The decline of yield of potatoes to one-fifth that of five years ago in most of the potato growing sections of California, is both startling and alarming. The cause is well known by the few. It is fungous attack. Methods to destroy these fungi are known. Disease-free seed is scarce and difficult to procure. Certified seed, known to be sound, brings from two to five times that which has not been inspected, and is, therefore, very likely infected with disease germs. It follows that education regarding these handicaps to successful potato production is a vital need to our potato growers. This has led to the following schedule of potato meetings in September: Bakersfield, Kern county, September 14th; El Monte, Los Angeles county, September 16th; Perris, Riverside county, September 17th; Salinas, Monterey county, September 20th; and Stockton, San Joaquin county (meeting of the West Coast Association), Thursday, September 23rd.

W. N. Shear, of the United States Department of Agriculture, and A. J. Cook, State Commissioner of Horticulture, will address each of these meetings. Full discussion by the growers present will be a valuable feature of each conference and effort should be made to secure large attendance of those interested at these meetings.

SALINAS SUGAR FACTORY ACTIVE.

The crushing season at the Spreckels sugar factory will start soon on the largest tonnage of beets in its history. There are 27,000 acres in all, ranging from Santa Clara to San Joaquin county. The tonnage has been estimated at 300,000 tons and the saccharine matter will run very high. The average price in this vicinity last season was $6.30 per ton, and at this rate the farmers will receive $2,700,000 for their beets. On account of the bright prospects farmers are already signing up for larger acreage the next season.

One Thousand Questions in California Agriculture Answered

Consists of 1000 of the most important questions on every subject that have perplexed the farmer and which have been submitted to the editor. The problem appears with its solution by Prof. Wickson immediately following; a comprehensive index enabling the reader to find the subject which interests him without delay. The 1000 questions and answers cover Fruit Growing, Vegetable Growing, Grain and Forage Crops, Soils, Fertilizing, Irrigation, Live Stock and Dairy, Diseases of Animals, Feeding Farm Animals, Poultry-keeping and Pests and Diseases of Plants, etc., etc.

This is a book of reference that every farmer, no matter in what branch of farming he is engaged, should have on his shelf. First Edition.

Price, $1.50 postpaid.

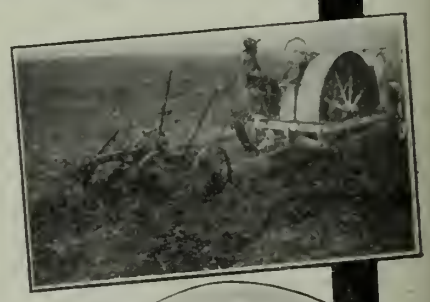
Increase the Efficiency of your Farm Equipment—by Buying this $585 Tractor and Portable Engine!—

F. O. B. MINNEAPOLIS, MINN.

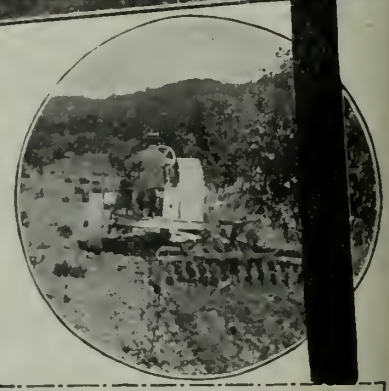


The modern farm is a "food factory," which must be conducted on the same efficiency basis which rules in all other big industries. Make your farm more PROFITABLE. Cut down the work you have to do. Sell most of your horses, save the expense of their upkeep, not to mention the investment—let a couple of your hired men go—buy a Big Bull Farm Tractor and put your land investment ON A SOUND BUSINESS BASIS.

Big Bull is a powerful lightweight Tractor, built especially to do ALL traction work on the farm. Big Bull is making money for farmers in all sections of the country—6500 Big Bull Tractors in use today. Put this economical power machine on your farm and let it do ALL the work. Big Bull does ALL your plowing, discing, seeding—runs manure spreaders, pulls hay loaders, mowers, binders—runs pumps, feed grinders, small shredders and threshers. Big Bull acts as an ever ready PORTABLE engine, saws wood, runs your cream separator, etc.

"BIG BULL"

Produces 20 Horsepower at the Belt. 7 Horsepower at Drawbar



Why not buy a "Big Bull" NOW and increase the productiveness of your soil 100% by DRY PLOWING IT?. Extreme heat makes the use of horses impossible. It never affects "Big Bull."

BIG BULL plows deep and thoroughly! Plows within 12 inches of ANY fence—practically turns corners on a pivot. Has DIRECT, single drive, with only 4 gears. Bull wheel runs IN THE FURROWS, yet does not pack down the soil. This means crop increase. Grousers four inches long on the bull wheel make it a deep-tilling SUB-SOILER. Hardest kind of sub-soil is easily penetrated, turned over, made ready for irrigation. Steer wheel of Big Bull runs IN THE FURROW IN A DIRECT LINE with the bull wheel. This makes Big Bull positively and automatically self-steering.

Don't buy a tractor that hasn't absolutely PROVEN what it can do! For two years Big Bull Tractors have made remarkable plowing records, working under the severest strains in the worst type of soil. Big Bull is exactly what California, Oregon and Washington farmers have wanted. It is the answer to the great question: How can I DECREASE the cost of my crop production, and at the same time INCREASE my profits?

Sheep Pay Well on Small Farms.

It is a very important matter to have more lamb and mutton for Californians to eat, and to have better lamb and mutton also. Who can produce it profitably?

[Written for Pacific Rural Press.]

California sheep are mostly raised in large lots of woolly ewes turned loose on any old kind of range, muchly uncared for, with mutton rams to breed any old time so that lambs come in good weather too late for the best markets; all driven in summer to grain stubble fields to fatten the lambs; old stock sheared twice a year; whatever profit there may be, is looked on as mostly clear gain, while whatever loss comes did not cost anything much anyhow. They are fed entirely on forage during one season of the year, and on grain and dry straw during the other, little attention being paid to consistent building of the best flesh or getting the best growth by balancing rations; or raising the largest percentage of lambs by providing shelter; or raising them to sell on the best seasonal market.

That this system makes money in our mild California climate is proved by the large flocks which inhabit most of our foothills. But whether sheep pay on the small farm is still a question in the minds of many oldcomers as well as newcomers.

That sheep do and will pay on the small farms, the Pacific Rural Press will prove by printing a series of articles giving the actual experiences of those raising sheep on small acreage in California. That they do and have paid on small farms in the East is familiar to anyone who knows Michigan and Ohio. First in this series is the article printed below as nearly as possible as told us by E. F. Byrnes of Marin county, who raises sheep without shelter on a hill ranch of about 200 acres, besides about 50 acres of grain and an acre or two of orchard.

Other articles will tell how sheep pay the expenses and living on the small subdivided farms, while orchards are coming into bearing; how irrigation ditches are kept clean with sheep at no cost except fences and a trifle of grain, having the lambs and wool for profit; how four Merino waifs became the foundation for a well-known high-producing herd of 75 ewes.

Those of our readers who can write definitely of success on small-farm sheep-raising are invited to contribute their experiences for the good of all. Mr. Byrnes' narrative is as follows:

Sheep do best on good pasture with a little grain and personal care and shelter at lambing, but they thrive anywhere that weeds grow, and make profits from unplowable land.

"I began with 150 mature sheep and 30 lambs brought directly off the range three years ago, after selling the cows on account of trouble in the herd. They were mixed Shropshire, Merino and Southdown for both wool and mutton. Four were Shropshire-Merino rams. When I started, I did not know anything about sheep, but learned several things by experience. I am dairying again, milking 25 cows, but I would not be without the sheep now if for nothing else but to clean up the weeds.

"I kept a dozen extra lambs this year besides replacing a few old ones which are sold every year, so there are about 200 in the breeding flock. I have found those with the most Southdown blood in them the most prolific under our conditions here.

"We have no shelter from the winter rains except the orchard, but usually raise about 90 per cent. Fifteen or twenty of the ewes last year had twins, but the coyotes got about 20. Usually a ewe which has twins one year will have only one the next. One which is now six years old had two lambs this year. Two other old ones are so large and have such big lambs I hate to let them go.

Lacking Shelter, Early Lambs Best. — "Lambs which come in January and February make market size quicker; but if they come earlier they get bigger by the time heavy storms come, when the bigger they are the better, especially if one has no sheds. Then if the storms come and go there will be no harm, but if storms are long continued, the soaking is likely to kill the lambs. Last year we had 150 lambs by December 1, but this year we have a man to help and can take better care of them, so may breed for them to come later.

"The ewes are turned out on a special range about lambing time, because they do not bring the lambs to the house and I have to ride out after them, sometimes bringing in as many as 20 in the evening. The others come home all right, and we corral them in the orchard every night on account of the dogs, which killed five when I first got the sheep. In winter time, when the orchard is muddy, we keep them on the hillside in a woven wire corral, which keeps dogs and coyotes out.

California Weather Record.

The following rainfall and temperature record is furnished the PACIFIC RURAL PRESS by the United States Department of Agricultural Weather Bureau, at San Francisco, for the week ending at 5 p. m., August 31, 1915.

STATIONS	Rainfall Data: Past Week	Rainfall Data: Seasonal To Date	Rainfall Data: Normal To Date	Temperature Data: Max'm	Temperature Data: Min'm
Eureka	0	.26	.21	66	50
Red Bluff	0	0	.02	110	66
Sacramento	0	0	.01	106	58
San Francisco	0	.01	.01	86	52
San Jose	0	0	.04	98	56
Fresno	0	0	0	108	58
Independence	0	.04	0	98	54
San Luis Obispo	0	.01	.05	96	52
Los Angeles	0	0	0	98	58
San Diego	0	0	0	90	62

THE WEEK

Signs of autumn gather. During the week the Mexican meteorological system lapped over upon southeastern California and there were roof-rending winds, torrents and temperature drops here and there. In the middle west, the dogs were chased out of their days by temperatures which came near to freezing in the old northwest of the lakes—quite phenomena these for the last days of August. They all mean that it is the season of the later fruits and that California's supplies are going east in better quality than the earlier and that there is more money in them. In table grapes there promises to be especially good reward for high quality shipments, and it is a great joy to have something cheerful about the long-suffering fruit of the vine. However, nearly all our fruits take a tumble now and then and quickly rise again. In fruit growing, as in politics and love, people do like a good loser; and in fruit growing wisely and well done, the chances of losing are few and wide apart and then frequently due to some omission which need not occur again.

Rally on the Peach.

We are very glad that something energetic is already being undertaken for the defense of the California peach along the lines so effectively laid out in our issue of August 21 by Justice Chipman, who called for action in support of the dried peach of the general nature outlined for all dried fruits by G. E. Merrill, in our issue of July 24. These were both pointed applications of the general principles of co-operation, without which our industries can never realize or attain what properly belongs to them. Why fruit growers will take to chopping out trees (if they are healthy and bearing such fruit as a good preserved product requires) without doing a thing to defend the value of the fruit against commercial sensations or buyers' self-interests, we cannot understand. And yet they are doing it, to some extent, simply because some strolling buyer knocks the fruit to serve his own purposes. In saying this we are not knocking the buyers. From the dawn of civilization it has been a part of their art to say: "It is naught"—if they wish to buy it, and when sellers take to buying they are apt to do the same thing. The wonder lies not in this fact but in the failure to recognize the other fact, viz.: whoever desires to get the worth of a thing must boost it. In this line an individual can do little by himself: an association can do everything to get whatever the real conditions allow—and that is all that can be expected in a large way. In Fresno on August 28 there was a rousing meeting of peach growers from the entire San Joaquin valley and it was decided to organize a stock company to control the prices of peaches and peach products. Fifty thousand dollars was subscribed by the delegates at the meeting, and mass meetings will be held throughout the San Joaquin valley next week for further subscriptions. A co-operative selling and distributing company is to be capitalized at one million dollars following the example of the Associated Raisin Company, a million-dollar co-operative marketing organization of raisin grape growers which has brought prosperity to the raisin producers. In addition to the capital stock subscriptions, peach growers are pledging their production to the new co-operative company and the result is expected to be an advance to the producer from two cents, which buyers are now offering, to upwards of five cents, for dried peaches. The two-cent figure does not pay for handling. Peach growers: go to it!

Raisin Mastery.

It is wonderful what a different attitude a producer assumes, toward the community and in his own heart, as soon as he begins to bear a part in an associated effort which is doing something for commercial righteousness. When he has no actual contact with marketing his product, except that which the strolling buyer's silver tongue or the city merchants' sympathetic letter establishes, he is much depressed, and if he is of gentle spirit he will wander among the trees, suffering in silence. If, on the other hand, he is of the bold, kicking type he will stride to the lee side of the sulphur boxes for help to bleach the sky with his language. In both cases, however, he knows he is helpless and his heart is as heavy as that of the captain of a liner who sees the white streak of a torpedo pointing at his hull. Quite otherwise is the mental attitude of the man who, at such a trying moment, feels the shoulder-touch of his fellows in the same craft, imparting the thrill of resolution to go to the very bottom of the threatening situation. (The reader will kindly notice that the word "craft" does not refer to "hull" in the preceding sentence and the "bottom" is not that of the ocean.) It is the strength of association which gives a man confidence that if the situation is artificially created against him, his association will expose its nature, and if things are measurably bad, his association will enable him to modify the consequences. This conviction gives him the public attitude and the state of mind which loyal supporters of the California Associated Raisin Company have created for themselves by their co-operative resolution and effort. It is not necessary to theorize about it: the facts are more eloquent. Last Saturday night a solid trainload of raisins was sent out of Fresno by the California Associated Raisin Company to Eastern markets. This is the first time in the history of the raisin industry that an entire trainload of raisins of one variety has been shipped to the East. It consisted of 41 cars containing 1,600,000 one-pound cartons and 30,000 twenty-five-pound boxes. The balance is in assorted loose raisins. The shipment was valued at $150,000. Another trainload will soon follow.

Such achievements are but a part of the aggressive work in distribution of the Raisin Association. They will spend $160,000, it is said, in advertising the food-excellence of the California raisin at the East and in telling people how to use them as food and not as a luxury. They are now publishing a neat monthly, "The Sun-Maid Herald," for free circulation to the same end. It is clearly a lesson drawn from the "Sun-kist orange" of the Orange Growers' Exchange. What it will mean for the development of the State when the eastern mind, dazzled by the fruit growers' imagery, rushes to the worship of our greatest product, "The Sun-Kissed Maid of California," the reader must figure out for himself. She, of course, is "a peach"—especially if the new association gets its million.

Merchants and Farmers.

We have to acknowledge that we share in the common prejudice against admitting other interests to growers' co-operative undertakings. This prejudice has taken the form of a conviction that when the commercial lion lies down with the agricultural lamb, one encloses the other when the rising comes. It was this prejudice which led us to look askant and write obliquely when we learned last spring that the cantaloupe growers and merchants of Turlock had concluded to hit it off together. But prejudice often leads people aslant and, so far, it looks as though we had hit aside the mark. For we read now that Turlock cantaloupe growers have had a much better market than usual and the writer of the account says:

"Turlock growers have been exercising greater care than ever before in putting up a uniform pack and selecting only the best melons for the Eastern trade. This has been largely a matter of education among the growers, and credit for it is due the Turlock Merchants and Growers' Corporation, a local co-operating marketing concern, which succeeded in making season contracts with a large percentage of the growers of the Turlock district. Through a system of rigid inspection, the corporation has confined Eastern shipments to the very choicest grades, with the result that top prices have been commanded in the Eastern markets, with correspondingly satisfactory returns to the growers. The 'T. M. and G.,' as the local concern is known, on August 16 started its first 'cantaloupe special' to the East. It comprised eighteen cars and its destination was Omaha."

We hope the arrangement will continue thus to work well, for there is surely great theoretical advantage in all good people co-operating for community prosperity and we hope Turlock will demonstrate that civic oil and water can be made into a good permanent emulsion. Of course, for the specific purpose in this case, it was important to mix them, for it is just as important to bind dealers to buy only good

graded goods as it is to bind growers to produce them—possibly even more important, because one of the greatest troubles is to get dealers to pay enough more for good stuff, whether it be cantaloupes or cream, to make the extra cost of producing it profitable. Keep your eye on the Turlockers!

"Jasm": A Needful Thing.

It is fortunate that we have a new word, used for the first time in our hearing at a university meeting in which ex-President Taft participated. The President of the University of Minnesota, Dr. Vincent, was also present and he is credited with the coinage of the new word, although he did not use it on that occasion. The definition of "jasm" is given by a figure of speech but not in words, viz.: "Jasm is what happens when a buzz saw running 1500 revolutions per second strikes a keg of tenpenny nails." It is obviously applicable to a foot-ball scrimmage or other great issue in action, and it is held by some philologists to be a sublimated form of "pep" or "ginger." We count its coinage fortunate because it expresses just what is now most needed in some of the agricultural affairs of this state. Our people, jointly and singly, are quite given to mooning over certain things which it is really needful to do for the advancement of agriculture; for the development of the state; for co-operative marketing to secure the best values attainable; for rural credit to secure proper recognition of agricultural security and preferred rates of interest; for the development of the live stock industry; for the uniform excellence of California butter and for half a dozen other things which are essential to state and individual prosperity. All these things are going forward in a way, but they lack something which no one could define. The new word enables every one to state exactly what is needful: it is "jasm." Who has it, and who will turn it loose on this hemisphere? There seems no lack of it on the other side of the world, but it is being displayed in such a bad cause! Peace has its jasm, no less renowned than war!

Why the Farmer Needs Jasm.

But it is not alone in great co-operative ways that the farmer needs this stupendous motive power. If what is being said about him is true he surely needs it in his regular business. Here is a scientific conception of a farmer, as given by a professional man at one of the recent congresses: "Inasmuch as agriculture is the control of life process of plants and animals for the ultimate benefit of man, chemistry and its allied chemical physics and chemical-biology are sciences vitally important to the successful conduct of the craft. Agriculture can no longer be considered merely as an occupation, but both a science and art, with more art than science."

Surely a farmer needs jasm to saw through that keg of nails, but he must do it. And then jasm in some cases may mean warmth in neighborly spirit: energy in the gentler forms of association. "Rural people do not see each other enough to love each other as they should," was the suggestion at another congressional debate. As a result of the stay-at-home habit of most rural folk, the speaker contended that rural residents are not getting all they should from life. Monthly meetings, at which spelling and computation contests, community singings, etc., were instituted have resulted in a more wide-awake people, better neighbors and greater interest in rural life. This is evidently rural social jasm. Go to it with singing and spelling bees at first, if that seems most practicable; the rural wheel will soon strike some important problem and then we shall have the jasm which the country needs.

Queries and Replies.

Querists must give name and address.

Hogs for Fruit: Not Fruit for Hogs.

To the Editor: I am thinking of buying twenty acres of unprofitable vineyard and starting in with hogs. As the vines go I could supplement pasture and raise my own feed, and keep more hogs. In your opinion would it pay to feed three and a half cent raisins to hogs? How many hogs could I keep on twenty acres, providing I pull up some of the vines and supply them with the necessary pasture?—R. L., Madera.

Of course we cannot tell how many hogs you can keep on land which is shifting from one crop to another and probably both of them poor. But we can safely say that we would not for a moment think of growing fruit to feed hogs: they will save waste of fruit, but they cannot justify growing fruit primarily for their use. Fruit, especially when dried, makes good hog feed, if wisely fed in connection with other feeds, but does not give high value to it. Four pounds of ripe grapes are equal to one pound of barley, and one pound of raisins is equivalent to one pound of barley; so the hogs might return you one and a quarter cents for your raisins, at the present price of good feed barley. If you wish to grow fruit, it will pay to keep some hogs on other land and let them save waste fruit with the alfalfa and grain you grow for them. If you wish to grow hogs, clear off the failing vines and grow alfalfa, Kaffir corn or barley, or else get some good land which does not have to be cleared of unprofitable vineyard. The last chapter of our book, "California Fruits," gives more facts about hog-value of fruits.

Fruit Trees in Vineyard.

To the Editor: Last winter I had about 400 almond trees planted in a vineyard—the grape vines were pulled up where the trees were set. The trees made a good start, but by the 1st of June three-fourths were dead—some say from root-knot; others, from sour sap. Of course I want to save the 100 trees which appear to be in good condition, which will necessitate cultivating the whole field. If it was root knot that killed the trees will it be advisable to replant next winter? The vineyard is standing, except where the vines have been pulled up to make place for the trees. I was told that the vines also had root-knot. I would like to replant the orchard this winter, if it is advisable. —L. M. L., Arbuckle.

Our notion is that your almond trees were either killed by standing water after planting or were dried to death by the thirsty vine roots which occupied the ground. If the land is low and heavy or over hardpan, the former would be likely; if sandy and dry, the latter would be indicated. Time enough did not elapse to admit killing by root-knot: besides if that was the trouble you could see it by pulling or digging up a dead tree.

We would not for a moment think of "spotting" fruit trees in an old vineyard. Either clear the whole ground and get out all the old vine-roots you can, or else take out a row of vines, plow deeply and clean out roots, plant the trees and keep all the ground well cultivated during spring and summer. It is a waste of money to plant trees without arranging for thorough working of the ground before and after planting.

Pot-Bound Plants.

To the Editor: I would like, through the medium of your paper, to caution planters of evergreen trees against the danger of planting potted trees. Some nurserymen will tell you that the roots should not be disturbed, and my experience is that such trees, after a few years' growth, are very apt to blow over because the root system circles around the trunk and does not get a proper hold on the soil. Is there a way to overcome this?—A. M., San Jose.

This is a lesson which planters should learn early. It is not, however, against pot-grown plants unless they are allowed to grow too long in the pots. Pot growing and planting out from pots is a great advantage and not a detriment if the plant is properly handled by the one who plants it out. If the roots have only begun to circle around they should be straightened and disposed in different directions. If the plant is badly pot-bound and roots circled the circles should be cut through with a sharp knife or shears. The cut ends will callus and new roots start out in all directions. Plant sellers should always advise beginners of the proper treatment or knock out the plant, make the cut and push back in the pot for convenience of carriage. Plants with circling roots will, of course, blow over when they grow large tops, because they have no good root-anchorage.

Cutting Back Peaches.

To the Editor: I wish for some information relative to peach trees. I have some trees that are very high and easy to break, and I wish to cut them back to the forks of the trunk, to start new growth. Can this be done, and when is the best time to do the same?—Subscriber, Murphys.

You can put a new head on a peach tree that way very easily. It is better to cut not too close to the fork. We prefer a foot or two, for the branch is smaller at the amputation and there is place for the new growth to start and hold on strongly. The time is just as the sap is starting, as shown by enlargement of the buds. If cut too early the stub is apt to die back considerably.

Papering-down Morning Glory.

To the Editor: I have heard several people say that morning glory could be killed by covering with a layer of tar paper that completely covered the patch, by leaving it on for a season, but no one seems to have actually tried it out. Perhaps some of your readers have tried this out and will know about it.

If so, let them go to it. We have seen many trials but no successes, and a lot of time and material wasted.

Cutting Corn for Forage.

To the Editor: When is the best time to cut field corn to make the best fodder. I have no way of chopping it up.—E. J. P., Paso Robles.

As shown by experience and determined by analyses the whole plant is in richest condition just when the kernels are glazing—that is, in the condition for roasting ears.

Swelling on Hog's Jaw.

To the Editor: Cheesy swellings come on the jaws of my hogs. Lancing them draws a very little blood but no pus. The mass is hard like muscle and keeps enlarging.—H. C., Live Oak.

This is either tuberculosis or actinomycosis. Have these animals tested for tuberculosis by the Intradermal method.—H. B. W.

ACCORDING TO U. S. Government reports dated August 17, the level of prices paid producers of the United States for the principal crops decreased about 0.2 per cent during July; in the last seven years the price level decreased about 0.1 per cent during July. On August 1 the index figure of prices was about 0.9 per cent higher than a year ago, 10.8 per cent higher than two years ago, and 0.2 per cent lower than the average of the last seven years on August 1.

The prices of meat animals—hogs, cattle, sheep, and chickens—to producers of the United States decreased 0.3 per cent from June 15 to July 15; in the last five years prices increased in like period 0.3 per cent. On July 15 the index figure of prices for these meat animals was about 7.8 per cent lower than a year ago, 5.8 per cent lower than two years ago, but 2.0 per cent higher than the average of the last five years on July 15.

More Citrus Cover Crop Experience.

A very suggestive discussion of the relation of cover crops to available moisture supply and important information concerning the melilotus.

[Written for Pacific Rural Press by William M. Bristol.]

So many queries have come to me since my article on cover crops in the Rural Press of July 31 that I am constrained to add a second chapter. Being an orange grower in the arid southern portion of California I failed to anticipate those questions which would come, from regions where irrigation is not quite considered a necessity, concerning cover crops in general and summer crops in particular.

Cover Crops and Irrigation.—Replying to this line of inquiry I may say that an orange grower places no dependence whatever upon rain, knowing that to be successful he must be prepared to irrigate, if need be, every month in the year. I should have stated that, whatever kind of fruit is being grown, the successful growth and handling of cover crops, either summer or winter, turns largely upon the use of water. If a winter crop be grown it must have moisture in the fall to start it and to keep it going until the winter rains come; and, in my own practice, it must be kept growing until it reaches comparative maturity in May. This means that when at last turned under it may have left the ground so dry that a copious irrigation is necessary. [Without irrigation the crop must be plowed in much earlier.—Editor.]

The questions that have come to me indicate that some fruit growers, even on elevated hillsides, are doing without irrigation where water might be had at reasonable cost. It is plain that, in some cases, the constant cultivation practiced to retain moisture in the soil has permitted unnecessary washing away of the fertile top soil by late spring and early fall rains—a loss which may be prevented, in large measure, by available water for irrigation.

It may sound a bit paradoxical to say that abundant water will prevent soil erosion—but the orange growers of the south know it to be a fact. A summer rain on a hillside where the soil is loose and dry is a misfortune to any orchardist. The citrus men earnestly hope that no rain will fall in their orchards after the cover crop is plowed under and until it is sowed again in the fall. They would vastly rather irrigate, to any extent made necessary by the cover crop, than to have heavy showers fall upon their bare and fertile slopes. I would advise every fruit grower who can install irrigation at reasonable cost to do so at once and charge the cost to the fertilizer account; for the value of the cover crop thereby made possible, both in its fertilizing value and in the protection which it affords to the soil against erosion, will more than repay the cost.

The Sweet Clovers. — Regarding the two varieties of Melilotus now being used it should be said that both may be sowed in the fall if desired. Melilotus indica, the winter growing, yellow flowered annual, may be sowed any time after September 15 and will grow continuously until maturity the following spring. Melilotus alba, the white flowered, summer-growing biennial, will germinate any time from early spring until late fall, but will make no appreciable growth during the winter. Experiments made in Highland indicate that whether sowed early or late it will bloom at about the same time the following summer. If a cover crop is desired which shall immediately cover the ground this fall and shall continue to grow through next summer, it has been suggested that the seed of the two varieties might be mixed and sowed together.

Ten pounds per acre of either variety will give a good stand, but fifteen pounds is better. To those who have wondered how the sudden and enormous demand for the seed is being met it should be explained that the seed of M. indica is a by-product of the grain fields—an interloper the seed of which has heretofore been blown out with the chaff. This also explains the cheapness of the seed, which sells from about five cents per pound upward, according to its freedom from mustard and other seeds. At this price it is immeasurably cheaper than vetch because of the larger number of seeds in a pound. Seed of Melilotus alba is another matter. So far as is known there is no way to obtain it as a by-product and its price therefore ranges upward from twenty-five cents per pound.

Indispensability of Humus. — In conclusion I repeat that humus in the soil is the chief need of California fruit growers today. I have no word of fault to find with the so-called commercial fertilizers in general—they are good in their place as supplementary to some bulky substance which will supply the needed humus. For the commercial fertilizer salesmen who have said to the fruit growers, "Beware of stable manure—it will make your oranges puffy," I have no such mild language. Stable manure and cover crops are today curing many orange trees of the dreaded and mysterious "mottled-leaf."

With all your getting, get humus; and, in Hoosier Schoolmaster phraseology, "git a-plenty while gittin'."

State May Inspect Parcels Post Packages

[Written for Pacific Rural Press.]

While heretofore California has spent much money in keeping out plant pestilences likely to affect our horticulture by being imported through the agency of common carriers, but has been defenseless against the importation of such insects and diseases through parcels post, she may now protect herself against the menace of the parcels post law.

We gladly commend the efficient work of the horticultural quarantine officers of the State and Nation in preventing the entrance of the numerous serious pests of the foreign countries so far kept out.

"That hereafter, when any State shall provide for terminal inspection of plants and plant products, and shall establish and maintain, at the sole expense of the State, such inspection at one or more places therein, the proper officials of said State may submit to the Secretary of Agriculture a list of plants and plant products and the plant pests transmitted thereby, that in the opinion of said officials should be subject to terminal inspection in order to prevent the introduction or dissemination in said State of pests injurious to agriculture. Upon his approval of said list, in whole or in part, the Secretary of Agriculture shall transmit the same to the Postmaster General, and thereafter all packages containing any plants or plant products named in said approved lists shall, upon payment of postage, be forwarded by the postmaster at the destination of said package to the proper State official at the nearest place where inspection is maintained. If the plant or plant products are found, upon inspection, to be free from injurious pests, or, if infected, shall be disinfected by said official, they shall, upon payment of postage, be returned to the postmaster at the place of inspection, to be forwarded to the person to whom they are addressed; but if found to be infected with injurious pests and incapable of satisfactory disiufection, the State Inspector shall so notify the postmaster at the place of inspection, who shall promptly notify the sender of said plants or plant products that they will be returned to him upon his request and at his expense, or, in default of such request, that they will be turned over to the State authorities for destruction.

"On and after the passage and approval of this Act it shall be unlawful for any person, firm, or corporation to deposit in the United States mails any package containing any plant or plant product addressed to any place within a State maintaining inspection thereof, as herein defined, without plainly marking the package so that its contents may be readily ascertained by an inspection of the outside thereof. Whoever shall fail to so mark said packages shall be punished by a fine of not more than one hundred dollars."

The plants and plant products subject to terminal inspection in the State of California are as follows:

"All florists' stock, trees, shrubs, vines, cuttings, grafts, scions, buds, fruit pits and other seeds of fruit and ornamental trees or shrubs, and other plants and plant products for propagation, except vegetable and flower seeds, bedding plants, and other herbaceous plants and roots; Provided, that this list of plants shall not apply to plants shipped under the certificate of the United States Department of Agriculture for propagation in the Plant Introduction and Field Station of the Department at Chico, California."

The place to which a postmaster in the State of California shall send for inspection, after receiving the required postage therefor, packages containing plants or plant products subject to terminal inspection, is the one in the list below which is nearest to his office:

Alturas, Auburn, Bakersfield, Colusa, El Centro, Eureka, Fresno, Hanford, Hollister, Independence, Lakeport, Los Angeles, Madera, Martinez, Marysville, Merced, Modesto, Napa, Nevada City, Oakland, Oroville, Placerville, Red Bluff, Redding, Redwood City, Riverside, Sacramento, Salinas, San Bernardino, San Diego, San Francisco, San Jose, Santa Ana, Santa Barbara, Santa Cruz, Santa Rosa, Stockton, Susanville, Ukiah, Ventura, Visalia, Willows, Woodland, Yreka, Yuba City.

How Fly-Paper Catches Citrus Scale.

R. H. Shoemaker, a prominent orange grower at Lindsay, has just completed an experiment with the Citricola scale that will be of interest. Two sheets of sticky fly-paper were hung on the side of a building 20 feet from the nearest tree and in a place where the scale was apparently scarce, only a few being found before the hatch. Four sheets were placed on a ladder among the trees in a part of the orchard where the scale was most apparent, the ladder being placed in cans of oil so that the pest could not climb if it wanted to.

The six sheets were sent to Prof. Ralph de Ong of the Citrus Experiment Station at Riverside, and the following communication gives the result of the test, which shows conclusively that the scale is spread by the wind soon after they are hatched as all scale found were very young:

"I have finished the count on the fly-paper with the following results: Two sheets on the barn, 39 to 32 scale, respectively. Paper from the grove: No. 1, 273 scale; No. 2, 234 scale; No. 3, 288 scale; No. 4, 156 scale. Sheet No. 4 had caught dust which caused a smaller number of scale to adhere. These results corresponded closely with black scale work.

"At Riverside sheets put in the grove always had over 200 young scale. This amounts to about two days' exposure in our work in the south, for after this period of time the paper is generally too dry to be of service."

Poor Disinfection Spreads Blight.

[Written for Pacific Rural Press.]

The pear blight fight is often lost on account of mistakes in disinfection, according to Prof. F. C. Reimer, who spoke at the recent fruit growers' convention. Corrosive sublimate carried in metal buckets of any sort is rendered useless in a few minutes. Wood is better than metal, but glass is still better. Applying the disinfectant to tools with pieces of collar pads, old rags, etc., quickly makes the corrosive sublimate harmless to bacteria on account of organic matter in the cloths. Sponges are best, but eventually glass-and-rubber atomizers will be used for disinfection with corrosive sublimate.

Resistant Varieties.—Our costly methods of fighting pear blight are almost unknown in Europe, largely because they use resistant varieties. Bartlett and Howell are the least resistant and should be topworked on trunks of other varieties such as Burkett, Surprise, Douglas, Warner, or others which are proved resistant.

They have about 500 varieties of 25 species at the Experiment Station in tests for blight resistance. No variety could resist inoculation in the tips of tender shoots, but many varieties were inoculated by putting a bacteria-laden drop of water on the bark and pricking through the drop into the bark 20 or 30 times. In the most resistant varieties bacteria would live a short time, but could not spread under mature bark. A. L. Wisker's commendation of Japanese stock for blight resistance was corroborated. Three weeks previously Prof. Reimer inoculated French and Japanese stock with blight bacteria, and on examination before coming to the convention 36 percent of the inoculation on French had already developed, but none on the Japanese. Examination of a good many hundred Japanese roots has never shown up woolly aphis which carry blight more or less.

AGRICULTURAL USES OF RADIUM.

We have seen many publications concerning the effect of radium upon plants which seem to be based upon actual experiments made by institutions and by private plant growers. The well known journal, the Scientific American of New York, has given much space to the subject and in one of its issues draws these conclusions:

"According to recent experiments in Europe, it appears that Radium is instrumental in preventing diseases of plants, whence is likely to arise a new application of this interesting element in agriculture. For several years, workers in agronomic science have been experimenting with the effect of Radium upon vegetation by mixing Radio-active substances with usual fertilizers. The numerous results obtained in this work show that most plants, either grain or flower, are remarkably stimulated and give a better yield both in size and quality, this being often seen in the fine and healthy color of the green plants or leaves.

Under these conditions it is not surprising that the plants are in better condition to resist attacks from the various sources of disease such as cause so much damage to crops, especially diseases known as cryptogamic, which arise from spores or mold. It seems that Radium is to act as a preventive for such diseases as wheat rust, rotting of potatoes, grape vine mildew and many others which cause such detriment to agriculture. Such results in the application of Radium in agriculture are likely to be far-reaching."

These conclusions from European researches seem to be supported by experiments in this country as reported by Dr. H. H. Rusby, who has a farm at Nutley, N. J., on which the tests were made.

Concerning the source of radium fertilizer this interesting statement is made:

"Radium is obtained from ore at a tremendous cost. It requires 400 tons of radium ore of the standard quality to yield a gram of radium, which could easily be carried on a man's thumbnail, the market price of which is $120,000, or $70,000,000 a pound. After all the possible radium is extracted from the ore, there still remains in the finely powdered residue some two or three milligrams of pure radium which would make the residue worth about $3000 per ton. It is this residue thinned down to the proper proportion of Radium, which, when mixed with fertilizer compounds or any suitable fertilizer, produces such wonderful results on plant life."

BLIGHT CUTTERS SCARCE.

[Written for Pacific Rural Press.]

"We have been able to find only one satisfactory man to cut out pear blight," says Horticultural Commissioner H. G. Kercheval of Sacramento county, commenting on the criticism that pear blight exists even where county ordinances empower the horticultural commissioners to clean out where orchardists do not.

They all recommend themselves, but they turn out either lazy or ignorant, or they skip blight spots, or what is worse, they won't disinfect thoroughly. Such men spread blight rather than cut it out.

The best way is to get the orchardist to do it himself. If we put incompetent men in his orchard and they spread the blight, he has a real grievance. The one man mentioned above is kept busy now on three ranches, receiving $2.50 per day and board.

LARGE TRIAL OF LIMESTONE.

Considerable acreage of the northern section of the Orland Federal irrigation project is being treated with lime to increase the fertility of the soil.

Many have had difficulty in breaking up the soil and keeping it from baking. Thirty-one carloads of crushed lime rock from the Redding quarries is now being spread on the soil.

It is estimated that two tons of crushed lime will keep an acre workable for five or six years. The lime is delivered at Orland for less than $5 a ton. Most of it is used in alfalfa fields. Howard Ball is using the lime exclusively for orchard and garden. Farm Adviser Heileman is watching the experiment closely. Those taking the lime are Supervisor Brown, S. F. Ehorn, Howard Ball, R. G. Weidemier, A. Heywood, M. S. Holt, R. E. Volkerts, M. Pederson and J. Hendrickson.

Practically the entire crop of over wintering capri figs in Tehama county dropped last winter. This necessitated getting insect-laden figs from scattered trees which had their fruit and from the old capri trees on the Vina Ranch, with which to pollenize the spring crop of capris.

California Fruits and How to Grow Them
EDWARD J. WICKSON.
Seventh Edition, Extended and Revised.
Contains over 500 pages of text with many illustrations. Goes thoroughly into every phase of that immense industry, California Fruit Growing.
In the preliminary chapters, the important subjects of Climate and Soils are handled in a masterly manner, with the necessary modifications called for by the immense latitude, the topography of the Country and the different regions with their relation to coast, valley and mountain.
The book then goes into the subject of Fruit-Growing from the nursery, on through budding and grafting, preparation for planting; planting, pruning the trees and thinning fruit; cultivation, fertilization and irrigation right along to picking, canning and preserving, with chapters on injurious insects, tree diseases and the protection of the trees therefrom. Every fruit and nut which can be grown commercially in California or countries possessing a similar climate, has received the attention which the forty years' experience of the author makes of incomparable value to the fruit grower,

THE Panama Canal is working right even if most of the movement is on land and within the United States. On August 21 the overland carriers filed with the Interstate Commerce Commission application for permission to publish reduced west-bound rates on commodities that heretofore have moved from Eastern terminals to Pacific Coast territory via the Panama Canal. If these rates become effective it will enable California firms to obtain their shipments via the Sunset Route and other lines at practically the same rates as are in effect via the water route. The proposed reductions constitute another step in the transcontinental carriers to meet the canal competition. A short time ago a reduction was obtained in east-bound rates. The Santa Fe Railway has announced a reduction in rates to permit the shipment of grapes from California points to all Eastern points in lug boxes at the same rate as in closed packages at actual weight, not on an estimated box rate, subject to carload minimum of 26,000 pounds. This is to enable shippers to send East their second crop.

What Became of Black Eyes?

This is not the lament of a deserted lover nor is it a problem for an oculist. It is simply a desire to know beans, as the reader will discover.

To the Editor: What is the average annual production in California of Blackeye beans? What are they used for, and in what relative amounts? One authority advised me: "For human food, stock food and gun powder," but a letter from Du Pont people states they are not used at present for this purpose. I am satisfied very few are used in California for human consumption, and I think that only a small percentage of the crop is used for stock food. What becomes of them? They are a staple crop in this section. No one knows where they go. Can you inform me fully. If not, can you tell me where I can get the information. Surely some one knows.—Enquirer, San Joaquin county.

[Answered by Simsheimer & Co., S. F.]

To the Editor: In our opinion the annual production of Blackeye beans in California ranges from 150,000 to 250,000 sacks of 80 lbs. each. The production promises to be considerably larger this year, owing to the very large increase in the acreage planted, and as the condition of the growing crop is excellent at this time. It would be very difficult to make an estimate of what this year's production will be as a great deal of the land planted to Blackeyes this year has never been planted to beans before, and we do not know what the average yield to the acre will be on land of this kind.

California Blackeye beans are used principally for human food; the southern states being by far the largest consumers. This is really the only purpose for which Blackeye beans are used, speaking in a general way, although we believe that more of them are used as seed for a cover crop in the Southern states to enrich the soil.

New York state is also a considerable buyer of this article at times, but a good many of the beans shipped for New York are resold from there for export to Cuba and Porto Rico.

Although California Blackeyes are considerably superior in quality to those raised in other sections we have at times to meet competition of Southern Texas, Virginia and during various times, of Europe. The quantities raised in these districts are not large, but when prices are high here they are shipped from those districts to compete with California stock.

M. F. Amerine of Santa Clara county recently purchased 320 acres near Madera from a company of Los Angeles capitalists.

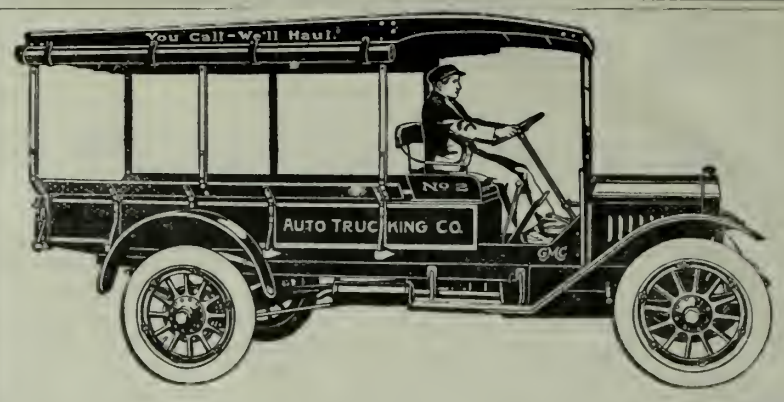
CANNING EGGPLANT AND CORN.

To the Editor: Will you give a method of canning eggplant? Also state whether the boiling point is hot enough for eggplant and for canning corn.—R. L.,Germantown.

[Answered by Prof. W. V. Cruess.]

The only recipe we have for the canning of eggplant reads as follows:

"Pare the eggplant; cut it in thin slices and drop into boiling water and let remain for 15 or 20 minutes; remove from the water and pack the slices in glass jars or tin cans; cover with boiling water. Cap, tip, and process No. 2 cans 60 minutes at 240 degrees, 10 pounds pressure."



You will notice that a pressure of 10 pounds or a temperature of 240 degrees is recommended. This would mean that the eggplant is very difficult to sterilize, and that if a temperature of only 212 degrees is used it will be necessary to process on three successive days, probably for one hour at each processing. If this long boiling softens the eggplant too much, the time could probably be cut down somewhat at each boiling. A trial cook would have to be made to determine this point. The eggplant is canned in plain water according to this recipe. No doubt a light brine of salt and water would also serve the purpose.

Corn cannot be sterilized with uniform success at 212 degrees. However, often the corn will keep if three successive cooks of one and a half hours at 212 degrees Fahrenheit are used. If you use considerable brine on the corn the heat will penetrate more rapidly than if only a small amount of brine is used, and this aids in sterilizing. It is possible to sterilize corn by one cooking at 212 degrees for one hour if the corn is covered with tomato juice or if a considerable amount of the tomato pulp is mixed with the corn. The tomato juice furnishes the acid that the corn lacks. It is because corn is deficient in acid that it is so difficult to sterilize.

IRRIGATING POTATOES PAYS.

That it pays to irrigate potatoes when summer rainfall is scant is shown by experiments conducted by F. C. Reimer, superintendent of the Southern Oregon Experiment Station at Talent. Eight leading varieties were grown in as many rows and one-half of each row was irrigated, the other half not, but cultivated and sprayed in otherwise precisely the same way. When the potatoes were harvested and weighed it was found that the yield of the irrigated half was three times that of the unirrigated. The quality was equally good.

The Kings county honey crop is reported to be only half of normal.

1500 lb. Delivery Truck

Chassis $1090 F. O. B. Factory

This new General Motor Company truck stands supreme in its class. It is a real, high grade commercial vehicle that will meet every qualification. Built in accord with the latest and most modern ideas in truck manufacture.

For every kind of transportation demanding a truck up to 1500 pounds capacity this model has no superiors.

G. M. C.

The G. M. C. line of trucks was secured by Don Lee because it embraces every size and style.

With this line a Don Lee expert can analyze the needs of a business and recommend the kind of truck most desirable. If a ton-and-a-quarter size is preferable to a two-ton we can supply it. If a delivery service is more fitted to the electric we can give unprejudiced advice along that line. The G. M. C. line is complete, any size, any style.

If you are interested in trucks it's to your interest to have our representative call.

NEVADA NOTES.

To the Editor: George Barrett gives me this interesting statement: "I have raised potatoes in Mason Valley for several years. I have very good success, and at present grow only "Netted Gems" for the local seed market. These are the potatoes which grow the best in Mason Valley. I average seven and a half tons to the acre, and I think that exceedingly good. Every year I manure my ground thoroughly with well-rotted manure. When I plant I put four of five pieces in each hill—never using any blossom ends, and only the finest big potatoes are used.

"I always put my hills at least 36 inches apart, giving lots of room to irrigate and hill up without disturbing the vines. I irrigate little and often so as to keep the ground of a constant moisture, for dryness followed by sudden moisture starts new growth or lumps on sides of potatoes, which invariably hinders the growth of the main potato.

"After each irrigation I always go over the irrigation ditches and around the edges of the hills with a very fine cultivator so as to avoid any top crust from forming. You can't cultivate too often, but you can work too close.

About nematodes or eel worms. Well, I have found their presence depends on the soil. They are only found in heavy, low, poorly drained places. In the higher, well-drained sections, if too much irrigation has not been used, you never find them. To try this out, I have planted seed infested with eel worm, and where I did not irrigate too much, even in the low land, I never found an eel worm in the product.

"Sweet clover here in Mason Valley goes very well, and this year people are finding it a new industry. It not only grows wild, but is also grown for seed to ship East, to be planted for use as a fertilizer.

"There is interest manifested in alfalfa meal, and a possible market for Nevada alfalfa meal. Alfalfa crops are exceedingly good, especially the first crop in Nevada this year.

"Mason Valley is settling up fast and needs improvement in dairy stock. Almost every ranch has artesian water on it. One farmer has a 12-inch well that flows like a river. Constructive dairying is needed in Smith Valley. From about sixty ranches which comprise the settlement at Smith Valley they only succeed in turning out four tons of butter per month at the local creamery. Mr. Myers has managed the creamery for over two years. One-half of this butter does to San Francisco, and the other half is consumed locally." Charles Barnum.

ARSENATE OF LEAD FOR CORN-EAR WORMS.

[By M. L. Germain, President Germain Seed & Plant Company.]

The article to follow is one which I feel will be of general interest because it is so absolutely wonderful. No doubt you remember your grandfather complaining because so much of his sweet corn was wormy. As a matter of fact, this same condition has existed right up to date and many well versed in horticulture have claimed it impossible to control the corn pest because any remedy used would kill the corn silk, and that being destroyed would in turn kill the corn. So all of us have continued to eat corn from which the wormy end was cut. But during this season we have carried on some interesting experiments at our extensive trial grounds and the results fully justify our claiming that we have a product which when used on the corn will kill and control the corn-ear worm, and yet in no way does it injure the ear. At our experimental fields we planted a plot of 4 rows about 200 yards long. We treated one-half of this corn with the powder when just tasseling out. The other half we left untreated. We watched with interest its progress in growth and were anxious for the maturing. At last the time for inspection came and we could hardly believe what we saw. The corn which we treated was practically immune from the worm as fully 90 per cent was clean and free from worm, while that portion which was not treated was fully 95 per cent wormy. The corn that was treated was perfect in every way, the ears being fully matured and of a sweet flavor, while the untreated corn was badly infected with worms. The product we used to treat the corn with was a "patent arsenate of lead powder," and properly used it is absolutely safe. We have the results of this experiment in our windows at the present time, so any one interested can see for himself the work accomplished by the application of this efficient insecticide.

[We are glad to have this confirmation from California experience of the efficiency of this treatment for corn-ear worm, which we published in our issue of August 21, page 172. —Editors.]

HOW DEEP WILL GOPHERS GO?

To the Editor: I scarcely think that gophers can be walled out of a farm at a reasonable cost, as I know that if they meet an obstruction they will go down 4 or 5 feet to get below it.

A case in point is the basement under my house. The walls are 5 feet below and 1 foot above the surface, yet they burrow under the floor and frequently the basement is flooded when we irrigate the garden adjoining the house—the water running down their runways. I imagine that they could be cleaned out by using ferrets and a good rat dog or two, to catch them as they come to the surface.

Rats are exterminated in this way in England and I think the gophers could be caught in the same way.

San Jose. Sam'l Haigh.

[Ferrets were freely commended for this work many years ago and one man imported and bred them for the purpose, advertising their qualities to make sales. Nothing came of it then; the conclusion seeming to be that it was more trouble to fuss with the ferrets than to kill the gophers with traps, poison and water-flooding.—Editors.]

STOCKS FOR SUGAR PRUNE.

To the Editor: Concerning the inquiry of J. V. of Morgan Hill, I would say I have had experience with Sugar prunes continuously since their first appearance and can say they will not unite satisfactorily on peach stock. It is not a question of being "well done," but simply that in almost all cases the union is poor, the joint swollen and rough and it breaks off at almost no provocation. Strangely enough the Sugar prune makes as good a union on apricot as the French does on peach.

PUTTING A CORE IN A DITCH BANK.

To the Editor: My experience with ditch banks may be of interest to E. L. (whose letter was in your issue of August 14) and others who have the same trouble with gophers.

On the outside of each bank where the slope of the ditch joins the level of the field I trimmed with a square shovel. I had a round-pointed shovel cut down to four inches wide, which is wide enough to get my foot in; then with this shovel and a mattock I dug a trench along the outside of the ditch about thirty inches deep. Part of the trenches I filled with crude oil—a layer of oil, then a layer of earth. The balance of the trenches I put in galvanized iron, the ends lapped over an inch or two, and then shoveled the earth back in.

The iron is the most satisfactory. It is easily and rapidly laid, and not too expensive, particularly if one can get second-hand stuff. I found four inches about the right width, as it is hard to dig deeper than thirty inches and gophers seldom work deeper. I put this in early in the fall; and after the gophers that may have been already in the ditch bank were killed and the old holes stopped I had almost no breaks, and those that come are usually near the top where they can be seen easily.

I do not think it would be necessary to dig a slot from the top of the bank to the bottom of the ditch, especially if the banks ever have to be plowed or scraped, and it takes so much more material.

Hughson. F. D. Keeney.

ENGINE MIXES POULTRY FEED.

[Written for Pacific Rural Press.]

Mixing poultry feed on a big ranch is a big job, but it is easy for T. B. Purvine of Petaluma, who uses a power mixer for his wet mash.

The machine is a semi-cylindrical metal tank hung horizontally on an axle shaft run by a line shaft from a 6 h. p. gas engine. The tank is 2x4 feet on the top view and about 2 feet deep. At different points around the circumference of the axle and projecting squarely from it are ten long, curved, paddle-ended fingers which reach to the bottom of the tank. The shaft runs continuously, having its speed reduced from the line shaft by reciprocal cog wheels.

The feed is dumped into the mixer from a platform behind. When it is sufficiently mixed, a little lift on the side of the tank tips it more than quarter way over so that the mixing paddles dump the feed onto a lower platform whence it is shoveled into the wagon to be hauled out to the hens.

An improvement might be made by having the outfit high enough to dump directly into the wagon.

The same line shaft which runs the mixer comes from the separator room to save elbow grease in separating the milk from Mr. Purvine's large purebred Jersey herd.

ENGINE WHICH NEEDS MUFFLING.

To the Editor: A neighbor has a large pumping plant close to his dividing line, and our house is 100 yards from it. But they seem to be so situated that the exhaust from his engine makes an echo in the house, such as to make it at times almost unendurable to my wife's nerves. When my neighbor is running his "popper" eight, ten, or twelve days one could almost imagine he was in the trenches and a whole battery turned on him.—Reader.

[Answered by Prof. J. B. Davidson, Davis.]

[To overcome the objectionable noise from the exhaust of a gas engine, it is necessary to provide some form of a muffler.

For large stationary gas engines one of the most practical mufflers is a cistern into which the exhaust may be led, and allowed to expand before being led to the open air. Such a cistern may well be made by digging a hole in the ground, and filling with large rock. The purpose of the rock is to break up and cool the blast of gases from the engine. Care should be used to see that there is plenty of opportunity for the gases to escape should unburned gases collect in the muffler or cistern and become ignited. The use of a muffler of this kind will almost entirely overcome the objectionable noise described.

It is to be suggested in this connection that if a neighbor insists upon operating a noisy gas engine, it may be considered a public nuisance, and legal authorities should be consulted in reference thereto.]

POWER ORCHARD SPRINKLING.

To the Editor: I intend installing a sprinkling system to irrigate a 40-acre orchard of oranges, olives and almonds. At present I am taking water through five two-inch connections from the water company's 6-inch pipe line, but the pressure is not great enough to run the sprinklers. My intention is to build a concrete reservoir close to the 6-inch pipe line; run my 2-inch pipe into it; lay a 4-inch pipe through the center of the 40 acres with laterals extending both ways to sprinklers. I intend to install a centrifugal pump and gas engine at reservoir and connect discharge to the 4-inch pipe. The water company will not allow me to connect suction to their 6-inch pipe. What size pump and engine shall I buy; how large a reservoir should I build and if reservoir is 6 ft. deep should the pump suction be level with top or bottom of reservoir? The 40 acres is almost square and slightly rolling; highest point about 15 feet higher than top of reservoir.—W. J. K., Fair Oaks.

[Answered by Prof. J. B. Davidson, University Farm.]

The foregoing enquiry does not furnish sufficient data for a complete answer, and certain assumptions must be made.

The pump and engine used will depend upon the amount of water pumped under the conditions specified, which in turn will depend upon the design of the sprinkling system. A four inch pipe, however, will carry with reasonable efficiency from 150 to 200 gallons of water per minute. If a static head of 20 feet

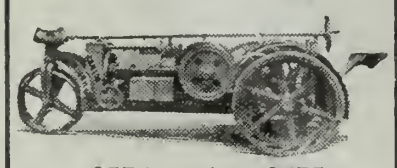
"Jackson MADE"

A Better Make Not Made

For Water Deep Under The Ground

Jackson Deep Well Turbine Pumps give continuous and efficient service. They do not get out of order as they have no valves or plunger rods. Very little care or attention needed as they are oiled from the surface. Are much lower in cost than other types of deep well pumps when the expense of dug pits, cribbing and timbering is reckoned. They raise water from the very bottom of the well, thus eliminating heavy vacuums and delivering all the water the well yields. They develop slow wells and increase their flow.



Write for Catalog No. 47 F

Like all Jackson Made Pumps These Deep Well Turbine Pumps Are the Very Best Pumps Made for the Purpose—They are Dividend Earners, Not Expense Makers

be assumed, and a fraction of 25 feet estimated, and a nozzle pressure of 45 feet be assumed, making a total head of 90 feet, it will be found that a two inch horizontal centrifugal pump will furnish 150 gallons of water per minute, and consuming 11.25 horse power. This would mean that a 12 h.p. gasoline engine would be adequate if properly rated. The size of the reservoir will depend upon the discharge from the six-inch pipe.

Further information will be necessary to discuss the problem further.

"KT" Screw Lift Gate (Type W).

Modern
Irrigation
Methods

This Company originated the Valve System of Irrigation—which completely revolutionized the methods then in vogue. Ever since that time, our motto has been—"When better gates and valves are made, K-T will make them." In line with this policy, we have finally evolved the K-T Type W Gate—illustrated above—the acme of perfection in irrigation appliances.

You cannot afford to experiment in Irrigation. Profit by the experience of men who have devoted a lifetime to the business. Our advice is free. What would you like to know?

ENGINE RUNS SEVERAL LINE-SHAFTS.

[Written for Pacific Rural Press.]

Making one gas engine do all the repair work of the farm, and a lot more too, by the use of several line shafts all in one shop saves G. W. Gibson of Colusa county, secretary of the J. S. Gibson Co., a great deal of time running to town for repairs or working along with faulty machinery.

The first thing which his 8 h.p. engine does is to pump the water for domestic use into a tank, from the well so located that a wheel on the engine shaft runs a vertical belt to the centrifugal pump in the pit. This is arranged so that the pump is automatically stopped when the tank is full.

Close by the well on the outside of the building is a grindstone and some other equipment run by a shaft from the same engine, projecting through the walls.

Within the building, the first line shaft with which the engine is connected is 12 feet long and has seven wheels to connect it to several machines and to run the other line shafts in the shop.

A power drill is one of the machines run by the first line shaft; and an air pump which stores air at 160 pounds or greater pressure to inflate auto tires, of which Mr. Gibson has a great many.

The second line shaft runs a universal grinder to sharpen all the tools used on this farm of over 1200 acres.

Still another line shaft connected to the first one runs a big drill at four speeds. The biggest line shaft, however, is across the shop from the engine; and extends its full length. Vertical belts from it run a big milling machine, a big lathe, an emery wheel and buffer, and a hack saw rigged up to run by an eccentric wheel.

In the far corner of the shop is a forge by which the blacksmithing is done. It is supplied with air from a fan connected to the line shaft and also by a hand-driven fan.

Another wheel on the same line shaft works a power hammer under which the welding is done far more effectively than it could be by hand, because it can be done so quickly with so much power.

Mr. Gibson is rightly proud of his shop which, though expensive in first cost, saves far more than the interest and cost of up-keep.

BUILT-IN SEPARATOR ENGINE.

[Written for Pacific Rural Press.]

A separator run by a motor gas engine built into its frame under the milk tank is used by W. W. Freeman of Sonoma county. A little round belt runs from the engine over two pulleys to a horizontal wheel on the central shaft running through the bowl which separates the milk. To start the engine, they wind a small rope around a projection from the fly-wheel and then sit around until the milk is separated.

Grand Prizes

The International Jury of Awards of the Panama-Pacific International Exposition has awarded Grand Prizes for the Caterpillar Tractor and the Caterpillar Harvester. Only one Grand Prize is awarded in each class—the rating is made on the skill in invention, on the value to the world and to agriculture, and on similar points.

Send for Bulletin C 309, which gives full information about the Caterpillar Tractor, or ask for literature on our harvester line.

General Agricultural Review.

CITRUS AND SEMI-TROPICAL.

Growers in the Pomona section have received $511,515.83 from the Pomona Growers' Exchange.

A. A. Bennett of Orange recently sold his 20-acre Valencia orchard to W. Meeker of San Francisco.

Arrangements are rapidly being made by the Northern Tulare County Citrus Association for the season's pack of oranges and lemons that will be shipped from Suitana.

An organization of citrus growers has been organized at Glendora to be known as the Glendora Hillside Growers. The following officers were elected for the first year: D. W. McDonald, president; C. A. Hammond, vice-president; and S. R. Pratt, secretary.

DECIDUOUS FRUITS.

The Beaumont Fruit Growers' Association of Riverside county is shipping Bartlett pears.

The dried fruit season at Hanford is in full swing now, and tons of peaches are being packed.

Live Oak orchards are suffering from a water table of 2½ to 3 feet under the surface.

The pear crop of the Paradise section of Butte county is reported to be about 20 per cent of normal this season.

The weekly payroll of the Porterville cannery totals $2500; the largest daily output so far has been 42,000 cans of peaches.

The harvesting of prunes has commenced in Anderson Valley, Shasta county; it is expected the crop will amount to about 1500 tons.

Five cars of Gravenstein apples were recently shipped to Buenos Aires, Argentine, S. A., by Garcia & Maggini of Sebastopol.

An independent Malaga grape packer of Dinuba was the subject of the first arrest for violation of the new fruit standardization law.

Sutter county growers have been irrigating peaches and prunes despite the props already required to prevent breaking.

That the white fly is prevalent in Marysville, although not to any serious extent, is the statement made by the County Horticultural Commissioner of Yuba County.

Drying peaches will pay the labor, keeping many employed, and will also pay something for the peaches, according to W. N. Woodson of Corning, who is drying his.

A movement has been started in Butte county to establish a shipping industry there for deciduous fruits, provided sufficient acreage can be secured to assure carload rates when the fruit comes into bearing.

On Aug. 23 a fire, probably of incendiary origin, threatened the large plant of the Central California Canneries company at Yuba City; but the prompt action of the night watchman prevented any damage.

GRAIN AND FIELD CROPS.

Sutter county is harvesting an immense crop of grain.

Eight cars of barley were shipped from Chowchilla the past week.

Beans up the river near Sacramento have set fine crops.

It is estimated that Canada will have about 175,000,000 bushels of available wheat this season.

Two to three cars of sweet potatoes are being shipped every day from Atwater.

It is stated that hay is as abundant this year in the western part of Nevada as in former years.

It is reported that the Saticoy lima bean crop will be about 20 per cent less than last season.

It is estimated that the grain crop on the west side of the San Joaquin is but half of normal this season.

The red spider is doing considerable damage to the bean crops of Sutter, Yuba, Sacramento and Yolo counties.

The Orland cannery recently commenced operations; tomatoes will be the principal product handled this season.

Up to Aug. 16, just two months from the date of the first shipment of the season, a total of 1001 cars of melons left Turlock.

C. A. Patrick of the Patrick-Rudy Seed Company of Kansas City has contracted for 250,000 pounds of Lassen county alfalfa seed.

It is expected that many hops will be shipped this year to Australia from the United States, on account of the drouth in the former country.

Great damage is reported to the south Texas rice crop; growers had expected one of the largest crops in years and it will be less than 50 percent of normal.

Geo. Marchbank, County Horticultural Commissioner of Madera county, reported recently that the blackeye and tepary bean crop was promising; rabbits injured the tepary, but not the blackeye beans.

A freak watermelon has been produced on the ranch of J. A. Meek of Stanislaus county. It weighs 43 pounds, is perfect in shape, and has imprinted on the dark green of its skin a full yellow moon and scores of stars.

GRAPES AND SMALL FRUITS.

Hanford raisin growers expect to commence harvesting the first week in September.

Malaga grapes from the San Joaquin Valley are reported to be selling for $1.35 to $1.80 a crate on the eastern markets.

A transcontinental rate on shipments of green grapes in lug boxes has been asked of the Interstate Commerce Commission.

The California Associated Raisin Company has sent out a request to growers not to pick their grapes until they test 17 per cent sugar.

Harvesting of one of the biggest Thompson seedless grape crops in years will shortly commence in Sutter and Yuba counties.

The California Associated Raisin Company's brand, "Sun Maid" raisins, will be sent out in new cartons with the picture of a girl's head set in the light of a rising sun.

On August 24, grape picking commenced in the Kerman district when the Pioneer Fruit Company opened its packing house to begin the run on Malagas.

It is said that the California Associated Raisin Company have commenced the publication of a magazine to be known as the "Sun-Maid Herald."

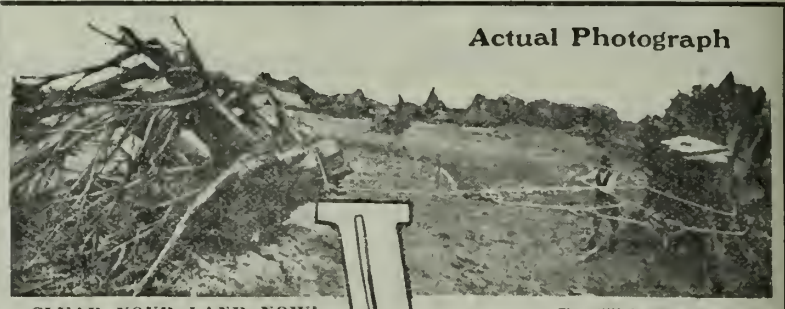
Experiments in Zante currant growing carried on near Lincoln, Placer county, have proved very successful; an effort is to be made by the State to interest growers in its extensive culture.

The Viticultural Commission has sent a representative among the grape growers of the San Joaquin Valley urging them to co-operate in keeping up the standard established in other years for table grape and raisin shipments.

Grapes on the Lucerne vineyard of Hanford will be made into raisins this season instead of being crushed for wine. The tonnage is expected to be between 1200 and 1500 tons and the crop is signed up with the California Associated Raisin Company.

In order to keep inferior raisins off the market, the California Associated Raisin Company has issued the statement that they will buy all Feherzago grapes at $10 per ton delivered at some station or winery which will be designated later.

The California Wine Association announce that they will not manufacture any wine this season; they have offered either to lease one of their plants to growers who wish to crush their own grapes or to make wine for growers provided the question of price and terms is left to the Association.



MISCELLANEOUS.

The Orange County Fair will be held the week of October 12 to 16.

San Joaquin Valley bee farmers expect a normal crop of honey this season.

November 23 has been set aside as National Pineapple Day at the Panama-Pacific Exposition.

THE YUBA BALL TREAD TRACTOR

Can be specially equipped to work on very soft ground, adobe or sand. The catalogue tells how. Send for it.

The Yuba Construction Co.
DEPARTMENT A-5
433 California St. San Francisco, Cal.

The St. Helena Vintage Festival and Napa County Farm Bureau Fair will be held at St. Helena from Sept. 3 to 6.

An orchard experiment station in connection with the University of California is under consideration for Fair Oaks, Sacramento county.

Tent caterpillars are found in great numbers in Nevada county on the manzanita and birch bushes; growers fear for their fruit trees.

Geo. Wilson, graduate of the Agricultural Department of the University of California, has been appointed Assistant Farm Adviser of Humboldt county.

At a recent meeting of the Humboldt county Farm Bureau, a "Gopher Day" was suggested by one of the members for the purpose of cleaning the county of the pest.

A movement has been started to secure a permanent building for the big display of California products in the California Building at the Panama-Pacific Exposition.

It is estimated that there has been an increase of 50 per cent in the irrigated crops grown in the Oakdale Irrigation District this year over last.

Twelve cans of San Joaquin county delta peat soil have been shipped to Germany where a chemical analysis will be made by a prominent fertilizer firm, which will be of great value to delta land owners.

A Berkeley woman enjoys the distinction of being one of the few women to be employed as a lookout in the Forest Service. Her post is the station which overlooks the eastern portion of the Tahoe National Forest.

The International Irrigation Congress has been placed "on wheels" and will meet in Stockton September 13 and 14; in Fresno September 15 and 16; in Sacramento September 17 and 18, and in San Francisco September 20.

OLIVES AND NUTS.

The almond orchards of Merced county are reported to be suffering from the red spider pest.

The harvest of almonds in the Oakdale section of Stanislaus county has begun.

According to growers, the walnut crop of Santa Barbara county will be about three weeks earlier this season than usual.

A large concrete building will shortly be erected as an addition to the Ehmann Packing Company's plant at Oroville.

The Maywood Packing Co. of Corning is putting out 30,000 to 35,000 cartons of their new product, the dehydrated olive.

R. F. WILSON, STOCKTON, CAL.

ALFALFA REPLACING PEACHES.

To the Editor: I am taking out a block of 250 ten-year-old Muirs. Would it be best to plant the ground to alfalfa as soon as I can get it in shape? (I have a pumping plant handy.) Or to fertilize and then plant? Or to put in an early cover crop and wait till spring before putting in the alfalfa? I am lopping off the branches at the crotch. What is the easiest and cheapest way of getting out the stumps? If I gave the stumps a thorough soaking, would a medium weight pair of horses pull them out with block and tackle? Or would an 18 h.p. Yuba tractor pull them on direct pull?—L. D. B., Yuba City.

[We should get on the water, get out the peaches and get in the alfalfa this fall, so the latter can get a good start before frost. We see no reason to put money and time on the cover crop and if the land grows good big peach trees it is rich enough for alfalfa as it is. Manure would be good, of course, but probably you can use it to better advantage on some other crop. You could get the stumps out of wet ground with team and tackle if rigged right, but it would cost you more than to get a stump puller probably. You might try the tackle and see how it works; it depends of course on how strongly fixed the stumps are. The tractor ought to walk right away with them.—Editors.]

EGYPTIAN WHEAT AND CARROTS.

To the Editor: Will Egyptian wheat make good silage after the seed is ripe enough to harvest? The seedsmen from whom I bought my seed say that they are unable to inform me whether stock will eat the forage after the grain is ripened before cutting. The Egyptian wheat makes an immense amount of green fodder, as many as 50 or 60 stalks to the hill, and grows to a height of 7 or 8 feet. One pound of seed will be sufficient to plant an acre, dropping 4 or 5 seeds to a hill. We planted ours too close (24 in. by 36 in.). Three feet apart each way would have given a better stand. Most seedsmen say carrots can be sown any month in the year. That may be true on the coast, or north of San Francisco, but it won't answer here. We have tried to grow both beets and carrots during the summer months, but never succeeded until this season. By soaking the seed 24 hours and allowing it to start germination, and opening up the furrows in the dry soil, which must be well pulverized, we sowed the seed after drying it with fine sand so that it would not choke up the drill; covering it and rolling it well. We then with a common watering can watered the rows night and morning until they got the 2nd seed leaves. After this we irrigate and cultivate as usual. Watering is a little trouble, but in our soil it is necessary to keep the surface from baking hard as a brick. Of course this only applies to garden culture. Hand watering on a large acreage would be too expensive and too slow.

San Jose. Sam'l Haigh.

[We presume what you received as "Egyptian Wheat" is a sorghum. It is unfortunate that such a name was ever given it. If it is a sorghum then experience shows that the stalks can be successfully siloed after the grain is ripe enough to cut. Sorghum stalks are different from Indian corn stalks in this respect as they hold more moisture after the heads at the top have matured. Your account of starting carrots is very interesting.—Editors.]

[Written for Pacific Rural Press.]

HOW GOOD IS OUR BUTTER?

Ten per cent of the approximately 200 butter makers in the State send cubes to the University Butter Scoring Contest held monthly. About 75 per cent of those who take part, pasteurize their cream, according to Prof. L. M. Davis of the University Farm, who has charge of the contest.

Each butter maker is provided a blank to be filled out and sent in with the cube, telling all the necessary details regarding the cream and the method of manufacture. The cubes are simply numbered so that no one knows the maker until the judges have announced their criticisms and score; then Prof. Davis compares the score and the judges' criticisms with the blanks filled out by the butter maker and sends him a personal letter of suggestions and criticisms.

Scores of less than 90 are not published, nor are others if requested to be withheld. The results are sent to participants and to dairy papers.

One of the strong points brought out in the last contest was the fact that butter makers cannot make from poor cream a product that will compete in the markets with eastern butter or Australian butter. This was evidenced by the fact that only one entry was above 33 points, which is the standard for extras, although it is generally assumed that butter makers entering the contest send the best butter they are able to make.

One creameryman whose score was below 90 answered the letter of criticism, thanking Prof. Davis for withholding his score and saying that he had done everything he knew how to get better cream. How can this be done?

Draft Horse Breeders to Meet.

[Written for Pacific Rural Press.]

With the object in view of entertaining the largest gathering of western and eastern horsemen ever held in California, the directors of the California Draft Horse Breeders' Ass'n are busily engaged completing the final arrangements for their annual meeting to be held at the Panama-Pacific Exposition October 1.

At a directors' meeting held in San Francisco on August 20, the progress of the program committee was reported, Secretary J. I. Thompson reporting that he had received word from several prominent horsemen in the East to the effect that they would be in San Francisco on that date and be glad to act as speakers.

It was definitely decided at the meeting to hold a business meeting of the association at the Livestock Convention Hall in the afternoon, where election of officers and other business will be transacted, deferring the program till evening, when a banquet will be served, probably on the Exposition grounds.

Coming as it does at the time of the Exposition's draft horse show, it is expected that practically every horse breeder will be present.

In line with their policy of aiding in every way possible the colt shows which are to be held in the State this fall, it was decided to give a silver medal to the grand champion foal at all recognized shows, and also give a gold medal at next year's State Fair to the grand champion foal of the State selected from the winners of silver medals at the local colt shows this year. It is also expected that a suitable cash prize will be provided for by the State Agricultural Society for this class at future State Fairs, thus encouraging farmers to show at both the local and State shows.

J. I. Thompson reported that he has been advised by the Farm Advisers in San Joaquin, Napa, Alameda, and Ventura counties that colt shows will be held in each county this fall. This with the Solano county show will insure good representation at next year's State Fair, and establish the colt show in California on a permanent basis.

Active interest is being shown in all quarters regarding the "better horse" and this was reflected in the optimistic spirit of the meeting. A number of very important measures are to be taken up by the Association this fall, which will, it is thought, do much toward advancing the horse industry of the State.

The program for the annual meeting will be completed in a short time and will appear in a later issue of this paper.

KILLING ALFALFA DODDER.

To the Editor: Will you kindly inform me the best method of destroying dodder? I have quite a bit and I don't seem to be able to get rid of it.—C. F., Tulare.

[We have to answer this question every few months, but this is probably unavoidable because we have so many "new subscribers" coming all the time. Dodder is a parasitic plant which starts from a seed brought in, generally, with the alfalfa seed. As soon as this little seedling starting from the ground gets high enough to grasp and entwine an alfalfa stem, it grows into this stem, sending root-like suckers into the tissue of the stem. As soon as it has done this the part near the ground dies and disappears. Dodder is an annual—that is, it has to start every year from the seeds which are freely dropped by the older plants which are attached to the alfalfa. Anything which will prevent its going to seed will kill it off in a year. The usual mowings for hay are too far apart, because the plant blooms and forms seeds as it grows; and by the time the alfalfa is ready to cut some of the lower blooms may have formed seed which will be ripe enough to germinate when dried with the hay and dropped to the ground as the hay is gathered up. Dodder can be prevented from blooming and seeding by pasturing close all summer. Another way to kill it off is by burning before the seed ripens. This is sometimes done by spreading straw and burning, but it is easier on a small patch to go over it with a plumber's gasoline torch, burning all you can see of it. Remember, if you prevent blooming, the dodder will disappear.]

SHEEP AND WOOL INVESTIGATORS MEET.

[Written for the Pacific Rural Press by Prof. R. F. Miller.]

On August 9th to 11th a conference of sheep and wool investigators of Western Agricultural Colleges was held on the Panama-Pacific Exposition Grounds at San Francisco. The following colleges were represented: J. A. Hill, Wyoming; R. R. Dodderidge, Montana; J. T. Cain, Utah; F. D. Wilson, Nevada; R. F. Miller, California, and J. M. Jones, Texas.

The improved system of preparing wool for market was discussed, sheep problems of the different states were considered, and the wool exhibits of foreign nations and the various states were inspected.

Mr. W. T. Ritch of Salt Lake City was present and gave a review of what had been done under the improved system, or the skirting and classing of fleeces, at the Bitter Creek Shed, Wyoming. Professor Hill also told of the success at the Swastika ranch at Laramie, Wyoming.

The general system was highly endorsed by the men present. It is operated on a sound business basis, the wool is put up clean, is classed and is packed in uniform bales, the grower becomes familiar with the grade of wool he is producing, thereby encouraging breeding for same, and last, but not least, the sheep are easily and quietly handled.

The financial advantage is certain to follow as soon as the market becomes adjusted to the new method of marketing. For illustration, we only need to turn to Australasia, the greatest wool-producing country in the world, practically the same size as the United States, and running nearly twice as many sheep.

An association was formed named "The Range Wool Improvement Association." The advisory committee is to be composed of one member of the Animal Husbandry Division of each of the Western Agricultural Colleges represented; also one member to act as state instructor who is devoting time to sheep and wool. In this way it is planned to conduct an educational campaign, Mr. Ritch being the official lecturer, to bring this improved system thoroughly before the sheep men of each state. If it meets with approval, it is hoped to construct two modern shearing sheds in each state to afford sufficient work for a trained crew for at least four months.

The wool exhibits at the Exposition proved very instructive. In the Australian building, among other exhibits, wool stands out prominent. A striking display of the Australian Merino may be seen here. In the Palace of Agriculture, New Zealand has spared no means in arranging a very attractive display, characterized by the selection of crossbred fleeces. Lincoln and Romney fleeces are also well represented and a collection of scoured bellies, pieces and and pulled wool is displayed.

The Argentine Republic, though not quite as extensive, shows a collection of wools native to that country, mainly Lincoln-Rambouillet cross. Full information is given with each fleece regarding the breed, shrinkage, etc.

The states of Ohio and Nevada also have quite attractive exhibits.

University Farm, Davis.

A farm bureau fair is planned for Oakhurst, Madera county, September 27 under the auspices of the five units of the Farm Bureau.

FOR SALE
8 choice, registered tuberculin-tested
Short Horn Bulls
Aged 18 to 25 months.

Dried Beet Pulp for Dairy Cattle.

To the Editor: My cow declines to eat beet pulp, either dry or soaked. I persuade her by mixing cocoanut meal with it, one part cocoanut to two parts beet, soaked. What is the feeding value of beet pulp compared with bran or alfalfa meal?—G. H. B., Cupertino, Cal.

[Answered by Prof. F. W. Woll, University Farm, Davis, Cal.]

Dried beet pulp is not particularly palatable feed, but it does not take dairy cows long to get accustomed to it and they will eat large amounts right along when once started on this feed. Some cows take readily to it from the beginning, while others do not; this may happen with nearly all kinds of feed and is nothing against the feed. The best way to teach cows to eat pulp is to feed a little at first with other concentrates, and gradually increase the allowance until the grain mixture decided upon has been reached. Some farmers prefer feeding the pulp wet, and some feed it dry. It does not make much difference how it is fed, although most cows take to it more readily when it is fed wet than when dry and will eat larger quantities of it in the former form.

Cocoanut meal is all right to mix with the pulp. A mixture of barley and cocoanut meal, or barley and mill feed, is better, since several feeds make a more appetizing grain mixture than one or two and will favor a high production. The reason why the correspondent did not have better success in getting his cow to eat the pulp is probably that she did not need much more feed than she was furnished in the rough-age fed, or he did not try her long enough. Good dairy cows will always respond to grain feeding and take to a mixture containing beet pulp as readily as other grain mixtures.

The fact that beet pulp, as a general rule, is a relatively cheap feed on the Coast makes it a very desirable component of our dairy rations. It contains no injurious component or chemical substances that would render it undesirable as a dairy feed or a component of the grain ration for dairy cows. Its feeding value may be considered nearly equal to that of wheat bran and somewhat higher than that of alfalfa meal, ton for ton.

HOG FEEDING PROBLEMS.

To the Editor: Will wild parsnips poison hogs? Will hogs take anthrax? What are the relative feeding values of corn and sugar beets, half sugar and half mangel?—C. A. T., Bishop, Cal.

[Answered by Prof. F. W. Woll, University Farm, Davis, Cal.]

While parsnips are probably not poisonous to any of the farm animals, at least there is no evidence that they are, cowbane or water hemlock, which is sometimes incorrectly called wild parsnips, is exceedingly poisonous to stock. Hogs would not be likely to eat it, but they might, and poisoning would doubtless result in that case.

I am informed by our veterinary division that hogs are subject to attacks of anthrax. It is sometimes called quinsy by farmers as one of the first symptoms is a swelling of the throat. The disease is, however, not common in hogs, as is evidenced from the fact that no mention is made of it in the literature on the subject of swine diseases to which I have access.

I take it that the last inquiry refers to the grain of Indian corn and not to corn fodder or green corn. In so far as two feeds of such different character as sugar beets and corn can be compared, I would say that it would take about 6 to 7 tons of sugar beets to equal a ton of corn or other cereals (except oats) in feeding value. If it is intended, for instance, to partly replace corn in a mixed ration with beets, the production will not be affected appreciably when the substitution is made in the ratio of 1:6, by weight. This has been thoroughly tried out in a large number of feeding experiments and is in accord with our general knowledge of the contents of valuable nutrients in these feeds.

The different varieties of mangels vary greatly in their content of dry matter; some contain nearly as much dry substance as sugar beets, while others contain only one-half as much. The average water content of half-sugar mangels appears to be about 87 per cent, while good sugar beets will contain 80 to 85 per cent of water (15 to 20 per cent of dry substance).

TEST CREAM BEFORE SHIPPING.

[Written for Pacific Rural Press.]

"Why is it that my cream test is nearly 40 per cent sometimes and the next time below 30 per cent?" said a dairyman recently. "I have the same cows, the same feed, the same adjustments on the separator, and I try to run it at the same speed."

The best suggestion we could make was either to adjust the matter by conference with the creameryman, or, with far more satisfaction, get a small Babcock tester and know whether such variation existed. Aside from the more important use of the tester in checking up the value of each cow separately, he might save the cost in a year on the cream test on which the price is based.

It was pointed out that the creameryman who knows there is a tester on the ranch, is a little more careful to be exact in his test at the factory.

A Babcock tester to be run by hand, testing four samples at once of either milk or cream may be obtained from our dairy supply advertisers for $7.00. The boys can run it and get as accurate a test as the most expensive apparatus, and it will make them more interested in the milking.

PURE-BRED HOG PRICES.

[Written for Pacific Rural Press.]

"Good high-grade pigs are all right if they are raised for nothing but butchering, but purebreds are just as good as the best grades for the block, and with registered purebreds there is always a chance for a premium as breeding stock over the price that would be paid for butchering.

"Instead of selling at 6½ cents, the purebreds may often be sold at a price that will make the whole herd average as much as 20 cents per pound," says E. C. Rand of Sonoma county.

The prevalence of hog cholera around Modesto is reported.

NOT ONE, BUT BOTH, FOR COWS.

To the Editor: Will you kindly let me know through your columns which would be the better winter feed for dairy cows: rye or vetch, and what variety and the one making the quickest feed?—F. R., Turlock.

[They are better together than either one is separately, both for good growth, ease of handling and balanced feed. Either the common vetch or the hairy vetch sown as soon as the ground is well wet down, with either rye or oats, ought to fix you well while grass or alfalfa are coming. Rye and hairy vetch are the better growers during low temperature.—Editors.]

TESTING NOT DANGEROUS.

To the Editor: Would you be kind enough to inform me if there is any truth in the statement that a cow that is with calf when tested would likely lose the calf? Is the testing process in any way detrimental to a cow?—H. W., Sonoma.

[There is no danger of abortion from testing cows for tuberculosis if the test is properly administered. When cows are in this condition the Intradermal test should be used.]

BLACK LEG
LOSSES SURELY PREVENTED by Cutter's Blackleg Pills. Low-priced, fresh, reliable; preferred by Western stockmen because they protect where other vaccines fail. Write for booklet and testimonials.
10-dose pkge. Blackleg Pills $1.00

GRANDSONS OF TILLY ALCARTRA
At Prices within Reach of Every Breeder and Dairyman.

A Grandson of Tilly Alcartra.

We have several splendid grandsons of this now famous cow which we can deliver to you at prices which will suit the pocketbooks of every dairyman wishing to improve the quality of his herd, whether it be a grade or pure-bred herd. These bulls are sired by our herd bull, Prince Alcartra Korndyke and out of A. R. O. cows, and are the only living grandsons of a cow having a record of over 30,000 pounds of milk in a year. Such an opportunity for increasing production has never been offered DAIRYMEN AND BREEDERS in California, price and quality considered. Buy one of these bulls and solve your low production problem. DAIRYING.

G. G. Wenger of Modesto is getting a nice start in Holsteins and Berkshires.

A. D. Medford of Salida sold 4 registered Holsteins to Jas. Gibson of Modesto.

Hartman of Ripon is shipping sanitary milk to Crocker where it is sold for 10 cents a quart.

The Jersey cow, Idle Fern Beauty, belonging to J. J. De La Mater of Stanislaus county, produced 573 pounds butter in 10 months.

Dos Rios Ranch, Modesto, recently shipped a yearling registered Jersey heifer to Thos. Allen of Riverside. The price paid was $200.

Murry & Jones of Ceres, breeders of Jersey cattle, have a fine bunch of stock. They expect to do some official testing in the near future.

R. W. Stellar, manager of the Merced Ranch, Modesto, is planning to go East after Holsteins just as soon as the quarantine is lifted.

F. D. Keeny of Hughson has ordered a Jersey bull from the Hood Farms, Mass., which will be shipped as soon as the quarantine is lifted.

The J. S. Gibson Company of Williams sold the Holstein bull, Clifden Jetze Oakwood, on August 25, to Roeber Bros. of Delevan.

A tract of 1500 acres in Newman which was put under irirgation last year by the Simon-Newman Company is now being subdivided into dairy farms.

Golden Ladd Opa, belonging to Jas. A. Goodall of Turlock, just completed an official test. In 365 days she made 541 pounds butter, figuring 85 per cent fat.

J. A. Pelander of Salida is completing a new barn which with equipment will cost him $2,000. It has stalls for 14 cows, 6 box stalls, and now holds 45 tons of hay.

A most precocious calf is reported to be owned by Alfred Conner of Newburgh, N. Y.; at the age of seven days it gave milk and now at the age of a month it is being milked daily.

Having won prizes in nearly every class, the famous Morris & Sons' herd of cows are now practically debarred from further competition in the Holstein-Friesian Association of America.

W. J. Hackett of Ceres, Jersey breeder, has ten head on official test. Greys Kings Regina, daughter of Golden Tina, has just completed a year's test with 310 pounds fat from 7178 pounds milk.

E. O. McClure, Holstein breeder of Modesto, has a son of King of the Pontiacs as herd sire. All the cows and heifers are being given A. R. O. records, one cow recently making 28.5 pounds butter in 7 days.

C. J. Outland, Modesto, recently sold to K. W. Abbott of Milpitas four choice cows. Mr. Abbott has placed them on official test; and one, Yetzafha of Riverside, is making over 1½ pounds butter daily.

F. D. Wulff of Modesto owns a registered Jersey, Noble Warder's Bessie, that is the youngest cow on record. She calved at the age of one year and 18 days; she is now milking 16 pounds daily.

Dairymen of Tillamook county, Ore., recently made a test to see which was the better cheese breed, the Jerseys or Holsteins. The test showed no difference, the average cow of each breed yielding 3.3 pounds.

J. M. Campbell of Escalon will erect on his 40-acre ranch a new dairy barn. Mr. Campbell is a new man in the Holstein game. His herd is headed by Torence Korndyke and out of 28½ pound three-year-old who is half sister to Tilly Alcartra.

A syndicate of farmers is forming near Corning to buy the Jersey bull, Torono of Ferndale, bred at the Hood Farms in Massachusetts and now owned by F. L. Cook of Corning, whose entire herd of young stock except three consists of this bull's daughters. Mr. Cook desires to keep the bull in his vicinity in order to build up the dairying there and get a creamery at Corning.

Grandsons of the recent world's champion cow, Tilly Alcartra, sold by the J. S. Gibson Company of Williams during the past season are named below. The sire of these calves is Prince Alcartra Korndyke, "the only sire to have a 31-pound sire and to have a dam (Tilly Alcartra) with a sire, grandsire, great grandsire, and great-great grandsire to form a direct chain of four generations each of which have a 31-pound daughter." Tilly Alcartra's latest records are 30,452 pounds of milk in a year; 3201.7 pounds in 30 days; 783.7 in 7 days; 1189 pounds of butter in a year; 121.11 pounds in 30 days; and 32.22 pounds in 7 days, the short records having been made in the first freshening after her great yearly record. Juliana Matter Clay Alcartra to Alan Milnes of Riverdale; Calamity Wayne Alcartra to A. H. Eager of Red Bluff; Korndyke Acme Alcartra to G. W. Locke & Son of Sacramento; Alcartra Oleander Zwartbak to Mrs. M. H. Huff of Rocklin; Prince Jetze Alcartra to

REGISTERED O. I. C. SWINE—C. D. CONWAY, Lairport, Cal.

POLAND-CHINA HOGS—C. A. Stowe, Stockton, Cal

SHEEP.

FRANK MEACHAM, Petaluma, California.—Breeder Shropshire, Rambouillets, American Merinos, both sexes. Take electric car at Santa Rosa or Petaluma for Live Oak.

CHAS. KIMBLE—Breeder and Importer of Rambouillets, Hanford, Cal.

BISHOP BROS., SAN RAMON, CAL.—Breeders and Importers, Shropshires.

MISCELLANEOUS.

ALFALFA SEED—If you are going to be in the market for Alfalfa Seed, get into communication with us at once. Will soon be harvesting the new crop. Booking orders now. Write or wire. V. A. Peterson Alfalfa Seed Co., Arbuckle, Calif.

FOR SALE—20 bead grade Ayrshire cows bred to registered bull of best quality. Wyndham Dairy, Redding, Cal.

BREEDER of Registered Holsteins and Poland China Swine. E. E. Freeman, R. 5, Modesto, Cal.

J. M. Youtsler of El Centro; Glenwood Alcartra Korndyke to H. M. Woodward of Los Molinos; Juliana King Alcartra to E. E. Gerry of Gridley; Aaggie Acme Alcartra to Frank Packer of Chico.

HORSES AND SWINE.

C. E. Barrows of Los Molinos plans to take seven Berkshires to the Panama-Pacific Exposition.

Harry Chamberlin of Live Oak has a sow that has had 12 pigs in each of her past three litters.

Milo, alfalfa, and hogs beat any other kind of farming, according to J. O. Hartman of Live Oak.

Poland Chinas have been fattened to 300 pounds at 8 months by S. F. Williams of Chico.

S. F. Williams of Chico expects to show several fine Jerseys at the Panama-Pacific Exposition.

Dr. Spaulding of Turlock, an old Illinois Poland-China breeder, is getting back into the game again.

S. F. Wiliams of Chico reports having sold over 300 Poland-Chinas the past four years.

Teedom & Son of Delhi are getting into the Duroc game. They plan to hold a hog sale next spring.

Ed. Johnson of Turlock is having more orders come in for his Durocs than he can fill.

Calla Grove Farm, Ripon, received a shipment of Berkshire gilts from A. B. Hampshire last week.

T. D. Collins, Denair, says the only trouble raising Duroc-Jersey Hogs is to raise them fast enough to supply the demand.

Leland Lucas took first prize in the pig fattening contest recently held hy the agricultural class of the Visalia High School.

The Stanford Vina Ranch is remodeling 50 of the old race-horse box stalls for farrowing pens which will be 10x16 feet.

T. R. Nickalls of Los Molinos expects to make much better money by combining with a neighbor to make carload shipments of uniform hogs.

John Daggs of Modesto, the Duroc-Jersey man, is receiving numerous inquiries in every mail regarding his hogs. He reports sales good.

Fattening 87 hogs from an average of 167.09 pounds June 7, to 188.85 June 15 was accomplished this summer at the Stanford Vina Ranch.

Schaffer & Renshaw of Atwater are going in for Berkshires on an extensive scale on their 240-acre ranch on the Merced river near Arundel.

Geo. Wingfield, Reno, Nevada, recently sent two agents to England for the purpose of purchasing some of the equine bluebloods of that country.

French army officers at Philadelphia recently commenced the examination of 41,000 horses assembled there before shipment to their country for war purposes.

A year and a half ago, R. J. Rose of Modesto paid out for his foundation stock of Duroc-Jerseys, $223. Since that time he has sold $814.85 worth of hogs, and has a goodly number remaining on his ranch.

Hogs fattened entirely on dried figs make the finest kind of hard pork, according to U. S. Wertz of Chico, who butchered six for Pete Moore of Gridley. They weighed over 200 pounds each at 9 months.

J. M. Knittle of Turlock recently paid W. D. Trewhitt of Hanford $35.00 for a hred Poland-China sow. He now has seven little Poland-Chinas for which he wouldn't take $35 quick money.

John Decker & Sons of Tulare are utilizing the unmarketable cantaloupes and watermelons by feeding them to their registered Duroc-Jerseys. They find that one ton of cantaloupes is equal to about 200 pounds harley in feeding value.

A sow overheated and cooled off by pouring water on her was paralyzed and has not recovered, though her owner, S. F. Williams of Chico, hopes to save the pigs. C. E. Barrows of Los Molinos says it is all right to pour water on an overheated hog's head and where it can lie down on it; but never on its back.

H. L. Murphy of Perkins reports having for sale some fine Shorthorn bulls and Berkshire sows—all registered. Some of the animals have been brought from the East, and others are part of the Murphy foundation herd.

The Mistletoe Ranch of Modesto are finishing about 100 hogs a month. Just recently they had 65 head gain in 6 days 730 pounds, or an average of 1.86 pounds each daily. They were fed a ration of rice, middlings, and rolled barley, half and half, and buttermilk.

Sept. 1 entries closed for the horse show that will be held at the Panama-Pacific Exposition Sept. 30 to Oct. 13. From the number of entries made, and the charcter of the entrants, it is the belief of the Exposition officials that the show will surpass any ever held before in the United States.

A. M. Henry of Farmington, president of the California Swine Breeders' Association, states that in the directors' meeting held at Stockton, Aug. 25, permission was given to the Poland-China breeders to hold a consignment sale at Hanford under the auspices of the Association, provided certain rules and regulations adopted by the directors were followed.

A. L. Stephenson of Los Molinos has a purebred sow, Chub the 3rd, two of whose sow pigs are square blocks weighing 60 pounds at 10 weeks, and two others of which are only slighily lighter. They are not for sale, as Mr. Stephenson thinks them worthy of being the foundation for a great herd. Chub the 3rd is a litter mate of Royal Lee 8th owned hy Mr. Steele of Salem, Ore.

E. W. Westgate and John McCormack of Rio Vista paid this office a visit last week while attending the meeting of the Directors of the California Draft Horse Breeders' Association. Mr. Westgate stated that satisfactory progress is being made in connection with the Colt Show to be held at Rio Vista September 9, and that they are expecting several purebred breeders from the outside to enter their stock. It was largely through Mr. Westgate that the Directors of the Association agreed to provide the Sterling silver medal and watch fob for the grand champion foal at the colt shows this fall.

CATTLE AND SHEEP.

The Central Stockmen's Association held a convention at San Luis Obispo on August 28.

Heavy shipments of cattle are reported from Nevada to the San Francisco markets, one firm shipping 60 cars to the Western Meat Company.

At Thornton, San Joaquin county, over 10,000 sheep helonging to the Western Meat Company were sheared recently.

Forty-two carloads of stock, the largest shipment made from that section for several years, left Chico on August 25 for San Francisco.

J. E. Wilhoit, in charge of the Shorthorn view herd at the Panama-Pacific Exposition, reports that the cattle are in fine shape and that he could have sold every animal in the herd twice over if they had been for sale.

Sheep raisers of northern Sonoma and southern Mendocino counties are formulating plans of organization for the purpose of arriving at a uniform system of wool grading and for disseminating information of value to wool men.

MISCELLANEOUS.

Atwater is going to hold a District Fair on Sept. 18. Live stock of all kinds will be shown.

J. H. Hersh of Denair is starting registered Holsteins and Duroc-Jerseys, and has a side line of sheep. He figures that the sheep will live on what the cows and hogs leave.

Sec'y. Paine of the State Agricultural Society has placed the State Fair grounds at the disposal of eastern stockmen who wish to condition their animals before taking them to the Exposition.

Receipts at the Portland Union Stock Yards for the week ending Aug. 24 were: Cattle, 1176; Hogs, 2081; and Sheep, 1594. Cows and heifers, as well as the entire cattle market, were considered steady to strong. Bulk of steer sales went at $6.25 to $6.75. Top hogs sold for $7.55. The lamb market especially has shown good strength; they readily sold up to $6.50.

Between 40 and 50 silos have been erected in Stanislaus county since the first of January, according to H. T. Fisher, Silo Expert of the Tuolumne Lumber Co. of Modesto. A pretty good beginning.

Contrary to word recently given out, the Illinois commission to the Panama-Pacific Exposition will not withdraw prizes it had offered livestock raisers of that State for exhibits at the stock show at the Exposition this fall.

Building to a HIGH Standard, Not Down to a LOW Price

IS OUR MOTTO

If a better silo than the

Ideal Green Feed Silo

could be built, we would build it.

Our TWENTY YEARS of practical experience in **silo building** has enabled us to discover and eliminate the faulty features of design and construction and to manufacture a silo that is a thoroughly practical piece of equipment.

WE COULD CHEAPEN the IDEAL GREEN FEED SILO:

BY putting on ½-inch hoops instead of ¾-inch.

BY furnishing a door that would leak instead of the patented refrigerator, air-tight type that is an exclusive feature in the IDEAL.

BY not furnishing a 3-ply circular plate at the top to hold the silo rigid and round and prevent its collapsing.

BY not supplying an acid-proof, water-proof paint for the inside of the silo.

BY making the doors serve the purpose of a ladder instead of furnishing a ladder complete within itself fastened to the silo at one side of the doors.

BY faulty design and inferior material and construction and omitting a galvanized steel ventilator for the roof.

But if we did, you would not be satisfied with it.. A silo to be of any value must be absolutely **air and water-tight** and of such design, material and workmanship that the shrinkage, while standing empty, can be readily taken up and the silo made just as serviceable as when first constructed **without its being necessary to rebuild it every year**, or to use pitch to chink up the cracks, as is necessary in others.

OLDS CREAM SEPARATORS

Why not make that new separator an Olds, while the price is right? Owing to a receiver's sale, I am selling this well-known, standard line of cream separators at less than wholesale prices.

Here are my prices for the Olds Cream Separators:

No. 14— 500 lbs. milk per hour **$45.00**
No. 16— 750 lbs. milk per hour **50.00**
No. 20—1000 lbs. milk per hour **55.00**
F. O. B. Los Angeles and San Francisco (Sunnyvale)

Write for catalog and complete particulars regarding this great **"price wrecking" offer.**

I also have gas engines, the famous Old line, 1½ H.P. to 35 H. P. at 50 per cent reduction.

How about a 1½ H. P. complete ready to run for $35.00, f. o. b. Los Angeles. Other sizes are in proportion. Get in touch with me before buying. I can save you money and give you standard quality.

BERNARD B. FALLON

207 N. Los Angeles St., **Los Angeles, Cal.**

Veterinary Queries and Replies.

[Answered by Dr. H. B. Wintringham, Petaluma, Cal.]

SOW PARALYZED.

To the Editor: My brood sow about a year old has lost all her strength in her back quarter; she is not able to walk at all. She was bred about three weeks ago; she is in a good condition. I feed her corn and slops and she gets all the water she can drink.—P. B. Redlands.

[This is paralysis due to her pregnant condition. Give her 20 grains potassium iodide three times a day before meals.]

GARGET.

To the Editor:—One of my cows was fresh three weeks ago with her fourth calf; she is milking a fine flow of milk, but after it is separated there is a slimy mucous on the separator discs. She appears in a healthy condition. Will you kindly state the cause? — Subscriber, Lodi.

[This is a mild form of Garget. Give this animal 2 drachm doses of potassium iodide dissolved in water twice a day for two weeks.]

LUMP ON DOE'S SHOULDER.

To the Editor: Can you please tell me what is the matter with my doe? She kindled about three or four days ago. This morning I noticed a big, hard lump back of her right shoulder. I feed her hay, greens of all kinds, and once in a while corn. The young ones are doing fine.—R. H., Monterey.

[This is an abscess. Lance it at its most dependent point and syringe out the cavity once a day with hydrogen peroxide 50 per cent strength.]

HOGS DOING POORLY.

To the Editor: I have four young shoats among my herd that are not well; they lie around, and seem to have no appetite, when walking are weak in hind parts, when standing are humped up and breathe very short. My hogs are running on alfalfa with plenty of fresh water and shade. Would like to know if this is a contagious disease and what I should do for them.—A. W. W., Gilroy.

[Separate the sick pigs from the well immediately. This looks like a form of contagious pneumonia. Give them the following: fluid extract nux vomica, 2½ drachms; fluid extract belladonna, 2½ drachms; guiacol, 5 drachms; alcohol, 4 oz.; water enough to make 8 ounces. Dose, two teaspoonfuls three times a day.]

COW REFUSES TO EAT.

To the Editor: I bought a Jersey cow about five or six weeks ago. About a week after I got her, she would not eat; her bowels were loose. She would eat a little, then would bloat and she seemed cold all over, though not in pain. I got medicine from a veterinary. In a few days she seemed better and would eat, but not as if she was hungry; and was very particular about what she ate. In a week or ten days she would not eat hay again; would eat grass or rolled barley a little. Both times she dropped down on her milk. What is the trouble?—M. S., Long Beach.

[This is indigestion. Let your veterinarian continue to treat this animal, as he did her good in the first place. Conditions of this kind are slow in responding and cannot be helped altogether at one treatment.]

MOON BLINDNESS.

To the Editor: The eyelids of my horse become puffed up and eyes discharge a watery substance as soon as warm weather comes on every summer. The local veterinarian calls it "Moonshine blindness" and says there is no cure. During cool weather the trouble disappears. Bathing with cold water twice a day seems to keep the trouble in check to a certain extent. During winter and spring the animal is up on the bit at all times, but while still keeping in good order, becomes lazy as soon as the eyes begin to run. Sometimes only one eye is affected. It seems to me this must be an infection, and if so there must be a cure. —Reader.

[Moon blindness is incurable. As you have not given sufficient symptoms to make a positive diagnosis of this trouble, try the following treatment: 1 ounce of 1% atropin solution, 1 ounce 1 per cent eserine solution. Place a few drops of one of these in the eye once a day and the following day use the other, alternating the solutions. daily. Also place a piece the size of a pea of the following ointment in the eye twice a day and rub in: 1 ounce 2 per cent yellow oxide of mercury ointment.]

STALE MILK INJURES HOGS.

To the Editor: Two of our sows died suddenly and the rest in the lot got a black diarrhoea. They are on pasture, received a little ground feed and separator skim milk hauled in a wooden tank, night's and morning's milk mixed. Another lot in the same pasture, separated only by wovenwire fence, receiving the same feed except the milk, were not sick at all. The sickness lasted a week and I suspected the milk so stopped feeding it and the sick hogs got well right away and have not been sick since. The milk tank in which it was hauled to the hogs didn't used to be cleaned at all, but lately we scrape it out once in a while and wash it out with clear cold water. We began that some time before the hogs got sick. What could there be in the milk to kill the hogs? We want to use the milk, but want to avoid the danger.—J. H., Tehama county.

[There is no doubt that the stale milk adhering to the sides of the tank putrefied and contaminated the fresh milk put in. This caused ptomaine poisoning. Keep the tank absolutely clean and you will avoid future trouble from this source.]

HORSE'S THROAT SORE.

To the Editor: I have a horse that runs from the bowels. He will also stand and drink for fifteen or twenty minutes without taking his mouth from the water; he eats everything put before him. He does better on grain hay than he does on alfalfa hay. Can you tell me what to do?—L. D., Stevenson.

[If you watch this horse closely while he is drinking you will notice that the water is returning through his nose. He has pharyngitis or sore throat. Syringe his mouth and throat out four or 5 times daily with a saturated solution of potassium chlorate. Also have his teeth examined by a competent man.]

HOW PIGS GROW.

W. S. Guilford of Glenn county, author of our new California Hog-Book, says: "Pigs weigh from one to three pounds when they are born and an average sow produces a little less than a pint of milk per day for each sow. Sow's milk is richer than cow's milk. This is the reason that you can almost 'see' pigs grow during the first few weeks of their existence.

"The cheapest gains are made while an animal is young—hence the necessity for providing the best of care and feed for sows and pigs."

Whether intended for show or market, the hog attains perfect condition and more quickly and economically if his ration includes some DIGESTER TANKAGE. The growing pig needs DIGESTER TANKAGE as a bone and muscle builder. Write for free pamphlet on hog-feeding.

WESTERN MEAT COMPANY,

Animal Food Dept., 704 Townsend St., San Francisco, Cal.

Ripe Sorghums for Silage.

[Written for Pacific Rural Press.]

"Early Amber sweet sorghum makes the best and most satisfactory silage of any of the sorghums, such as milo and feterita, which we tried last year," says E. C. Voorhies of the University Farm, where four varieties of silage were siloed last year. Though the Early Amber was so smutty that clouds of the smut blew out of the silo when it was being put in, this variety was most relished by the dairy cows, as reported by the herdsman and observed by Mr. Voorhies.

"All varieties, however, make first-class silage, but must be allowed to mature their grain before being cut. Sweet sorghum sours in the silo if not mature, as has been experienced by most of those who have used it. When any of the sorghums are ripe enough to be siloed, the leaves are considerably withered and dried, but this is no particular disadvantage because plenty of water is added while cutting.

The last crop of alfalfa also is a candidate for the silo, especially when there is danger of late rains. It usually does not cure very well anyhow, but can be entirely saved by the silo.

Corn or sorghums for silage should be planted very thick, in order to get more leaves and slenderer stalks, so that when cut up they will be in smaller pieces.

PEACHES SATISFACTORY FOR HOG FEED.

[Written for Pacific Rural Press.]

Anticipating trouble marketing his peaches, A. Dacosse, who has 11 acres of clings in Sutter county, arranged his swine breeding so he could take advantage of the crop for fattening them.

"I wouldn't fool with them at $10 to $7.50 per ton which the the cannery offered," says Mr. Dacosse. "They require us to cull out all but the best, even at that price, where in previous years they would do the culling and pay living prices. After picking, sorting, and hauling them there is more in it to shake them onto the ground for the hogs. Six pickers require two sorters and we would have to throw away about half to the hogs anyway. Might as well keep hogs to eat all of them."

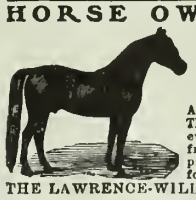
About 110 head, young and old, were kept for fattening on peaches. A sack of barley is fed twice a week and a few small potatoes bought at 25 cents per sack. About 25 boxes of peaches twice a day is the hogs' capacity.

"I threw out 50 boxes this morning and they went off shaking their heads. That's enough for all day. There is a disadvantage in depending on peaches for hogs, in that the Tuscans last about three weeks, then there is a gap of about ten days till the Orange Clings come, then another gap of ten days till the Phillips come. Must feed barley in the between. If there isn't any danger from their eating the meats of the pits, I want to find a way of cracking them, because the pits contain as much nourishment as the peach meat itself. They won't crack the pits unless they are pretty hungry."

Mr. Dacosse has raised hogs and other livestock since the earlier days of Sutter county and his judgment is that the ones eating peaches are making satisfactory gains. He has even hauled the cull fruit a mile and a half from the orchard of W. C. Huston, who had nearly 20 tons of Tuscans to spare.

COW LAMENESS.

To the Editor: One of my cows seemed to get lame in both hind legs or paralyzed; did not lie down for two or three days. She never went down in milk much; was pasturing on Johnson grass at the time.—J. R. Chinn, Madera.



[This is rheumatism. Give cow one ounce sodium salicylate three times a day until improvement is shown.]

100-HOLSTEINS-100

Will Be Offered at Complete Dispersion Sale of Two High-Class Registered Herds

The Entire Herd Owned By T. J. GILKERSON, Lemoore, Cal. will be sold.

Hanford, Cal.

SEPTEMBER 15, 1915

The Entire Herd registered in the name of HEENAN & WELDON, Sacramento, Cal., will be sold.

MAUD MOOIE CLOTHILDE,
3 A. R. O. dams average 18.83 lbs.. All under full age.

80 ---COWS AND HEIFERS--- 80

We will bring to our sale September 15th at Hanford, California, the best lot of Holsteins ever offered at a California sale, both as to breeding and individuality. When you look them over you will admit our claims.

The cows are young, good individuals, and milk up to their breeding and individuality. Many of these cows that have not been tested will make high records for their future owners.

Among the cows are several who have A. R. O. dams for the first four generations, and their sires are the most noted of the breed. You will find A. R. O. cows with good records; also cows that have produced A. R. O. daughters.

The cows are bred to the two best young bulls in the West, Juliana De Kol King Segis and Prince Gelsche Walker Korndyke.

Any purchaser of a cow or heifer in calf to these bulls gets the produce that will grow into money, and always find ready buyers.

The heifers you will find an extra well-grown, well-marked lot, and bred in the lines that are making big records and selling for the high dollar. Granddaughters of King Segis, Pontiac Korndyke, daughters of Admiral Burke and Sir Pietertje Korndyke Abbekerk, and all bred to the above named sires.

LOCUST TERRACE GOLD DROP,
Dam has A. R. O. Daughter.

BEAUTY MERCEDES NUDINE,
One that can make a high record.

2---GREAT HERD SIRES---2

For seekers after herd sires, an opportunity is offered that will not occur again this year.

JULIANA DE KOL KING SEGIS, out of Juliana De Kol, a world's champion two-year-old, who has produced one good son, and sired by King Segis Pontiac Emperor, a three-quarters brother to the $50,000 bull, and whose dam has 100 per cent, the same blood as King of the Pontiacs. ..PRINCE GELSCHE WALKER KORNDYKE, a yearling bull who has more high-producing dams, more transmitting dams, and more 30-pound sires in his pedigree than any sire in the West, and individually he is the equal of his breeding.

All stock guaranteed exactly as represented. Everything over 6 months of age tuberculin tested.

Catalogs ready about September 1st.

KALSORA MUTUAL DE KOL,
4 years old, record 16.48 lbs. Dam's record 20.25 lbs.

The Big Combination Sale.

James W. McAlister writes: "We are inclined to believe that in regard to large yearly records, size, show qualities, and individuality, the stock to be sold in our combination sale at Sacramento, October 6 and 7, will far surpass any other sale ever held before in the United States.

"In our consignment, we wish to call special attention to the daughters of De Kol Hengerveld Burke, one who, despite his limited opportunity, has come to be recognized as one of the greatest sires of the breed, having several daughters to make from 30 pounds to over 35 pounds in seven days. They are remarkably well bred on the dam's side, being in the most popular strains of the breed, one having a 26-pound, four-year-old dam who is a sister to the world's champion dairy cow over all breeds, Finderne Pride Johanna Rue.

DE KOL HENGERVELD BURKE,
Five of Whose Daughters Will Be Sold at the Combination Sale at Sacramento, Oct. 6 and 7.

JOHANNA McKINLEY SEGIS,
Sire of Some of the Females to Be Sold at Sacramento Oct. 6 and 7.

"The daughters of the $25,000 bull, Johanna McKinley Segis is also a most wonderful presentation to the purchasing public here in California. One of them is the second highest daughter for both milk and butter of her famous sire, and the other, Abbie Korndyke Segis, just made over 21 pounds butter as a three-year in the extremely hot weather in July. She has been declared by many critics to be the best individual daughter of Johanna McKinuey Segis, Offering such animals as her proves that we are not sparing any of the best in our herd.

"The great show bull, Sir Spofford Beets, who has won grand championships at many of the principal fairs in the East, will be represented by one of his very best individual daughters, Aaggie Mechthilds Beets, who made about 20 pounds as a three-year-old, and whose dam sold for $625 at the Breeders' Consignment sale last year at Hanford. There will not be a single blemished animal in our offering."

COMING SALES.

E. J. Weldon writes: "The success of the Dispersion Sale in Hanford on September 15 seems assured, judging from the number of inquiries coming in for catalogs and information regarding the cattle to be sold. More especially are breeders interested in the two herd bulls, Prince Gelsche Walker Korndyke and Juliana De Kol King Segis, that will be sold, showing that the breeding public are alive to and appreciate the opportunity that will be offered them to secure two of the best breeding bulls ever offered at a public sale. While there are many nicely bred and good young bulls offered for private sale throughout the State, we are sure that no opportunity will be offered buyers to place their own price on better young bulls than we will offer aside from the two headline herd sires; and as we are selling our entire herds without reserve, there is no culling possible. Mr. Gilkerson, during the past two weeks, has made some very creditable record on a number of the cows in his herd that will be announced at the sale. Every one interested in Holsteins are invited to be with us at the sale."

MULES FOR THE WAR.

Two hundred mules for the French Government were purchased by a government agent recently near Lakeview and Blye, Oregon. The mules average from 1200 to 1500 pounds, and are from four to six years of age. The purchase price for the band in Oregon was close to $25,000. Payment was made in cash. There is sharp competition in Oregon for horses and mules. The purchaser of this band was offered $1000 for his bargain the next day after it was closed, but he declined.

W. H. Brink of Modesto finds registered Duroc-Jerseys far more profitable than the common hog to raise, figuring from a pork standpoint.

Geo. L. Proctor of Oregon has purchased the Rowland Ranch of 1163 acres near Healdsburg from Geo. P. McNear of Petaluma and Geo. D. Sanborn of Sebastopol.

SHEEP PAY WELL ON SMALL FARMS.

(Continued from page 217.)

"We formerly lost a good many lambs which were drowned trying to jump little streams during and after the storms trying to follow their mothers, but we now keep them off from the general range until they are pretty strong.

Potato Sprouts Dangerous.—"Sometimes we feed small potatoes and a little hay in the winter, but one must be careful not to feed potato sprouts. After losing a few sheep, having fed sprouting potatoes, I fed one with sprouts alone and the other potatoes from which the sprouts had been taken. The first died, but the other showed no ill-effects. Only the old ones would eat the potatoes anyhow; the young ones are better rustlers, and get enough of other feed.

"When the grain is off, we turn the sheep and old lambs on the stubble to help carry them over the season of dry grass. We aim to get rid of market lambs between April and July. We sold 175 in one bunch last May at $4.60 per head for all that would weigh a maximum of 60 lbs. on June 15. The buyer came to the ranch for these; other smaller ones were stringing along until August. These are sold to the local butcher, who does not want big sheep, or else they will be kept over.

In the latter case they are sheared in July, and will be again in April or May whenever warm weather comes. The semi-annual clipping of both old and young is due to the loss of wool which pulls out in bunches in wet, muddy weather if allowed to stay on too long.

The bucks are turned with the ewes June 15 to October 1. We do not like to have the lambs come too late on account of the feed drying up to before lambs are ready to sell."

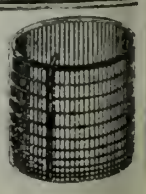
TO GEO. H. CROLEY: "You mentioned to me that when you published the balanced egg ration in the Pacific Rural Press (which appears in Aug. 28 issue) you would show me that, without forcing egg laying to an extreme, it would cost one cent per egg for this feed when calculating the grain and mash at $2.10 per 100 pounds; the greens at $5 per ton, and assuming that Leghorns laid 144 eggs each and large breeds 120 eggs each per year. I am unable to figure this out to my satisfaction; please explain more in detail."—W. Welch.

One Cent for Feed In Each Egg Produced

[Written for Pacific Rural Press by Geo. H. Croley, President Federated Poultry Ass'n. of California.]

In answer to the request of W. Welch: It has been demonstrated in numerous tests that to feed liberally and at the same time avoid undue forcing of egg production, the following scale is very reliable: For Leghorns and smaller breeds 5½ pounds of digestible food is required per day for each 100 pounds live weight of the fowls and about 3 1-3 pounds of digestible food per day for each 100 pounds of the larger breeds. On that basis it would require about 15 pounds of our assortment, as published, for 100 pounds of Leghorns and about 9 pounds for 100 pounds of the larger breeds.

In laying condition, Leghorns will average about 30 hens to the 100 pounds requiring 15 pounds of feed, and at this rate 100 Leghorns would require 50 pounds of the feed per day which is divided as follows: 7:06 pounds grain; 7.62 pounds of mash; and 35.32 pounds greens, etc. For one year this amounts to: 2580 pounds grain @ $2.10 per 100 pounds, $54.18; 2730 pounds mash @ $2.10, $57.33; and 12,940 pounds greens, etc., @ 25 cents per 100 pounds, $32.35; total $143.86, or 14 cents less than an exact cost for each egg when the hens average 144 eggs per year.



In the larger breeds an average lot of hens in laying condition will not vary much from five pounds each, which results in 20 hens for the 100 pounds live weight requiring 9 pounds of this feed or 45 pounds per day for a hundred hens. In order to avoid any possibility of forcing the larger breeds it is necessary to decrease the grain and mash a very little and make up the difference with the green stuff; therefore, we divide the 45 pounds as follows: 5:72 pounds of grain; 6.23 pounds of mash; and 33.05 pounds greens, etc. For one year this amounts to: 2088 pounds of grain @ $2.10 per 100 pounds, $43.85; 2274 pounds of mash at $2.10, $47.76; and 12,063 pounds greens, etc., @ 25 cents per 100 pounds, $30.15; total, $121.75, or $1.75 more than an exact cost of one cent for each egg when the hens average 120 eggs per year.

It is, of course, necessary that the hens have the capacity to produce this number of eggs. If they are not properly bred or are not given reasonable attention, these results cannot be obtained, while on the other hand this ration is capable of producing over 200 eggs per year from hens that have the capacity to digest more than the amount we state in our estimate. That is the whole "secret" of great egg production; the hen is simply a machine that consumes raw material and converts it into finished eggs. The hen that eats little or that consumes much, but does not digest it, cannot lay

many eggs; neither can she produce them if not given the proper assortment of materials that go into the construction of the egg.

Because it is generally understood that for one year about 70 to 80 pounds of feed is required for a laying hen, it may be well to state that in calculating the weight of the green stuff, etc., we aim to supply practically the same amount in dry weight as we do of grains. Although the weight of the greens in our list is five times the weight of the grains, they are practically equal because the greens average about 4-5 water and the grains only about 1-10 water.

In making our calculation we have endeavored to fit them into average conditions. An expert feeder could accomplish much greater results, particularly if he adds careful personal attention to the hens. As an illustration: We recently visited a poultry plant that was feeding a ration not quite as rich or varied as the one we published; in the large flocks of about 500 hens each the average yearly egg yield was about 148 eggs each while in some small flocks of 20 hens in small houses and yard room of less than 3 square feet per hen averaged nearly 200 eggs on the same feed, but with more personal attention.

Farm Poultry for Profit.

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

CAN THE MOLT BE CONTROLLED?

(Concluded from last week.)

Feed all the green feed you can possibly get. Yesterday I heard of a poultryman with five acres of land who is actually feeding his hens the leaves from his fruit trees for green feed. He says he is losing money, and I believe him, more than that I believe he ought to lose money. Five acres of land and plenty of water, Why, if it was me I would dig up one or two of the trees out, if it was not possible to grow feed in the rows, but green feed I would have or the chickens would go.

It is just as much a question of health, as it is economy, to have some green feed for poultry. Anybody can grow some green feed, perhaps not all they would like but they can grow some, or try to. To keep young stock in a growing, healthy condition they must have a good variety of grain as well as vegetable diet, cleanliness and room to grow; given these we may expect them to pay it back some day, but if any or all of these needs are held back the chicks will never be a profitable investment. So we see that even from selfish motives we ought to give the stock good care.

Fresh Air.—This is a trying month, the days are rather hotter than usual and everything needs plenty of fresh air and room. Food is not quite as important as the comfort in hot weather, yet it costs more in hard money; lack of air and room costs both money and labor.

Care and Regularity Needed.—Cutting the feed off, changing it from one thing to another, moving hens around, and all these things that are entirely in our hands, cause the hens discomfort and change the chemical conditions of the system. With this knowledge, every poultryman can and should regulate his system of feeding and caring for his flock and keep it in order. Instead of that we find the average man trying first this thing and then something else, because somebody tells him it is good. Now I don't mean to say that we should not experiment and try new things, but it should be done in a small way with just one small pen of fowls, not with the whole flock that we are depending on for eggs to foot the bills.

I have heard that when bachelors in camps make a new kind of biscuit they always try it on the dog first; if the dog lives through it, it's safe for them to eat. That would work out on poultry ranches, too—try the experiments on a few and note results. You need not kill anything to make an experiment, except it be time to watch the results. I say now what I always say, if half the time spent in other things was spent in watching the poultry there would be smaller and fewer failures.

"California Poultry Practice" tells you right out in plain English, the sort of English that calls a "spade a spade" and makes no excuses for doing it, just what to do and how to do it.

Don't Force Molt.—Since the above was written a poultry feed salesman was here and we naturally got to talking about molt; and he says some poultrymen are feeding 20 per cent animal food to hurry the molt. Oh yes, they will kill quite a few, no mistake about that; liver troubles and all kinds of troubles will spring up in the wake of 20 per cent meat; but they think eggs must be gotten to pay the bills. And one man said that after counting his dead, he was money in hand by this method of forcing the molt. Well, he may think so, but I don't, and neither will he after a few years' experience, because the hens will not live half long enough to pay a profit on raising them. And after they are through the molt, they will lay a few eggs, then get roup or go light and drop off like flies on a poison dish. Now what sense or reason is there in that kind of feeding?

Time of Molting.—Now as regards the molt and time of hatching, all Leghorns that are hatched earlier than March will go into winter molt. It is not possible, so far as I know, to prevent it, so if your pullets are early hatched you can look for them to go into a winter molt about December or January; but plenty of green feed will be on hand at that time and the weather being cool you can feed a generous ration of both protein and carbohydrates. Boil a good mess of potatoes and mix a good rich mash in them and feed them warm, then at night give half corn and half wheat for supper and the molt will not last long. Pullets hatched after middle of March ought never to molt until the following fall, nor will they if the feeding is properly regulated. But if they are fed on the hit and miss plan both in regard to quantity and quality, why you can't blame the hen for going on strike. Molting more than once a year is the hen's method of protesting against the treatment you are handing out to her; it's all she can do and sometimes it is wonderfully effective in making the boss "sit up and take notice."

Be Careful in Buying Mash.—And by the way, if hens did not have any more sense than some of us who pretend to know more, we never would find out the many frauds, called "mash," there are put up in sacks and sold at exorbitant prices. Some of these mixtures contain very little real food that the hen can use to make eggs with; the bulk of it is what might be called "fillers." The filler is generally cocoanut ground up or some substitute for bran, nothing in the world but wood fibre that just about uses up all the hen's energy to get rid of; and no doubt when a hen has managed to pass it through her system, she has worked hard enough to have made several eggs, had the right material been on hand.

Swelling Under Turkeys' Eyes.—Your turkeys have roup. Clean up your yards, feeding troughs, drinking vessels, etc. Scald them, give the turks a physic of epsom salts in a little mash, say 2 ounces to a quart of mash, and let all have some; then quit the bran mash and feed more dry food; feed the mash dry and give more grain. Look after them at night and see that they do not crowd.

Sore Mouth in Turkeys.—For the sore mouth (which is canker), clean up your feeding ground, and scald the drinking vessels first thing, then give soft feed with one teaspoonful of sulphate of iron to a quart of mash feed, fed just moist enough to mix. Swab the mouths and throats with pure peroxide of hydrogen. Do this until cured.

CHICKEN FLEAS.

To the Editor: Will you please tell me how one can fight the little fleas that live on chickens heads and throats? Our chickens range and do splendidly with the exception of those hatched in the late summer or fall. These become infested with fleas that live on chickens' heads and antiseptic salve on their heads, but this has to be repeated every few days and that is hard on the baby chick as well as a great deal of work. There are none of the fleas in the chicken house.—Mrs. R. F., Lompoc.

[Answered by Geo. H. Croley, San Francisco.]

[The samples you sent seem to be just ordinary fleas and not what is usually known as chicken fleas. The only way to prevent them from attacking the chickens and to gain permanent relief is to first destroy their breeding places and then treat the chickens with insect powder or the ointment you mentioned. These hopping fleas prefer to breed in dusty cracks and corners of buildings, but when forced to do so they will breed in the open in the dust or sand. For the houses, clean out dust as much as possible and spray with distillate and carbolic acid or naphthalene flakes dissolved in cheap kerosene. For the yards, spray with water and hoe or thoroughly stir the dust or sand while spraying. We have never found anything that was superior to water and hoeing for killing them in the open.]

J. K. Fraser of Denair lost his show boar, Slocum Crimson Wonder, a few weeks ago of overheat. He is going to the Panama-Pacific Exposition this fall just the same and will take California Defender, a son of the one lost.

Mammoth Bronze turkeys from eggs for which Mrs. N. E. Meelick searched Pennsylvania, New Jersey, and the Virginias, will be shown by her at the Panama-Pacific Poultry Show.

THE LITTLE STREETS.

"Tomorrow I'll do it," says Bennie;
"I will by and by," says Seth;
"Not now—pretty soon," says Jennie;
"In a minute," says little Beth.

O dear little people, remember
That, true as the stars in the sky,
The little streets of To-morrow,
Pretty-soon, and By-and-by,
Lead, one and all,
As straight, they say,
As the King's Highway,
To the city of Not at All.

—Anna Hamilton Donnell.

THE OGRE OF GRIM GOBLIN CASTLE.

"It's too hot for anytbing," sighed Dorothy. "The crabs won't bite any longer, and my face is burned almost to a blister."

"Well, then, let's row up under the bridge, and get cooled off in the shade," suggested Tom; and Dorothy gladly nodded her assent.

Once under the shadow of the long wooden bridge, life began to seem more pleasant to Dorothy. Tom was really exerting himself to entertain her; for she was only a visitor, while Wood's River was his home.

They were cousins, and Aunt Anne had sent over for Tom to come to the Gables that afternoon, to take Dorotby out on the river, crabbing.

From their present position beneath the bridge the chimneys of the Gables were just visible.

"When I was a little chap, I used to call it 'Grim Goblin Castle,'" said Tom, as he pointed the Gables out to Dorothy.

"And the goblin?" she queried, laughing.

"Was Uncle John! You ought to have seen the way he used to scowl at me whenever I went to the Gables with mother to see Aunt Anne,—it used to scare me blue! I believe I'm a bit afraid of him still," he added, laughing.

"So am I," confessed Dorothy. "I don't know why,—but he's so big and so gruff,—and I heard him tell mother that children ought to be kept shut up in the school-room until they were grown."

"What a funny echo there is under this bridge!" said Dorothy. "Didn' you notice it? Well, listen now." And she screamed.

Then Tom tried it himself with wonderful results.

A moment later they heard the distant patter, patter of a horse's hoofs at the entrance of the bridge.

"Now wait," said Tom, "let's wait till he gets just over us, and then let's yell together. One, two, three —are you ready? Now!" Such a shout as tbey sent up, both of them together, and how the echo caught it up and repeated the dreadful sounds!

There was a sudden plunge overhead, the gentle pit-a-pat changed into the sound of galloping feet. Tom and Dorothy lay back in the boat and laughed heartily over the horse's evident astonishment.

They lingered for another hour, and then Tom leisurely pulled back. As they were walking up tbe pathway they met Michael, the hired man, hurrying down toward the river.

"Begorra, an' I was jest comin' out to look for yez. A great excitement we've been havin' here. There's tramps about, hangin' around the bridge yonder; an' tbey hollered, an' scared Brown Bess so she ran away, an' yer uncle was throwed out and hurted his arm. An' he's declarin' he'll have 'em arrested an' locked up in the county jail. 'Better catch 'em furst,' sez I. But Miss Anne she sent me out to find yez; for 'the river ain't safe,' sez she, 'with such ruffians hangin' about.'"

Tom and Dorothy exchanged a rapid glance; and Dorothy's color paled, while a quick flush overspread Tom's olive cheek.

"Is Uncle John badly hurt?" he questioned anxiously.

"He's badly shook up, but he's madder than hurt, I guess," he said shrewdly, as he turned off toward the barn.

"Oh, what shall we do?" whispered Dorothy. "I never thought we were doing any harm!"

"Nor I," said Tom. "So just you keep still, Dorothy, and don't say a word. Nobody knows we were under the bridge. They think it was tramps, you see."

"Yes, I know — but" — objected Dorothy.

Tom flushed hotly. "We can't help it now," he said.

Uncle John's arm bad been bandaged, and he was in the library, resting. He had given strict orders that he was not to be disturbed.

Shortly afterward, in spite of his orders, Uncle John was disturbed by a knock.

"Come in," he said gruffly; and the door opened to admit his nephew Tom.

"What do you want?" he growled.

"I want to say I'm sorry for the —accident, uncle," Tom began awkwardly; "and I hope you are not much hurt."

"A sprained arm and plenty of bruises; but wait till I catch those rascals!"

Tom drew a quick breath.

"I did it, Uncle John!"

"You?" Tbe gleaming eyes under the shaggy brows were suddenly turned full upon him.

"I did not think it would do any barm. It was thoughtless. I am very sorry."

"Who was with you?" demanded Uncle John. "There were two voices."

"That I cannot tell you. The blame is altogether mine."

His uncle looked at him in silence for a moment. Then he pointed to the door. "You may go home," he said gruffly. "I will not pardon you today."

It was already dusk when Uncle John was disturbed again. This time the intruder was a pale-faced, fair-haired girl.

"I'm so sorry you were hurt," she murmured in a rapid, half-frightened way; "but I had to come and tell you—it was—it was I—who did it. I never dreamed it was going to do any harm."

"Oh, ho!" said Uncle John. "So you were the ruffian who frightened Brown Bess! And who was the other one?"

"Oh, but I canont tell you!" Dorothy said bravely.

Uncle John stared hard at her. "What did you do it for?" he asked at length.

"The echo under the bridge was so funny! We—that is I—had been trying it; and then when we—I—heard the horse's footsteps coming, oh, so slowly—we waited, and

"John"—

"We are almost out of chocolate. Get a 3-lb. can of Ghirardelli's Ground Chocolate. Don't buy the bulk kind."

And John "obeyed orders" cheerfully, for of all the members of the household, John, the "boss," likes his breakfast cup of Ghirardelli's the most.

He knows what a delicious, sustaining beverage it is, what wonderful cakes, puddings and cookies his wife makes with its aid. He also knows that it gives the highest food value for the man who works hard, for the woman who must always be well, for children on the grow.

counted one, two three—and then we shouted as loud as we could, and we—I laughed so to hear the horse jump and go galloping away! But I never thought of doing any harm, or that you—or any one—would be hurt."

"And who was your companion under the bridge? I insist upon knowing," said Uncle John again.

"I cannot tell you," she repeated bravely, trying to steady her shaking voice. "No one would have thought of doing it if it had not been for me."

"Very well, Miss Obstinacy! I shall know what to think of a girl who refuses to answer her uncle's questions. You may go now, but come here again in the morning at a quarter past ten. I shall then have something further to say to you."

At breakfast the next morning Tom received this note.

"Nephew Tom,—I wish to see you in my library this morning at ten. Be punctual. Uncle John."

Again Tom was standing before his uncle in the library, and he had just again refused to tell who had been his companion on the river the day before, when there was heard a gentle tap, and in came his pretty cousin.

"Dorothy!"

"Tom!"

Each looked as if trying to fathom the reason which had brought the other hither. Then their eyes sought their uncle's face, and they saw his eyes gleaming upon them from under his shaggy brows.

"I'd like to know what I'm to do," he said gruffly, "with these two obstinate offenders who both so resolutely refuse to tell me their confederate's name."

"Uncle!" cried Dorothy. "You aren't really angry, after all!"

Uncle John actually smiled.

"Not very angry, my brave little woman, only still rather lame. Come here, sir! I hate a sneak; but I'm glad to have found you both out. Some day you shall take me out on the river, under the bridge, and let me hear that 'funny echo,' but not while there are any horses passing overhead,—do you understand?"

"I declare," Tom said to Dorothy afterward, "he isn't such an ogre, after all. I guess I'll never be scared at him again."

"Nor I," smiled Dorothy. "Uncle John is like a chestnut-bur, the prickliness all outside."

Uncle John, nursing his lame arm in the quiet library, had come to the conclusion that there were some young people he didn't dislike very much, after all.—Judith Spencer, in the Churchman.

California Garden-Flowers

SHRUBS, TREES AND VINES

Being Mainly Suggestions for Working Amateurs.

By Edward J. Wickson,
Hon. President, California State Fioral Society.

FIRST EDITION—1915.
262 pages, 5½x7½ inches; illustrated; cloth bound;
12 full-page photo-plates and numerous text illustrations.

This book aims to tell the beginner in California, whether he be a scholar struggling with his school-garden, or a suburban gazing vacantly on his residence lot, or the farm-home maker, who is puzzled to translate his experience with teams, plows and pasture fields into trowels, pruning-shears and lawns, just what to do to make garden-soils, grow plants and surround his abode with beauty under the peculiar climatic conditions of California.

WONDERFUL COUNTRY.

The visiting diplomat from one of the countries of Europe was being shown the stockyards district.

"And what is that queer looking building over there?" he inquired curiously.

"That is a fat refinery."

"And what do they refine in there?"

"Hogs."

The visitor made no comment, but in his letters of travel in his home papers was the following entry:

"America pays wonderful attention to refinement. They even have institutions where they make hogs refined."—Chicago News.

FOXY.

Rita (looking at photo)—Oh, yes, he's handsome enough, but he's an awful bounder.

Stella—What did he do?

Rita—Didn't I tell you? He made an awful fuss with me one season, and then asked if I thought that dad would object to him as a son-in-law. I said no, I thought not, and he went away and proposed to my sister.—Illustrated Bits.

RIPE TOMATO PRESERVES.

Six pounds tomatoes, 4 pounds sugar, 3 lemons sliced thin—leaving on the rind—cook slowly.

WHAT TO SERVE WITH ... MEATS.

Roast Beef—Grated Horseradish.
Roast Mutton—Currant jelly.
Boiled Mutton—Caper sauce.
Roast Pork—Apple sauce.
Roast Lamb—Mint sauce.
Venison or Wild Duck—Black Currant jelly.
Roast Goose—Apple sauce.
Roast Turkey—Oyster sauce.
Roast Chicken—Bread sauce.
Compote of Pigeon — Mushroom sauce.
Broiled Fresh Mackerel — Sauce of stewed gooseberries.
Broiled Bluefish — White cream sauce.
Broiled Shad—Rice.
Fresh Salmon—Green peas with cream sauce.

VEAL ROLLS.

Cut veal steak into pieces about 3½ inches square, salt and pound them. Mix together cup bread crumbs, 2 slices of onion, 1 egg beaten light, pinch of salt and a little sage, ½ teaspoonful baking powder. Put a little of this dressing on each piece of meat, roll it up, fastening edges together with toothpicks. Roll in flour and fry quickly to a deep brown. Cover with water and cover tight with cover. Set on back of the stove and simmer 10 minutes. Serve hot.

THE SORROWS OF CHILDHOOD.

Auntie—Why are you so sad, Lulu, darling?

Six-year-old — I was thinking, auntie, what a bother that little brother of mine will be when I grow up and have a beau.—Exchange.

GEORGIA SWEETS.

Boil sweet potatoes until they are almost tender; pare, slice in 1 in. slices, arrange in buttered baking dish with bits of butter and brown sugar and 4 or 5 allspice to each layer. Bake until they are a rich brown.

ONE METHOD.

"Is there any money in poultry?"

"You can get pretty good prices for chickens killed by passing autos, but you have to keep a sharp lookout."—Pittsburg Post.

Lawns are the foundation of all decorative planting. A good, well-kept lawn contributes more to the beauty of grounds than any other single factor. For this reason special attention should be given to the grading, cultivation, and enriching of the area to be devoted to the lawn. After good preparation come good seed and care. Get your ground ready now for October or November seeding.

Penelope: "There, uncle, that makes two hundred and seventeen presents. Aren't they lovely?" Her uncle: "My dear, I think I now understand why we are told that in heaven there is to be no giving in marriage."—Puck.

"Bruddahs and sistahs," said the old colored preacher, "I'se gwine to preach a pawahful sermon dis maunin'. I'se gwine to define the indefinable, I'se gwine to explain the unexplainable, an' I'se gwine to unscrew de inscrutable."

Portland, Ore.

The Markets.

Unless otherwise quoted f. o. b. San Francisco.

San Francisco, Sept. 1, 1915.

WHEAT.

The wheat market has dropped off shorply, in sympathy with conditions in the north, where a cessation of export buying has depressed prices. The outlook is very uncertain, depending largely on war and shipping conditions.

Sonora	$1.70@1.75
Cal. Club ctl.	1.60@1.70
Forty-fold	1.70@1.75
Northern Bluestem	1.85@1.90
Northern Club	1.60@1.70
Northern Red	1.60@1.80

BARLEY.

There is some business in shipping, but feed, which is offered freely, is slow to move, and the price has been shaded.

Shipping	$1.32½@1.35
Choice Feed, ctl.	1.17½@1.22½

OATS.

Oats are a little lower, partly in sympathy with other grains. Offerings are ample, with only limited demand here.

Red Feed	$1.30@1.40
White	1.45@1.50

CORN

The corn market holds fairly steady on all grades. There is a fair demand in the country for Kaffir, milo, etc., for feed, but locally the movement is rather light on all lines.

California Yellow	$1.80@1.85
Eastern Yellow	1.85@1.90
Milo Maize	1.75@1.80
Manchurian	1.40@1.60
Kaffir	1.80@1.85

BEANS.

The bean market is in decidedly uncertain condition just now, and quotations are somewhat arbitrary, figures from different sources showing wide variation. This may be attributed largely to the uncertainties of the coming crop, little of which has been harvested as yet, and also of the future demand. In the last week there has been some excitement in the market owing to heavy damage east, and large buying has caused a sharp demand in all lines. How long this will hold remains to be seen. The export outlook also is doubtful. It is said in some quarters that there will be a large quantity of off-grade beans, but it is too early to know this definitely. The outlook, however, is favorable for a large crop in most lines.

Bayos, per ctl.	$4.40@4.60
Blackeyes	3.50@4.00
Cranberry Beans	3.75@4.00
Horse Beans	3.00@3.25
Small Whites	4.50@4.60
Large Whites	4.15@4.45
Pink	3.60@4.20
Limas	4.50@4.85
Red Kidney	5.50@5.75
Mexican Reds	5.00@5.25

SEEDS.

There is practically no movement in the local market as yet, and prices remain largely nominal as formerly quoted.

(Wholesale prices, San Francisco.)

Alfalfa	17 @18 c
Brown Mustard, per lb	Nominal
Canary	10 @12½c
Hemp	3 @ 3½c
Millet	2½@ 3 c
Timothy	7½@ 8 c

HAY.

Local offerings continue about as heavy as for several weeks past. Prices are keeping up well at the level recently quoted, and all arrivals move off readily, with an active demand from local consumers, many of whom are beginning to put in supplies for the winter. There is also an active export demand, which is absorbing a large tonnage. Such hay as remains in the country is rapidly going into warehouses, and the fields will soon be cleared up. Alfalfa is firmly held, with a good demand.

(On track, San Francisco.)

No. 1 Wheat, per ton	$11.50@12.50
do No. 2	8.50@10.00
Barley	8.00@10.00
Tame Oats	9.00@12.50
Wild Oats	7.00@ 9.00
Alfalfa	8.00@11.00
Stock Hay	5.00@ 5.50
Straw, per bale	.25@ .40

FEEDSTUFFS.

Alfalfa meal has stiffened up sharply, owing to a brisk shipping demand. Bran and rolled oats and barley, however, are easier, in sympathy with the tendency of the grain market.

(Wholesale prices per ton, carload lots, San Francisco.)

Beet Pulp, per ton	$20.00@21.00
Alfalfa Meal, ton	16.00@19.00
Alfalfa Molasses Meal per ton	19.00@20.00
Bran, per ton	27.00@28.00
Oilcake Meal	38.00@39.00
Cocoanut Cake or Meal	23.00@25.00
Cracked Corn	41.00@42.00
Middlings	35.00@37.00
Rolled Barley	26.00@27.00
Rolled Oats	22.00@23.00

VEGETABLES.

Offerings in many lines have been excessive this week, resulting in a good deal of shading of prices. Arrivals of tomatoes are especially heavy, and hardly anything will bring over 40c. per lug, while a good deal is forced out at 20c. Bell peppers also are cheap, the best bringing 30c., and cucumbers are even lower than last week. Arrivals of summer squash also are rather in excess of requirements, causing a slight drop. Ordinary green corn is doing rather better, but nothing will command much premium. Eggplant is slightly firmer. Good string and lima beans are scarce, but ordinary stock is plentiful and easy.

(Wholesale prices, San Francisco.)

String Beans	1 @ 3 c
Lima Beans	2 @ 5 c
Peppers, bell, box	20 @30 c
Tomatoes, lug	20 @40 c
Cucumbers, lug	15 @25 c
Eggplant, lug	35 @50 c
Summer Squash, lug	20 @30 c
Green Corn, sack	.75@1.00
Okra, lug	40 @70 c

POTATOES AND ONIONS.

Onions continue very weak, with heavy offerings from the Delta, though some large shipments are going to Australia. Salinas potatoes are still rather scarce and bring high prices, and Delta stock is a little firmer. Sweets are lower, as supplies are coming forward more freely.

Salinas Burbanks	$1.50@1.60
Delta Burbanks	60 @90 c
Sweet Potatoes, lb	1¾ @ 2 c
Onions, ctl.	50 @55 c
Garlic, per lb., new	5 @ 7 c

POULTRY.

The demand for the week has been lighter than for a week or two previous, and with continued liberal arrivals prices have been marked down a little. Broilers show a wider range, and fryers, hens and roosters are all lower. Hares are doing better with the arrival of fall.

(Wholesale prices, San Francisco.)

DECIDUOUS FRUITS.

Prices in general are rather easy, as arrivals average pretty heavy, and much of the fruit is so ripe that it cannot be held back. Raspberries are again coming in fairly large quantities, though good stock brings satisfactory prices. Huckleberries are easier, while blackberries are advancing. Plums and prunes are steadily held with little change. Offerings of figs have increased, causing some easiness in prices. Nectarines are lower, and peaches also are rather easy, though there is a fairly good demand. Choice pears are firmer, but there is a good deal of poor stock sold at irregular prices. Most varieties of apples are higher. Practically everything in the melon line is easier, with large arrivals. Most lines of grapes have stiffened up a little.

Raspberries, chest	$6.50@11.00
Huckleberies, lb	7 @10 c
Strawberries, chest	1.50 @3.00

DRIED FRUITS.

Local packers report a more active market in nearly all lines. Buyers in other markets are beginning to make active preparation for their late fall trade, which in many places promises better than last year; and while the export trade is still an uncertain factor, packers are showing more interest in country offerings. Evaporated apples show a slight advance, with no prospect of excessive production. Apricots continue very strong, with nothing obtainable at the former inside figure, while fancy lots might bring a premium. White and Calimyrna figs are both higher, on account of poor prospects for shipments from the Mediterranean. Prunes are being pretty firmly held, and packers have raised their offers a little in response to increasing requirements. There is also a firmer feeling in peaches, though there is no great demand and it is impossible to verify reports of better prices. There has been quite a heavy movement of raisins of late, and the market is quite steady. The New York Journal of Comerce says:

"With the season for 1914 crop Prunes rapidly drawing to a close the spot market is easing off and very light buying is in progress. Holders are evidently making an effort to dispose of their supplies before the shipment of the coming season's crop begins to reach the New York market. The general impression here is that stocks are growing very limited. The past week has witnessed a renewal of the export trade, which underwent a slight slump about the middle of the month. About 10,000 boxes have been sold by operators in this market for prompt shipment to Europe.

Future dried fruits remain practically unchanged. In prunes advices state that there is no indication as yet of the cessation of the strained relations which are existing on the Coast between the packers and growers. Until the present deadlock is broken in California the operators here appear to be content to sit by and wait for developments."

WOOL.

There is practically nothing new the wool situation, as buyers in is vicinity are taking little interest present, and the greater part of e spring clip has been disposed of. umboldt & Mendocino 18@27c ool, Sacramento Valley, lb 18@22c uthern, year's staple 15@18c x months 14@16c

HORSES.

Reports continue to come in from ore or less distant parts of the untry about heavy purchases to be ade for Europe, but this stock is actically all of inferior quality and cked up at low prices, having so far no perceptible effect on the market. This continued drain, however, is bound sooner or later to result in a better demand for horses, and it is likely that the stock sold will be replaced by better types. Locally there is not much to report. Dealers are getting in a few more horses, but few over 1400 lbs. and local buyers take no great interest.

(Approximate values at San Francisco, based on auction sales.)

SPECIAL DECIDUOUS MARKET REPORT.

By J. L. Nagle.

Sacramento, Cal., Aug. 30, 1915

Market conditions have remained about the same during the past week, with the possible execption of a demand for fancy Pears and Tokay and Malaga Grapes.

The unseasonable weather during the past two weeks has not improved Grape conditions in California and as a matter of fact both the Tokay and Malaga crops are still lighter than they were a week ago. It is estimated that there are not more than 1000 to 1200 cars of Malagas yet to be shipped from the San Joaquin Valley and, consequently, we look for a steady market throughout the season.

There seems to be a slight demand for Salway Peaches, provided the same can be shipped to arrive in the Middlewest in the next two weeks, this is due to the fact that if they arrive any later they will come in competition with Washington. This seems to be the only ray of hope there is for late varieties of Peaches.

The following prices have ruled for the week:

New York.—Bartlett Pears, averaged $2.05; B. Hardy, $1.35; Tokay Grapes, $1.78; Malaga, $1.40; Grand Duke Plums, 83c.; Hungarian, 85c.; Gross, 75c.; Diamond, 75c.; Kelsey, $1.10; Elberta Peaches, 50c; Orange Cling, 70c.

Chicago.—Duke Plums, 80c.; Giant, 80c.; Gross, 85c.; Hungarian, 85c.; Kelsey, 75c.; McDevitt Peaches, 60c.; Elberta, 60c.; Crawford, 55c.; Susquehanna, 50c.; Bartlett Pears, $1.70; Malaga Grapes, $1.50; Tokay, $1.54.

Boston.—Bartlett Pears, $2.40; Gross Plums, 90c.; Dukes, 95c.; Hungarian, 75c.; Giant, 75c.; Kelsey, 90c.; Elberta Peaches, 50c.; Malaga Grapes, $1.75; Tokay, $1.85.

Total shipments to date, 7524 cars. Total shipments same date 1914, 8347 cars.

CALIFORNIA ALMOND GROWERS' EXCHANGE

311 California Street, San Francisco, Cal.

REPORT OF PRUNE GROWERS' COMMITTEE.

San Jose, Aug. 28, 1915.

Since the Prune harvest commenced the feeling has been growing that the crop is falling far short of what was estimated at the time of the mass meeting in May.

At our meeting today a full report was made by 18 to 20 different growers in all parts of the county and of these only three reported as large a crop as was estimated early in the season. Half of the reports stated the crop would be 25 per cent less than estimates and the balance stated the shortage to be from 10 to 20 per cent.

A careful personal canvass by a member from one of the best districts gave the following figures: Of 30 growers interviewed having 804 acres of Prunes, the 1914 crop was 1702 green tons—the early estimate of the 1915 crop was 2038 green tons—the present outlook is for 1755 green tons, a shortage of 14 per cent from early estimates.

At present, packers are offering a 4c. base or better, for "first picking" prunes as they come from the trays. but are having very little success in obtaining any quantity at this figure. The growers as a whole are standing firm on the idea that 5c. base is the least price at which any general sale should be made. As all growers are aware the first pickings is the poorest quality of the season and as one of the largest growers in the valley remarked to a committee member: "If they pay 4c. base for such stuff it is equivalent to the good fruit being at 5c. base."

This low grade stuff that the packers are now buying is going out to fill the spot market for immediate use and by no manner of means sets a market price for the main crop, or in any way lessens the probability of the main crop reaching a 5c. base to the grower, who has backbone enough to demand and hold for it in the face of the evident shortage.

Direct reports from Sonoma, Napa, Contra Costa and Tulare counties indicate these districts are falling far short of packers' estimates and that a large proportion of the growers are holding, as we are, for 5c. base.

The situation now appears to be so far in the hands of the growers that it only remains for them to remember similar previous occasions on which their fruit has been sold by the packers while in the blossom on the basis of an enormous crop prospect and when harvest came and the tonnage shrank the price rose in proportion.

We again call attention of the growers to the way in which the price of dried Apricots rose after harvest, in spite of packers stating that it would be practically impossible to sell them at all.

Also we call attention to the fact that no matter how great the shortage, no buyer will raise his offer to the growers unless the spirit of the growers is such as demands and necessitates it.

J. H. BONE, Chairman.
H. O. H. SHELLY, Sec'y.

Publisher's Dep't.

A letter from one of the largest seed houses on the Coast says: "We believe your paper is most progressive, as you appear very ready to undertake anything which will promote the public welfare in the farming line."

A letter from a subscriber at Modesto says: "I value the Rural Press. It so thoroughly covers the field it occupies. I have your books—California Fruits, California Vegetables, also 1000 Questions, and find them very comprehensive and valuable."

E. F. Curtis of Napa, sends us a change for his liner advertisement and says: "I am more than pleased with your paper. I have sold over 30 pigs in a very short time, by advertising in the Press. Be sure and put me down for a "California Hog Book," it is just what we need."

The J. S. Gibson Co. of Williams, reports selling eight grandsons of the Holstein cow Tillie Alcartra, through advertising in the Rural Press. One inquiry coming as far as Argentina.

The cut used in the advertisement of the Killefer Mfg. Co., elsewhere in this issue, is the same that received mention in an article appearing in the Pacific Rural Press, week of August 21st.

A letter from Lockeford dated Aug. 28th, asks for information about "California Fruits." As the writer did not sign his name, we cannot answer the letter.

W. S. Guilford, the author of "California Hog Book," now in press, is watching the details of proof reading, cuts and make-up very carefully. We anticipate being able to send to the trade next week a very handsome, valuable, 288-page cloth-bound book. Price $2 per copy, postpaid.

Scores of new pumping plants will be installed during the fall months—perhaps more in the next three months than during all the other months of the year combined. If you are planning the installation of a new pumping plant you will do well to write to the Los Angeles concern that has recently issued a new irrigation booklet dealing with the technical side of the proposition and which is written in such a manner so that anyone can understand every word. This booklet contains a large amount of interesting irrigation information, in which is included—how to construct a weir and measure the quantity of water, convenient water equivalents, frictional losses, amount of horse power required to raise water, different types of well screens, qualities of different pumps, oil bearings for pumps and a score of other helpful subjects. A free copy will gladly be sent to any rancher, irrigator or prospective water user who writes to the Layne & Bowler Corporation of Los Angeles, requesting their new irrigation booklet.

Permanent headquarters for the assembling and distribution of "K" Hand-Power Stump Pullers have just been opened in San Francisco, at 182 5th street, by Walter J. Fitzpatrick, manufacturer and distributor of this remarkable land-clearing device in the United States and Canada. Owing to better manufacturing, marketing and shipping facilities in San Francisco, Mr. Fitzpatrick decided to remove from Seattle, where he has been operating for the past three years. San Francisco and the state of California, therefore, have won another large and promising industry, the business of which reaches into every farming section in the country where there are cut-over lands to be cleared. Recently, the business reached such proportions that it was impossible to fill the orders from Australia, and the manufacturing rights were purchased by Mr. Fitzpatrick, who is now manufacturing the machine on a large scale. They will be on demonstration every day at the San Francisco offices.

THE TWO GREAT SALES

The Crowning Achievement in Holstein Sales

Combination Sale

A. W. MORRIS & SONS, Woodland, Calif.
McALISTER & SON, Chino, Calif.

175 High Class Registered Holstein Friesian Cattle

Tuberculin Tested.

State Fair Grounds

SACRAMENTO, CAL., OCTOBER 6-7, 1915.

NOT ONLY BY FAR THE GREATEST SALE IN THE WEST, BUT ALSO IN RESPECT TO INDIVIDUALITY, SIZE AND CONFORMATION, HIGH YEARLY RECORD COWS: DAUGHTERS AND SONS OF HIGH YEARLY RECORD COWS. THE GREATEST IN THE WORLD!

Look at This Wonderful List of Offerings:

70 Great Record Cows, including:

Jane Korndyke of Riverside, with a record of 31.47 lbs. butter in 7 days from 713 lbs. milk and 119 lbs. in 30 days from 2875 lbs. milk.

A 28-lb. daughter and a 21.39 lb. 3-year-old daughter of the $25,000 sire Johanna McKinley Segis.

A 28-lb. 3-year-old with 2-year-old yearly record of 570 lbs. butter.

A 23-lb. daughter of a 30-lb. cow.

A 25-lb. daughter of Aaggie Cornucopia Johanna Lad.

Seven cows with yearly records ranging from 795 lbs. to 828 lbs. butter in 1 year and a number of other large yearly record and 7-day record cows.

Daughters of Great Record Cows

Including:

FOURTEEN DAUGHTERS OF KING SEGIS PONTIAC EMPEROR, including a 23.90 lbs. 3-year-old. Others out of an 800-lb. daughter of Ignaro De Kol, and an 800-lb. daughter of Romeo Aaggie Acme of Riverside, a 33-lb. cow with a yearly record of 1003 lbs.; a 31-lb. daughter of De Kol Burke; a 28.87-lb. daughter of Korndyke Queen De Kol's prince; a 27.58 lb. 4-year-old daughter of a 30-lb. cow.

TWENTY DAUGHTERS OF KING PONTIAC TOPSY, one of the best sons of King of the Pontiacs and nearly all out of large record dams. As nice and as uniform a lot as you ever saw.

EIGHT DAUGHTERS OF LORENA KORNDYKE: One of the greatest show bulls in the United States and out of high record dams.

SIX DAUGHTERS OF PRINCE GELSCHE WALKER: The only bull in the world from three generations of 30 lb. dams, all with records over 125 lbs. in 30 days. Two from sisters of Tilly Alcartra, with records of over 800 lbs. butter in 1 year, the other from high record dams.

FIVE DAUGHTERS OF DE KOL HENGERVELD BURKE: Sire of a 35-lb. and a 30-lb. daughter, all from A. R. O. cows.

A FORTUNE: Their calves will represent a fortune bred to such great sires as Segis Pontiac De Kol Burke, son of Riverside Sadie De Kol Burke; Aralia De Kol Pontiac Segis, son of the first 28,000 lb. cow; Tilly Alcartra Son, son of the world's champion milk cow, and King Korndyke Pontiac, one of the best sons of King of the Pontiacs. Bear in mind that there are many cows and heifers in this sale in calf to sons of cows that hold every world's record from 7 days to 3 years.

BULLS: Look at this list. Where can you find their equal?

Sons of 30-lb. cows and 1000-lb. yearly record cows, and also the two great herd sires King Segis Pontiac Emperor and Lorena Korndyke. Just glance at this list and make up your mind you want one of them.

King Segis Pontiac Emperor, senior herd sire of A. W. Morris & Sons, right in his prime and a proven sire. A son of King Segis Pontiac out of a full sister to King of the Pontiacs. Three times first prize-winner at the California State Fair.

Lorena Korndyke, a splendidly bred show bull. Four times first prize-winner at the California State Fair, twice grand champion.

A son of De Kol of Valley Mead 2nd, 906 lbs. butter as a 3-year-old, and 1011 lbs. as a 4-year-old, breed record for two consecutive years at age, sired by a son of Aralia De Kol, the first 28,000-lb. cow.

A son of Luit Burke, 32.76 as a junior 4-year-old, sired by Segis Pontiac De Kol Burke, son of Riverside Sadie De Kol Burke.

A son of Miss Blaney, 27.60 lbs. in 7 days, 1008 lbs. in 1 year, sired by Segis Pontiac De Kol Burke.

A son of a 31.78-lb. daughter of De Kol Burke, sired by son of Aralia De Kol.

A son of a 25-lb. 3-year-old, now making over 900 lbs. for the year, sired by son of Aralia De Kol.

And a number of others from high record dams.

The Sale of No Regrets

THE CALIFORNIA HOLSTEIN BREEDERS' SECOND CONSIGNMENT SALE.

175 - Registered Holstein Friesians - 175

Tuberculin Tested.

HANFORD, CALIF., OCTOBER 14th and 15th.

Consignors:

HEWITT & HEWITT, Hardwick.
R. F. GUERIN, Visalia.
W. J. HIGDON, Tulare.
E. A. FAWCETT, El Monte.
ALEX WHALEY, Tulare.
McALISTER & SON.
C. C. LESTER, Gilroy, Calif.,

who is disposing of his entire herd of 65 head.

Bigger and Better Than Ever

You will not regret buying at this sale because the above gentlemen are breeders whose integrity is beyond reproach, and they assure you a square deal.

Their offerings contain approximately twenty-five A. R. O. cows, including a cow with a 29.90-lb. record made as a 4-year-old. A cow with a 24.45-lb. 3-year-old record and others above 20 lbs. in 7 days. And mighty nice individuals!

About 30 daughters of A. R. O. cows, including a daughter of a 30-lb. cow, 2 daughters of the 29.90 lb. 4-year-old, a daughter of the 24-lb. 3-year-old, a daughter of the 24-lb. 4-year-old and 3 daughters of a 22.50-lb. cow.

NOTEWORTHY FEATURES OF THIS GREAT SALE ARE:

15 daughters of Colantha Sir Pontiac Aaggie, the best-bred son of Colantha Johanna Lad, out of a daughter of the first 34-lb. cow, Aaggie Cornucopia Pauline, and nearly all out of advanced registry cows with records ranging as high as 30 lbs. butter in 7 days.

Several daughters of Arcady Pontiac Wayne Hengerveld, a brother to the World's Record Sr., 4-year-old.

A good record granddaughter of the King of the Pontiacs, 164 A. R. O. daughters. An A. R. O. daughter of Homestead Girl De Kol Sarcastic Lad, 104 A. R. O. daughters. A daughter of Johanna Rue Sarcastic Lad, half brother to the sire of the new world's champion. A granddaughter of De Kol 2nd Butter Boy 2nd. A daughter of Lorena Korndyke, the great show bull. A half-sister to Juliana De Kol, former world's record heifer. Two granddaughters of Juliana De Kol. Several granddaughters of King Segis Pontiac Emperor, the best bred son of King Segis Pontiac, sire of the $50,000 bull and $20,000 calf.

WHAT WILL THEIR CALVES BE WORTH?

Look at this list of reference sires and make up your mind they will be worth more than their dams bring.

TILLY ALCARTRA SON, you know him, the coming young son of Tilly Alcartra. DICTER SPOFFORD KORNDYKE LAD, son of a 36-lb. cow. ARCADY PONTIAC WAYNE HENGERVELD and JUDGE HENGERVELD DE KOL 6th, respectively brothers to the World's Champion Sr., 3 and 4-year-olds. PRINCE JULIANA DE KOL WALKER, a son of Juliana De Kol, and sired by Prince Gelsche Walker, the only bull from three generations of 30-lb. dams each and over 125 lbs. butter in 30 days. KING SEGIS PONTIAC EMPEROR 3rd, a son of King Segis Pontiac Emperor and out of a cow with a record of 872 lbs. of butter in a year. Others of almost equal merit.

ABOUT 20 BULLS—Nearly all of which are ready for service, including King Segis Pontiac Emperor 3rd. You know his sire. His dam has a yearly record of 870 lbs. butter from almost 20,000 of milk, and is a half-sister to a 33-lb. cow. Sir Riverside Tommy, out of a 772-lb. yearly record dam. Sir Holland Gamp, one of the greatest show bulls on the Coast and a prize winner wherever shown. A son of King Pontiac Topsy, out of a 28-lb. daughter of Johanna McKinley Segis, the 25,000-dollar sire. This youngster contains more 40-lb. blood than any bull offered on the Coast at public sale. A son of King Segis Pontiac Emperor 3rd, out of a 24-lb. 4-year-old. And many others good enough to head your herd.

Russety Bartletts: A Problem.

The glory of the California Bartlett pear is clearness of its pale golden hue—coinage of California sunshine and dry summer air. When we get other climatic conditions, must we grow pears like other people?

[Written for Pacific Rural Press by Frank T. Swett.]

DURING the past season probably 80 per cent of all the Bartlett pears shipped have been russety. Such pears have been sold at from 25 to 40 cents a box less than smooth, shiny, attractive pears. Although just as good to eat, russet pears do not tempt the buyer. Specimens submitted by me to Prof. Horne of the University showed no indication of injury by fungus. This russet is entirely distinct from the deeper stains and deformations caused by pear scab. It is also different from what we have been accustomed to call thrips' injury. In Contra Costa county, two orchards sprayed with a fungicide added to the lead arsenate spray showed no better results than other orchards. There is a good deal of uncertainty about it all. While the experts at present think it a disease, at the same time the pear growers hope that the Department of Agriculture will put men in the field next season to follow the matter up. It has cost the growers of California perhaps $150,000 this season. And even if it be physiological, like chapped skin of humans, who knows but some one may find a way of controlling it?

As M. B. Waite of the Department of Agriculture at Washington is most widely known as a student of abnormalities in fruits produced by the perversity of their own nature or by disease caused by invading organisms, I took the liberty of submitting the above facts to him. California fruit growers cherish deep regard for Mr. Waite because of the vigor and incisiveness with which he took hold of our pear-blight problem a decade ago and they will be glad to have his analysis of pear russeting and the comfort he and Professor Horne give us that our glorious climate, which produces glorious pears, was merely temporarily off its job and may be expected to return to its normal function and generally to remain there. Mr. Waite's conclusions on russeting in general and our problem in particular are thus set forth in a letter from him dated August 25:

"I have made quite a study at odd times in the course of my other investigations on pear disease of the causes of russeting, and will discuss them in a general way.

"First, fungous russeting. We have a lot of trouble in the East, particularly on late pears, with a little surface growing fungus which scarcely penetrates the outer skin of the fruit and which causes a brown russeting. It is completely remediable by spraying, either with lime-sulphur solution or with Bordeaux mixture. In the latter case a 2-3-50 Bordeaux mixture well applied when the fruit is about half grown will make it safe for the season. I do not believe you have that in California. It comes with our rainy, damp weather of late July, August and early September.

"Second, spray russeting. There are a lot of different types of spray russeting. One type consists merely of enlargement of the lenticels or breathing pores, "yellow dots" of pomological descriptions. There is arsenical russeting and copper poisoning. This varies enormously in different seasons and with the different varieties of fruits, and probably in different sections of the United States. You are no doubt familiar with some of the different types.

"Third, insect russeting. It is evident that you are quite familiar with the russeting by pear thrips. I think there are probably some other mite troubles of this sort besides the regular pear thrips. We have very little trouble of that kind in the East, though one has to be on guard for it, and I have seen very little of it during the three summers that I visited your State.

"Fourth, physiological russeting, or, as I prefer to call it, rain russeting. We have a lot of this in the Eastern States. It almost chronically occurs in the cavity around the stem. It is sometimes spoken of as stem russeting, and yet occasionally Eastern fruit and most Western fruit, as you know, has no stem russeting. It is the water held in the cavity that really causes the cuticle to roughen. Ordinary water russeting or rain russeting is something like chapped hands, the mere scaling and slight cracking of the cuticle. When the whole epidermal layer of cells cracks then you have a deep, rough russeting, which is of course less common but more serious.

"My experience is that rain russeting is much commoner on fruit when it is rain-soaked when small, that is, when the pears or

(Continued on page 249.)

PEAR GROWING IN ALHAMBRA VALLEY.

The views show pear trees in a picturesque coast valley. The edge of the valley with dwarf trees which have probably standardized themselves by rooting from the graft wood: Trees probably over 40 years old, which were too closely planted. A later planting, well spaced, formed and cultivated.

California Weather Record.

The following rainfall and temperature record is furnished the PACIFIC RURAL PRESS by the United States Department of Agricultural Weather Bureau, at San Francisco, for the week ending at 5 p. m., September 7, 1915

STATIONS	Rainfall Data: Past Week	Rainfall Data: Seasonal To Date	Rainfall Data: Normal To Date	Temperature Data: Max'm	Temperature Data: Min'm
Eureka	0	.26	.31	66	48
Red Bluff	0	T	.09	96	58
Sacramento	.01	.01	.04	90	54
San Francisco	0	.01	.01	72	54
San Jose	.04	.04	.07	88	50
Fresno	T	T	0	94	60
Independence	0	.04	0	86	52
San Luis Obispo	0	.01	.05	80	48
Los Angeles	0	0	0	86	60
San Diego	T	T	0	76	62

THE WEEK

If we do not get early rains and plenty of them this year it will not be the fault of the prophets. It is announced from San Jose that Dr. Porta, whom a rival recently described as "not knowing a magnet from a cow's horn," has given out a thirty-day weather-forecast, based upon the quadrature of Jupiter, in which he promises the Coast a storm between September 20th and 24th which will rival the disturbances of September 22-26, 1904, when five inches of rain fell in San Francisco. Other storms are predicted to occur on September 8th to 12th, and September 14th to 18th.

This basing fore-knowledge of weather upon a quadrature of Jupiter appeals to us very strongly, because from remote classic times Jupiter has been recognized as the chap who made the weather and, though it may be contended that the ancients hardly knew whether Jupiter had any quadrature or not, it was generally agreed that Jupiter lived where he had manifest advantages in his business of throwing down things on the earth. Relying on this ancient conviction of the race, we advise our readers to stand from under on those dates, because, though we may not be able to tell a quadrature from a cow's horn, we apprehend that it means that this year's September rains may be about four times as lively as usual. It is fortunate that the Weather Bureau, although we suspect it does not have as much respect for Jupiter and his quadrature as we have, is to set a new watch, and notifications of frost and rain during the remainder of the fruit-drying period will be given through the San Joaquin Valley by warnings sent out from the Fresno office in time to protect the stuff on the trays.

For all those who get their fall work along and all stuff now exposed under cover, it will be a great joy to have the rains begin early, and keep at it as they usually do when they are large at first. The abundant water of last fall and winter put the State in great shape, as the 1915 crops have shown. And there is another good thing which the snow and water do. It is announced that, with the exception of one year, the total yield of mine gold in California for 1914 was the highest in fifty years. The value was $20,653,496, an increase of $246,538 over that of 1913. Though the amount may not seem so very large, since greater amounts come in in single ships to pay the debit balances of European belligerents to Uncle Sam, it is a neat sum for a single industry and helps along with the development of California.

Activity in Beet Sugar.

The ample moisture of last winter and the cool, moist weather of spring and early summer may have worked some hardship to fruits, as the interesting article on our first page this week indicates; the conditions surely favored the beets and great field-products and factory runs are being reported. The factory at Visalia closes this week, having paid out $100,000 for beets and $25,000 for wages. and made a product of 40,000 sacks of sugar—three-fourths of which are already sold. Other factories nearer the coast are but just beginning to crush beets, and the coast sections have splendid crops as well as the interior valleys. One grower near Stockton reports a yield of 30 tons per acre on 50 acres—the first shipment of beets from two acres running 17% sugar. On the whole it looks as though the California beet sugar industry might be rehabilitated just at the time it was expected to expire, because the rest of the world has shown us that America must depend upon American sugar and get into the world's trade also. This seems warranted as an outlook because the government seems to be awakening to the fact that our sugar interests cannot be sacrificed. E. F. Bishop, an Hawaiian sugar leader, has said this: "Free sugar would mean the shutting down of many of the plantations in the islands. I base the statement that there will be no free sugar on the fact that there is now a deficit in the national revenues and that a larger one stares the administration in the face next year. Sugar brings in a revenue of $50,000,000 a year in duties, and that is no small sum in such an emergency."

A fair tariff on sugar will of course do much more for the country than help the government out of a financial hole, and help it to get into a proper condition of preparedness in case war should be forced on us. The best thing about it, of course, is that it keeps our fields and factories busy and pays wages to our own people rather than to other nations. These facts we believe the coming session of Congress will fully recognize.

Requirements of Fruit Varieties.

As the planting season approaches it is interesting to consider the selection of varieties of the kind of fruit one desires to plant. Though it is an adaptation of a very old phrase, it is very true to say that a new variety of fruit, to justify commercial attention in California, must not only be good but must be good for something. Unless it has demonstrated with reasonable certainty that it has some specific character, quality, behavior or ripening season which meets a definite demand, or fills a lack recognizable by our fruit shippers, driers or canners, it should not be planted on a commercial scale, and therefore should not be pushed by nurserymen, except for trial plantings. California planters have sometimes lost money through the aggressive pushing by nurserymen of varieties not fully tested out in this State—not alone with reference to their growth and productiveness under our conditions, but as to their suitability for our commercial purposes. Our California nurserymen may be guilty of this unwise policy to some extent, but it is generally distant propagators who urge large California planting of varieties which they have found desirable in other parts of the country. Their argument is that if a new variety is good elsewhere, it ought to be much better in California. This is complimentary to our conditions and to a certain degree the compliment is justified, but the commercial requirement is, as stated above, that a new variety shall not only be good but good for something—in fact, good for several things, if possible, for such wide fitness is an element of safety in planting, but it must be specific fitness even though there are several forms of it.

Local Varieties Well Tested.

While it is perfectly true that with some fruits, as for instance the peach, plum and almond, some of the varieties which constitute our chief product are of California origin, it should be remembered that these varieties had from ten to twenty years' local trial before they were largely planted commercially and their characters and behavior were fully determined. It is probably true that for every one of even these local varieties which now prevail there were a score of other local varieties which gave partial evidence of suitability to our uses but had to be rejected for some point of failure. This being the case, one can learn from it the risk of planting of varieties perhaps notable elsewhere but which have had no local trial whatever.

These facts would seem to indicate that California nurserymen should be very critical and conservative in their judgment of new varieties, of whatever origin, and should urge them upon planters only for trial in a small way. These facts also justify them in their present attitude and policy to propagate and urge upon planters fewer varieties and those which have made good on commercial account. They should continue to do this even though enthusiastic plungers in fruit planting should charge them with lack of enterprise in not offering great new things. New things are not great until they are locally demonstrated to be good for something in our commercial category of fruit uses.

Another reason why new varieties do not figure more largely in California fruit-growing is the smallness of the amateur interest. There is, in fact, almost an absence of pure amateurs, enthusiastic, critical, discriminating, athirst for novelties. Even suburban planters follow the lead of the commercial orchardists and plant chiefly what has been adapted to local growing conditions, and few are averse to making what they can by sale of small surpluses. The result is that California fruit growing is almost wholly commercial in spirit, policy and point of view, which is perhaps only natural in a state where the fruit products reach an annual aggregate value of something like one hundred millions of dollars. The effect is to concentrate attention upon varieties which have achieved fame for profit, and to repress amateur devotion and indulgences.

At the same time there is and always has been quite a disposition toward trial of novelties among commercial growers, especially mani-

fested in search for specific characters, which are seen to be desirable rather than desire of newness for its own sake, which is often a point of pride among amateurs. To this enterprising and discriminating search is due the prominence of some of the leading varieties, which are chance seedlings recognized as meeting special requirements and grown great because they really did so.

Better Forms of Tested Types.

The California grower is quite certain that he needs not varieties new throughout and of startling characters, but improved types of varieties which hold the good points of the old and add other points. For instance, he calls for trees resistant to disease and more regularly productive; for improvement of the fruit in beauty, flavor and keeping qualities; for varieties, similar in kind, which fill gaps in the ripening season, so that he can employ help continuously; and shippers and canners agree with him, so that they can keep the cars moving and the cannery plants at work. The experienced grower knows he must be careful not to plant largely something different from what is already growing and selling well in his region, and this is also the advice of the trade to him. He cannot risk much on varieties of entirely different types, although most growers are always doing a little experimenting. Nor should he undertake too many varieties, because a profitable orchard is not a pomological museum. There must be a large quantity of uniform fruit to make any district commercially prominent.

Many Varieties Not Desirable.

For these reasons the number of varieties now planted largely in California is much smaller than it was a quarter of a century ago, and, stopping at this point, one might get the idea that the California grower was a monument of conservatism, and lacking in enterprise and adventure. It is a fact, however, that he has very definite ideas of what he wants that is new, and that he has problems enough to keep plant breeders busy for a century. These are chiefly better manifestations of particularly desirable characters which California growers, shippers and canners have found to be desirable. Such observations from men who have their livelihood and fortunes involved in profitable growth constitute the specific requirements of new varieties in California, and they are not vain imaginings but deeply felt wants.

These facts make it quite clear that it is the duty of propagators to multiply only the best types of the varieties they undertake; to assure themselves of the demonstrated excellence of the sources from which they take buds and scions, and to become, as far as possible, critical and conscientious pomologists as well as trade leaders. The nursery is the foundation of the orchard and the fruit trade, and it must be sound and true in all the requirements of science and morality if our fruit production and commerce are to reach their widest and most prosperous development.

A New Creamery.

According to Farm Adviser E. O. Amundsen, it is intended to get into operation a creamery at Auburn, under the management of a University Farm graduate, to gather cream from surrounding territory and thus aid farmers having a few cows and to increase the number of cows, etc.

Queries and Replies.

Querists must give name and address.

Russian Thistle Helps Alfalfa.

To the Editor: Here in Fallon (Nev.) many new settlers have had a hard struggle getting their first stand of alfalfa, due to the sand blowing and drifting and the hot sun burning the seed and tender roots. In places where the Russian thistle has existed, it has proved the best policy to drill the alfalfa among the young thistle, thus using the thistle as sort of a nurse crop. The thistle shades the soil and prevents the sand from blowing; also helps hold the moisture till the alfalfa gets its right start. Then the alfalfa will crowd out the thistle.—C. Barnum, Fallon.

This is interesting. The chief objection to a nurse crop is the exhausted soil moisture, which takes place during the maturing period of the grain, though too much shade may result also. Russian thistle is more gentle than grain in the matter of shade and thirst, and therefore may be a better nurse crop than grain. As it is an annual it can make no strong fight against alfalfa. The experience is unique and may have a bearing on the general disfavor of nurse crops for alfalfa, which are general grain crops. Possibly some other plant less objectionable than Russian thistle may serve the same purpose. It is interesting, however, to know that the Russian is good for something besides sheep-feed.

The Pepper Tree as a Windbreak.

To the Editor: Kindly give me information on the pepper tree (Schinus molle) for windbreaks. Where could I get the trees and is it practicable to grow them from the seed?—S. A. C., Corning.

The pepper makes a dense windbreak and was formerly largely alternated with blue gums to make both a high and low windbreak in the citrus districts, but some years ago it fell into disrepute because of the love of the black scale for it, and planting was reduced. We are not sure that the sacrifice was warranted; certainly the tree is regarded as one of great beauty in regions where there is no heavy freezing—for the tree is about as hardy as the blue gum. Any nurseryman handling ornamentals can furnish any quantity. The tree is grown from the seed without special difficulty.

Have a Reason for Spraying.

To the Editor: Should one-year-old peach and cherry trees be sprayed this fall?—F. B., Veterans' Home.

It depends upon whether there is any pest or disease affecting them for which spraying is a remedy. More than that, you have to know what the pest or disease is, so that you can select the proper spray. It is not a question of the age of the tree: it is a question of whether anything is biting it or not and if yes, what is doing it.

For a Fall Feed Crop.

To the Editor: Is it too late to sow German millet? If so, what would be a good crop to sow this late? We will have about three months to make hay before a freeze.—J. A. L., Yucaipa.

German millet, or Hungarian grass, does not like dry heat. All accounts we now have do not favor it for California interior situations, at least. If you were sure of three months' frost freedom, you could get quite a growth of sorghum for dry forage, if thickly broadcasted and cut with a mower—but it would not take much of a frost to knock it out. Oats and vetch sown together are more hardy and make a good hay. Or you can put in rye for green feeding during the winter. It will grow with less heat than most wild forage plants.

For Fall-Sown Cover Crop.

To the Editor: Is it practicable to raise a crop of cowpeas (black eye) for green manuring this fall? Part of the ground can be irrigated. I have raised a crop of black eyes on part of it for seed; part is in irrigated cane and sweet corn. The land is a sandy loam with a clay element. It has been small-grained for fifty years. When plowed four to five inches deep it packs badly. This is my first season here. Some of my neighbors do not cultivate cane and corn after irrigating and have a good growth.—T. H. V., Oakdale.

If you can count on freedom from frost until the holidays, you might get a good deal of stuff from cowpeas to plow under, but that is pretty risky in most places; and a hardy legume, like vetch, or melilot, or burr clover, is safer, and you can let it grow until March, unless you wish to put in some other winter crop before that time. Some of your neighbors must have pretty sandy land, or they are doing pretty poor farming.

The J. H. Hale Peach.

To the Editor: I send you a sample of J. H. Hale peach from a tree planted in April, 1914. It was advertised extensively as being "as firm in flesh as a cling," but is a perfect freestone, and has no claim to be classed as a cling. Another drawback is the flesh is red around the pit and discolors the syrup when canned. What do you think of it? I feel inclined to graft them over to the Tuscan cling.—S. H., San Jose.

It is a full-sized, globular, high-colored peach, and on the fresh fruit market should sell well unless it comes in seasonal conflict with some other variety we now have, which is also good for other uses than selling fresh. It has color at the pit, but we are growing other varieties with that character, which are used also for drying. You were evidently misled by the statement that its flesh was "firm as a cling." Every experienced grower ought to know that no freestone has the flesh-texture of a cling, and cannot serve the same purposes even if the flesh is "firm." Those advertisements had the Eastern and Southern conception of firmness, which is different from the California conception of it and its uses. As for the pit-points, something in your specimen was worse than the color, and that a tendency to decay at the pit, but one cannot safely judge a fruit from one specimen. This peach may prove very valuable in this State, but no one should plant this or any other variety, largely, until demonstration of its characters and suitabilities are established by local trial on a small scale.

Grape Grafting.

To the Editor: I have about 40 grape vines of the Sweet Water variety that do not do very well. Can I not graft other kinds into them, say Muscats; if so, when is the best time?—W. W. C., Mesa, Arizona.

Yes; if your old vines are thrifty. Saw off the vine below ground several inches; use a long scion to bring one bud above the surface. Stake the shoot from that and let it make all the growth it will next summer. Cut it back the following winter to the point where you desire the head of the new vine and remove all shoots below that point. Such grafting under ground needs no waxing. It should be done as growth is starting in spring. The bleeding does no harm as the surplus can escape.

Another Year of Citrus Co-operation.

The Report of the California Fruit Growers' Exchange, which handles 62½ per cent of our citrus products, shows progress and masterly control of marketing problems amid perplexing conditions.

From the report of G. Harold Powell, manager, for the citrus year ending August 31, we prepare the following condensed account of past achievements and plans for future operation.

Citrus Shipments. — There were shipped from California during the year ending August 31, 1915, 40,991 cars of oranges and 6,667 cars of lemons, making a total of 47,658 cars. The Exchange shippers forwarded 24,217 cars of oranges and 5,565 cars of lemons, consisting of 9,640,977 boxes of oranges and 2,244,617 boxes of lemons. The returns f. o. b. California, estimating the few cars unsold, will be about $19,537,850; the delivered value in the markets is approximately $30,000,000.

The Exchange shipped 62½ per cent of the total shipments, representing the largest volume as well as the largest proportion of the total crop ever handled. There has been a gradual increase in the proportion of the total shipments handled by the Exchange since its organization. Ten years ago our growers forwarded 47 per cent, five years ago 59 per cent, and three years ago 60 per cent of the total crop.

At intervals during the year, each association estimates the size of the coming crop in the orchards of its members. During the last two years the estimates have varied less than 1 per cent from the shipments.

The Cost of the Exchange Service.—Our shippers paid approximately 4¼ cents per packed box to distribute and sell the crop to 2500 jobbers in the United States, Canada and other foreign countries, or 1⅔ per cent of the delivered value of the fruit. They paid approximately 2 cents per box, or less than 8-10 of one per cent additional for national advertising to increase the consumption of citrus fruits, to popularize the "Sunkist" brand, and to bring the shippers into closer working relations with the jobbers and retail dealers. In passing it may be interesting to note that national advertisers of food products often expend 10 per cent or more of the value of the product for advertising purposes. The total cost of distribution, marketing, advertising and dealer-promotion work, including the general service furnished the shippers by the central office, averaged 6¼ cents per box or 2.46 per cent of the delivered value of the fruit. The average cost of the district exchange is 91-100 of 1 per box, making the total average cost of the Exchange and district exchange service, including the cost of advertising, 7 16-100 cents per box. The Exchange service, which is an evolution of 20 years of existence, is not only less expensive, it is more comprehensive than any other crop-marketing service yet developed.

Oranges and Grape Fruit in 1914-15.—There was an increase of 19.1 per cent over the largest preceding season in the total volume of oranges and grape fruit shipped from December to February, inclusive, in 1914-15, from Florida and California, the average shipments from the two state equalling approximately 275 carloads per day during this period. This increase, in addition to 2,000 carloads from Louisiana and Porto Rico, had to be consumed in the face of the most disastrous business depression that affected both the American consumer and producer. It also had to compete with the largest crop of American and Canadian apples ever produced, which sold throughout the winter at disastrously low prices.

Extreme cold weather prevailed early in December which froze much of the fruit in transit and paralyzed the holiday trade. It gave the consumer inferior eating oranges soon after the season had opened so auspiciously and turned him to other fruits during one of the most desirable periods of the year. A similar severe cold period occurred in January which still further interfered with the sale of fruit and damaged a large number of cars in transit, costing the growers in some districts more than half the cost of producing all the fruit they shipped during February.

The table following shows the number of carloads of oranges and grapefruit shipped from Florida and the oranges shipped from California from December, 1914, to August, 1915, inclusive:

Florida and California Shipments,—1914-15.

	Florida	California	Total
December ..	5170	4668	9838
January ...	3538	3197	6735
February ...	4157	4753	8910
March	3709	5852	9561
April	2656	6556	9212
May	1229	5666	6895
June	241	3097	3338
July	6	1362	1368
August	——	850	850

There was an increase of 33.8 per cent in the volume shipped in December, 1914, as compared with December, 1913, and an increase of 27.4 per cent in February as compared with February, 1914. This increase in volume, with the low retail prices that prevailed, increased the per capita consumption, and affected the prices received during the latter part of the season.

The Effect of Publicity.—In March under better climatic conditions the decay disappeared and market began to improve. This improvement was accelerated by the national publicity given Orange Day, March 20th. Orange Day was recognized by the Governor of California and by many of its leading institutions. It was given a national publicity at that time by publishers, railroads, express companies and other organizations. Through the co-operation of the Exchange with the publishers and with the trade, more than 250 pages of orange advertising appeared in the newspapers on Orange Day. It was "bargain day" in oranges, supplies that had accumulated were cleared up and the markets thereafter readily absorbed the fresher, newer stocks. Comparatively satisfactory prices were received in April and May, and 26 per cent more oranges and grapefruit were consumed in April than in 1914. The almost universally low margins of the jobbers and retailers during the winter and spring months gave the consumer navel oranges at reasonable prices and formed a greater orange eating habit than the people have ever acquired before. The better condition of the later market brought the average on all navel oranges higher than the average of the previous year.

The effect of national advertising, coupled with a somewhat smaller crop than in 1914, has been a leading factor in making one of the most satisfactory Valencia seasons in recent years. The trade has learned that the Valencia is comparatively free from decay; that it is the only summer fruit that can be handled without excessive loss; that it can be shipped into the country towns and to the mountains and seaside resorts. The good color and eating quality of the Valencia, and the freedom from decay, have combined to give the growers of the Sunkist Valencias a splendid financial return.

The Lemon Season.—The California lemon crop increased 132 per cent over the crop of the preceding year. The factors which affect the lemon market differ from those governing the sale of oranges, because the general use of lemons in the summertime depends primarily on climatic conditions. Americans use lemons most freely in cold drinks in hot weather. They use them in a comparatively small way throughout the year for culinary and other general purposes.

Unlike the orange, a low retail price will not greatly stimulate the use of lemons in the summertime. Then temperature is the controlling factor, and if the weather is generally cool, the consumer demand is missing.

The most striking factor in the lemon situation this year has been the abnormally cool weather that has prevailed over the United States since the middle of May. Twice only since the last of April has the average Eastern temperature reachel the normal; twice only since the last of May has the Central temperature reached the normal, and at no time since the last of May has the average temperature reached the normal in the Western section of the United States. The wholesale and retail prices of lemons have been unusually low, but neither the jobber or retailer has been able to move the fruit freely because the consumer will not use the lemon as a beverage when the weather is cold.

The War.—When war was declared in 1914, it was generally believed by the trade that imports would be stopped. Wholesale and retail prices rose to abnormal figures in the fall, the trade had no advices of importations and the dealers stocked up for the future with high priced fruit. But imports were not stopped. Italian lemons were shipped here in the usual quantities in the fall. The wholesale price dropped $3.00 per box in thirty days, but the wholesale and retail trade had large supplies of high-priced foreign and California lemons on hand. These high-priced supplies in the hands of the jobbers and retailers prevented a free distribution of the fruit for many weeks.

What Tariff Reduction Did.—The United States has been supplied with the lowest grades of Italian lemons in recent years on account of the usual continental-European markets having been largely cut off by the war. Whenever it was figured that overhead charges could be realized a flood of foreign lemons has resulted. The reduction in the duty of 1 cent per pound in 1912, reduced the overhead charge on foreign fruit 72 cents per box. These factors have resulted in the lowest prices for foreign lemons in New York probably in the history of the importing business. For the year ending June 30, 1910, the average selling price of imported lemons in New York was $2.90; in 1911, $3.55; in 1912, $2.88; in 1913, $4.38; in 1914, $3.11 and in 1915, $2.02 per box. The New York price of foreign lemons for the fiscal year 1915, which is a leading factor in establishing values throughout the country, is only slightly more than the average cost of producing and placing a box of lemons on the cars in California.

Good Fruit Wins.—At no time in the history of the industry has the advantage of all the details of skillful fruit handling been so strikingly illustrated as in 1915. Some of the California shippers have forwarded their entire crop without loss from decay, with satisfaction to the trade and the consumer and with profit to the producer; while other shippers, through lack of equal efficiency in fruit handling, have been unable to ship fruit of sound merchandising value or return a profit to the growers.

By-Products Company.—The Exchange lemon shippers have organized a company to manufacture by-products from the lower grades of fruit. The plant is under construction and the business will be handled on a co-operative basis, the growers receiving the full returns for the by-products after the cost of operation is deducted. From one and one-quarter to one and one-half million dollars' worth of lemon oil, citrate of lime and other lemon by-products are imported annually into the United States. These products can be manufactured successfully in California from the lower grades of fruit that are not worth shipping, as well as from fruit that demoralizes

THE United States, for the first time in its history, now leads the world as an exporter. Figures made public August 27 by the Bureau of Foreign and Domestic Commerce show that American exports in the fiscal year ended June 30 last totaled $2,768,000,000, compared with $2,170,000,000 for the United Kingdom, the next largest exporter. This was an increase of 17 per cent in the case of the United States, when compared with last year, and a decrease of 30 per cent for the United Kingdom.

American exports included domestic products valued at $2,716,200,000, against $2,239,700,000 in 1914; and foreign products, $52,400,000, against $34,900,000 in the preceding year. British exports included British and Irish produce, $1,734,100,000, against $2,577,200,000 in 1914; and foreign and colonial produce, $426,000,000, compared with $526,500,000 in 1914.

the markets because of its inferior quality.

Increasing Consumption of Lemons.—There are 20,000 acres of lemons in California four years old or under which will soon come into bearing and will double the supply of domestic lemons. Including the foreign lemons, it will be necessary to increase the lemon consumption in the United States and Canada from 75 to 100 per cent in the next few years. This can only be done by increasing the consumer demand. Production cannot be curtailed because the groves are already planted; and the crop can be successfully sold by the grower, the jobber and the retailer only when the consumer demands it. The advertising of Sunkist lemons as a separate campaign from Sunkist orange advertising has been adopted by the board of directors as the basis for the future lemon sales plan. New uses of lemons will be suggested to the public, and the consumer will be educated to the advantages of the lemon as a healthful product, in a greater number of culinary uses, in toilet uses, and in beverages, so that lemons will be used more generally throughout the year.

The Fruit Growers' Supply Company.—The Fruit Growers' Supply Company has transacted a business of $3,300,000 for its members. The value of packing house materials supplied the associations will equal approximately $2,440,000, or $400,000 in excess of last year, while orchard supplies, on account of the elimination of the oil and orchard heater business, will be correspondingly reduced. The Supply Company has furnished 12,000,000 boxes, or 2100 carloads of box shook; 16,500 kegs of nails; $236,675 worth of fertilizers; 1,500,000 pounds of cyanide of sodium; 420,000 pounds of cover crop seed.

Increasing Demand for Citrus Fruit.—The orange and lemon crops of California have increased from 5 to 20 per cent or more annually for many years; the lemon shipments during the present year are three times as large as two years ago, and twice as large as last year. Population increases on the average 2 per cent annually, but production continues to increase without reference to demand and without relation to the increase in population. In addition to 20,000 acres of lemons, there are 21,000 acres of Valencia oranges and 43,500 acres of the Washington Navel variety, 4 years old or under, which, in the next few years, will double the lemon and Valencia crops and increase the Washington Navel shipments.

The problem of the Exchange therefore is to create a larger consumer demand and then to increase the efficiency of our sales efforts with the jobbers and retailers so that our oranges and lemons may be widely distributed and placed in the consumer's hands at reasonable prices. We cannot curtail production. We must sell whatever our growers bring forth. Our sales efforts must be broad enough to move the crop under adverse, as well as under normal conditions. The Exchange, in having the stability of the industry largely in its charge, has no alternative. Through a national campaign of education it must continue its efforts to increase the consumer demand rapidly enough to keep pace with production. If we can increase the consumer demand, the problems of wholesale and retail distribution that confront the industry in California and in Florida are solvable; if consumer demand is not increased commensurate with increased production, no sales efforts on the part of the Exchange or any other shipper, the jobber or the retailer can move the crop at satisfactory prices.

Cherries in Modoc County.

To the Editor: I now have in my orchard five very large, thrifty cherry trees, aged about 14 years, which have never yet furnished me a cherry. They bloom nicely and the cherries hold on until size of peas, then fall. They were sold to me for the Black Lamberts. I have been told to drive rusty nails in them to make them bear; also to put old rusty irons around the roots; or when in heavy bloom to give them lots of water. Please give me your idea on such doings. Do you think a big locust tree standing near would affect their bearing? My orchard is a dry land orchard and does nicely without irrigation if given plenty of summer cultivation.—G. W. C., Standish.

[Answered by D. E. Alvord of Cedarville.]

I am about one hundred miles north of the place in which your correspondent is located. The climatic conditions are very similar, however, and I may be able to give you some information which will be of value in determining his difficulties.

The soils in Modoc and Lassen counties vary considerably within short distances. His soil may lack the element most necessary in the production of cherries.

This is a semi-arid region with a very dry atmosphere through the months from June to October. The cultivation of the soil in this region must be carefully done, and at the proper season in order to prevent evaporation. Spring plowing and cultivation has a tendency to permit rapid evaporation and drying out of the soil. Fall plowing and cultivation is decidedly the best for the conditions we have to meet here. Mulching of the trees is essential for best results. This may be done with straw or stable manure.

It has been my observation that irrigation at time of blossoming is very beneficial if it is at all possible to procure water at that season. Your correspondent's method of pruning may have some effect upon the bearing of the fruit. He may have a variety of fruit tree that is not self-pollinating. Perhaps his trees do not run true to name and may be entirely different than he believes.

His question concerning the large locust tree near the cherries suggests to me that it might affect the moisture at a critical period in development of the fruit. Particularly where he is dry farming and moisture is at a premium.

In Surprise Valley, where I am located, all the sweet cherries thrive and bear excellent fruit every season, barring a loss by frost at a time when the fruit is very tender. The varieties grown here are Lambert, Black Republican, Black Tartarian, Royal Anne and the Morelloes.

I cannot think of any other considerations at this time that might have any bearing upon his problem. I have never seen an instance where the crude method of driving rusty nails or placing of scrap iron about the roots had any effect upon the bearing. This is a natural region for growing of sweet cherries, and your correspondent should have no difficulties by following the approved methods.

Melilotus Makes Fine Cover Crop.

[Written for Pacific Rural Press.]

After raising citrus crops for twenty years, A. W. Mueller put in his first cover crop last fall, and had a splendid stand of melilotus on his gravelly soil near Upland on March 1 last. It was beautiful to look upon, but wet to pick in, for it was well over knee high, standing straight up between the rows. It had not been sowed between the trees within the rows because that would necessitate two weeks earlier plowing in one direction so that the vegetation would decay enough to interfere with the cross plowing. Though the seed had not been treated with bacteria, there were large numbers of small nodules on the roots. Mr. Bartholomew, who lives across the road and has raised melilotus a year or two longer than Mr. Mueller, had larger nodules, though probably not more of them. His stand, however, was rather uneven, being highest and thickest close to the branches of the trees, where it was hard to turn under. This uneven stand was largely due to the fact that he sowed it a month later than Mr. Mueller last fall.

About the first of March, the latter gentleman dragged down the cover crop in his younger orchard so that it would not be so wet to pick, so it would turn under easier, and so that the blood fertilizer he expected to apply might be distributed more evenly. Three tons of blood, 14 per cent nitrogen have since been applied to the ten acres, about nine pounds each to the larger trees.

This crop has been watched by a half a dozen of Mr. Mueller's neighbors who have decided they will plant some next fall.

Recommended by Expt. Station.—It was due to the recommendation of the Citrus Experiment Station for melilotus in the heavier soils, that Mr. Mueller last fall decided that he would try it on his gravelly soil. The Station people were doubtful, but recommended twenty-five to thirty pounds of seed per acre. It was sown at the rate of about seventeen pounds per acre because the spaces between the trees were left bare, and because the trees covered so much of the ground. The seed are very small, like clover and the plant grows erect without stooling. It requires moisture at the start and not too much hot weather when it first comes up, as the hot sun would cook it. Immunity from chickens is also desired, for that section close to the chicken yard in Mr. Mueller's orchard has a rather thin stand.

In the Upland district, each orchardist gets his irrigation water once a month. Mr. Mueller's came about September 12, after which the soil was allowed to dry enough to work well. The furrows were then closed and the space cultivated, then the seed was broadcasted, five or six days after the irrigation, and harrowed. Furrows were plowed for irrigation, and a light rain after the first of October, two weeks after the seed was sown, is credited with much of the successful stand. Another irrigation came October 12 and an extra run of water late in the same month, then rain took care of it for the rest of the winter.

Only about one-fourth of the growth was made before February, when it seemed to jump out of the ground. Nevertheless, both Mr. Mueller and the Experiment Station emphasize the need of early sowing if the ground can be kept moist.

It was noticed that the melilotus was taller in the west end of this 10-acre orchard where the trees were younger than the east end where they are 20 to 25 years old. The ground was shaded more and was, therefore, kept in better condition of moisture so that the seed started more quickly, but later in the season the extra warmth and sunshine between the smaller trees gave the cover crop there the advantage.

Horticultural Inspection Saves Fruit.

[Written for Pacific Rural Press.]

At the county horticultural commissioners' meeting which preceded the regular Fruit Growers' Convention, insect, fungus, and bacterial diseases were the main topics. Prof. A. L. Melander of Washington has been misquoted as saying that tremendous loss to the growers and increased prices to the consumers have resulted from horticultural inspection of infested fruit. He told of many instances which came under his observation two or more years ago in the State of Washington, where fruit was condemned because it harbored pests which could not under any circumstances have become dangerous to the horticultural interests of that state. For instance, citrus fruits harboring distinctly citrus pests were destroyed, ostensibly for fear of endangering the horticulture in a state which grows no citrus fruit at all. Instances have been known where wormy apples were condemned on the city markets and destroyed, though in the country roundabout the orchards had to be sprayed for codling moth anyway. Such measures are not adopted in California, and the policy of the horticultural commission is to quarantine, return, or destroy only those plants, fruits, or vegetables which would become a menace to the agriculture of our State. As an instance of this, the eel worm quarantine on Nevada potatoes of a few years ago, while it effectually kept infested potatoes out of the State, did no good because California potatoes in practically all producing sections were affected as badly as Nevada potatoes. Therefore, when this fact was learned, the quarantine was lifted.

PROPERLY DRUM-PACKED GRAPES.

Table grape growers of the State who may be contemplating putting up a portion of their pack in kegs with the use of redwood sawdust as a preservative may be interested in knowing that the cost of the package, the sawdust and the labor is about 90c per keg. Freight and refrigeration to Chicago amounts to 71c per keg.

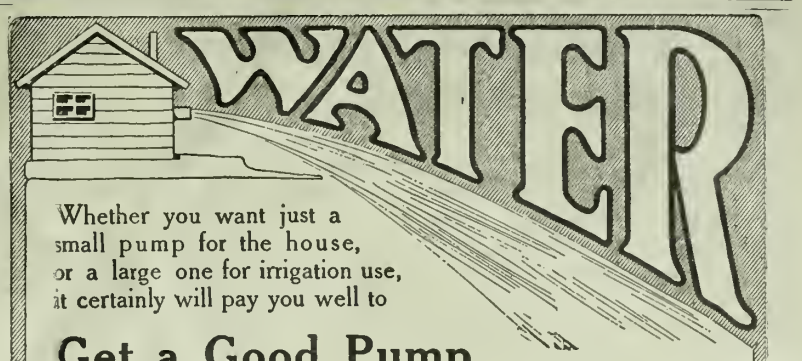
Last year some of the grapes packed in this form sold as high as $2.50 per keg f. o. b. California. This price, however, was subject to considerable fluctuation, and where the grapes were consigned they brought various prices according to their condition when the keg was opened.

The keg contains about thirty-five pounds of grapes, and the mode of distribution has been largely through commission merchants and the agencies established in the East by the large fruit shipping concerns of California.

Although a great quantity of table grapes was packed in this fashion last year, the distribution by this means may still be considered to be in an experimental stage.—State Board of Viticultural Commissioners, E. M. Sheehan, Sec'y., Aug 28.

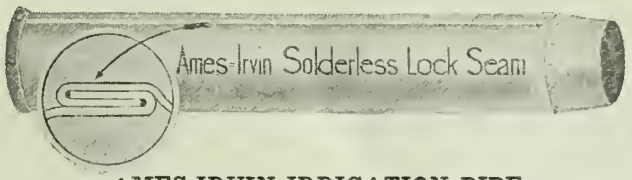
[In our issue of May 8, 1915, is an article containing notes of interest in regard to commercial aspects of keg-packing, and in regard to the best methods of packing.—Editors.]

IRRITATED BY EXTRACTING.



To the Editor: Our attention has been called to an inquiry, page 123 of your issue for Aug. 7, 1915, in regard to poisoning when extracting honey. This irritation comes no doubt from the propolis or bee glue, which the bees deposit in cracks and crevices in the hive, and which is to be found, of course, on the frames containing the combs to be extracted. To some this propolis, or some varieties at least, is somewhat poisonous. We are sending you under separate cover a copy of the June 15th issue of "Gleanings in Bee Culture," in which you will find an article by C. R. Parks on propolis poisoning and several remedies which Mr. Parks has tried and found to be valuable.—H. H. Root, Medina, O.

[Thank you for the reference. Mr. Parks found that this application was very satisfactory: It is a powder—camphor, half a drachm; oxide of zinc, one ounce; starch, one ounce. Dust the affected parts well, and, unless it is a severe case, relief and cure will be the result. This powder can be used about the eyes and other tender portions of the body without irritation; but it is well not to get it into the eye.



Covering the hands and wrists with soap before working in propolis aids in preventing poisoning, and assists in removing propolis from the hands.—Editors.]

Paso Robles almond growers are harvesting a much larger crop than was first expected.

Mechanical Power on the Farm.

WHAT A CANADIAN DID WITH HIS AUTO.

After driving a 1912 Overland touring car more than twenty thousand miles over the rough roads of Saskatchewan, A. W. Bell, a native of Saskatoon, conceived the idea of putting it to work on his farm. His theory was that if the car could stand three years of traveling over the so-called roads of that section of the country, it could go a step better and do the practical work.

The auto was converted into a tractor by the simple arrangement of putting in an extra axle under the frame, two feet in front of the rear axle of the car, on which were placed two binder wheels. After removing the rear wheels of his car, Bell replaced them with small sprocket wheels which were connected with large sprockets on the drive wheels by a chain. This reduced the speed of the car and gave it more power.

Practically all of Bell's neighbors who were interested in his experiment, believed the scheme to be impractical. They tried to convince him that the engine would heat up too much and declared the gears could not possibly stand the continuous strain.

But, although the machine has been in almost constant use throughout the summer, no trouble has been developed. It has been run as many as fourteen hours a day, drawing a set of discs and a set of sixteen fast harrows, without even needing a fresh supply of water.

Bell states that he was able to seed thirty acres a day or harrow from sixty to seventy acres with his automobile. By drawing the twelve-inch bushers, he managed to break five acres of soil a day, or the equivalent to the work done by six or eight horses.

The car consumed just seventy gallons of gasoline to put in the crop. The saving in time and labor was another important item.

It took less than an hour to change the rigging of the car, so that at any time when its owner desired to make the trip to town all that was necessary was to take off the farm equipment and transform the machine into a full-fledged touring car.

SATISFACTORY CEMENTING OF DITCH.

To the Editor: I was interested in the article from "E. L." in regard to his ditch trouble in the issue of the Rural Press of August 14th. I have had a little experience with similar ditch trouble. A neighbor and I have a long ditch built on a levee. There is a good deal of alkali in the soil, so it was real easy for the gophers to get a hole started and then the water soon did the rest.

In 1911 we put in about 300 linear yards of cement, about 7 ft. surface, at a cost of 50 cents per running yard. We mixed the first coat 5 parts sand to 1 of cement, plastered that on the sides and bottom about ¾-inch thick; then put on a second coat, 2 parts sand and 1 cement, about ¼-inch thick. The cement cost about $13 per ton net; sand did not cost anything. We allowed ourselves $2 per day for all time put in.

The next year we put in about 30 linear yards more of cement. That we mixed, the first coat 7 parts sand to 1 of cement, and the second coat 3 parts to 1 of cement. We put the first coat a little thicker than we did when we mixed 5 to 1. It is as satisfactory as the first year's work.

The result has been no trouble from gophers, weeds, or seepage, and no expense for repairs on the part of the ditch that was cemented. The ditch is almost four miles south of Hanford, Cal.

I will be glad to answer any questions in regard to the work if this statement is not clear enough.

Hanford, R. 6. C. R. Watson.

STEEL PILING FOR DITCH-CORE.

To the Editor: In your issue of August 14th I note E. L. of Winton asks for suggestions covering a means to prevent burrowing animals from working through his irrigating ditch banks and causing them to fall.

I believe the least expensive and most efficient plan will be to use steel-sheet piling. Most any sheet metal works, equipped to bend and form fairly heavy steel sheets, will be able to form the edges of the piles so that they will interlock. The formed edges will tend to stiffen the piles and prevent buckling while being driven into place. As the narrower these piles are the stiffer they will be, comparatively light gauge metal can be used. A cast iron drive head, made to fit well down over the top end of pile, will pre-

Get Under Your Plow Sole and Raise Your Profits

FIELDS, truck gardens and orchards are often underlaid with a plow sole as a result of long cultivation. This hard packed soil is practically impervious to moisture and impenetrable to roots.

Formerly it was necessary to fertilize such land heavily every year—a method of cultivation entailing considerable waste in money and effort. Why? Because the hard stratum caused much of the valuable fertilized top soil to be lost by erosion.

Today without this expense, without this waste, bigger, better and more profitable crops are being produced by means of

HERCULES DYNAMITE

With its aid the rich virgin plant food four feet below the plow cut is being utilized, the drainage of the soil is being improved, crops are being protected against drought and floods.

Hercules Dynamite is doing these things quickly, easily and economically. But subsoiling is only one of the many uses of this great agricultural power. It is saving time, labor and money in planting trees, draining land, removing rocks, blasting stumps, digging ditches, excavating cellars, cisterns, etc,

You can do the work yourself without difficulty even if you've had no previous experience. There is a Hercules blaster near you, however, who will do the work for you at a small cost. We shall be glad to send you his name on request.

If you want to know the many ways in which Hercules Dynamite can lessen your work and increase your profits

GET OUR VALUABLE FREE BOOK.

We have just issued a revised edition of *Progressive Cultivation*. Whether your farm is large or small you cannot afford to miss reading this interesting book. To every reader of this magazine we offer a copy without cost or obligation. Write for yours today.

vent any damage from the driving mallet.

The piles will be less costly than lining the ditch with concrete and probably more durable and less liable to damage from any source. If, after the first lot of piling has been put in, it is found necessary to add to the original lines no expensive equipment will have to be used—a few men, some piles and a couple of mallets will do it.

Theo. Poindexter.

San Francisco.

WATER FOR 20 ACRES, $1.40.

[Written for Pacific Rural Press.]

"Why are you pumping here where the Government irrigation ditch runs so close?" we asked of Adam Lachenmyer, who lives close to the Orland project.

"Well, here are 35 acres of oranges set out a year ago in June and interplanted with beans and Gyp corn which must be watered regularly, but we are outside of the Government project."

The orchard is a little over three-quarters of a mile long and 14 trees wide. Fifteen acres at the far end are planted to corn, but are unavailable for irrigation from the pump on account of a sag in the middle of the orchard; so the trees are watered in little basins from a tank wagon which is supplied by another engine-driven pump at the other end of the orchard.

The ditch runs the full length of the upper side of the remaining 20 acres, on which the water is run in furrows from the orchard. It requires just a day on this deep clay soil for the 5-inch centrifugal pump with a 6-inch discharge, run by a 15 h.p. International Gas Engine to water the 20 acres.

Fifteen gallons of distillate work the engine a day of 12 hours at a cost of 97½ cents, being bought in large quantities by combining orders with a neighbor. Forty cents' worth of lubricating oil supplies the engine a day so that the running cost of irrigating Mr. Lachenmyer's 20 acres of oranges and beans is about $1.40 per irrigation.

The well is 100 feet deep with a 12-inch perforated casing all the way down, though the water rises to 20 feet below the surface during the irrigating season. The pump is practically always under water in a 24-foot pit, so it requires no priming.

Will Use Cement Pipes.—To get water across the low part of the orchard and avoid loss in seepage, etc., Mr. Lachenmyer expects to buy cement by the carload, get gravel cheap nearby, and make concrete pipe in co-operation with his brother; and they will use patent gate valves in order to control the waterflow absolutely.

RUSSETY PEARS: A PROBLEM.

(Continued from page 241.)

apples are an inch or so long. I think you had some abnormal rains last spring. I am inclined to suspect Prof. Horne's suggestion is correct, that your moist spring weather may be the real cause of your present trouble with russeting. That means, of course, that you may not have the trouble at all another season."

[The analogy, which both Mr. Swett and Mr .Waite suggest, between russety pears and chapped hands is probably warranted. It is largely a matter of keeping out of the wet in both cases—Editor.]

GRAND PRIZE WINNER AT SAN FRANCISCO EXPOSITION

International Harvester Manure Spreaders

"MOST machines handle crops—the manure spreader produces crops." There is a lot of food for thought in that sentence. When you have crops ready, you need machines for the harvesting, but before you can have crops you must have fertile soil. Your yields depend on how well you fertilize the soil.

In the choice of a spreader—your crop producer—you cannot be too careful. Avoid all chance of going wrong by choosing an **International Harvester** spreader—**Low Corn King, Low Cloverleaf,** or **Low 20th Century.**

I H C spreaders are built from careful designs based on rigorous field tests; strength in every part makes them last for years; they can be had with an attachment spreading 8 feet wide or more; they are low for easy loading; narrow for easy handling in yard, stable and field.

If your local dealer can't show you an **I H C** spreader, write us for our booklet "Why You Should Use a Manure Spreader," and when we send it we will tell you where you can see the machine. Don't buy until you have seen an **I H C** spreader.

General Agricultural Review.

CITRUS AND SEMI-TROPICAL.

The orange crop of Tulare county is reported to be 70 per cent of normal; the lemon crop, 80 per cent.

F. Dunning Fowler of Palermo recently purchased 77 acres of the Grinnell Burt property there; 47 acres are in navel oranges.

The highest price paid this season for oranges, $5.70 per box, was secured by the Anaheim Citrus Fruit Growers' Association on the Boston market recently.

According to a report made by its manager, the California Fruit Growers' Exchange during the year ending August 31, shipped 24,217 cars of oranges and 5,565 cars of lemons from the State, bringing in returns amounting to $19,537,850.

OLIVES AND NUTS.

Mrs. Maud Spencer will plant 13 acres north of Princeton to walnuts.

The California Walnut Growers' Association estimates the 1915 shipment at 13,200 tons.

The walnut crop of Orange county is unusually early this year, harvesting just commencing.

It is estimated that there are 13,000 acres of full-bearing olive trees in California this year.

Corning olive growers are going to form a district organization affiliated with the State Olive Association.

According to merchants handling the product, the dehydrated olive is becoming very popular in Sacramento Stockton, and Marysville.

The world's first almond festival, which was held at Esparto on Sept. 4, was pronounced successful in the highest degree.

Fair Oaks olive growers met on Sept. 6 for the purpose of discussing the advisability of joining the Statewide California Ripe Olive Association.

The San Joaquin County Almond Growers' Association has commenced shipping almonds; the crop from that section is reported to be 60 per cent of normal.

Almonds are now being delivered by growers to the warehouse of the Sutter County Almond Growers' Association at Yuba City. The Sutter county crop is not as heavy as usual.

The University of California has increased its correspondence course on olive growing, and is prepared to give all the scientific instruction on the raising of olives at its command.

DECIDUOUS FRUITS.

The harvest of a fair crop of cling peaches has commenced in Tulare county.

The Chico prune crop is said to be several weeks later this year than ordinarily.

It is stated that the Tulare county prune yield will exceed that of any season since the industry started in that county.

It is estimated that with fair prices, the crop of Bartletts will bring Nevada county growers from $75,000 to $100,000 this season.

The young prune orchards in Napa county are being attacked at present by the red-humped caterpillar, according to a report made by H. J. Baade, Farm Adviser.

Dr. B. C. Burger of Placerville took 1100 boxes of pears from 200 trees. The returns for the first shipment of 224 boxes averaged $2.35 a box. The second shipment is expected to sell for more money.

Encouraging returns are being secured by the California Fruit Distributors from their eastern advertising campaign started recently for the purpose of giving wider publicity in the East to the green fruit shipped from the San Joaquin Valley.

Many growers are subscribing to stock in the$1,000,000 California Peach Growers' Company; forty growers are members of a volunteer committee for the purpose of canvassing for stock and are doing good work in the San Joaquin Valley.

On Aug. 31 the plant of the Turlock Fruit Juice Company was completely destroyed by fire. The company some time ago discontinued the manufacture of grape juice and the plant had been leased by the Turlock Merchants' and Growers' Corporation for packing sweet potatoes and cantaloupes.

That the proposed formation of the California Peach Growers' Company is attracting wide attention in the East is shown by the fact that J. P. Bolton, secretary of the central executive committee, received a tentative offer from an eastern jobber for the California fruit, dried and green, to cover a period of ten years.

GRAPES AND SMALL FRUITS.

Lodi shipped the first car of straight Tokays on Aug. 31.

On September 9, Grape Day was celebrated at Escondido.

The Sutter county grape crop is reported to be 60 per cent of normal.

Gathering of the Muscat crop in Tulare county has commenced; the crop is said to be extremely heavy.

The grape picking season has commenced at Yuba City, and hundreds of men are now engaged in the work.

Sutter county raisin grape growers are experimenting this season curing their crop by the oil bleach method.

The California Associated Raisin Company shipped the second trainload of Sun Maid raisins to the East on Sept. 4.

According to Elmore Chase, county inspector, Tokay grapes in the Fairoaks and American river district are sugaring up well.

The Interstate Commerce Commission has granted grape growers the rate of $1.15 per 100 pounds in open lug boxes to eastern points; the new ruling becomes effective Sept. 15.

The California Wine Association will not buy any grapes this year, for the production of dry wines, from the growers of the State, according to an announcement made by the manager.

At the meeting of the American Pomological Society at Berkeley it was announced that a new variety of grape had been discovered. It is called the "Hubbard," is black in color, and is exclusively a table fruit.

Canned grapes bid fair to be one of the most important products in Kings county in the future. The approximately 500 tons put up by the Kings County Packing Company this season found a ready sale in the East.

A fruit inspector in the Reedley district recently found several bunches of Muscats in Malaga shipments which were being tested in a packing house; he was undecided as to whether an attempt was made to evade the law.

That the conditions are better in the San Joaquin Valley for a bumper grape crop than in the past 20 years and that the Muscat variety is beyond the average, is the report made by the State Board of Viticultural Commissioners.

The Parlier winery and the St. George winery at Clovis have been named by the Associated Raisin Company as receiving stations for wine grapes; the company has also agreed to purchase Malaga, as well as Feherzago grapes at $10 a ton.

GRAIN AND FIELD CROPS.

The threshing of beans has commenced in Orange county.

Good bean crops in the delta regions now seem assured.

The harvesting of beans has commenced in the Oakdale section of Stanislaus county.

This season the San Joaquin Valley Sugar Company at Visalia turned out 40,000 sacks of sugar.

The Carson Valley, Nevada, grain crop this season is said to be the greatest in the history of the county.

On Sept. 3, a fire destroyed 1200 bales of hops on the E. Clemens Horst Company ranch near Sacramento.

A bean one yard long was produced this year on an ordinary beanstalk in the yard of Fred Gilbeau of Lodi.

Experiments in rice growing at Princeton, Colusa county, are reported to be successful, a yield of 90

Pacific Implement Company

SAN FRANCISCO, CALIFORNIA

to 100 sacks per acre being expected.

According to the V. A. Peterson Alfalfa Seed Company, growers of alfalfa seed in the Arbuckle section will realize $30,000 for their crop.

The San Joaquin beet crop is reported to be in excellent condition, and shipments to the Spreckels refinery have already commenced.

The German Government has offered to purchase 1,000,000 bales of cotton in the United States at 15 cents a pound, payable on delivery.

It is expected that the rice acreage of Butte county will be increased by fully 10,000 acres as the result of the opening of the Western Canal.

Sutter county farmers have a large grain yield; 150,000 sacks have been piled outside the warehouse at Tarke station by farmers in District 70 alone.

A company of San Francisco men have purchased 4500 acres of land in Glenn county from the Sacramento Valley Irrigation Company, which will be planted to rice.

Rice on 100 acres of the Shipee Ranch of Butte county will be ready for harvesting within a couple of weeks; the company intends to plant 600 arces next year.

Alfalfa growers of Dixon have taken steps toward the organization of an alfalfa growers' association. At a recent meeting, H. McFadyen was elected president; R. Moss, secretary; W. R. Madden, treasurer.

Potato conferences under the auspices of the State Commission of Horticulture will be held at Bakersfield, Sept. 14; El Monte, Sept. 16; Nuevo, near Perris, Riverside county, Sept. 17; Salinas, Sept. 20; Stockton, Sept. 23; Sebastopol, Sept. 25.

Butte county rice growers are very enthusiastic over the crop prospects at the present time. The company which recently took over the California Rice Mill at Biggs is now making plans to assist the growers in harvesting and caring for their crops.

The Yolo county Farm Adviser reports that this year many hundred acres of field beans have been planted in the county on land which never before grew beans, and a great deal of difficulty is being experienced because of poor selection of varieties and lack of familiarity with cultural operations. The Blackeye and Tepary varieties are giving good results under the most trying atmospheric conditions.

A blackeye bean harvester, cutting and winrowing two rows at a time, with the two horses pushing the machine and walking on clean ground, was recently invented by H. B. Brubaker of Modesto and is being used to cut his own and his neighbors' large acreage. He will not patent it because of his principles against "making use of the law" to defend a patent against probable infractions. The machine does fine work easily.

A very serious condition prevails in the river section of Yolo county among both bean and alfalfa growers, according to the Farm Adviser. The high water table for the past two years has drowned off the tap root of the sub-irrigated alfalfa, and as the water table has fallen away rapidly, the surface roots are left without moisture and the plants have ceased to grow. In some cases, sheep are being turned into the fields, which in normal years would yield two more cuttings of hay.

The Turlock Merchants' and Growers' Assn., whose organization was completed in June, controls about 45 per cent of the melon and sweet potato acreage, and instead of the 75 to 100 cars they expected to handle, had already on Sept. 4 shipped 396 cars of cantaloupes and 234 cars of watermelons. Shipments will cease about Sept. 15; $18,000 was advanced on the pool previous to Aug. 1 and $13,000 remained to be paid on that. The Aug. 1-15 pool averaged better prices than the others. The first 200 cars for which remittances were received brought $70,000 to the growers f. o. b. Turlock. The Association expects to market dried fruit and other products for its members next season.

MISCELLANEOUS.

A movement has been started in Santa Cruz county to secure a farm adviser.

On Sept. 4, the attendance at the Panama-Pacific Exposition passed the 12,000,000 mark.

A movement has been started by progressive farmers of Butte county to secure a Farm Adviser.

An effort is being made to secure a farm adviser for the Alta Irrigation District of Tulare county.

An effort is being made to establish an irrigation project at Grass Valley, with the aid of the U. S. government.

Experiments in the culture of silk worms are being carried on in Yuba county, according to a recent commerce report.

The Fresno weather bureau has commenced sending out daily reports on weather conditions to fifteen places in the valley.

Raymond Beckman, a Lodi boy, has been elected president of the National All-Star League of Agricultural Prize-Winners.

Farm Adviser H. A. Weinland of San Diego county reports that a systematic squirrel campaign will be conducted in his territory.

The 35 winners of the California agricultural clubs will leave San Francisco on Oct. 17 for their 9000-mile tour of the United States.

The entire California fruit crop will be somewhat below normal, according to the last estimate made by the State Commission of Horticulture.

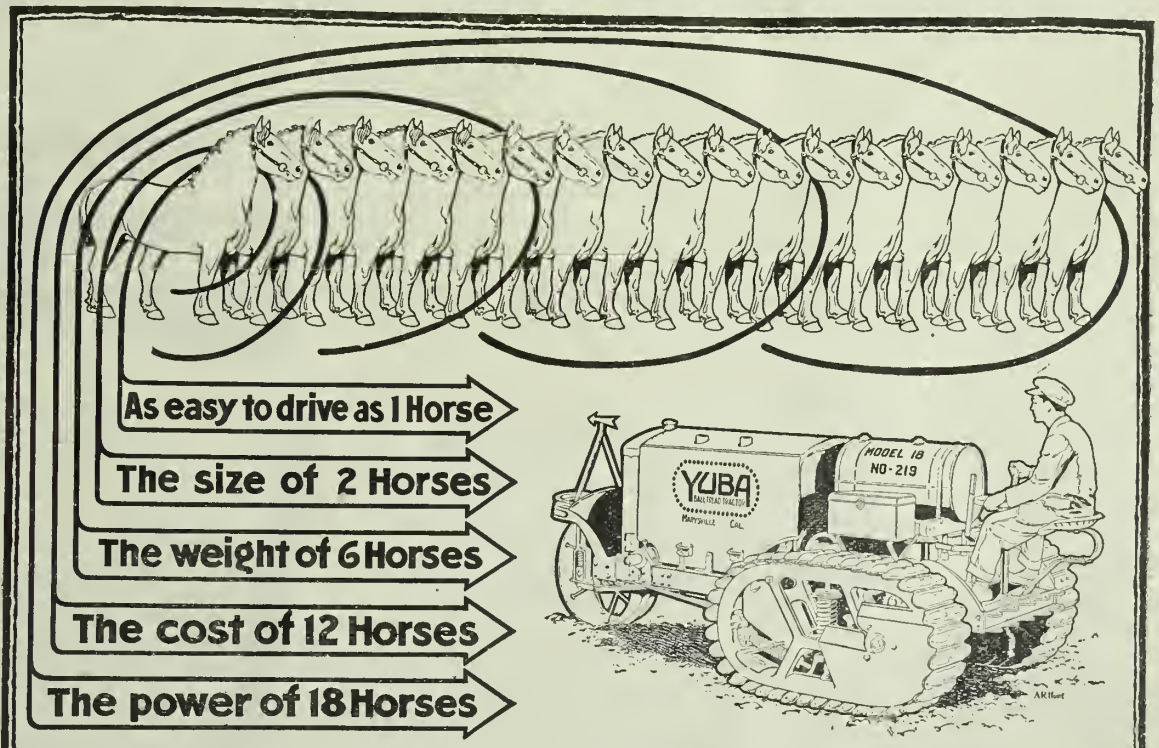
Members of the Chowchilla Farm Bureau recently met to oppose the movement on foot in Madera county to dispense with a County Farm Adviser.

E. R. Arner of San Francisco recently purchased 800 acres in Butte county, with the intention of improving the property and subdividing it into small tracts.

Organization of a Sutter County Farmers' Protective League was perfected recently, the object of which will be to oppose adverse legislation and efforts to force fruit prices down.

After an investigation by Dr. E. Metcalf, pathologist with the U. S. Forestry Bureau at Washington, D. C., the U. S. Plant Introduction Garden at Chico was found free from disease of any sort.

The Farm Bureau of Humboldt county is endeavoring to secure an efficiency expert for that county, whose duty it will be to tell the farmer wherein he is losing money, either in producing or marketing.



The second annual meeting of the Yolo county farm bureau was held recently and the following officers elected: J. L. Harlan, president; M. H. Stitt, vice-president; H. Van Tassel, secretary; and the Bank of Esparto, treasurer.

MICA AXLE GREASE

gives *better* lubrication. Spindles *can't* get dry or hot—grease *can't* gum or cake. The grease itself is the best that skill, equipment and money can produce, and then—there's the ground mica. Keeps the spindles friction free. No hot boxes. Dealers everywhere.

WHAT AUSTRALIA THINKS OF OUR BUTTER.

A prominent butter manufacturer and distributor states that with the opening of outside butter markets which is sure to come now that we have reached the limit of home supply, the style of our package will be of more importance than it has in times past.

He compares our present box, in which the cubes are placed, to an office desk having a fine interior but a cheap rough exterior, and asks whether one would be apt to purchase such a desk when one with a fine exterior was available.

In connection with this subject of butter packages, it is interesting to note the comments made on the past few months' shipments to Australia by dealers and inspectors in that market.

The following from the Melbourne Age is contained in the U. S. Govt. Commerce Reports of a recent date:

"For the first time in the history of the trade, consignments of butter from America have been placed on the local market. Mr. R. Crowe, exports superintendent, stated yesterday that several parcels of Californian butter had been examined by experts of the produce division of the agricultural department, and the quality generally had been found uniformly good. The flavor was lacking in freshness, just as might be expected, considering the age of the butter. The type of package and weights chiefly arrested attention. The cube boxes were made of spruce pine, planed on the inside, and coated with paraffine wax to prevent the wood from tainting the butter. The outside was very rough, neither the wood nor the edges being planed, and this rough exterior lent to the picking up and holding of dust and handling marks. All the brands were stenciled and not impressed, as was the case with Australian butter boxes.

It was strange, continued Mr. Crowe, that in America such taste was displayed in the type, get-up, and branding of kerosene cases, and also such a laxity with butter. The weights were not marked on the packages, and the contents varied from 65 to 72 pounds; each packet had to be tared and recorded separately. In this respect the early days of the butter industry in Victoria were recalled, when kegs and boxes of different sizes and shapes were the rule. It was then necessary to weigh and record the gross, tare, and net weights of each package. That was the practice of 25 years ago. The Agricultural Department set to work, and soon had the ½-cwt. package in universal use. The whole of the butter packed in bulk for export and local sale through Australia was put in boxes containing 56 pounds net, and special precautions had been taken by regulations under the commerce act to insure the continuance of this standard package. By the arrival of butter from San Francisco one was reminded of the enormous boon the standard package was to all concerned. With the million boxes of butter made yearly, both labor and clerical work, sometimes involving mistakes and loss, were avoided. It came as a surprise, concluded Mr. Crowe, that the Americans, who adopted decimal coinage, should have overlooked the advantage of standard butter packages."

THE SILO IN GRASS COUNTRIES.

[Written for Pacific Rural Press.]

The need for silos in an all-the-year pasture country and where corn will grow, but does not ear out, may seem at first far-fetched; yet dairymen in Humboldt county are putting the silo into service the same as in all other parts of the State in ever-increasing numbers.

It is an established belief among many of the stockmen of that county that the more you farm, the less money you make; and in line with this thought the silo fits in perfectly. In the past it has been customary for every dairyman there to plant a small portion of his ranch to root crops with which to carry his stock over the fall and winter months when heavy rains make it necessary to stable the stock.

These root crops, while producing wonderful tonnages cost money to raise and harvest, $40 to $50 per acre being the rule, and it is to overcome this expense as well as to furnish green feed in midsummer when good pasture is scarce that the silo is warranted.

Corn and sorghum crops being eliminated as silo crops, necessitates the use of the clovers and rye grass which are most commonly grown and this enlarges the usefulness of the silo, as the rain-damaged hay crops of spring may in this way be saved and turned into valuable feed when such feed is most badly needed.

As is common with the silo in all sections, experience brings to light new silage crops and new farming methods; and so it is there, bald barley or oats planted with vetch seeming to be the coming silo crop on account of its adaptability to a rotation system with the summer and fall grown root crops.

When such feed is siloed or contemplated as a silo crop, it is planted in fall on the land which has been previously planted the same year to root crops. As this beet and carrot land would otherwise usually lie idle till after the heavy winter and spring rains, it may with the vetch and grain hay crop be utilized the entire year growing the silo crop in the winter and early spring before land preparation is necessary for the root crops.

Wheat and vetch are also reported as good silage crops, being seeded in December and cut in April or May when the wheat is in the dough. One silo owner with several years' experience highly recommends this as a silo crop. Incidentally, it might be mentioned that he has even siloed Canadian thistles and found the cows so fond of them that they licked the feed troughs clean when fed the silage.

One dairyman in the whole milk business thinks so much of silage that he silos all of his rye and clover which would ordinarily be cut for hay and buys alfalfa hay in its place to be fed with the clover silage. This does away with root crops entirely in this instance and is believed to be more efficient and more economical.

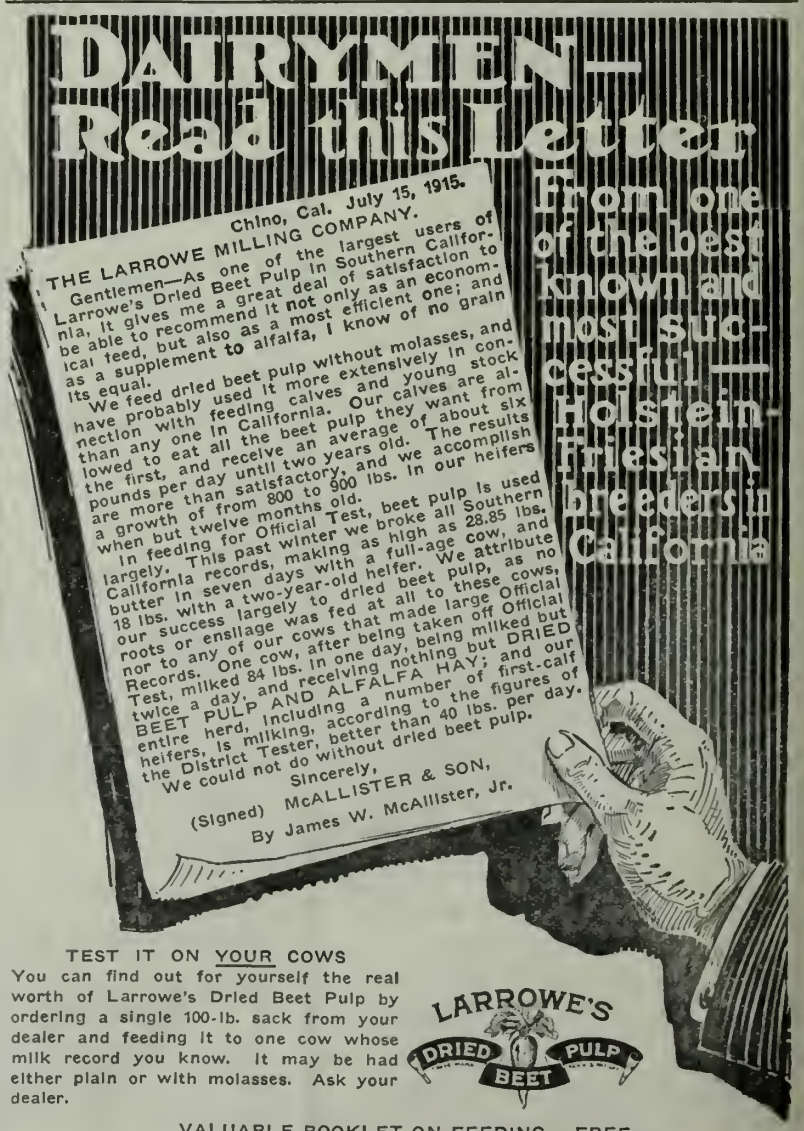
What one dairyman of Humboldt county said may be applied to all parts of the State at the same time: "The thing that every stockman is interested in and watchfully waiting is the silo. It's coming fast, and the dairyman of the future without a silo will be the exception."

STARTING WITH PUREBRED HOGS.

[Written for Pacific Rural Press.]

"Many people wanting to start with purebred hogs come to my place to buy a couple of sows and a boar. I practically always advise them to take two or three gilts already bred to one of my boars, then save all the sows pigs; and when ready to breed the sows again, come and buy a good, young boar which has no relation to them. He can serve the sows and their pigs, while if the boar were bought with the original sows, he would have to be sold or exchanged right away, for there is not much profit in keeping a boar for two sows and another one for the rest," says E. C. Rand of Petaluma.

One who starts purebreds in a small way must work up his reputation. This is done by local advertising at first, for it does not pay to attract inquiries which must be turned down for lack of stock. Such an inquirer does not often come back.



Later on, when the herd is increased to justify it, advertising in the State-wide farm papers, showing at the fairs, and taking part in swine breeders' association are necessary parts of the breeders' policy. It is poor business to sell any animal on which the buyer will have a kick coming, for advertising pays best when it attracts customers who repeat their orders.

CHEAPER FREIGHT ON BETTER ANIMALS.

Valuation of cattle, horses and other animals in live stock shipping contracts made by forty-five railroads west of Chicago have been declared to be unjust and unreasonable and ordered canceled by the Interstate Commerce Commission. The Commission declared the scheduled valuations were not representative of the average actual values of the animals shipped.

On a horse, the actual value of which does not exceed $150, the new rates must be fixed at not more than the freight charge now based upon the present scheduled valuation of $100. New tariffs on other animals were prescribed in accordance. For each 50 per cent or fraction of actual value added, not more than 2 per cent additional may be charged.

A Holstein cow, Brinka De Kol, owned by J. A. Pelanda of Salida, produced in 10 months 807.87 lbs. butter.

Importance of an Exchange for Feeders.

To the Editor: Kindly allow me to continue the subject of organization to aid stock feeders in this State by quoting from your comments upon my letter, published in recent issue, as follows:

"Just what kind of distributing and marketing system would best meet this growing demand is a much mooted question, but it is certain that the one now in vogue will not permit of much development."

It would then seem that there is need for a freshly organized association to meet developing conditions in a progressive manner.

The eastern union stock yard plan could be simplified and improved upon, for California use, in handling transactions in feeders and eliminating the need of commission men and stock brokers.

It would be desirable to operate a San Francisco Union Stock Yard on a cost basis as a market for finished stock solely, without handling feeders in the yards.

It would not seem necessary nor economical for a farmer in Sacramento county to be obliged to buy Plumas county feeders in San Francisco yards, when a well-informed association office could accomplish the transaction, quickly, bringing the parties together without the expense of unnecessary loadings, rail journeys and holdovers as with the Eastern system.

As it is now, feeders generally go out on a stock hunt, picking up here and there, driving to a collecting point for shipment or buying through a local broker. This involves a loss of time, expenses, shrinkage or fees which reduces profits for the large feeders and practically eliminates the small fellows from the game.

The aggregate of small fellows can handle an immense number of cattle, and their needs as well as others must receive attention if California's vast available resources in the feed lots are to be utilized.

Until the small producer wakes up to the necessity of organization he will continue to remain nailed to the cross as an easy target for those who separate him from his feed and ship it long distances to others who realize the value of it even at four times its original cost.

The producer not only gets his nose pulled but his face slapped by a joke, for allowing the pulling, and about all he has left is his independence in saying which candidate shall be permitted to do the pulling, knowing that all have agreed to use the same force.

When an alfalfa mill can contract one thousand acres of alfalfa for the season at four dollars per ton, which sells as meal in the eastern market at twenty-five dollars per ton to furnish a profit there, is it necessary to continue blowing an impotent reveille to the feeders of California?

Is the idea going to die in the wool, or are you fellows with feed for the stock going to mill it up in your own pastures and at your own stacks? It is up to you.

There is a good deal of intelligent assistance to be had in undertaking the formation of an association in this age.

The Office of Markets and Rural Organizations of the U. S. Dept. of Agr. has done remarkable work in facilitating the formation of such enterprises. Its large fund of information and accumulated data is at your disposal for intelligent use as well as their personal services.

Assistance may also be had from the county farm advisers of this state in getting into close local touch with all parts of the commonwealth.

Execution to produce material and concrete results is the sort of activity that is required at this time.

Let not the old saying that "what is everybody's business is nobody's business" operate to the detriment of all concerned in this matter. If it concerns you, make it your business! Wm. Curtis Clark.

Dixon.

HOLSTEIN STEERS VS. CHEAP HAY.

To the Editor: Would it be profitable to fatten and raise grade Holstein calves into market steers, say three-year-olds, on alfalfa hay at $5.50 a ton, together with some corn stock rougbage, the animals not being required to range for their feed? In other words, will it pay me, with more hay than I can feed my dairy cows, to feed my own calves or to sell the calves and the excess bay at $5.50 per ton, not considering the manural value of the stock? What is it likely that the figures would be? If I fed straw with alfalfa would it make a good ration?—R. D. K., Richfield.

[From our observation it would not be profitable for you to attempt to raise Holstein steers under your conditions. We should sell the calves for veal when they were three or four weeks old and utilize the surplus feed by adding more hogs and dairy cows. If you want to feed butcher cattle, get well bred beef calves, short yearlings if possible. Feed them well and turn them off next spring. In this way you may make better than $5.50 a ton for your hay, providing the market is right in the spring.—Editors.]

Registered Jersey Bull

A perfect individual.
Dam "Register of Merit" cow.
Sire, 1st prize winner and Reserve Champion.
Daughters are Big Producers.
Must dispose of this finely bred animal, as I do not wish to use him on his daughters.
Sure Breeder and Gentle.

GRANDSONS OF TILLY ALCARTRA
At Prices within Reach of Every Breeder and Dairyman.

A Grandson of Tilly Alcartra.
We have several splendid grandsons of this now famous cow which we can deliver to you at prices which will suit the pocketbooks of every dairyman wishing to improve the quality of his herd, whether it be a grade or pure-bred herd. These bulls are sired by our herd bull, Prince Alcartra Korndyke and out of A. R. O. cows, and are the only living grandsons of a cow having a record of over 30,000 pounds of milk in a year. Such an opportunity for increasing production has never been offered DAIRYMEN AND BREEDERS in California, price and quality considered. Buy one of these bulls and solve your low production problem. Write
J. S. Gibson Co., Box 97 Williams, Cal.
"THE NAME GIBSON INSURES QUALITY."

A. R. O. Cows and Heifers
Bred to PRINCE JULIANA DE KOL WALKER, will be in our offering at the California Holstein Breeders' Sale at Hanford, October 14-15. PRINCE JULIANA DE KOL WALKER is sired by PRINCE GELSCHE WALKER, whose dam is GELSCHE WALKER, 30.54 pounds butter in 7 days, and whose seven nearest dams average nearly 30 pounds butter in 7 days. His dam is JULIANA DE KOL, former world's record 2-year-old, whose sire has 8 daughters averaging 867.82 pounds butter in one year. This is the kind of Blood for Foundation Stock.
HEWITT & HEWITT, Hardwick, Kings County, Calif.

When Grain is High **Feed DIGESTER TANKAGE**
Whether intended for show or market, the hog attains perfect condition and more quickly and economically if his ration includes some DIGESTER TANKAGE. The growing pig needs DIGESTER TANKAGE as a bone and muscle builder. Write for free pamphlet on hog-feeding.
WESTERN MEAT COMPANY,
Animal Food Dept., 704 Townsend St., San Francisco, Cal.

With the Live Stock Men.

DAIRYING.

A. Allen of Escalon will fill his recently-erected 50-ton silo with Indian and feterita corn.

A. A. Merkley of Sacramento sold a Holstein bull to F. W. Kissel of that place for $300.

A. B. Humphrey of Mayhews recently sold a Guernsey bull to C. E. Humbert of Cloverdale.

S. Ever of Clarksville, breeder of Brown Swiss cattle, has his dairy herd up near Truckee on his summer ranch.

The new 120-ton silo erected on the Goodman Ranch east of Manteca will be filled with corn in the near future.

Jas. McGillvery of Sacramento county reports sales of Holstein bulls as being good. "Cannot supply the demand," he says.

Joe Carrico of Oriand has a dozen heifer granddaughters of Tilly Alcratra, which are likely to make a big showing one of these days.

O. J. Ames of Oakdale recently shipped a six months old Jersey bull calf to Chas. McKay, Jr., of Bishop, Inyo county; also one to Hans J. Nilsen of Oleander.

Two burebred sales of dairy cattle will be held at Hanford next week—a Holstein sale on the 15th and a Jersey sale on the 16th. All purebred men should attend.

Dr. Farish of Sacramento has a herd of 125 milking cows on his ranch near Woodland. He is testing his cows and weeds out the poor ones, replacing them with others.

R. F. Guerin of Tulare recently had an advanced registry test made of several members of his herd; two cows produced 16 pounds butter fat in a week, and two others 14 pounds.

Twenty-five high grade Holstein cows were recently purchased from dairymen in the Arcata section of Humboidt county by the manager of the Gotshal Cattle Company of Ripon.

The F. J. Scheef Dairy, west of Woodbridge, was scored 100 per cent by the Alameda Dairy Inspector. The Empire milking machine has been used for four months on this ranch.

The daughters of Silver of Cosumne, great herd sire belonging to P. H. Smith & Sons of Sacramento county, are proving to be great producers, and a credit to the Jersey breed.

Theodora, a three-year-old Holstein in the E. F. Young herd of Modesto, produced in 10 months 332.4 pounds fat. In her best month she made 62.6 pounds fat and 1565 pounds milk. Pauline Echo, a stable mate, made 357.6 pounds of fat in 11 months.

Ernest Hogiund of Denair is one of several in that district who are putting up silos. He has three acres of yellow dent corn planted the last of June on sub-irrigated land, from which he expects to fill a 50-ton silo. A little feterita will be mixed in, as he thinks that will improve the silage.

The Keyes creamery of Stanislaus county began August 16 to pay one cent more for cream testing over 35 per cent butter fat, though they always have churned their poor cream separately into two grades of butter. No customers have been lost and the percentage of extras made from the same amount of cream receipts has increased from about 5-6 to 6-7 or 7-8.

That this is to be a great silo building year is evidenced by sales made during the past week by the De Laval Dairy Supply Company of San Francisco. During that time they shipped a carload to Inyo county, two carloads to Imperial Valley, two silos to the Fairview Stock Farm at Gonzales, two to the Henderson Company, Galt, two to A. Meister, Sacramento, one to J. M. Harlan, Woodland, and two to Herbert E. Coyle, Woodland. They state that they are finding dairymen as a whole very enthusiastic over silos and believe it is only a matter of a short time until the silo will be considered as necessary as any other part of the dairy equipment.

The Holstein Association has announced the winners in the butter fat contest for the year ending May 1, 1915: Miss M. Holdridge of Modesto took 15th prize money with Tuia Peitertje Netherlands in 7 and 30 day tests. Twelve hundred cows in the United States contested. This great cow produced 33.82 pounds butter in 7 days and 129.39 pounds in 30 days. The average fat test was 4.77. Fedessa Bloom, another cow from the Cream Cup herd, took 17th place, making 33.54 pounds butter in 7 days; fat test, 4.69. In the continuous milking contest, 6 cows placed. Navena Cream Cup at the 8th month made 15 pounds butter in 7 days, 780 pounds in the year. Winifred Hotaling 2nd, a five-year-old, made 14.46 pounds butter in 7 days. This year at the 8 months period she made 17.03 pounds.

HORSES AND SWINE.

Geo. Murphy of Perkins will have his Berkshires at the Exposition.

Dr. Gouid of Ripon is securing a start in Berkshires.

W. J. Hackett of Ceres is getting some surplus registered Duroc stock to sell.

F. W. White, Elk Grove, sold 5 sows and a boar to Smith Bros., of Fiorin.

Berkshires are proving a good money crop for Wm. Mikesell of Manteca.

John H. Stewart of Elk Grove sold 10 registered Berkshires in the last two weeks.

A. Carison of Camino, breeder of O I C swine, is planning to enlarge his herd next year.

K. J. Miller of Lathrop reports having sold 8 registered Poland-China boars and sows lately.

To date 475,000 horses and mules have been shipped out of the United States for the European belligerents.

Twenty head of registered Duroc-Jersey gilts were purchased from M. C. Allen of El Cajon by W. E. Vondiner of Ripon.

C. B. Cunningham of Mills, breeder of O. I. C. swine, has shipped seven head of registered hogs within the last 30 days.

Purebred Hampshire or "Dutch belted hogs" create quite an interest in those who pass the farms of L. Barnhart and his father near Turlock.

Two boars and three sows of one litter bred by J. K. Fraser of Denair are going to put up a strong bid at the Panama-Pacific Exposition for the ribbons, etc.

Chas. Goodman of Williams is now breeding from a registered Berkshire boar, Kaiser, which weighed 66 pounds at three months and 173 pounds at six months.

The prize winning Berkshire boar recently imported from the East lost his life in a fire that destroyed the calf barn on the Humphrey's ranch at Mayhews. A very valuable sow was also burned.

Rather thin hogs about six months old and weighing 100 pounds make the best feeders, according to H. F. Beidleman of Ceres, who buys hogs and fattens them for the Western Meat Company.

A contract for the sale of 5000 horses for cavalry purposes, valued at $700,000, has been made by Dr. H. Hodron of Chico and N. D. Simpson of Woodland with a representative of the French government.

M. Rucker of Fair Oaks reports the sale of a Duroc-Jersey sow to John Donaldson of Pasadena, and three bred gilts to Harry T. Hauston of Woodland. The Rucker show herd will be shown at the Exposition.

A beginner with purebred Berkshires is Harry Basso of Modesto, who recently bought a registered gilt. As her offspring increase, he will diminish the number of mixed hogs. He is feeding fruit and skim milk to nine shoats.

Ruby & Bowers at Davis will show fifty horses at the Panama-Pacific Exposition, which they claim will fill all classes in Percherons, Belgians, Clydes, and Shires. Fifteen of the animals will come from Davis and rest from Oregon.

The University Farm is fitting a

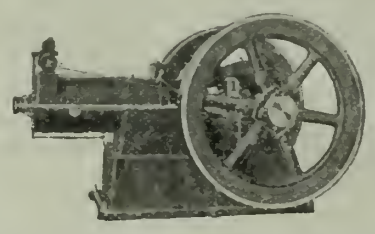
90% of gas engine trouble has always been due to faults of ignition

The "ALPHA" Engine

"The gas engine without batteries"

Stops ignition trouble

THE ALPHA IGNITION EQUIPMENT consists of a gear-driven, positively-timed, built-in magneto, which we guarantee will last as long as the engine, and a simple, well-built and positive igniter. A hot fat spark is developed, which quickly ignites the whole mixture in the cylinder and enables the production of maximum power from the minimum amount of fuel.



ALL ALPHA ENGINES not only operate but **start** on this magneto. It is hard to believe it until you see it done. In starting even the largest size Alpha Engine, only a partial turn of the fly-wheel is required and the engine goes right to work. No fussing or stewing over batteries, coils and spark plugs with which other engines are equipped.

THE ALPHA ENGINE IGNITION system is so much simpler that once you see it done you can do it yourself. No trick about it.

If you have had any experience with gas engines you will readily appreciate the great advantage of the Alpha in this respect, and even if you don't know gas engines, an inspection of the Alpha Engine will certainly convince you of its simplicity of construction and the excellence of its material and workmanship.

THERE ARE A DOZEN OTHER points of superiority of the Alpha that are just as important as the advantages of its ignition system, and these the nearest Alpha agent will be glad to explain to you. If you don't know the name of the Alpha Engine agent in your locality, we will be glad to put you in touch with him, or if there is no Alpha agent in your neighborhood we will send one of our own representatives to see you, upon request.

IN ANY CASE, WE SHALL BE glad to send you the finest gas engine catalogue ever printed.

1½ to 50 H. P. Stationary, Portable or Semi-Portable, Water Cooled or Hopper Cooled, for gasoline, kerosene, or low-grade distillate.

ge number of hogs of five breeds m which they will select the best ividuals for each class to be wn at the Panama-Pacific Expo- on. Some of the sows now near- ready weigh well over 600 pounds. An extensive hog plant is being cted on W. E. Vondiner's ranch r Ripon. A string of 50 houses i pens have already been erected i 100 more will be put up in the r future. The foundation of the d and storage barn has been rted.

Geo. F. Woods of Ceres has both rebred and mixed Durocs. He will rk into purebreds only, in a year two. He is feeding a bunch of barrows 28 gallons buttermilk i 300 pounds cull sweet potatoes day. That is just as good feed corn, in his judgment.

Four registered Duroc sows which D. Collins of Denair bought from K. Fraser for his start a year , had 51 pigs, of which 11 were led or given away. The other 40 now making the farm look like up-to-date breeding outfit. About ee-quarters of them are sows.

A. B. Humphrey of Mayhews re- rts the following sales: 4 sows to Butte City Ranch, Glenn county; boar to Henry Rehm, Milford, ah; 1 young sow to Hunt Bros., nden, Cal.; 1 boar to L. R. Brand- tter, Stockton; 4 sows to Calla ove Farm, Manteca; 2 sows to Mrs. lian North, Sacramento; and 1 ar to H. H. St. Clair, Livermore.

Elmer Lamb of Ceres expects to ke 11 registered Durocs to the esno Fair and take the winners to Panama-Pacific Exposition, with ers which may improve between w and then. The herd will put up very strong fight for the honors. includes American Beauty, under o years, 2 sows under 18 months, boars under a year, 3 boars and sows under 6 months.

Lamb's American Beauty, grand ampion sow of the 1914 State ir, is reported by one of our rep- sentatives to be looking fine. Two gs of her last litter promise to do mething in the show ring. Mr. mb is mating some of his sows to bins Robusta, son of King of Ore- n, grand champion of Oregon, 14, and is using California Keen h, one of the State Uniersity show ospects, on others.

CATTLE AND SHEEP.

H. L. Murphy of Perkins has some ry classy Shorthorn cattle which e proving good money makers.

The wool clip in Oregon this sea- n amounted to fifteen and a half illion pounds.

J. L. Bruml of Lockeford keeps a nch of sheep to clean up the weeds d grass along the fences.

The cattle tick cost the United ates approximately $90,000,000 ring the past year, according to a vernment estimate.

J. W. Marshall of Dixon recently pplied the University Farm with a rebred Shropshire buck to be used rough the breeding season.

Stockmen in Siskiyou county have en troubled with the ravages of ountain lions; one man recently st three calves when lions raided s corrals.

Green Wood Mary, former great ow cow of the Hillcrest Stock Farm Davis, now owned by Geo. Murphy Perkins, is still in good trim and regular breeder.

Five hundred head of cattle were cently received by the Porterville lfalfa Company for feeding pur- ses; they will be put on the com- ny's big ranch at Poplar.

A ewe cheese factory will soon be operation in Esparto. Three pro- oters of the scheme have leased a rge ranch and have contracted to ilk 1250 ewes this season.

One of the largest sheep ship- ents in years recently reached oodland from Nevada. It con- sted of 4300 head and was con- gned to S. Cokely, L. Murphy, and . D. Bailey.

The first annual meeting of the entral Stockmen's Association was eld in San Luis Obispo last week, nd Howard V. Jack was elected resident and Easton Mills treasurer. he main object of the association is o protect its members from cattle- tealing.

A splendid exhibit of Angus and Hereford steers and cross breds of the Shorthorn and Hereford will be shown by the University Farm at the Panama-Pacific Exposition. There are a dozen head, all raised on the Farm except an Iowa-bred Angus bull.

MISCELLANEOUS.

F. W. Kissel, Sacramento, is entering the Duroc-Jersey and Holstein game.

W. H. Heileman, Farm Adviser of Glenn county, reports that a live-stock census is being taken in that county.

Eldorado Ranch near Folsom is selling at public auction on Sept. 14 the entire stock and equipment of the ranch.

A hay barn 120 feet long by 40 feet wide, with 14 foot sheds on each side, has been erected on the Richards Ranch near Oakdale.

Directors of the Ferndale Fair have made two rulings which will tend to encourage breeders to show their stock. One is that all stock will be cared for by the association, and the other is the offering of premiums for stock under one year of age.

Favorable freight rates have been granted livestock exhibitors at the Panama-Pacific Exposition by the various transportation companies. In broad terms it can be said that shipments to San Francisco from points throughout the greater part of the United States will be returned free to point of origin, provided charges have been prepaid in full one way, and that shipments not returned will have a refund of 25 per cent of one way charges, except terminal ones.

LIVESTOCK DIRECTORY.

Rates in this directory, 3c per word each issue; or if carried weekly for ona year, 2½c per word.

DAIRY CATTLE.

DISPERSION SALE OF HOLSTEIN HERD—52 Head of Registered Holstein-Friesians—26 cows of excellent blood lines of bigh record cows. 4 beifers, 2 year olds, bred. 10 heifers, four to fourteen montbs old. 6 service bulls of best families. 6 bull calves, one to ten montbs old. Tha sira of this berd is **Artis Pontiac Tekstra**, a grandson of **King of the Pontiacs**, also, a grandson of **Pontiac Artis**, one of the best of 116 A. R. O. daughters of Hengerveld De Kol. Prices on application.

BREEDER of Registered Holsteins and Poland China Swine. E. E. Freeman, R. 5, Modesto, Cal.

Veterinary Queries and Replies.

[Answered by Dr. H. B. Wintringham, Petaluma, Cal.]

PIGS LOSING WEIGHT.

To the Editor: I have some young pigs about five months old. They have quit eating and are dropping off in flesh. The boar pigs are swelled underneath in the center and they are all weak on their hind legs and walk around hanging their talls. Do you think that feeding them peaches and cantaloupes has anything to do with it? Kindly inform me if there is any cure or what the trouble is.—C. P. Y., Turlock.

[Change these pigs' rations immediately and put them on grain for awhile. When they become improved, you can gradually substitute fruit again for part of the grain ration.]

HORSE'S JOINT INJURED.

To the Editor: One of my horses has recently been severely cut on a disc; cut is located a few inches above fetlock joint on inside of right hind leg. The attending veterinarian said one of the tendons is cut and the other partially. When stepping on foot, fetlock nearly touches the ground. Am treating her as directed by veterinarian. Will the horse ever recover?—R. E. S., Lanare.

[The tendon is severed. Recovery will depend on the treatment. It will be advisable to apply a soft bandage to the leg and cover this with electrician's tape to support the leg while the tendons are uniting. This bandage should be changed every few days and the wound dressed.]

CHICKEN LICE.

To the Editor: Kindly tell me how to get chicken lice out of a combination chicken house and stable for horse. Stable is two story and buggy shed on one side. Horse is in danger of the lice and therefore keep him in yard in summer, but must have a stable in winter.—H. C., San Jose.

[Tear your chicken house down from the barn and rebuild it by itself then spray it once a week with any of the commercial disinfectants on the market. It is very inadvisable to have a chicken house in connection with a building for any other purpose.]

BULL'S TONGUE SWOLLEN.

To the Editor: About three months ago my bull began to develop a swollen tongue. Had a veterinarian examine him, but he could not locate the trouble. The root of the tongue seemed all O. K., but from the base out the bull seemed to have no control of it. It is hard, but no sign of abscess has shown. It is hard for him to chew his cud and to drink.—G. S., Salinas.

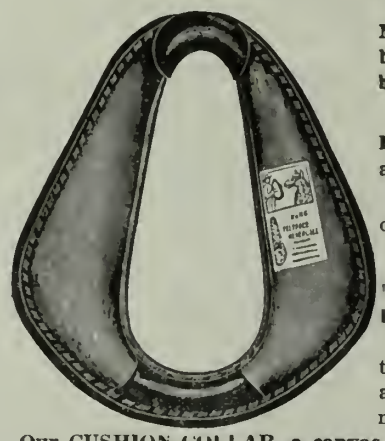
[This is Actinomycosis of the tongue, sometimes called wooden-tongue. Put the animal on potassium iodide given in two drachm doses three times a day on an empty stomach. Dissolve this in water. This is the only drug which has a specific action on this trouble.]

HOGS AND DRY-FARMING.

To the Editor: I have just been reading the article, "Hog Growers' Opportunity in California," in the issue of Aug. 21st, and think it very good and excellent advice to the people of this state.

The trouble with a great portion of the state is that there is no water and everything has to be grown under dry farming conditions. I find it very difficult to get information on scientific dry farming. People in this part of the state think that grain, and mostly barley, is the only thing that can be grown on dry land. It seems to me that by using proper methods, we can grow a great many different things, even to having green succulent foods at all times for cattle or hogs.

It would be a great help to the farmers in the dry land districts of this state, and there are a great many of them, if you could give a space in your paper devoted to scientific dry farming. This space to be used by the different farmers, who are trying to work out methods for better use of the semi-arid lands, to discuss their methods and thus help each other along. I hope you will be able to give us some assistance in this line and help the dry land farmers to make better use of their land. E. S. T., Arlington.



[We surely will; go to it, all you dry farmers; our columns are open. And our correspondent has about the right idea of the way to get "scientific dry farming." It depends upon tillage, times and ways for doing things and right choice of plants, and all these are largely local questions. The theory is probably pretty well understood and we have set it forth many times. Now we want to know what any reader has succeeded in doing, for that will help all to do the right things. Who has hogs by dry farming?—Editors.]

The Soledad Creamery is turning out 900 lbs. of butter daily.

1608 HOBART BLDG., SAN FRANCISCO

BEWARE OF POORLY MADE HORSE COLLARS

More shoulders are being ruined by poorly-constructed collars than by the work the animals are doing.

W. DAVIS & SONS' FELTFACE COLLARS are guaranteed to prevent sore shoulders.

Look for the felt at the edge of the stitching.

Made to sell as follows:

FELTFACE, medium draft, $5.00
FELTFACE, heavy draft .. 6.00

If your dealer does not have them, we will tell you where they are to be had, or send direct if no dealer is within reach.

Our CUSHION COLLAR, a canvas and leather Boston Team Collar, is now to be had for $3.00.

ANOTHER GOOD SORE-SHOULDER PREVENTER

A selling agent (dealer) in nearly every town. If none in your town, Write Us. Catalogue on application.

Opportunities in Great Herd Sires

At Sacramento Oct. 6th and 7th

We will sell KING SEGIS PONTIAC EMPEROR, one of the greatest bred bulls living today, and several other young bulls fit to head any herd in the world, including:

A son of SEGIS PONTIAC DE KOL BURKE, out of the highest record daughter of DE KOL BURKE (7 thirty-pound daughters), 32.76 lbs. at 4 yrs. 1 mo. Dam and sire's dam average 32.52 in 7 days and 125.36 in 30 days.

A son of ARALIA DE KOL PONTIAC SEGIS from a 31.78 lb. daughter of DE KOL BURKE.

A son of ARALIA DE KOL PONTIAC SEGIS from DE KOL OF VALLEY MEAD 2D, for three consecutive years awarded FIRST PRIZE BY HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA on her butter records in long distance tests, and for three years first-prize heifer in show ring. His dam and sire's dam average 1077 lbs. in one year, both having made world records.

A son of SEGIS PONTIAC DE KOL BURKE, out of MISS BLANEY, 27.60 lbs. in 7 days and 1008 lbs. in one year. Dam and sire's dam average 29.95 in 7 days and 1047 lbs. in a year.

In every respect the best lot of young bulls that have ever gone out from our herd—THE RIGHT BREEDING—THE RIGHT TYPE—backed by VERY LARGE RECORDS in both short and long time tests—the kind that will add prestige to your herd and sell your surplus stock at top prices.

Buy your herd sire here and have the advantage of seeing what you are buying and the assurance of immediate delivery.

Shropshires sired by rams imported by me from England in 1911.

When Will Cows Pay?

To the Editor: I am starting in the dairy business and hope to keep from 5 to 8 cows. Hay has been $4 to $5 a ton, but is going up and now is about $7; may go to $10 by spring. How high priced hay can a man feed to cows so as to get what his hay is worth in the stack and some for his work? How much should a man get from an average cow in a year? Butter fat is 29 cents here now; at that price can a man do better to sell his hay for $10 to $12 a ton or to feed it to cows at the price of butter fat now? Cows are high—from $90 to $100 each. Would it pay to feed some grain to the cows; if so, what and how much? I have just commenced to sell cream; the first time it tested 30, the next 34, the next 28. What is the reason? It was from the same cows and separated the same. I have been told that a pound of butter fat would make a little more than a pound of butter. How can anyone get more than a pound out of a pound? In feeding cows, can a person increase the richness or just increase the flow of milk? I intend to milk my cows for what I can get out of them; not for a pastime, so if I feed $2 worth of grain to a cow I hope to get more than $2 back.—E. L., Winton.

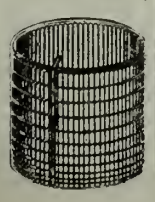
[The price of alfalfa hay never goes so high in your section as to prohibit the feeding of it to good dairy cows. The question of what priced hay dairy cows can pay out on is entirely one to be settled by the cow. If a cow produces but 150 pounds fat a year on $10 hay, you are not getting rich fast. If, on the other hand, she gives 230 pounds fat a year, hay is worth more than $10 a ton. The average cow consumes about six tons of alfalfa hay a year so you can pretty accurately determine how much you are getting for your hay by the annual butter fat production. To this should be added about a pound of rolled barley, dried beet pulp, and cocoanut meal for every seven pounds of milk a cow gives. The calf and skim milk should about offset the labor. Your chief trouble, like many other hay growers, seems to be that you lose sight of the cheap hay prices as soon as hay goes up in price. According to your own figures, the average for hay there is nowhere near $10 a ton. Unless we are very much mistaken, cow values will suffer this fall and winter simply because so many hay men jump out of the dairy business as soon as a little spurt in the hay market comes along. It would seem that the last two years' experience would cure everybody of that fault, but it is doubtful whether it has or not. If you can once understand that dairying requires consistent building to be profitable, you will not be alarmed about such hay prices as are now prevalent. No man can make money dairying who is in one season and out the next. Get the best cows you can and breed them to the best bull you can get. Keep it up for a few years and weed out any poor actors with the scales and Babcock test. If you will follow that closely, you will know better than we do how much hay is worth. The variance in your cream test is probably due to irregular speed of the separator. If you turn it fast, your cream is thicker. If slow, it is thinner. The temperature of the milk at separation would also affect the test. The reason that a pound of butter fat makes more than a pound of butter is due to the moisture and salt which is added in the churning. The overrun in this way is responsible for the creamery man paying you as much for fat as he gets for his butter. This overrun of 15 or 20 per cent constitutes his cost of manufacture and profit. The only way feeding might affect the quality of milk is where a cow is not fed all she desires. A change from one ration to another will not make the milk richer, but it will oftentimes greatly increase the flow. Feed a pound of barley to every 6 or 7 pounds of milk and you will find it money well spent.—Editors.]

MILK STABLE CONSTRUCTION

To the Editor: How can I find out the best arrangement, the necessary floor space, and the cost of materials for a cow barn for 15 cows—nothing fancy, but substantial and clean.—R. D. Kellogg, Richfield.

[Answered by F. W. Andreasen, Sect'y State Dairy Bureau.]

[A milking shed for 15 cows, built either at right angles to the barn where the feed is stored or at the end of same, should be about 20 feet wide and from 50 to 57 feet 6 inches long, according to the space allowed for each cow. This space is usually from 3 feet to 3 feet six inches. Where the cows are only to be kept in the barn while fed and milked the space for each cow is generally only 3 feet. Allowing only the latter space, 45 feet for the cows and a gangway 5 feet wide at the end where the shed connects with feed barn would be sufficient. There should be concrete floor arranged as follows: feed alley and manger from outside wall to stanchions, 8 feet; floor stanchion to gutter 5 feet, with one inch fall to gutter; gutter 18 inches wide; passage way from gutter to outside wall 5 feet 6 inches. There should be about ten 2 by 3 feet windows in the barn.



Another plan would be to build the shed for 16 cows with two rows of cows and a feed alley 10 feet wide between the rows. This milking shed would be about 29 feet by 34 feet and could be extended if the herd increased in number. The cost of the concrete floor and foundation would be about $200.00. The cost of lumber and building can best be estimated by a carpenter when he knows the price at which lumber can be placed on the ground.]

SHADE FOR HOGS.

In talking with a Pacific Rural Press representative recently W. S. Guilford of Willows, Glenn county, was very emphatic about the need of shade and plenty of water for hogs during the summer months in the great interior valley:

"I know of a number of valuable registered breeding hogs that have been lost this summer because they did not have shelter and a chance to get moisture, either from a water and mud wallow or a concrete wallow, and plenty of water to drink. During our hot periods a hog gets great relief from the heat if it can get water all over the surface of its body. In evaporating this cools the animal and makes it possible to endure the heat without great discomfort."

F. F. SMITH & CO. - Sacramento, Cal.

Fine Stock Consigned to Sacramento Sale

We are mailing you today a cut of four yearling daughters of King Segis Pontiac Emperor which are not surpassed by any other four heifers in our herd for high individual quality, breeding and official record backing. Two of these are from dams with yearly butter records above 800 lbs., one of which is a three-quarter sister to Aralia De Kol, 1142 lbs. butter and 28,090 lbs. milk in a year.

Four Yearling Daughters of King Segis Pontiac Emperor.

These heifers with their sire and ten of their sisters will be sold at the Morris-McAlister Sale at Sacramento, Oct. 6th and 7th. In no sale ever held to our knowledge has there been included 14 sisters that are their equal in respect to type and high record ancestry, two being from 31 to 33 lb. dams, three from dams with 800 to 1000 lbs. in a year, one from a 27 lb. 4-year-old daughter of a 33 lb. cow, one from a 28.87 lb. 4-year-old daughter of one of the breed's greatest proven sires, and all others from cows with high records.

As to the breeding of King Segis Pontiac Emperor it is only necessary for us to say that he is by King Segis Pontiac whose dam is full sister to King of the Pontiacs, whose daughters have broken more world butter records than the daughters of any other sire. King Segis Pontiac Emperor, as an individual, has but few equals, having already been awarded three first prizes at California State Fair, and he is already a proven sire, his first daughter to drop her second calf having made 23.90 lbs. in 7 days. For the breeder in search of a real high class sire, or the man who contemplates establishing a pure bred herd of the highest order, this bull and his fourteen daughters, carrying calves by bulls of unusual breeding, is an opportunity that has never been presented at public sale.

A. W. Morris & Sons Corporation.

Farm Poultry for Profit.

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

CHEAP POULTRY HOUSES FOR FARMERS.

The average small rancher would like to increase his flock of poultry, but is often held back from doing so on account of incurring cost in building. This is the case, too, with some men who through force of circumstances are compelled to rent land. They would like more poultry, and the keeping of a good sized flock would help out their incomes and work no injury to the landowner, but they can't afford to build houses to leave on another man's premises, and so it goes that this side of the farm life is neglected.

Now one of the first lessons the farmer in a new country gets is that unless he can get a cover over his stock and machinery he is bankrupt before he starts. This causes men to think up some means of doing this very cheaply.

Pioneer Barns.—Our first barn in Dakota was made of sod, but as we had not put in enough timbers, the cattle pushed the walls down and the cold and snow drifted in. The second was hay with heavy timbers enough to hold the roof up, and as the walls were about six feet through it took the cattle a long time to eat their way out. This idea was quite common in Dakota in pioneer days; make your roof strong, then build a haystack over and around it. Later we improved on that idea and built a frame near the grain stacks where the thresher could throw the straw over it. A man with a fork worked the straw along evenly, as the thresher threw it on top; and when the grain was threshed we had a nice place, commodious and warm. After the straw got settled, holes could be sawed in the sides to let in light during fine weather and a sort of shutter arranged to protect from snow and cold during the night.

Fodder Houses.—All over this State there is some kind of cheap fodder, it matters little whether it is Kaffir corn fodder, real corn fodder, spoiled hay or bean straw, wheat straw, etc. Any or all of these could be made to serve as shelters for poultry. I would make the outer frame fairly strong and put rough poles over the roof, then tack on poultry wire to hold the roof up so that when it rained the sagging would not let the water run in the building. Kaffir corn fodder could be made like the old thatched roof and battened down. If there is plenty of material on hand, the whole building could be of the same material and if it was made large enough it would make an excellent place for the chickens to seek shelter on rainy days.

If mites or other vermin got in during the summer it could be burned, or moved to new ground and the loss even if burned would not be felt, after it had served a season's usefulness.

The roof, being the main feature of a building in this part of the State, should project quite a bit all the way around; and if this is done and the building is rather low, just leave it free to the sun and air and your chicks will be sufficiently sheltered. Where the rainfall is heavy, it would be well to have three sides closed in, leaving the front only open.

The Paper House.—This is another cheap house, though it costs considerable more than the straw or fodder house and will not be so cool in summer. In making this house the frame need not be heavy; in fact, the whole thing can be made of either one-by-threes put on flat, or the 1½ inch stuff called "tree props."

Make the frame as large as wanted; a house 8x12 will accommodate fifty hens and give ample room for feeding in rainy weather. Put the dropping boards and perches crosswise, or if dropping boards are excluded sling the perches from the roof with baling wire. The cheapest wiring to use is the thin spool wire; tack this cross-wise over the frame of the roof and up and down, or lengthwise of the three sides and ends, tacking with a double pointed carpet tack at each stud or rafter. When the wiring is done, spread your paper, being very sure to pull it tight and keep it so until fastened down. If the item of expense is too much for paper all around, just use it for the roof and use burlap or gunny sack cut open for the rest. The life of gunny sack in summer is about eight to ten weeks, when it must be renewed; in winter, it will last three months and is plenty warm enough for any poultry, except small chicks. Personally, I prefer to have the frame houses covered with 2-inch chicken wire. When this is well stretched and tacked down thoroughly it increases the life of the paper indefinitely, because when the paper gets worn it can be painted over with some coal tar product and be just as good as new. I have one roof that has seen three year's service and is as good now as the first day because it was put on right; another one with just one year's service needs replacing because it was let to sag down in the first place, and the paper wore itself out in chafing. Where the rainfall is heavy, alfalfa hay would make as good a roof as any if it was put on in the manner of the old-fashioned

thatch and stitched across with baling wire.

Other Uses of Cheap Houses.—This is the time of year to get ready for increasing the size of your flock, so that it will be to your advantage to build a few of these cheap poultry houses; they can also be used for ducks, and, with a fly arranged to the size of the house, for pigeons. So that no matter what sort of feathered pets you want to keep, these cheap houses will be better and more sanitary than the old mite-ridden lumber house that is full of cracks that never seems to be clean. They could be made rat-proof and rabbit-proof by putting a one-inch wire poultry mesh under ground about one foot. They would be much better for breeding rabbits as there could be more room allowed for exercise than is generally given in these small hutches. When spring comes, a few of these cheap houses would come in handy for the young turks, as they could be kept off the damp grass in a morning longer than in a small coop filled with light.

A GIANT GRASS FOR FOWLS.

[Written for Pacific Rural Press by Geo. H. Croley, President Federated Poultry Ass'n of California.]

During August, September and October a very large percentage of poultry keepers complain that they are short of green stuff for their fowls. With only a small patch of land and a very moderate amount of water, this trouble may be disposed of by planting a giant variety of grass that is now available. All farm animals relish and thrive on it; in fact when the value of this giant grass is properly appreciated by the farmers of California, the livestock business will be stimulated in a marked degree and will add many millions of dollars annually to the income of our agriculturists. Nothing can equal it for silage; it is superior, for this purpose, to any other product of the soil.

When raised for the purpose of securing seed, it must be planted so as to allow ample time to mature; and it will then grow, in four or five months, to a height of 6 to 14 feet and return, under favorable conditions, quite one thousand fold.

When sown in a more compact mass to produce green or dry forage, its rapid growth is amazing. The writer has an experimental plot of not extra good soil, in which on the evening of Aug. 1 he sowed two varieties—one a yellow seed sort and the other a white seed variety—and this morning, twelve and a half days after planting, the average height of beautiful, tender grass is about nine inches as it stands, with a number of blades that when held upright along the rule measure over 14 inches.

It produces from 25,000 to 45,000 pounds of green forage per acre; all animals take to it greedily. Fowls devour it completely even to the greater part of the roots. The whole plant contains much sugar which no doubt accounts for its palatable qualities. The seeds, which may be produced at the rate of 40 to 100 bushels to the acre, contain almost 70 per cent of pure starch and 5 to 8 per cent of fat.

We now have evidence that this giant grass was extensively cultivated by the inhabitants of Yucatan before the arrival of Europeans in America. The insignificant primitive weed from which it was no doubt evolved by the natives of that country, has been found growing in the wilderness of that part of Central America. When the Spanish invaders overran that country, they destroyed practically all historical and other records; otherwise, we might be fully acquainted with the history of its development by these ancient people.

Unlike most other grasses, this does not readily lodge; only a tornado or a flood of water will cause it to lean or tangle. It has been grown without a drop of water either from rain or irrigation from planting to harvesting of a good crop of matured seed, but this is very exceptional and it should be understood that ordinarily considerable moisture is necessary. This demonstrates, however, that it is a wonderfully aggressive and vigorous plant that can thrive in almost any climate.

POULTRY NOTES.

The monthly report of the Tulare Co-operative Poultry Association shows a substantial gain over the same month in 1914. The total business handled by the Association in July was $4372, and $2716 worth of eggs were shipped.

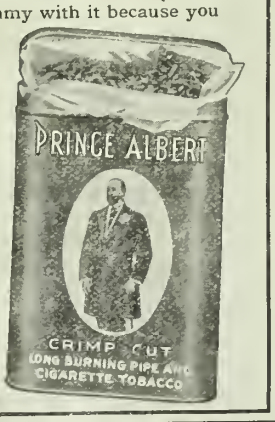
Copyright 1915 by R. J. Reynolds Tobacco Co.

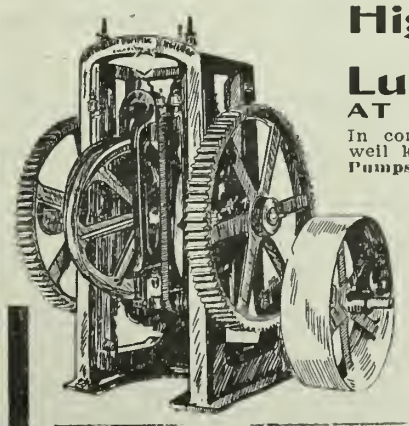


There's a bunch of joy in every puff of Prince Albert tobacco!

YOU don't have to call for an encyclopedia to find out how P. A. sets on your taste! You just open up your supply, fill your old jimmy pipe or roll a makin's cigarette, strike a match—and puff away! Because, you have struck tobacco happiness on the first bound—and you're set for the future on the smoke question. The patented process fixes that—and cuts out bite and parch!

PRINCE ALBERT
the national joy smoke

among tobaccos is like a real man among men. You can make camp with it on short acquaintance! And get mighty chummy with it because you know from the first few puffs that *P. A. is right!*



Gentlemen, here is the friendliest smoke a man can put in his pipe or roll into a cigarette. *We* know, *men everywhere* know, and *you'll know* that what we tell you is government-bond-good just as soon as you prove it out in your pipe or cigarette! We tell you our printed word has never yet struck within 50% of what P. A. will produce in tobacco satisfaction *for you!*

Prince Albert is sold everywhere in toppy red bags, 5c; tidy red tins, 10c; handsome pound and half-pound tin humidors—and that fine crystal-gloss humidor with sponge-moistener top that keeps the tobacco in such splendid trim!

Selected Cockerels and Cock Birds, $5 each and up.

The Home Circle.

THE GROWN-UP ME.

I do so wish that I could see
The grown-up girl that will be me,—
Such heaps of things I want to know,
And she could tell me if they're so:

If they let her stay up till late,
And not go off to bed at eight,
And how it feels, way off in then,
To stay down-stairs awake till ten.

And if she ever wants to cry—
The grown-up me in by and by—
(But I don't think she could, do you?
If all the things I want come true.)

But when she's here, grown up and tall,
There'll be no "little me" at all;
So I shall never, never see
The grown-up girl who will be me!
—Margaret Widdemer, in St. Nicholas.

DOROTHY'S MISTAKE.

Dorothy had a long talk with Mother as to what she should wear. Mother suggested a pretty new gingham as being dainty and suitable, if they should want to play games—

"But, Mother," said Dorothy, "Marian's friend is from Boston, and her father is a m-m"—

"Millionaire?" suggested Mother.

"Yes, Mother; and they live in a grand house, and have a cottage at the seashore, and—and— Do you think she would play rough games as we do? O Mother, I would like to wear my pink silk!"

Mother smiled. She knew that Boston little girls were very much like other little girls; but it was hard to resist her daughter's pleading eyes, and it was better for her to learn some things for herself. So Mother helped her on with the pink silk. It was a pretty dress, of the soft pinky tint one sees in the inside of a seashell, and it was kept for very, very grand occasions.

Dorothy felt very fine, indeed, as she ascended the steps of Marian's house with Marjorie Marie in her arms. Marjorie was a wonderful doll who was also kept for state occasions.

Smiling, Marian opened the door. For an instant there was a blank look in her eyes; but it melted into a smile as she helped Dorothy take off her hat, and led her into the parlor to meet the little guest. Dorothy fancied that little Miss Boston also looked troubled for an instant, but she smiled very pleasantly.

Dorothy noticed at once that both little girls were plainly clad, and it made her feel quite over-dressed; but Marian ran upstairs for her dolls, and the little girls were soon seated on the sofa, admiring Marjorie and chatting merrily.

Suddenly Marian's brother Rob burst into the room in such a startling costume! It was not a baseball rig, and yet it was something like one,—bright red and yellow and curiously puffed and slashed.

"Come on, girls!" he cried impatiently. "It's after two, and we're all ready. Harry Lee's brought his trick monkey," he added with a delightful grin.

Marian gasped, and Miss Boston's upper lip trembled a little; but they were brave little girls, and very polite. They exchanged looks. It would never do to take that silk dress to the barn.

"Not this time, Rob," said Marian, quietly, giving him a warning glance; for she saw a troubled look on Dorothy's face. But Rob was so stupid!

"Aw! why?" he cried. "When you've been talkin' about it all day? What's got the matter with you?"

"We're not going, Rob," said Marian, firmly, with a little spark in her eyes.

Rob turned and stamped down the hall and slammed the door. The pleasure was gone from his afternoon; for he, too, had counted on dazzling Miss Boston with his trapeze performance.

While Marian was trying desperately to think of something to say, the troubled look on dear little Dor's face deepened. Suddenly all the visiting dignity disappeared, and she buried her head in Marjorie Marie's ruffled skirt with wild sobs.

"Oh, I wish I had my gingham dress on!" she wailed.

Then the other girls burst into tears. They crept as close to Dorothy as they could, but they did not dare to put their arms around her on account of the pink silk. How Dorothy hated it!

All at once Marian sprang to her feet.

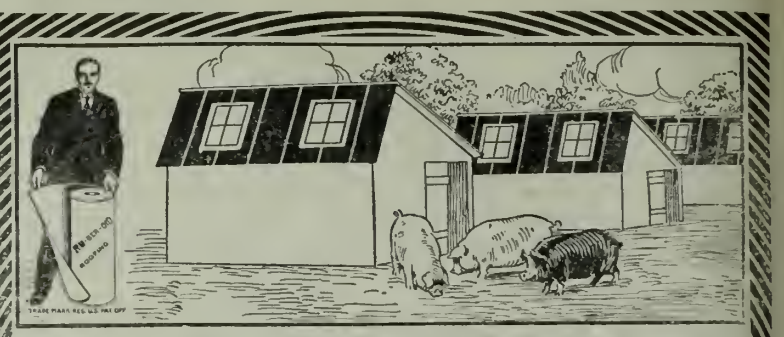
"Come upstairs and put on one of mine!" she cried excitedly.

Up the broad stairs the three little girls tore wildly, leaving that elegant French lady doll with her waxen smile buried in the fur rug in front of the sofa.

"Hurry, hurry!" cried Marian, as they struggled with the fastenings of the gingham, which was a trifle small for plump Dor. "We'll be in time, after all."

A moment later Marian was pounding on the barn door. Rob thrust his head out. He grinned broadly before he thought, then he took in the smile and put on an injured look.

"I dunno whether I'm going to let you in or not," he growled.



But he did at last, although he continued to look glum until Marian took him aside and whispered something in his ear. After that he beamed again. He fairly outdid himself in his trapeze performance, and felt fully repaid when he heard Miss Boston say with a chirp of delight, "Why, he's like a real showman!"

Then there was a trick dog, then other boys performed, and last of all a trick monkey brought down the house with his funny antics. Then followed a glorious romp in the barn, and a delicious lunch of apple turnovers and gingersnaps. "I never had such a good time in all my life before," said Dorothy, as she smoothed her tangled locks and donned the pink dress again.

"I never did, either," said Miss Boston. "That is the beautifullest dress I ever saw," she added. "I mean to ask my mother to buy me one just like it."

Dorothy smiled blissfully. Wise little Miss Boston! She knew how to draw the one wee thorn from Dor's

Better Hogs Mean Bigger Profits

A hog-house should be dry and comfortable. Leaky, draughty roofs breed discomfort and disease. Insure hog-health and hog-profits with a roof that is weatherproof and practically wear-proof. There are almost no repairs with rot-proof, fire-resisting

Pronounced "RU" as in RUBY
RU-BER-OID ROOFING
COSTS MORE - WEARS LONGER

Brick manufacturers use RU-BER-OID on kilns—in which the heat reaches 300° Fahrenheit. Heat from within and constant sparks from without do not injure RU-BER-OID.

Captain Scott used RU-BER-OID on his winter quarters near the South Pole. It kept his party dry and comfortable for two years at 56° below zero.

RU-BER-OID has been widely imitated. The U. S. Court of Appeals enjoined imitators from using the word "Rubberoid or any similar name as the trade name or brand" of their roofing. The genuine has the "Ru-ber-oid Man" (shown above) on every roll.

Colored RU-BER-OID (Ka-lor-oid) comes in beautiful, permanent Tile Red and Copper Green.

CHOW CHOW.

One peck green tomatoes, ½ peck ring beans, 1 quart small write ions, ½ pint red peppers, 2 large eads cabbage, 4 tablespoonfuls hite mustard seeds, ½ pint horse-dish, 1 teaspoonful cloves, 1 tea-oonful allspice, 1 teaspoonful cin-amon, 2 pounds sugar, 3 heads of elery; chop the tomatoes and let and over night in brine that will ear an egg, then squeeze dry; chop abbage, onion and beans, chop to-natoes separately, mix with spices, ut in porcelain kettle, cover with inegar and boil 3 hours.

MUSTARD PICKLES.

One dozen cucumbers, 3 quarts of inegar, 2 pints of sugar, 2 dozen nions, 1 dozen peppers, 1 peck to-natoes, 1 pound white mustard seed, pound ground mustard, 1 ounce umeric powder; slice tomatoes and alt, let stand over night then drain. Heat sugar and vinegar then add to-natoes, onions, cucumbers, peppers nd mustard seed; boil till tender, hen stir in tumeric powder and the round mustard. Stir all the time ill thick. Seal in glass cans.

A BEAUTIFUL EUCALYPT.

At the Vallance Nursery in Oak-and is a ficifolia Eucalyptus tree, ow in full bloom, that is very beau-iful. The tree has been growing in ts present location for a decade or nore and is quite large. The blooms re very fine (almost feathery petals) olor a dark orange shade or per-haps can be described as between scarlet and brick red, and they look well when cut and used in a bouquet. More of these trees should be grown n California for their ornamental value alone.

WISE MO.

"Why," asks a Missouri paper, "does Missouri stand at the head in raising mules?"

"Because," says another paper, "that is the only safe place to stand." —Christian Register.

A certain poor woman had received some new underclothes from one who had helped the family. The woman's husband thanked the donor's husband, and a whole drama of humble ambitions might be built round his words. "Mary's mighty glad to have those clothes," he said. "She says now she'll have something to hang out on the line Mondays."—Boston Record.

Two boys were having an argument concerning their respective strength. "Why," said John, "I go to the well and pull up ninety gallons of water every morning." "That's nothing," replied Bob, "I get a boat every morning and pull up the river."

Two Irishmen arranged to fight a duel with pistols. One of them was distinctly stout, and raised an objection. "Bedad!" he said, "I'm twice as big a target as he is, so I ought to stand twice as far away from him as he is from me." 'Be aisy now," replied his second. "I'll soon put that right." Taking a piece of chalk from his pocket he drew lines down the stout man's coat, leaving a space between them. "Now," he said, turning to the other man, "fire away, ye spalpeen, and remember that any hits outside the chalk line don't count."

In Western Kansas a teacher in a primary grade was instructing her class in the composition of sentences, according to the Pittsburg Chronicle-Telegraph. After a talk of several minutes she wrote two sentences on the blackboard, one syntactically wrong and the other a misstatement of fact. The sentences were: "The hen has three legs" and "Who done it?"

"Willie," said the teacher to one of the youngsters, "go to the board and show where the fault lies in those two sentences."

Willie slowly approached the board, evidently studying hard on the tangle. Then to his teacher's consternation he took the crayon and wrote: "The hen never done it. God done it."

An American and a Scotsman were walking in the Highlands, and the Scot produced a famous echo. When the echo returned clearly after nearly four minutes, the proud native, turning to the Yankee, exclaimed, "There, mon, ye canna show anything like that in your country." "Oh, I don't know," said the American. "I guess we can better that. Why, in my camp in the Rockies, when I go to bed, I just lean out of my window and call out, 'Time to get up! Wake up!' and eight hours afterward the echo comes back and wakes me."—Bristol Times.

Fruit Puff Pudding.—Mix well in one pint of flour, two teaspoonfuls baking powder, and a little salt. Make into a soft batter with milk, Put into well-greased cups a spoonful of batter, then one of Loganberries or Mammonth blackberries, then another of batter; stew twenty minutes. Serve with liquid sauce.

The Pacific Guaranty & Mortgage Co. of San Francisco recently purchased 1000 acres in Oakdale, which will be converted into a dairy ranch with 400 cows.

Bean harvesting at Carpinteria has commenced.

The Markets.

Unless otherwise quoted f. o. b. San Francisco.

San Francisco, Sept. 8, 1915.

WHEAT.

Export business continues to drag, and domestic buyers are accordingly reluctant to take hold, which leaves the market in a decidedly weak position. Nearly all lines are about $1 per ton lower in this market. Whether there will be a stiffening later depends on foreign exchange and shipping conditions, which cannot be foreseen.

Sonora	$1.60@1.70
Cal. Club ctl.	1.55@1.65
Forty-fold	1.70@1.75
Northern Bluestem	1.75@1.85
Northern Club	1.55@1.65
Northern Red	1.55@1.75

BARLEY.

Both grades have dropped off a little this week, as buying for export is rather slow, and the new grain is coming in rapidly. Feed is in fair demand, but few large purchases are being closed.

Shipping	$1.25@1.30
Choice Feed, ctl.	1.15@1.20

OATS.

Seed oats are beginning to move a little, and quotations on black will probably be out next week.

Red Feed	$1.30@1.40
Red Seed	1.60@1.65
White	1.40@1.45

CORN.

With heavier offerings at shipping points, Eastern corn is a little lower. California yellow is almost entirely nominal, with practically nothing offered.

California Yellow	$1.80@1.85
Eastern Yellow	1.80@1.85
Milo Maize	1.75@1.80
Manchurian	1.40@1.60
Kaffir	1.80@1.85

BEANS.

The bean market is still uncertain, and prices are largely a matter of opinion, actual business being of no great volume. Horse beans have been marked down sharply. Most of the stock offered is wormy and cannot be shipped, and even good offerings will hardly bring the former figures. An unusually large proportion of other varieties is said to be turning out defective, though it is too early to say positively. Large and small whites have again been marked up quite sharply, as spot supplies are well cleaned up and there is a strong demand; and pinks are also higher. Limas, red kidney and Mexican red beans all show advance.

Bayos, per ctl.	$4.40@4.60
Blackeyes	3.50@4.00
Cranberry Beans	3.75@4.00
Horse Beans	1.50@2.25
Small Whites	4.60@4.85
Large Whites	4.50@4.75
Pink	3.75@4.00
Limas	4.85@5.00
Red Kidney	6.00@6.25
Mexican Reds	5.25@5.75

SEEDS.

The season of active demand has not started, though there is a little more business.

(Wholesale Prices, San Francisco.)

Alfalfa	17 @18 c
Brown Mustard, per lb.	Nominal
Canary	9 @10 c
Hemp	3 @ 3½c
Millet	2½ @ 3 c
Timothy	7½ @ 8 c

HAY.

Arrivals are exceptionally heavy at present, and the market is extremely active, all offerings in San Francisco moving off without difficulty, and even bringing advanced prices for the better grades, which are in especially strong demand. Consumers in all the larger towns around the Bay, in fact, are laying in large stocks of both grain and alfalfa hay, as they are coming to appreciate the fact that, with the export movement that has already taken place, supplies are going to be short. Moreover, there is still a good deal of export inquiry. The fields are rapidly cleaning up.

(On track, San Francisco.)

No. 1 Wheat, per ton	$12.00@13.50
do No. 2	8.50@10.50
Tame Oats	9.00@13.50
Wild Oats	7.00@10.00
Alfalfa	8.00@11.00
Stock Hay	5.00@ 6.00
Straw, per bale	.25@ .40

FEEDSTUFFS.

Most lines are moving in about the normal way, with little buying except for nearby requirements. Cracked corn and rolled barley and oats are all easier.

(Wholesale prices per ton, carload lots, San Francisco.)

Beet Pulp, per ton	$20.00@21.00
Alfalfa Meal, ton	16.00@19.00
Alfalfa Molasses Meal per ton	19.00@20.00
Bran, per ton	27.00@28.00
Oilcake Meal	38.00@39.00
Cocoanut Cake or Meal	23.00@25.00
Cracked Corn	40.00@41.00
Middlings	35.00@37.00
Rolled Barley	25.50@26.50
Rolled Oats	30.00@32.00

VEGETABLES.

The week opened after the holiday with a very heavy movement, and while supplies of most varieties have been coming forward liberally, the market in general is rather firmer. Tomatoes show an advance, notwithstanding the heavy arrivals from the Delta and Bay districts. String and lima beans show better quality, and are firmer at the inside figure. Cucumbers show a little more firmness, and the best bell peppers have been marked up sharply.

(Wholesale prices, San Francisco.)

String Beans	2 @ 3 c
Lima Beans	4 @ 5 c
Peppers, bell, box	30 @50 c
Tomatoes, lug	30 @70 c
Cucumbers, lug	20 @30 c
Summer Squash, lug	20 @35 c
Green Corn, sack	.75@1.25
Okra, lug	50 @75 c

POTATOES AND ONIONS.

Prices in this line are decidedly easy, with heavy supplies on which a moderate shipping movement makes little impression. Salinas potatoes are easier, with larger arrivals. Garlic has been marked down, and both potatoes and onions from the Delta are easy.

Salinas Burbanks	$1.25@1.50
Delta Burbanks	60 @90 c
Sweet Potatoes, ctl	$1.75@2.00
Onions, ctl.	50 @55 c
Garlic, per lb., new	4 @ 5 c

POULTRY.

Some changes are noted in classification of turkeys and broilers. Otherwise prices remain about as before, with rather less activity than was expected for this week.

Turkeys, old, lb.	17 @19 c
do, young	25 @27 c
Broilers, 15 lbs. to doz. and less, lb.	27 @30 c
do, over 15 lbs to doz	22 @24 c
Fryers	21 @22 c
Hens, extra, per lb	15 @16 c
Small Hens, per lb	13 @14 c
Smooth Young Roosters per lb.	21 @22 c
Squabs, per doz.	$2.00@3.50
Geese, per pair	2.00@2.50
Ducks, young, lb	13 @14 c
Old	12 @13 c
Belgian Hares	8 @ 9 c

BUTTER.

Extras show no change whatever, standing the same as for several weeks past. Prime Firsts dropped 1c. but have recovered in part; while firsts have recovered from last week's drop.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	28	28	28	—	28	28
Prime Firsts	25	25	25	—	25½	25½
Firsts	24	24	24	—	24	25

EGGS.

The effects of the advancing season are seen in decreased arrivals from nearby points, as supplies on hand after the holiday were light, and active buying since has sent extras up 6c.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extra	30½	30½	31	—	33½	36
Sel. Pul.	26	26	26½	—	28	31

CHEESE.

The demand for cheese has been rather slow so far this week, and Y. A.'s are ½c. lower. Monterey cheese has also dropped.

Cheese	12	12	12	12	12	12

DECIDUOUS FRUITS.

The market was well cleaned up after the holiday, and with an active demand values in general are pretty well maintained, though arrivals are still heavy in many lines. Strawberries and blackberries have advanced rather sharply. Prunes are held at good prices, and choice plums are a little firmer. Figs have dropped, but blacks are doing better than whites. Good Bartlett pears find quite an active demand, and prices are well maintained. Offerings of peaches are decreasing, and good fruit in small boxes brings much better values. Gravenstein apples are easier, but in general the apple market is fairly steady. Casabas and watermelons are easier. Seedless and tokay grapes are doing better.

Huckleberries, lb	5 @ 9 c
Strawberries, chest	2.00@4.00
Blackberries, chest	3.00@4.00
Plums, crate	50 @85 c
Prunes	.90@1.00

Tokay	$1.00@1.25
Muscats	60 @75 c
Black	40 @65 c

DRIED FRUITS.

The dried fruit situation continues to gain strength slowly, and some further advances are noted this week. The eastern distributive trade seems to be taking hold in better shape, while some packers are compelled to buy to take care of contracts, all of which tends to strengthen values. One of the most interesting features is an advance in the offer for peaches, which are now quoted up to 3½c. Growers are showing a disposition to hold firmly, and while sales are not heavy the market is in better shape. Apricots also have been marked up again, though only fancy stock in favorable location would bring the top figure. However, the amount available at the former easy prices is very limited, and stock of all kinds is getting scarce. White figs have again been marked up, owing to the scarcity of imported stock. Local packers have made no change in their offer for prunes, though growers in some of the leading districts are holding firmly for a further advance. The future will depend

reatly on foreign demand, as to hich one man's guess is about as ood as another's; but the domestic rade is disposed to buy the goods nly as needed, following about the ame policy as last year. The New ork Journal of Commerce says:

"The dominating tone in the futre prune market appears to be tronger. Though buying from all uarters continues to be extremely ght, there was a firmer feeling in vidence. Conditions in the Apricot narket are being held on a very firm asis, but the prevailing tone apears to be dull. It said here that the uropean buying, which has aided he apricot market, has practically eased and that operators do not exect to dispose of many more stocks or the foreign trade. According to he opinion of one very well posted perator in the New York market the uropean demand from now on will all for prunes of the 1915 pack instead of apricots. Sellers are still offering natural Thompson seedless nd Sultana Raisins for November nd December shipments at 6¼c. for he latter and 6¾c. for the former."

(Prices to Growers.)

SPECIAL DECIDUOUS MARKET REPORT.
By J. L. Nagle.

Sacramento, Cal., Sept. 6, 1915.

Since our last letter California has experienced the hottest spell for this time of the year that we have had for several seasons. In the lower San Joaquin district the temperature averaged for four or five days 105, and in none of the fruit sections was it lower than 100. This unseasonable weather has done more damage to the Grapes, consequently the crop of Tokays and Malagas will be lighter than originally estimated.

There is nothing left for shipment in the line of freestone peaches, with the exception of Salways and a large portion of this crop will go to the canners. Probably 100 to 150 cars of clingstone peaches will be marketed at a price that will net the grower on a basis of $10 to $12 a ton. This is equal to, and if anything better than the canners are offering.

Mountain Bartletts will all have been shipped by the latter part of next week and those that are now arriving in the East are bringing satisfactory prices.

We do not anticipate that the total shipments of Grapes will exceed 5,000 cars, against 8,300 last season.

The following prices have ruled for the week:

New York.—Bartlett Pears, averaged $1.97; Malaga Grapes, $1.50; Tokay, $1.90; Cornichon, $1.75; Duke Plums, 80c.; Gross, 95c.; Hungarian, 90c.; Orange Clg. Peaches, 60c.; McDevitt, 70c.; Elberta, 60c.

Chicago.—Bartlett Pears, averaged $1.85; Giant Plums, 87c; Duke, 89c.; Malaga Grapes, $1.15; Tokay, $1.50; Phillip Clg. Peaches, 55c.; McDevitt, 66c.

Total shipments to Sept. 7, 8155 cars. Total shipments same date 1914, 9219 cars.

Publisher's Dep't.

While we have not yet received a complete copy of the new "California Hog Book," we have seen parts of it, and expect to have a lot of them on hand by the time this reaches our readers. We would urge everyone interested in swine to send for a copy at once. It is more than worth the price, $2 postpaid.

An announcement has been made by the Luitwieler Pumping Engine Company of Los Angeles, stating that Luitwieler Pumps were given the highest awards at both the San Francisco and San Diego Expositions, taking first prize in competition with many other well known pumps. Two prizes were given by each Exposition, for the Luitwieler deep well pump and the Triplex high duty pressure pump. Owing to the great number of ranchers planning to install pumping plants this fall, this Los Angeles concern has ordered a new supply of its irrigation booklet which describes the different pumps that were awarded prizes at the Expositions. Copies of the booklet will be sent to ranchers free of charge.

CALIFORNIA ALMOND GROWERS' EXCHANGE

311 California Street, San Francisco, Cal.

For a Bigger YIELD Of Better FRUIT With Bigger PROFITS

THE PACIFIC GUANO & FERTILIZER CO. HIGH GRADE FERTILIZER TRADE MARK SAN FRANCISCO, CAL.

For fall use on deciduous trees and grapes you should use

F&V

Gaviota Fertilizer

It is especially successful for prunes, pears, cherries, apricots and all varieties of grapes.

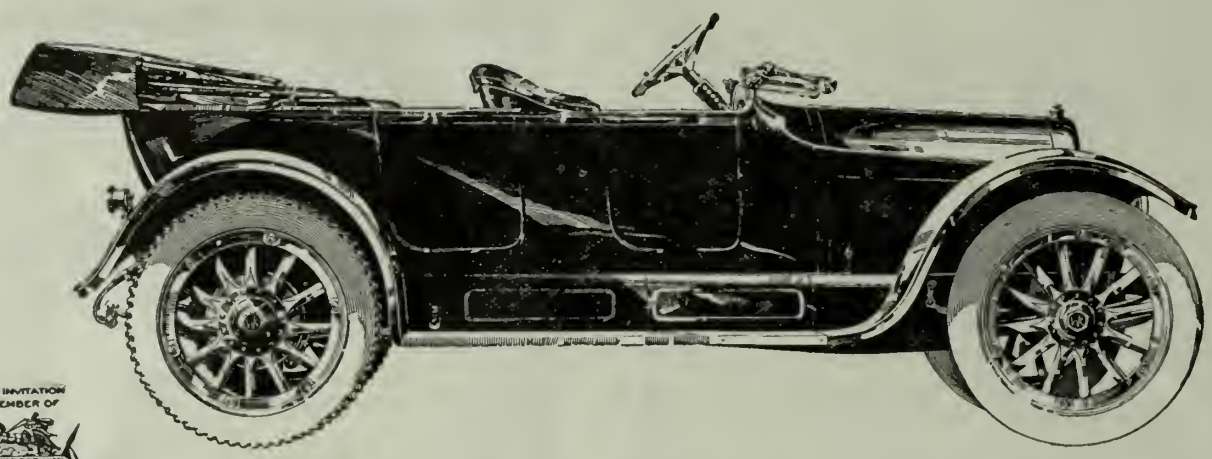
A Prune Grower Writes:—I cannot recommend Gaviota too highly. Where I have applied it I have the largest crop of prunes that I have ever seen on an orchard.

From a Cherry Man:—I have used Gaviota on my cherry orchard for the last three years—The trees have made a good growth and have produced for three years in succession a large crop of fruit of more than ordinary size and color.

From a Grape Grower:—I used your Gaviota Fertilizer and the results have been very satisfactory. The yield is much heavier and the quality of the grapes greatly superior to anything I ever raised before, and the growth of the vine satisfactory in every way.

We have hundreds of letters similar to these.

We have a sworn statement to the effect that Gaviota Fertilizer increased a grower's yearly profits from $2500 to $9528—another that it increased the production of a ranch so that it could be sold at a profit of $4500.



We want you to learn about Gaviota and how you can increase your yield. So write today for a free copy of our valuable book, "The Care and Feeding of Crops." In order that your trees can produce the best fruit in paying quantities you must properly feed the soil—You cannot take out of the soil what is not in the soil.

To find out just what your soil needs to produce bigger profits, you should take advantage of our free service bureau. Write and let us know exactly the conditions you are working under—send us a sample of the soil, without obligation to you, we will tell you honestly what you should do and what you need to improve your crops.

Willys KNIGHT
Sleeve Valve Motor

5 Passenger Touring Car
$1095
Roadster—$1065—*f. o b. Toledo*

BY INVITATION MEMBER OF

The World's Lowest Priced Knight Motored Car

THIS announces the greatest achievement in the history of the automobile business.

The Knight is the automobile motor that revolutionized the entire motor car industry of Europe.

The Daimler of England, the Panhard of France, the Mercedes of Germany, the Minerva of Belgium—in fact, practically all of the costly European cars—are equipped with the famous Knight type motor.

This motor differs from other motors in that where others deteriorate with use, *this improves;* to all others carbon is harmful; *here it is beneficial;* size for size, it has *more power.*

It has no noisy poppet valves; *no* noisy cams; *no* uncertain valve springs; *no* troublesome valves to grind; practically *no* wearing parts.

Instead it has silent sliding sleeve valves.

The Willys-Knight has the same advantages and is just as efficient as those costly European Knight cars.

The Willys-Knight, in our opinion, has the least vibration and is the smoothest, quietest and most economical car made.

Have your demonstration at once.

Deliveries now.

Specifications:

40-horsepower Knight type motor; cylinders cast enbloc, 4⅛" bore x 4½" stroke
High tension magneto ignition
114-inch wheelbase
Full-floating rear axle
Underslung rear springs
34" x 4" tires; non-skids rear
Demountable rims; one extra
Color: Royal blue with ivory striping; gray wheels; nickel and polished aluminum trimmings
Vacuum tank gasoline system
Electric starting and lighting system
Control buttons on steering column

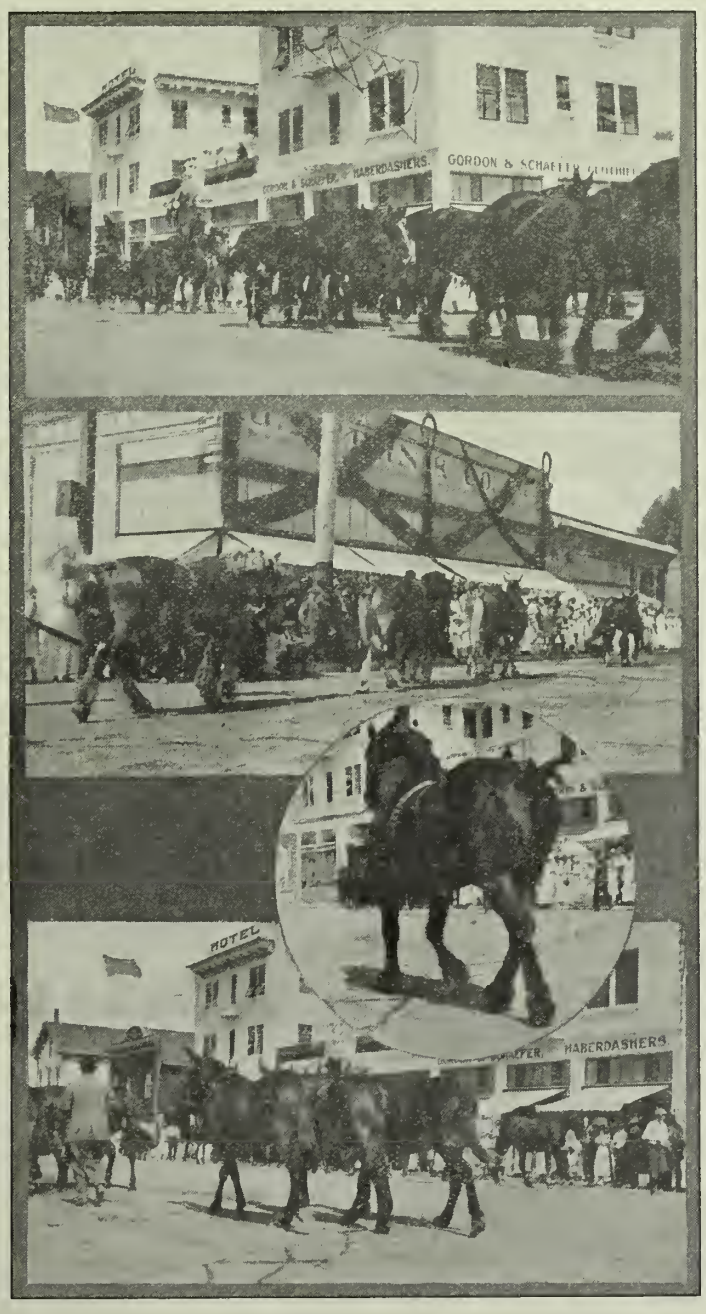
Horse and Colt Show at Rio Vista.

Surely the world is moving when the University holds a horse show. The Supervisors and the people pay for it and count the money well spent. Why not do it in many other places?



[Written for Pacific Rural Press.]

OUR first county colt show—that was what we journeyed over to Rio Vista to see on Admission Day, as did hundreds of others. When we entered the outskirts of the town, we discovered that this wasn't merely a little cracker-box kind of a show, for the first thing that greeted our eyes was horses; and from that time on we saw horses all day. Not the fast-stepping kind that were so familiar on special holidays a few years back, but the big, heavy kind that we talk of so much, but see so seldom. In fact, our colt show had materialized into a great, big horse and colt show combined.

Soon after arrival, we, with some 1500 other interested spectators, watched with admiration the parade. And what a parade! Not the kind we have all been used to seeing, it is true. Ordinarily, we see horses in the parades drawing muchly decorated floats containing muchly decorated citizens, but this was a "horse day," and the men in charge rightly assumed that the horse and not the citizen should be featured.

And this featuring was no small work of equine art, for there were over 120 head of horses and mules, some showing the work of much grooming, others less, and still others that showed unmistakable signs of hard work the day before.

A far greater achievement than the grooming was the size and quality of the animals participating. Nobody who viewed that parade was expecting to see the ordinary horse show frills. Rather, they had come to see just what they did see: a parade composed of draft horses in their workday clothes, fresh from the farm, but in much larger numbers than the most sanguine booster of the day previously had hoped for.

Scenes taken of the big horse parade at Rio Vista, when 120 head of horses and mules were in line. The farmers of that locality have for years been breeding good stock, until now it is one of the big horse centers.

Now parades, as we soon discovered, are not the whole show at this kind of gathering. They are nice to look at, but there were bigger things back of this show than looks. Good-natured rivalry, together with a desire for knowledge, had brought these farmers and their horses together; not bands, decorations, and bright lights. And so it was that after a short address by Dr. David P. Barrows, of the University of California, which in ...ion, through its Farm Adviser, had fathered the show, the real business of the day started: that of picking the best horse out of each of the many classes provided.

Purebreds were judged first, Shires, Percherons and Belgians being represented, with Shires having a big lead in numbers, with Percherons second. Then came the mule and jack classes, with 14 animals in all classes—not so largely represented as the horse, perhaps, but fully as well in some classes, showing that the mule is considered an important factor in farm operations in the Rio Vista country.

But for real intense competition, the kind that seemed to be the backbone of the whole show, the judging of the grade mares, geldings, and foals, proved most interesting.

Apparently every exhibitor considered his mare the best one, for there were 14 mares in the Best Grade Mare class, all of which weighed over 1600 pounds. It is needless to say that such a collection of mares could not be made in any but a country where draft horse breeding is continuously followed. Perhaps the brood mares in this show were the most remarkable feature both for size and quality. Seldom does one see their equal, and as one horse raiser remarked, "We have good horses in our country, but nothing that can touch these mares, and you can't get big drafters unless you have good mares."

Again, in the mare and foal class was one taught an object lesson in regard to the importance of the brood mare. Of the 10 entries in this class, all were big strong foals; the kind that grow into big work-horses at an early age.

And so it went from class to class, each one naturally bringing out a winner and putting a hundred resolutions into the loser's head to raise a better one next year. And, incidentally, it might be mentioned that not only was the exhibitor making mental resolutions, but also the spectator who had left his horses at home.

Much interest naturally centered on grand championships, of particular interest in this respect being the grand champion foal irrespective of breeding, which carried with it the silver medal awarded by the California Draft Horse Breeders' Association, as well as an opportunity to compete for the State championship at Sacramento

California Weather Record.

The following rainfall and temperature record is furnished the PACIFIC RURAL PRESS by the United States Department of Agricultural Weather Bureau, at San Francisco, for the week ending at 5 p. m., September 14, 1915.

STATIONS	Rainfall Data: Past Week	Rainfall Data: Seasonal To Date	Rainfall Data: Normal To Date	Temperature Data: Max'm	Temperature Data: Min'm
Eureka	.02	.28	.57	62	48
Red Bluff	0	T	.16	84	54
Sacramento	0	.01	.11	92	52
San Francisco	0	.01	.01	74	56
San Jose	0	.04	.11	84	46
Fresno	0	T	0	96	52
Independence	0	.04	0	90	42
San Luis Obispo	0	.01	.08	76	50
Los Angeles	0	0	0	82	56
San Diego	0	T	0	72	60

THE WEEK

Multitudes from all American countries, and more than we might expect from the other hemisphere, considering the acute troubles on that side of the world, are enjoying with us these delicious September days. Last week the Exposition had two days which will stand high in the attendance-records of the year. Labor Day and Admission Day drew throngs almost beyond anticipation and their unique events filled the popular heart with joy. It is an interesting fact, however, that so many Californians are now realizing that the Exposition is a great educational opportunity and something more than an abode of delight—which they have been disposed to regard it while the vast throngs of midsummer visitors from the east were in possession of it. Then, Californians were busy showing friends from a distance, during their short sojourns, the grand spectacular and pictorial phases of the wonderful creation of architects, artists and gardeners. Now Californians are realizing the importance of leisurely studies, not only of the grandly attractive features, but of the detail of art and industry which the palaces contain in such unprecedented volume and variety. Everywhere one hears remarks of realization that the vacation season is over and that the Exposition, as a great school for the education of mankind, has opened in the minds of the people. This is a most fortunate, popular conviction. Probably the greatest permanent good, in the promotion of knowledge and thought of great and good things among Californians, and the effects of such realizations in the upbuilding of the State, is to be secured by the autumn studies which our people are providing for by frequent and prolonged visitations. Each one should seize the opportunity to the extent of his conditions and requirements.

California Starts a New Question.

California is enjoying this week a most unique session of the International Irrigation Congress, in that it is of nine days' duration and includes special assemblies at four different points in the State: Stockton, Fresno, Sacramento and San Francisco—at the Exposition on September 20 and 21—the latter being "Rural Credits Day." The California conventions will be most notable during the 22 years of the life of the Congress in the extent and definiteness of its effort for fair financing of irrigation development, from the point of view of the irrigator himself. In the past, full attention was given by the Congress to national financing of irrigation development as a whole: now it is more a question of financing the settler so he can get upon the land and stay there. California is leading in systematic State promotion of rational and successful colonization on idle lands—not public lands necessarily, but the subdivision and occupation of idle lands covered by private ownership in large tracts. The California Legislature last winter prepared to give the people a chance to change the constitution so that State credit could be used, if necessary, in such colonization enterprises, and a vote will be taken on that amendment on October 26. In accordance with another provision by the last Legislature Governor Johnson has appointed four of the five contemplated by the law, viz.: Col. Harris Weinstock, Doctors D. P. Barrows and Elwood Mead, and Senator Matthews, as a committee to devise a plan for subdivision and colonization of lands by State enterprise, which can be presented to the next legislature. All matters involved in such a State movement were brought before the Irrigation Congress and will now become a subject of nation-wide discussion on the basis of California's leadership.

The meetings at the Exposition on September 20 and 21, both afternoon and evening of the latter day, should be attended by all who have regard for rural credits questions, from any point of view. The proceedings will have to do with both the colonization-development propositions and with short-term credit for producing and marketing purposes.

Facts Which Do Not Fit.

Upon another page of this issue may be found a communication from Dr. A. J. Cook, State Commissioner of Horticulture, which we hope everyone will read carefully. Dr. Cook is very anxious that our readers should have the facts in the case and not be misled by the slanders which we supply them—according to the information which some great and good friend gives him. The saddest thing about the interesting facts which Dr. Cook presents in his letter, is that they do not fit the case. If he had found time to read our paragraph before replying to it, he would have noticed that we did not say anything about the aggregate attendance. What we did say was this: "The sad scarcity of fruit growers is only what might have been expected," etc. It was a "Fruit Grawers' Convention," and yet the attendance consisted of almost wholly academic, official and dilettante persons. We do not desire to deny entertainment to such persons, but they are not "fruit growers" and cannot be counted as such. Nor are they likely to burden themselves with transactions which are now most essential to the prosperity of men who are growing fruit.

Another thing which Dr. Cook might have noticed, if he had read the paragraph before answering it, is that our chief objection to his lay-out for a Fruit Growers' Convention consists in its likeness to a Farmers' Institute—which is a teaching affair as it ought to be, for it is a University exercise. We claimed that his conventions departed from the earlier, and most valuable character of Fruit Growers' Conventions, and were duplicating the institute and short-course work which belongs to the University. In his reply, Dr. Cook not only admits this, but argues in favor of this kind of meeting, and he should not have arraigned us for not giving the facts. Our facts were right: his facts do not fit.

"Institutes" and "Conventions."

Our claim is that the better Dr. Cook's meetings are as "institutes" the worse they are as "conventions," which have rendered most value as fruit-growers' executive assemblies. This is the character which has practically been lost sight of. That Dr. Cook does not at all apprehend the nature of our objection, appears in his effort to show that three-fifths of the addresses at the Stanford convention were from the "practical side" and two-fifths from the "academic"; but if one cares to examine the program he will find that the subjects assigned even to the "practical" speakers were encyclopedic, descriptive and academic, and did not attack live issues in our current fruit-growing experience, except in an incidental way. This is, of course, not so great a sin as the closing of the opportunity for business-like conference between growers, which is the direct result of his lay-out. He programs the meetings so full of those who have either the standing or the style of academic spell-binders that they resist even the dynamite of current necessities.

The California fruit-growers nearly thirty-five years ago instituted a method of instant and concentrated movement in the solution of their problems by appeal to popular assemblies, known as "Fruit Growers' Conventions." They were unique in their character and most effective in their work and nearly, if not quite, all of the great successes of the growers' organizations in regulating production, protection, transportation and distribution have followed from the initiative at these great conventions. No other agency or institution compares with them in work done for the promotion of the fruit industry and the prosperity of producers. They set up no qualifications nor requirements of membership; they had no constitution nor by-laws. Their rallying cry was: "Let's get together and do something," and the growers did get together and did things. In recent practice the particular force of these great, unique, characteristically Californian and democratic assemblies has been well-nigh frittered away.

What Is Executive Horticulture?

When Dr. Cook began as State Commissioner of Horticulture nearly four years ago, he seemed to be impressed with an idea that his duty was to duplicate or displace the College of Agriculture, both in teaching and research—just as he had previously discounted local investigators by referring to distant agencies appeals which should have been made to our own investigators and institutions—apparently always preferring the former. When he assumed the commissionership he started out to realize these mistaken notions; and though he has been shaken loose from many of his old tenets he still fails to grasp the fundamental character of his office in the executive work of the State, which is to understand and execute

the laws, which the Legislature has provided, for the promotion of the great industry of the State which those laws contemplate. We do not mean, of course, that the State Commissioner should confine himself to the letter of the laws in which he is specifically mentioned—such as the protection from pests, etc.—but the laws which aim to embody the spirit of State-help to the fruit interests.

There is every reason to believe that the incumbent administration desires to do something for the promotion of State business in production. The Governor has said so, and the people believe he means it. He has said, if we remember correctly, that the producer is not getting what belongs to him from the selling price of his products. He has approved a law the design of which is to show what the State can do to help the producer get what he earns. What is the attitude of the producers toward State help in marketing? Not less than a whole day should have been given at the Stanford convention to discussion, which would have helped producers to understand each other and to know what all are willing to stand for. To that end representatives of all co-operative marketing associations should have been summoned; and, if they had been, there would have been a discussion which even our old friend, Eben Boalt, would have had no difficulty in understanding. We do not know whether the new marketing law will go up or down, but we do know that as a new phase of State legislation, looking toward a square deal for producers, it should have been the main issue at the Stanford convention, and it should not have been passed in silence by the horticultural branch of a State government, which is willing to face even the failure of a new idea in government for the purpose of demonstrating what really can be done to secure producers their share of prosperity.

Another Executive Instance.

Another matter to which the State administration has strongly committed itself is the proper provision of rural credit. Every branch of the executive outfit of the State should endeavor to realize the Governor's desires in this regard, and there are popular votes approaching on preparations for rural credit machinery. Dr. Cook did wisely in getting Col. Weinstock to set forth fundamental principles at two earlier conventions, if we remember correctly, but he stopped there, and when definite ideas and methods for local realization of what Col. Weinstock advocated are pending, there is nothing doing at the great assemblies which the horticultural commissioner has the power to convoke and which could make telling declarations on the subject. The result is that, instead of being called together to act upon a leading executive policy of the State, the fruit interests are now trying to get themselves together on that important matter. If we are correct, the executive branches of the government are constituted for the purpose of arriving at and realizing beneficent purposes. Dr. Cook's idea of working his branch of the executive works seems to be to elucidate, eliminate and evaporate—which it not a good executive way.

The specific instances, which we cite, of executive referendum to fruit growers are only two of many, but they illustrate our conception of the work which needs to be done. California fruit industries are now only at the beginning of their development. The legislature, from time to time, has provided ways and means by which the executive branch of the State government may exert powerful influence in promotion and protection of these industries and may always keep in close touch with the men and organizations whose function it is to do things. It does not mean leadership by apron-strings. It means leadership by business spirit, knowledge and force. When the Governor of California can feel his connection with these greatest industries of the State, through leadership of this character, he will be officially informed of what fruit growers desire and what their industries need.

Relations of Riot to Fruit Growing.

Another executive subject upon which the Stanford convention was silent, so far as we have heard, is the riot and destruction being waged upon fruit properties this summer by those who respect neither owners' interests nor the rules of the labor organizations. The convention should have probed this movement to the bottom and demanded law and order. It is fortunate that Governor Johnson has been able to reach the bottom of it without the horticultural contact which the law provides in the Fruit Growers' Conventions; for in a formal statement, issued September 21, he declares the Industrial Workers of the World to be doing these things: they preach, in the name of Ford and Suhr, violence, sabotage and arson. They demand the destruction of the farming and fruit industries of California; they are instructing by word of mouth and otherwise how best haystacks and barns and buildings of industry may be burned, and how fruit trees and vines may be killed. If such things had been going on twenty years ago the fruit growers' assembly would have hastened to offer the governor its support in denouncing them. Fortunately, however, the governor has had his own eyes on the situation, and now declares: "So long as, in behalf of these men, the threats of injury and sabotage continue, so long as the preachment exists in their behalf in the State of California, so long as incendiarism is attempted, I will neither listen to appeals for executive clemency, in behalf of Ford and Suhr, nor in any fashion consider the shortening of their terms of imprisonment."

As such inhuman practices are thus seen to be hopeless of reaching their intended results, their advocates must adopt some more rational and lawful methods.

Queries and Replies.

Querists must give name and address

Unanswerable Alfalfa and Corn.

To the Editor: How long after cutting alfalfa should it be raked into windrows; and how long should it stay in the windrows before putting into cocks? When in cocks, how long should it remain? Should alfalfa be stacked the same as hay before hauling into the barn? I have some field corn now growing, and some advise me to cut off the tops and others say do not.—R. A. C., Hayward.

We are sorry that these questions are broadly unanswerable. Correct practice with alfalfa in one place would be wrong in another; also a method might be both right and wrong in the same place at different times of the year. Sometimes the hay can go right from the windrow to the barn, but it is generally cocked and seldom stacked before going in. There is no rule and can be none. A beginner should seek the advice of an experienced neighbor who can see if the cutting is ready or not, and should begin right there to educate his own judgment. As for topping corn, 20 experiments at the stations showed that in 7 cases it hurt the corn, in 8 cases it helped it, and in 5 cases it made no difference. No wonder your advisers disagree.

Alfalfa Tonics.

To the Editor: I have some alfalfa that is not doing well. The stand is good, but it makes a poor growth. I will disc it this fall and put on barnyard manure. I would like to use gypsum. Please tell me how to do it. Would you mix with manure and spread broadcast before disking? Also, how much per acre? The soil is moderately deep, and I think does not contain alkali.—R. M., Roseville.

We should spread the manure and disk this fall after the last cutting, as you propose. The gypsum can be best applied in the spring when the growth is starting and still more rain is to come. You can use 300 lbs. per acre, broadcasting it over the surface. For a small field a small fire shovel makes a good throwing implement for one hand. The first following rain will take care of it.

A Seedless Fig.

To the Editor: I am sending you a seedless fig. We find this fig superior in many ways to any other fig that we have seen. For jams and preserves they are far ahead of any other fig. The tree is a heavy bearer. The fruit is not subject to decay on tree and is not bothered with bugs. For candied figs they excel all others. I would like your opinion of them.—W. F. Bolinger, Redlands.

These figs are of roundish form, light yellow, medium size, and apparently thin and tender skinned. One of the specimens is practically devoid of cavity—it being reduced to a thin slit. The interior of the fig is therefore packed full of pulp of light yellow color, and evidently well suited for the preserving processes which Mr. Bolinger specifies. A very few empty seeds are found in the pulp, but the fruit is relatively as seedless as the navel orange, perhaps—so few seeds that they are negligible. Another specimen, on cutting, shows more vestiges of a normal cavity, but the prevailing form is probably the former, which it is fair to call either a solid fig or a seedless fig, as the grower chooses.

Lemon Insects.

To the Editor: I have some young lemon trees and some of the leaves turn brown and curl. Upon looking closer I have found insects about one-fourth of an inch long, which look exactly like small brown caterpillars. There are large numbers on some leaves. Can you inform me as to what to do?—A. J., Soquel.

If the insects are only on the leaves which curl, the cheapest method would be to pick off and crush all such leaves. If they are scattered you should spray with arsenate of lead just as you do for the apple worm—being sure, of course, that you are dealing with caterpillars. If they are more like leaf lice, you should spray the trees with a soap or tobacco wash.

Barley on Salt Marsh.

To the Editor: Can I sow barley on marsh land which has considerable salt grass on it, and in winter it lies under tide water for about one month?—E. J. B., Vallejo.

You can only tell by trying a little patch on it—sowing late in the spring. Usually such land has to be leveed, with gates to exclude tide water and let out rain water, which carries the salt with it.

Peach Growers Organizing.

A million-dollar organization of dried peach growers on lines almost identical with the plan of the Associated Raisin Co. is well under way, and the greatest eastern distributors are tumbling over themselves for a chance to handle the peaches.

[Written for Pacific Rural Press.]

Dried peach growers are stranded high and dry, and there is a great thirst for information bow to get living prices; but a cloud "as big as a man's hand" has risen above the borizon and is rapidly gathering size and force. Meeting after meeting of peach growers is being held in the San Joaquin valley and the storm is about to break that will sweep away the present system of everybody trying to sell to the packers in a month what it has taken a year to produce. The packers, knowing that the feverish rush is coming, sell peaches that they don't own before the trees bloom, and then hold prices low as possible. The packers aren't to blame for taking advantage of the system; but if the peach growers hang back to "let George" take advantage of the present opoprtunity to do away with that system, the system will continue and the peach trees will come out.

As we have traveled up and down the Sacramento and San Joaquin valleys, it has been almost with indignation as well as grief that we have seen the heartless neglect of peach orchards and the crops on them. Growers did not thin the fruit and it opened the centers of tbe trees to sunburn—it broke down great branches, opening jagged wounds for decay to strike at the trunks and roots. Fruit has rotted on tbe ground by the orchardful; more thrifty growers have fed it to swine; others have already laid the tractor to the root of the tree and burned botb tree and crop. There are 5897 peach growers with 55,000 acres in 40 townships of the central San Joaquin valley alone, who are in the same straits.

Three cents is the highest sale that has come to our notice, and the usual hammering down has already occurred to stampede the growers into the arms of the packers.

But the end is in sight.

A peach growers' committee was recently appointed in Fresno to find a market for the "terrible" carryover before the new crop should come on. One hundred tons was all it could discover and very little was in the hands of the growers. Tbe packers had sold short and wanted to scare the growers into selling early at packers' prices to cover their shortage. A meeting of peach growers was thereupon called Aug. 20 in the Fresno Chamber of Commerce. It appointed a committee of five who called another and larger mass meeting for Aug. 27. There a million dollar corporation was proposed to be organized on lines similar to the Associated Raisin Co. and the committee started to raise the money, as was described in the Pacific Rural Press of Sept. 4. Local meetings have been held in various parts of Fresno county, and will be held in all peach-growing sections, to explain the situation and the plan of organization to peach growers, and to take subscriptions for stock in the company. Over $50,000 stock had been subscribed in the two weeks previous to this writing. The Reedley district alone had signed up over $10,000.

Chairman Wm. Glass of the committee, publisher of the Fresno Republican, says that while he is not a peach grower, he is financially interested in the success of the corporation because he is sure the peach growers will then have more dollars to spend for Fresno Republicans and the things it advertises. He is sure tbat every automobile dealer in Fresno, every furniture dealer, every clothier, has a direct interest and will back up tbe movement if the growers take hold with plenty of interest.

Secretary J. P. Bolton of the committee, another veteran of the Associated Raisin fight for organization, says that on his peach account, he is a heavier borrower every year, getting mortgaged beyond endurance. His orchard will have to go to other hands unless relief is found within two years. This is just a typical case of the desperation of peach growers. So the committee is giving its time gratis to help organization. There is no treasury nor money in it.

Details of Plan—25,000 shares of $40 each; $250,000 to be subscribed before Jan. 1, 1916, or goodbye peach orchards; subscriptions payable ¼ as soon as the trustees organize and ⅓ of the balance annually; stock to be held in trust by 25 trustees elected for a term of 7 years, at the first stockholders' meeting, each share being entitled to one vote; business to be transacted by a board of seven directors; a growers' contract similar to the raisin contract is contemplated to be worked out as soon as organization is effected; other details on which general agreement might be difficult, are left for the management to settle.

Easterners Want to Handle Peaches—The biggest distributing houses in the Middle West have seen newspaper reports of the organization and they have written their delight, and desire to handle the Chicago and St. Louis business of this organization which cannot be born till next January. The California Cured Fruit Excbange has expressed its sympathy with the movement. Chambers of commerce and the press of the State are lending their hearty supoprt.

Numerous large subscriptions have been made witb the condition that $600,000 be subscribed before beginning business. Among these is $2500 by Wylie Giffen, who says his experience as president of the Associated Raisin Co. convinces him that $600,000 will be necessary at the start in order to make it a success. That may be easily possible if all growers take a hand like the little bunch of Easton peach growers who, tired from long days' work in the vineyards following close upon their peach drying, and in spite of threatening rain, held a meeting on the night of Sept. 9, and in fifteen minutes signed up seven hundred and fifty dollars, besides getting volunteer committees to canvass their district.

Taxation Necessary; May Be Beneficent.

Taxation is necessary and may be beneficent. It should at least be constructive and not destructive. Otherwise it crushes industry and becomes, subjectively, suicidal.

A very impressive picture of the latter aspect of taxation is portrayed in his report to the California Association of Nurserymen by Frank T. Swett, chairman of its committee on viticulture, as follows:

In place of a long report summarizing details of production, planting and progress; we think it wise to emphasize one overshadowing problem, which is of vital importance. We refer to the taxing out of existence of a most important branch of the viticultural industry.

Owing to the action of Congress, in imposing on all wines a heavy stamp tax of eight cents a gallon, and in addition to that the levying of a tax of 55 cents a gallon on brandy used in fortifying sweet wines, present and prospective marketing has been curtailed. The cellars of California are full of unsold wine, an abnormal and unprecedented condition.

In the present condition of the country, where reduced tariff collections have impaired the National Revenue, the viticultural industry is willing to bear its full share, and to carry all the burden it can, without going out of existence. But an excessive tax defeats its own purpose, if it kills off the goose that lays the golden egg.

During the coming vintage a tax of 55 cents a gallon will be collected on all brandy used in fortifying sweet wines. Last year and for many years past the tax was 3 cents a gallon. And furthermore, through a probable inadvertence in drafting the law, after December 1, 1915, the tax will automatically become $1.10 a gallon, instead of reverting to the original 3 cents a gallon.

If the wineries could finance and endure the 55 cent tax, that would be 18 times the previous tax, and instead of $125,000 a year for California would be $2,250,000 for a normal production of California sweet wine. But those acquainted with financial and marketing conditions know that there can be nothing like a normal production in the face of such a tax. Comparatively little sweet wine will be made this year in this State.

And now we learn that after this year the tax becomes $1.10, which means a levy of $4,450,000 on 75,000 acres of vineyard, or a tax 37 times as great as a year ago; the impossibility is evident. There can be no misunderstanding the effect. It would be a crushing blow to tbe viticultural industry of the State.

The only alternative would be the conversion of sweet wine plants into dry wine plants, and tbe attempted making of clarets and white wines in districts fit only for producing ports and sherries. As the grapes in tbe interior hot valleys are not well adapted to the making of good dry wines this cannot be done on any large scale. In many districts the grapes would not even be gathered, but would rot on the vine.

The tax tbis season on a ton of grapes used in making sweet wine would amount to about $20 on tbat ton, and next year would amount to about $40 a ton.

The object of this law, that of raising additional revenue, is defeated by the impossibility of operating under the tax, and an industry which as a whole is valued at $150,000,000 is destroyed in part.

Tbis committee, therefore, believing that the nurserymen of the State desire to see everyone of our horticultural and viticultural industries fostered and upbuilded, instead of being hampered and destroyed, ask you to pass suitable resolutions, to be sent to Congress, through the medium of the State Board of Viticultural Commissioners, asking that Congress at its next session enact reasonable legislation for the relief of the vineyards of the State from the operation of the Act of Congress entitled "An act to increase the revenue and for other purposes," approved October 22, 1914.

STACKING BEANS.

To the Editor: In your issue of August 28 I notice a query from D. J. M. of Arroyo Grande, in regard to stacking beans. I remember, some years ago, Joseph Elvedge of Santa Maria stacked some beans and I think he had no trouble with them. However, if D. J. M. will interview him, as he is not far away, he will no doubt give him full particulars.

Isleton. **W. J. Phelps.**

[We shall be glad to have accounts from those who stack beans.]

Hemet Growers to Organize.

To the Editor: At an adjourned meeting of the San Jacinto Deciduous Fruit Growers, in Hemet, Sept. 5, a report of an investigation committee, composed of two of tbe local growers, Jay Dutter and Edward Schmidt, great enthusiasm was aroused for the movement that has begun among growers toward the co-operative processing and selling of their produce.

Mr. Dutter and Mr. Schmidt covered over two-thirds of the State on their investigating trip in an automobile and made a thorough study of tbe problem; a great deal of their investigation was of the working of the California Growers' Association, with headquarters at Tulare, Cal., which is a strictly co-operative association, and is formed by a number of local canneries, purely as a selling association; it is patterned some along the lines of the Citrus Growers' Association, also the raisin growers; but is mainly for the handling of canned and dried fruits of all kinds.

Their plans are to establish markets throughout the East, or wherever there may be a demand for their product, and distribute it through warehouse men, and direct to the retailer; experiments along this line of selling have been made last year with highly satisfactory results, and notwithstanding the fact that this is an ecxeptionally bad year; the results so far have been very promising.

A movement of this kind means that the more members or local canneries are in the organization the greater will be the success, and a

number of localities over the State who have heard of this organization are clamoring for admission to the association, and the central office is swamped with requests for the manager to come and organize them, and bring them into the fold, and this is being done as rapidly as possible, with the busy season of packing on, and the markets to look after.

The Hemet and San Jacinto Valley growers, after the report given by Mr. Dutter of the committee, and upon the committee's recommendation, apopinted a committee of seven members to solicit subscriptions for membership, and organization will be effected as soon as possible, hoping that they will be able to yet handle some of the olive crop this fall.

Jay Dutter.

Citrus Bud Selection From Proper Limbs.

[Written for Pacific Rural Press.]

Frost resistance and other good qualities are gained by selection of nursery buds from proper limbs, but they will vary unless taken from twigs with desired kind of fruit on it and having the desired characteristics.

Almost startling improvements have been attained in the yield of citrus trees by A. D. Shamel of the U. S. Dept. Agr. by top-working unproductive trees with buds from prolific bearers. Mr. Shamel emphasizes the need of cutting the bud stick with the fruit on it, using only plump, healthy buds on the twig back only to its first junction with another. Bud sticks without fruit are not desirable because they are not dependable to reproduce the type of fruit borne on other twigs of the same tree. Fruit must be on the twig when it is cut, so that it may be examined and found of the desired type.

Opposed to this conception, in a way, is the conviction of Carroll B. Smith of San Bernardino county, who makes an argument based on his own experience that, "No matter how definite the origin of citrus buds, the trees from them are going to have variations in foliage and fruit." Mr. Smith believes that buds from suckers coming from fruitful limbs (though not those coming from the trunk) make as fruitful trees as buds from real fruit-bearing wood. Moreover, he says, "In practice you can't select buds just from the limbs, but select prolific trees in prolific orchards, and take the buds from them."

Sixty Trees Budded from One Limb.—When Mr. Shamel began his tree record in the citrus orchards of California in 1909, Mr. Smith had pedigreed navel trees two years old in orchard form, all having come from a single limb from a tree in a neighboring orchard. The limb from which the buds came had been noticed because it bore fruit prolifically, 45 to 50 oranges that would delight the heart of anybody. The oranges looked like the pictures with which the California Fruit Growers' Association advertise "Sunkist" oranges. They were beautifully colored, regular shape, uniformly sized 150, with never a cull or a second for the six or seven years before the freeze of 1913.

Varied in Frost Resistance.—At the freeze of 1913, the 60 trees showed all variations of hardiness, from being killed nearly to the ground to but very slight defoliation. Fifty-six of the trees showed themselves less hardy than the average of 2000 Navel trees of the same age in a neighboring orchard, while four of them showed marked resistance so that they were not even defoliated to serious extent. The 60 trees, which are planted in four rows on level ground among other orchards near Redlands, still show very plainly the effects of the freeze. Some of them had to be cut back almost to the ground and many of them lost more or less of their big limbs. The four which showed themselves as hardy as the hardiest of the neighboring navels were beautiful large trees with their third crop of fruit on, when seen March 5, 1915.

Compact Fruit Wood. — The general appearance of the whole sixty trees is different from neighboring orchards, however, in that on the date mentioned there was considerable new growth which contrasted strongly with the small dark, green leaves compactly surrounding the multitudinous fruit. On the four hardy trees, when one would lift up the heavy outer "skirt" of fruit limbs so heavily loaded that they hung nearly vertical, another "skirt" still loaded with fruit would be exposed; and under that, still another. So the trees were well filled with fruit almost to the center, and all hanging on good, slender fruit wood. The fruit, however, even on open limbs of the same trees, was in various stages of ripeness, some of it being bright yellow and some of it dark orange. The skins varied in texture from coarse and thick to thin and smooth. Even the navels showed considerable variation in sizes. Some of the branches reproduced the same kind of fruit which had been borne on the parent limb of the whole sixty.

Keeps Records of Parent Trees.—Mr. Smith is keeping records of the amount of fruit and its quality, because he is propagating from the four as fast as he can get bud wood. At the time of the freeze, he had several thousand buds from the sixty pedigreed trees, but owing to the damage by frost, he threw all of these away and began again with buds from the four trees only, though he left all sixty of the trees for further observation.

There will be no nursery trees for sale from these four trees for some years because Mr. Smith hopes to work up a large number and observe the fruiting of the second generation of buds. Meanwhile, his records of the parent trees will serve him a good advertising advantage as the purebred live stock men use their pedigrees.

The surprising variation in fruit and frost resistance from the sixty trees from the same branch does not prove that bud selection is a failure, but it does prove that the commercial selection of buds from heavy producing trees, regardless of the twig which bore the fruit, is not certain to reproduce the quality and quantity of fruit borne by certain heavy bearing limbs of these productive trees.

RUSSIAN THISTLE IN MONO COUNTY.

To the editor: Please tell me about the plant which I enclose. Is it the Russian thistle?—J. C. D., Mocalno.

[Answered by Dr. H. M. Hall, University of California.]

The plant submitted, as you suspect, is the Russian Thistle (Salsola kali var. tenuifolia). This is the same Russian Thistle which causes so much trouble in the eastern States and which is becoming rather common in California.

Since it is an annual, it would seem a rather easy matter to destroy this weed; but because of the large number of seeds produced by the plant, its eradication is more difficult than one would at first suspect. If cut off at the surface of the ground the Russian Thistle does not grow again. Hence it seldom becomes objectionable on land which is frequently cultivated. The difficulty comes in where the plant is allowed to grow in waste places, since cultivated fields are rapidly infested by the seed of these neglected plants. Sometimes it is found practicable to burn the plants and thus destroy the seed, but it is better to pull or cut them before the seed is formed and to practice thorough cultivation wherever this is practicable, with the idea of destroying the young plants.

MORE GRAPES; LESS WOOD.

To the Editor: In reply to your letter, the aid to vines can be seen plainly. The more a person stirs up the soil the better it is for it and there is nothing that keeps the moisture close to the surface of the ground better than cultivation. As long as the moisture is close to the surface there will be no danger of sunburnt grapes. But most people in this vicinity stop cultivating too early in the season and the results are supburnt grapes, plenty of which you may see at this time.

The changes we made in pruning were cutting back; not leaving as many spurs as formerly and taking the arms back to the crown of the vine. Of course this can not be accomplished in one year. We also were particular when cutting off a limb to cut close to the bud so that when the scar healed there was no dead wood left to harm the vine for another year. As for added expense, we could see no difference, as it is just as cheap to make a cut close to the bud as an inch from the bud.

We followed Henry's system of pinching, that is when the vines were out about six or eight inches and the forms of grapes could be seen. We pinched the end out of the limbs. We did this both on Thompsons and Muscats. The cost was a small item, as one man could go over more than one and a half acres of Thompsons and about three acres of Muscats. Of course a man could not do the same on old vines. We have wonderful bunches on both kinds of vines, caused by pinching. In a great many cases the limb did not put out any more leaves and the bunch of grapes took all the sap that came out of the limb. We have measured a great many bunches of Thompsons and find many as long as sixteen inches and found one seventeen and one-quarter inches long. We consider this pretty good on two year vines.

In pinching Muscat vines we left all the suckers that had any forms of grapes and broke the limbs off close to the last bunch put out and then took off all the side laterals, which causes the suckers just to finish the bunch and not put out any more wood. In this we find some of the best grapes on the vines: that is in size of berries and clusters.

Who Can Make These Trees Bear?

Here is a chance to start a discussion of nearly everything involved in fruit growing from the soil to the sun. Who will take a whack at the nut?

To the Editor: We have about 15 acres of pear (Bartlett) orchard; the trees being about 15 years old. One-half of the trees make a normal wood growth and bear what we consider a full crop. In one location, however, about in the center of the orchard, about one-fourth of the trees do not bear regularly, and only average about one-fourth of the crop (average per acre).

These trees make a very vigorous wood growth, some canes running up 6 and 7 ft. In all they make over double the wood growth of the trees on the edge of the orchard that bear a full crop. In the other quarter of the orchard, the trees bear heavily and make only a very little wood growth. About 6 to 8 in. for this season.

The soil all seems to be about the same with moisture conditions equal. In some cases on the last referred to quarter, I know of some cases of "crown gall" or "root knot" which would be responsible for the small growth.

I have figured on pruning now that part where the wood growth is so strong, and thin out the trees so as to leave them well open to light and air. I cannot, however, learn from any of our neighbors if this would be practical. One neighbor had this same problem and did as I have mentioned several years ago. As I did not see this orchard until a few days ago I cannot determine the results very well. He has also used commercial fertilizer on these trees. He is now inclined to attribute his success to the fertilizer rather than the pruning. His orchard now ranks above the average in this locality. What have you to say in regard to the early pruning? Can you recommend other means of making these trees come back to normal condition? The growth is so rank that the trees fill in on top and become dark in the centers very early in the season; while the trees are formed very similar to those referred to as normal.

Martinez. R. W. Schmitt.
Sup't. Spring Hill Farm.

[Our guess would be that this bunch of trees had rooted down into a manure mine or found a spring or some other aggregation of moisture and plant food. To repress the growth the pruning should have been done a month or more ago, but still may have some effect. After thinning somewhat to be sure of light enough we should let the trees go uncultivated this winter and next summer and expect plenty of pears in 1917. Now the subject is open. —Editors.]

NATIONAL FOREST TIMBER FOR SALE.

The U. S. Forest Service is offering for sale 100,000,000 feet of timber on the Plumas National Forest, California. It is located in what is known as the Meadow Valley Unit and is within reach of the Western Pacific Railroad. This timber is estimated to cut out 60 per cent sugar and yellow pine. The tract has been cruised and appraised by the Forest Service and a form of contract drawn up, which allows a period of fifteen years for the cutting and removal of the timber exclusive of the time required for the construction of a mill and other improvements. In accordance with the law governing sales from the National Forests, only merchantable timber is sold. It is paid for in installments as cut. Title to the land remains with the Government, and young trees are protected from fire and other damage in order to insure a second crop. Full information concerning the above timber and the conditions of sale may be obtained from the District Forester, San Francisco, California. Bids will be received to and including November 4, 1915.

BEAN WEEVIL.

To the Editor: Will you kindly tell me how to keep the weevil and other insects out of beans, as I want to put away about 50 or 75 pounds for the winter?—J. C. S., Ontario.

[The weevil is started in the green growing bean, the egg being laid on the seam of the pod when small. Beans should be gathered as soon as ripe. If there are then bean larvae working on them, they can be killed by heating the beans to 130 degrees in the oven, but of course one must not get higher heat if it is expected to plant any of the beans next year. The larvae can also be killed by putting the sack in a tight barrel, placing a saucer with an ounce of carbon bisulphid on top of the sack. Cover the barrel with a sack and leave about 40 minutes. Do not let any fire get near or you may have an explosion. It should be done in the open air]

Early Purple Vetch in Prune Orchard.

[Written for Pacific Rural Press.]

In the last of May last spring we saw A. P. Marston of Santa Clara valley turning under a thick, heavy growth of purple vetch in his prune orchard. It was in full bloom and had no aphis visible. It had been left so late in order to provide all the hard stems possible to furnish more humus, though the land was rather black and heavy anyway.

A cow had been tied by a rope to a number of the trees in the orchard and had eaten off the vetch almost clean.

"It makes as good feed as alfalfa," says Mr. Marston, "and I could cut four tons per acre right here in the orchard."

Two acres were not inoculated, but were planted under the same conditions at the same time, beside the rest of the orchard in which the purple vetch seed was treated with bacteria to encourage the taking of nitrogen from the air for use in building up the plants and their roots.

This cover crop stood supporting itself with practically no weeds or other vegetation growing among it, well above the knees of an ordinary man. On lifting up some of the plants, much old, deadened vines were found under the growing ends, so that individual straws were well over 6 feet long. Bur clover growing beside it was slightly over ankle deep at the same time, but well matted.

This late plowing of the vetch was all right in Mr. Marston's case because he had irrigation water with which to soften the ground if the late spring should bring no rains. Irrigation was not needed this spring as it usually is when plowing is delayed so long. The seed had been planted late in September the previous year where purple vetch had never been grown before, though rye, bur clover, etc., had been growing as a sort of volunteer cover crop.

"I won't have to inoculate this section any more," says Mr. Marston, "though two acres where the seed was not inoculated last fall will have to be, next time, because it produced only about one-fifth of the green tops per acre this year as compared with the inoculated part."

WHAT SHOULD STATE HORTICULTURE BE?

[Dr. Cook defends his style of Fruit Growers' Conventions and convinces us that we like his kind worse than ever, because it does not serve the purposes of the State in providing for help to fruit-growing.]

To the Editor: One of our leading fruit growers called my attention to your editorial, in which you criticise the recent State Fruit Growers' Convention held at Stanford University. I had not read the editorial. He wondered how you could so mis-state facts. I excused you on the ground that you had not attended and that second-hand reports were often wide of the truth.

You refer to attendance. As you must know from the attendance at farmers' institutes, the number present is often very limited. Of course the time of the meeting at Stanford, during the fruit harvest, was unpropitious; yet it would not have been possible to secure the very excellent program—commended by all who have spoken to me—at any other time, which fact more than warranted the date. Able men the country over were to be here for other purposes; to not capture them would have been inexcusable. I am sure you will wish to give your readers the facts.

Before Mr. Jeffrey's administration there were thirty-two such conventions, with an average attendance of 194, with a minimum of 75 and a maximum of 676. Mr. Jeffrey arranged for seven conventions; the minimum attendance was 144, the maximum 670, average 290. During the present administration there have been seven conventions — besides the two emergency conventions which were both very largely attended—with a minimum attendance of 161, a maximum of 1200, and an average of 467. The attendance at the Fresno convention in December, 1912, was 161; at the San Jose convention, December, 1913, 167; that at Stanford University 235. This proves that the date of the meeting is not the only determining factor. The papers are published and have a wide reading. This probably accounts for the meagre attendance in so noted a fruit country as Santa Clara.

In your criticism you complain (as you did of the Santa Barbara convention, which all others, as far as I know, praised as of exceptional excellence) of the leaning toward academic preference in selecting the speakers. You will remember my insistence, in all the twelve years when I was conductor of institutes for the University, much of the time under your direction, that at least one-half of the papers be from actual farmers or fruit growers, and that if either force was augmented it should be from the practical side; and while I was working for the University you, in your annual reports, were exceptionally complimentary in commenting on the work. You will see I have not changed in my policy. At the Stanford convention, of the 52 addresses, 29 were from the practical side, 23 from the academic.

A. J. Cook.
State Commissioner of Horticulture.
Sacramento.

FEEDING SUNFLOWER SEEDS

To the Editor: What can be said of sun flower seed as a food for chickens and hogs? And to what extent should it be fed?—F. E. R., Rialto.

[The seed is rich in oil and should be fed rather sparingly and in connection with other feeds. Fowls and hogs with range or pasture can be fed rather more freely sun flower seeds than those in yards. For laying hens special care should be taken not to feed too much.—Editors.]

Mechanical Power on the Farm.

ALMOND HULLERS FOR SMALL PLACES.

[Written for Pacific Rural Press.]

Hulling the almonds from a 10-acre orchard doesn't justify the investment in a large machine. A Penrod, who came to Orland last May from the East, hulls his satisfactorily by getting a "Sure-pop" almond huller run by a 2 h.p. International Engine which is set on a frame of 3x8 planks resting temporarily on blocks. An iron wheel 28 inches in diameter supports the frame on each side about 18 inches from the back end. Two small wheels under the front end complete the equipment for quick and easy moving of the engine. The almond huller, including all delays, loosened the hulls of a lug box of IXL's in three minutes, though it could have been run much faster if Mr. Penrod had kept it busy.

Where the hulls are green or are tightly closed, a little adjustment of the gearing runs the machine slower and gives the nuts a more severe shaking up. A rotary fan blows the leaves out as the almonds are shoved across the edge of the hopper to drop into the threshing cylinder. They hulled in 1½ hours all that they picked in the rest of a half day, but the nuts are picked out from the loosened hulls by hand, six women sitting at a table, lengthwise of which across its center is a hopper into which the nuts are dumped directly from the huller and picked out by the women from a lower aperture.

Electric Driven Huller and Separator.—Mr. Penrod's neighbor, Dan Sturm, has a larger orchard and a big new "Sure-Pop" huller made by the Schmeiser Mfg. Company run by a 2 h.p. electric motor in a shed.

One man rakes the freshly picked nuts into the hulling machine through which they run onto shaking screens. The stick-tights are automatically returned through the machine, while the shucks are dumped into a pile by way of an endless belt which runs past a girl who picks out the few nuts which run over. Those nuts which loosen all right are run out on a belt past two girls who pick out the few stick-tights which come with the nuts, which are then dumped onto large sized drying trays on which another girl spreads them out.

Two men carry the loaded trays to the drying yard where they are dried so that the meats will break without bending. They are taken to the dipping vat in which they are submerged a short time by laying an empty tray on top to prevent floating. After the wetting, the nuts are put in a sulphur house and fumed to bleach the shells.

They are then stacked 14 trays deep with three-quarter-inch boards between the trays and an empty tray on top to allow the wind to dry them, but to keep the direct sun from the nuts.

Mr. Sturm is getting less than his motor capacity on account of the electric transformers being located 150 yards away, so that the huller often requires all the power available. If the transformers were close enough, they could get full capacity, with an overload when necessary.

MOTOR MOVABLE FOR IRRIGATION, ETC.

[Written for Pacific Rural Press.]

Pumping for irrigation has become so common that the power used for it is also used for many other purposes on many ranches. On one just out of Yuba City is a 5 h. p. electric motor fixed on a frame beside the well so that the motor can be easily removed at the end of each irrigation by removing nuts from bolts through the frame so it may be set up elsewhere on the farm.

Insulated wires run down from an electric pole on the roadside. When not in use, the current is shut off by a switch located near the top of the 30-foot pole and operated by a slender hand pole which works up and down under iron clasps. This is locked open or closed as desired.

CATERPILLAR PREVENTS THIRST.

[Written for Pacific Rural Press.]

After a tremendous fire had destroyed the Vina Ranch winery and the 60-foot water tank which supplied the large herd of dairy cattle and horses, quick work was necessary to prevent dire thirst.

One of the pipe mains was tapped, a hose connected to it and across to the irrigation ditch. There a 2½-inch Woodin & Little centrifugal

ump was mounted on a plank and hose dropped from it into the ater. A big 60 h.p. Caterpillar ractor was set in line with the pump nd a belt run to it. A man is left n charge all the time and the engine keeps up a continuous water pressure throughout the place.

"Is it economical to use such a big machine on such a small pump?"

"Sure, we are using very little gas and there is nothing on the engine to wear out and there is sure no wear on the tracks."

ORCHARD ALFALFA MUST BE WATERED.

[Written for Pacific Rural Press.]

Using alfalfa planted throughout the peach orchard, leaving a 4-foot strip of cultivated soil on each side of the rows which are 20 feet apart, seems not to have hurt their fruit-bearing ability nor their growth on G. B. Abbott's farm near Corning. The yield of fruit on three acres of Elbertas for the past three years has been 19, 25, and 17 tons. The alfalfa is usually cut three times before fruit picking and has to be clipped out of the way. A fourth full cutting is made in the fall.

It must be irrigated regularly and often, so that water is pumped from a well at the house by a 3 h.p. electric motor, using a 2-inch pump which runs a 3-inch underground pipe full of water 300 feet to the orchard, where it is distributed by means of 3-inch galvanized pipes in 20-foot lengths.

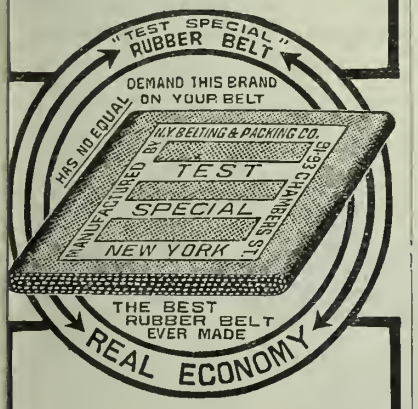
The cultivated strips between the rows serve the purpose of levees so it is a check irrigation, using surface pipe. The checks are 480 feet long and are watered from both ends, there being a "Y" in the underground pipe to let the water to both sides of the orchard.

Mr. Abbott points out the advantages of pump and pipe irrigation as being "no malaria; pump when you want water; no ditches to clean; no weed seeds carried in to grow along the ditch banks and in the orchard; and no mosquitoes."

The pump also supplies water for the house and farm buildings by the way of a 2-inch pipe to a tank 25 feet high.

ENGINE TO PUMP FOR STOCK.

[Written for Pacific Rural Press.]



There is not much for an engine to do on the farm of L. F. Killenbeck of Orland, but he has a little 1¾ h.p. set on a hand cart to be pulled about the place as desired. It pumps water for the cows, horses, and hogs, being attached to the pump by a cog gear on the belt wheel to a large cog wheel with a pin near its circumference. This pin is the axle for a vertical arm which reaches up to one end of the horizontal pump lever. Another vertical arm parallel to the first is worked by bending the end of the shaft on which the big cog wheel works, to Z shape so that its short end works in the same circle as the pin through the first mentioned vertical arm.

The frame for the gearing is fastened to the engine, and is held solid by a clevis set over a post in the ground. The horizontal pump lever is held by a bolt between two posts high enough so that the opposite end from the gear connection holds a 20-inch iron strap down to the pump rod. The boys are glad, for now they don't have to pump water for the very considerable herd of stock. In the opposite direction from the engine a belt is run to a grindstone axle which revolves in holes through two 3x4s leaned against the barn with the lower ends stuck in the dirt.

Horse Sense IN Belt Buying

When you are asked to put your good money into a belt, you should be in position to know just what service you are going to get from that belt. You should know how to test it—How to find out how it is made—How it is put together—How it will stand the strain in actual use—How good the guarantee is.

We want to send you a folder that gives an infallable test for rubber belting and tells you how to apply that test. With this folder we will send a sample of

Every foot of Test Special is backed by an unqualified guarantee—and that guarantee is backed by a manufacturing firm that for nearly three-quarters of a century has had the enviable reputation of making nothing but the best and of making good wherever their product did not give entire satisfaction.

General Agricultural Review.

CITRUS AND SEMI-TROPICAL.

There are six citrus packing houses in the San Fernando district of Los Angeles county.

Harry Postlethwaite is fumigating the large orange orchard of which he has charge near Lindsay, with machine outfits.

The four-acre orange grove set out by A. E. French on his ranch near Mt. Vernon last year is looking in a good, healthy, thriving condition.

An orange marmalade factory has been established at Anaheim by Thos. Crawford. While the industry is yet in its infancy, Mr. Crawford feels that its possibilities are unlimited.

The cost of fumigation work in Porterville, which was estimated early in the season at 35 cents a tree, has been reduced to about half that, according to the county orchard inspector.

The U. S. Plant Introduction Gardens at Chico were recently visited by members of the Bureau of Plant Breeding of the Dept. of Agr. to observe the results of citrus crossing experiments being carried on there.

The McPherson packing house at Orange will shortly reopen to finish packing about 85 cars of the association's Valencias yet to be forwarded; and will remain open until the end of the Valencia season.

Growers in the Pacoima section of San Fernando valley have organized the Pacoima Hills Citrus Association and will erect a packing house there, shipping their fruit through the Mutual Fruit Distributors.

Growers in the Alta district of Tulare county have formed an association to be known as the North Tulare Citrus Association, its chief object being the promotion of the industry along businesslike lines as well as the care of the orchards on scientific principles.

According to a recent commerce report, date growers throughout the Coachella Valley have received their share of the date-palm offshoots recently imported by the Date Growers' Association from the date gardens of northern Africa. The distribution of the palms is under the direction of the Government.

DECIDUOUS FRUITS.

The Visalia canneries expect to finish their season on Sept. 21.

The Nevada county pear shipping season is at present at its height.

An estimate places the Oregon apple crop at one-third of last year.

About three hundred cars of apples have been shipped from Watsonville this season.

"Prune Week" will be celebrated at the Panama-Pacific Exposition October 4 to 10.

The growers' cannery at Kingsburg have packed over 50,000 cases of fruit since opening.

Vacaville has shipped to date, Sept. 20, 830 cars of fruit as against 737 to the same date last season.

The harvesting of prunes has begun at Corning, and growers are well pleased with crop conditions.

Thos. Anderson of Anderson, Shasta county, states that the prune crop is turning out good in that section this year.

Returns on the first pool of the Sebastopol Apple Growers' Union yielded 76c for 4-tier and 53c on 4½-tier Gravensteins.

The packing of late varieties of apples is in full swing at Sebastopol; the Apple Growers' Union estimates that the season will be over Oct. 20.

The plant of Libby, McNeill & Libby at Selma broke all previous records for one day's run on Sept. 6 when 131,000 cans of peaches were packed.

An estimate made of the Kings county prune crop places it at 50 per cent of normal, with the lack of quantity made up in the high quality of the fruit.

Red spider is partially defoliating many Fresno county peach orchards; and little leaf of peaches is taking a very considerable percentage of Fresno county trees.

Claiming that it was working a hardship on packer-members of the Apple Distributors of Watsonville, the Board of Control has removed the minimum price on the "B" grade of apples.

The minimum price on Bellefleurs (four-tier apples only) has been raised from 75c to 80c by the Executive Committee of the Watsonville Apple Distributors; the new rate took effect Sept. 17.

Large quantities of peaches are being shipped from Loomis in lug boxes for southern California green fruit trade; this is an innovation, as peaches are seldom shipped in that manner except for canning.

According to a recent consular report, the short apple crop in England should create a large demand for American fruit. One estimate places the yield of early apples at one-third of a crop, and late apples at one-half a crop.

The first arrest in Fresno county for violation of the new fruit standardization law took place when the county horticultural commissioner swore to a complaint against a packer in the Clovis district, who shipped grapes to New York after they had been condemned for mildew.

A recent commerce report states that a cannery factory at Sodus, N. Y., has been experimenting with cherry pits this season. The pits are first dried and then crushed in preparation for a process which extracts the flavor of the kerneis. The extract obtained is used to give flavor to the canned fruit.

The plan to establish a deciduous fruit shipping industry at Oroville is meeting with favor, and much interest is being shown by non-resident owners of deciduous fruit lands. It is the plan of the owners of small tracts to plant their acreage to a fruit agreed upon by several of the growers, so that in all about 200 acres will ripen at the same time for shipment.

The California Cured Fruit Exchange, San Francisco, has recently affiliated with itself the Del Rey Cured Fruit Association, the Fresno Cured Fruit Association, the Kingsburg Cured Fruit Association, and the Visalia Cured Fruit Association. They also report the withdrawal of the Corning Cured Fruit Association, the Hemet Cured Fruit Association, and the Napa Cured Fruit Association.

MISCELLANEOUS.

Reclamation work on a 21,000-acre ranch in Klamath Falls, Oregon, is being carried on.

A fruit and flower festival is being planned at Paradise, Butte county, for early October.

Work on the drainage system of the Natomas District 1000 is expected to be finished by January 1, 1916.

The Modesto Irrigation District will spend $50,000 this year for improvements, according to a decision made by the Board of Supervisors.

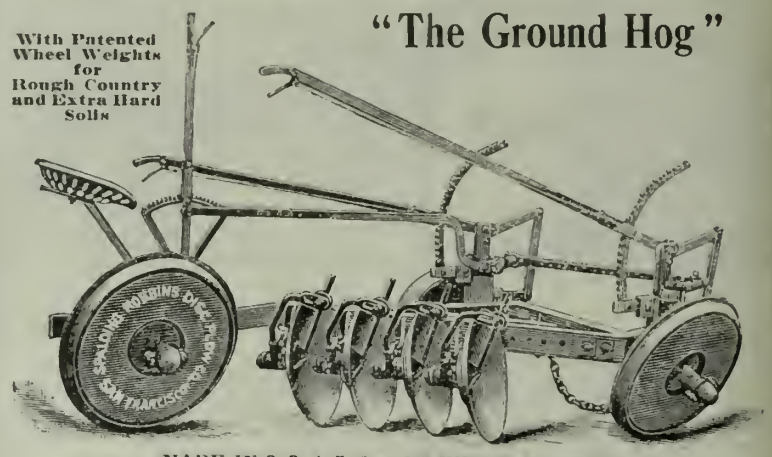
It is reported that the Colusa-Hamilton Railroad Company of Glenn county is planning to build a depot at Codora, lay out a township and call it Razor.

The fourth annual St. Helena Vintage Festival and first Napa County Farm Bureau Fair held at St. Helena Sept. 3 to 6 was successful beyond the fondest hopes of the committee in charge.

Major Narboe of the State Engineering Department recently made a trip of inspection to the San Joaquin Valley to investigate the plans of a contemplated irrigation project near Visalia, containing 12,500 acres of land suitable for the production of citrus fruits.

An organization known as the Northern California Counties' Association was recently perfected, the

Spalding-Robbins Disc Plows



AWARDED

GOLD MEDAL

By International Jury of Awards, P. P. I. E., 1915

With Patented Wheel Weights for Rough Country and Extra Hard Soils

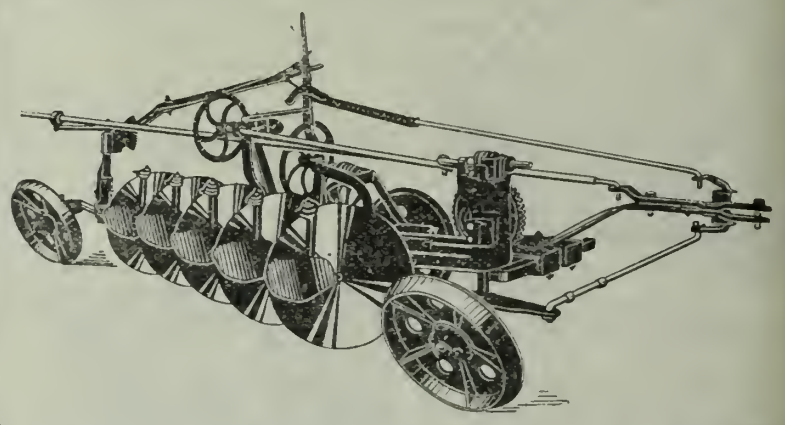
"The Ground Hog"

MADE IN 2, 3, 4, 5, 6 and 8 FURROW SIZES

Convertible to 1-Furrow Extra

SOIL NEVER GETS TOO HARD AND DRY FOR THIS PLOW

Plow your land dry. Do not wait for rain. It may not come till too late.



MR. FARMER, DO YOU KNOW that over 1,000,000 California acres not cropped last season, largely because weather conditions interfered with plowing? Were you among the losers? Don't be caught again. With "The Ground Hog" no matter how hard and dry your soil, you can plow this fall before the rain sets in—Insuring big crops. European demand insures you big prices.

BUY A GROUND HOG NOW. It will pay for itself this Season and give you a handsome profit besides.

We manufacture both Horse and Tractor plows. OUR PLOWS FOR SMALL TRACTORS work where other plows have been strained or pull to pieces. Write for prices and full particulars.

SPALDING-ROBBINS DISC PLOW CO.

461 Market Street, San Francisco

KNAPP ENGINE DISC PLOW

With this plow you can work within one foot of the trees in throwing the soil from the trees. Built very low, so that no part can come in contact with the limbs of the trees. Will penetrate hard soil and will not jump or swing around. Will turn under and completely cover up any cover crop or foul growth NO MATTER HOW HIGH OR HOW THICK.

WILL NOT CLOG UP IN PLOWING BURR CLOVER OR VETCH, as it has a wide clearance.

NO LEVERS to come in contact with limbs, as the land and furrow wheels are provided with worm-gear lifts, which does away with the levers and makes the plow easy to raise or lower.

TURNS EITHER TO RIGHT OR LEFT, and is steered by the engine as well as by hand.

The seat is in the center of the plow to keep the driver away from the trees, and all operating rods are within easy reach from the seat.

MADE IN ALL SIZES to suit every size and make of tractor.

WRITE FOR ILLUSTRATED FOLDER.

object of which is to promote the development of Modoc, Lassen, Siskiyou, Trinity, and Shasta counties. Congressman John E. Raker was elected president and Roscoe J. Anderson, permanent secretary.

OLIVES AND NUTS.

The harvesting of the walnut crop has commenced in the Saticoy district; a two-thirds of normal crop is expected.

It is reported that locusts have devastated Syrian olive groves to the extent of destroying two-thirds of the crop; olive oil prices are advanced accordingly.

The Durham Almond Growers' Association has sold the entire 250-ton output of its members at the prices fixed by the organization; the total receipts are between $60,00 and $70,000.

Farm Adviser, H. A. Weinland, of San Diego county, reports that he has spent some time with the prominent ranchers of Fallbrook formulating plans with them for an Olive Day which should be held in November in that locality and which should be an annual event. Exhibits of all kinds will be gotten together for this and it will be the stimulus, it is hoped, for a rivalry in growing the best crops in the locality.

About 70 olive growers attended a meeting at Lindsay Sept. 11, to hear about the California Ripe Olive Association which is forming to develop markets for the crop. Many of them signed up and others took membership applications to be sent in later. Over 125 growers had signed on Sept. 11, including much of the largest acreage in the State, besides a large number of small growers.

GRAIN AND FIELD CROPS.

The harvesting of beans has begun in the Saticoy district.

The lima bean crop is reported good in Santa Barbara county.

The first experimental planting of rice in Shasta county is proving successful.

Claiborne White of Stockton was the winner in the potato growing contest of the Stockton High School Agricultural Club.

The first harvesting of beans on a large scale in Sonoma county will shortly take place on the 180-acre Guilou ranch near Windsor.

The trial fields of rice planted south of Marysville last spring are reported to be looking well and promise a pretty fair yield.

At the end of the grain harvest in Kings county, it is estimated that the yield was close to 4,000,000 sacks, bringing the growers about $10,000,000.

San Joaquin Valley sugar beet growers are harvesting a big crop this season; next year it is expected that there will be an enormous increase in the acreage.

Roy Huffman of the Chico High School holds the State Record for the largest number of potatoes grown on a quarter of an acre, having produced 5490 pounds.

It is expected that the rice planted experimentally on a field near Claus, Stanislaus county, by the Modesto Irrigation District, will yield 25 to 30 sacks to the acre.

The Wheatland hop harvest has been completed; this season has been one of the most orderly ever known, and good wages have been made by most of those employed.

The Board of Supervisors of Butte county have organized a drainage district, to be known as Butte County Drainage District No. 100, which will include 20,000 acres of rice lands near Richvale.

About 100 Biggs and Richvale rice growers recently joined the Pacific Rice Growers' Association, a co-operative association for the marketing of rice products, incorporated at Oroville several weeks ago.

With approximately 34,350 acres sown to rice in California in 1915, the acreage has been doubled in a year, and a remarkable increase has taken place since the first planting in 1912 of 1400 acres near Biggs.

On the ranch of McMurray Bros. near Merced a giant watermelon was raised, which weighed 91½ pounds, with the major circumference measuring 4 feet, 10 inches, and the minor circumference 4 feet 3 inches.

A high school agricultural club has been organized at the Oakdale High School, and the school trustees are endeavoring to secure the use of different vacant lots about the city to be used by the members in their experimental work.

This year the acreage of Indian corn has greatly increased in Colusa, Sutter and other up-river counties, as well as in some of the sections down the river; growers claim that the California product can successfully compete with the eastern.

The University of California has leased a portion of land near Stockton on which will be conducted a fertilization experiment intended to show wherein the grain yield of the Valley may be increased; and, if predictions come true, $20,000,000 will be added annually to the yield.

GRAPES AND SMALL FRUIT.

On Sept. 12 a fire destroyed the Forestville winery near Santa Rosa, one of the largest independent wineries in Sonoma county.

Muscat picking in the Dinuba district of Tulare county is completed; growers have found the yield larger than they anticipated, and the quality above the average.

The California Associated Raisin Company announces the purchase of the Frank Lyman & Company packing house of Fresno, thus taking over about 3,000 tons of raisins.

The West wineries at Lodi have commenced receiving grapes from growers who wish to have them crushed and retain the wine in their own names until the market opens.

On account of the low prices being paid for grape culls and wine grapes, it is reported that many Tokay growers of Lodi are feeding their product to livestock with good results.

The opening of school at Fresno has called back all available boys of all ages and sizes who have been in the country picking grapes, in an effort to supply the shortage in field labor.

The "Raisin Special" which carried the second trainload of raisins from California to the East made a record run for a freight train, arriving in Chicago 131 hours from the time it left Fresno.

The offer of the California Associated Raisin Company to purchase certain varieties of wine grapes, which was to expire on Sept. 12, has been extended; so far more than 5,000 tons of these grapes have been purchased.

The Associated Raisin Company have finished seeding raisins at their plant at Hanford. It is stated that the market outlook is very bright at this time in spite of the fact that this season's crop is one of the largest ever grown in the State.

At the government experimental vineyard near Fresno, between 65 and 75 tons of grapes are being prepared for shipment to the Horticultural Palace at the Panama-Pacific Exposition.

California's Opportunity for Dairymen.

[Written for Pacific Rural Press.]

BANK LOANS TO BUY COWS.

One colony in the Upper Sacramento Valley is said to be going ahead of another largely because in the first mentioned colony there is a great tendency to keep livestock while in the other one there is scarcely anything but fruit. Some of the fruit growers realize their need of stock, but cannot get it.

The organization of a National Bank at Corning, largely controlled by farmers, received new impetus recently when Congressman Raker made a widespread investigation into the need for it and promised his support. F. L. Cook, a Jersey breeder of that section, is especially interested and hopes that the bank will lend some competent man money to go to dairy sections and buy cows to sell at cost to local farmers on their notes executed at 10 per cent.

Bank Loans on Cows Upbuild Community.—It is hoped that they can arrange to lend money to the full value of the cows and pay with half of the cream checks. This plan is modeled after the one successfully put into operation at Orland when the First National Bank there organized in March, 1913. This bank started and continued with the idea that the prosperity of the community depended on livestock; that dairying was the right kind of livestock because it begins to produce returns at once; that the farmer who shows himself willing and capable of handling cows ought to have them; that the bank is the best medium through which to buy cows to the advantage of the community, the individual, and the bank itself. Bank loans on cows are better than on other livestock because repayment begins at once; and the money is immediately loaned to other cow buyers, forming a revolving fund continually used to upbuild the community. There are now above 3000 cows on this project bringing into the town approximately $725 per day and increasing the fertility of the land.

Cows Safe Security.—John J. Flaherty, Cashier of the First National Bank of Orland, says that his bank loans money to the full value of the cows at 8 per cent interest, allowing the man to buy his own cows and repay with half of the cream checks. In order to get such a loan, a man must have contracted to buy a farm in that community and have paid part down. If he is buying raw land, he will not be able to take care of cows for a year or a year and a half, and by that time the bank will be acquainted with his energy and business management. If the place is improved and ready for cows and the buyer can furnish satisfactory references from his recent location, he may have the money at once. Money has been loaned to one man to the full amount to buy 20 cows at once and the bank has never lost a dollar on this class of loans.

Cows First; Fruit Afterwards.—"Getting into the fruit business is awful uphill business," says Mr. Flaherty. "I believe that this country will be planted out to trees eventually, but we must get into dairying and hogs first till we get on our feet. Alfalfa pays $12 to $18 a ton marketed in the form of cream and skim milk."

The Los Molinos Land Co. has put nearly 2000 cows on their colony under similar conditions, though they prefer their settlers to own their own cows. Some of the newcomers, unacquainted with the work of dairying or alfalfa raising under irrigation, have not made satisfactory success and their cows are for sale, though the company retains its equity in them. Anyone else wanting to buy these cows may arrange with their possessors as to price, which averages about $90, and the company buys them for him if he has a place on which 10 per cent has been paid down and has alfalfa and shelter for cows. The cost is paid back with half of each monthly cream check, with a minimum payment of $3 per month per cow plus about 50 cents interest at first payment. They do not advise starting with more than five cows unless the settler has had previous successful dairy experience.

Sheep While Starting an Orchard.

[Written for Pacific Rural Press.]

Making sheep pay the living expenses on 40 acres while orchards are coming into bearing is the plan successfully worked out by A. Heyward of Orland as the result of articles written in the Pacific Rural Press. He has 60 acres of alfalfa pasture in two pieces for alternate use; 9 acres of alfalfa hay; 15 acres of almonds interplanted with corn, beans, and 1250 Thompson seedless grapes. The remaining 10 acres are yet to be planted to olives.

It was three years ago that Mr. Heyward came to the Orland project after teaching school many years in Illinois and Dakota. He combined with two neighbors to buy 100 wild, mountain-bred Merino ewes, though the sheep business was new to them. The ewes were supposed to be already bred to Cotswold bucks; but as it turned out, only about 70 lambs were born. These came about April, the wrong time of year for the small sheepman's best profit. Shropshire bucks will be used this season and continually hereafter to grade the flock up to that breed, since mutton lambs are his object. Mr. Heyward will probably breed so the lambs will come in December or January ready for the Easter suckling-lamb market, which pays the highest prices on account of the least competition from the big range men.

Buildings on the place sheltered the sheep last winter and can be used conveniently as lambing sheds by making little pens with small movable panels, and the lambs are thus not exposed to destructive weather. The lambs that came last April will be kept until May or June next year when the wethers will be sold. He believes there may be more money in it that way, but it is a question whether the extra weight and lower price he will receive per pound will justify feeding so long.

The lambs will possibly be sheared this fall, but more likely not until spring on account of the higher price per pound for year's staple.

Making sheep pay the living expenses on 40 acres while orchards are coming into bearing is the plan successfully worked out by A. Hey- This may work on Mr. Heyward's place on account of the somewhat gravelly soil and good drainage.

Besides alfalfa pasture, the sheep get all the alfalfa hay they can eat every day, fed in mangers at the barn. No grain or grain stubble has been available, but would probably have brought more rapid gain and made better mutton.

The ewes were sheared about lambing time last April; seven pounds of wool per ewe which sold at 20 cents, making the profit on the 100 ewes for one year $140 plus the 70 lambs.

Meanwhile the almonds and grapes are growing and soon the olives will be, too, and the family is living very comfortably.

More and Better Hogs for California.

[Written for Pacific Rural Press.]

SORGHUM—DRY FARM HOG FEED.

While the corn belt of the East has been leading the world on swine production because Indian corn is such good hog feed, they do not have it so much on California. Though Indian corn production is in its infancy in California and cannot be produced well on unirrigated land, there are several varieties of sorghum corns which make as good hog feed as Indian corn and yield well enough to be very profitable under dry farming conditions.

One man who is making a success on 40 acres which he can't irrigate and 20 acres which he can is A. H. Lewis of Willows. He claims to have threshed 12 sacks of white Egyptian corn per acre on the unirrigated part last year. This grain was planted April 25, after having simply disked the adobe land without plowing. It was drilled at the rate of nearly three pounds of seed per acre, in rows 40 inches apart and a good stand was secured 18 to 24 inches apart. Each kernel stools out in four to six stalks.

This year he figures that the whole acreage will average 15 sacks, though only two pounds of seed were used per acre. Since Egyptian corn shells out too freely, when nearly ripe, it is cut rather green and thrown into piles in the field to cure.

Last year's crop was sold on the market at $1.50 to $2.00 per sack, the lower price being due to the fact that some of it was not so plump as the other. It would have sold for considerably more in the form of intelligently fed pork.

A. J. Morey of Orland is a good example of an intelligent dairy manager. Though he has only high grade Jerseys now, he plans to go into purebreds. He weighs each milking and tests a mixed sample of the night's and morning's milk of each cow the first of each month; he knows what each cow is worth.

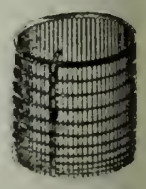
California Hog Book

By W. S. Guilford.

This new book, just issued, is what California swine breeders have wanted for years. Mr. Guilford, through his years of training under Prof. Carlysle, and his work since in Wisconsin and Idaho, and the last five years in California, is peculiarly well fitted to write this volume. Much of the matter contained in the book is from the practical side, gained in the East and on the author's hog ranch in Glenn county. Besides giving his own experience the author quotes from more than a score of California breeders, in giving their methods in feeding and handling hogs under local conditions.

TABLE OF CONTENTS

California Hog History, California Hog Growing Conditions, Description of the Hog, Judging and Selecting Hogs, Care of the Boar, Care of the Sow, Growing Pigs, California Hog Feeds, Feeding Suggestions, Hog Growing Systems, Hog Buildings, Appliances, Handling Hogs in Health and Disease, Profit in Hog Raising, Markets and Marketing, Value of Purebred Stock, Breeds, The Hog Breeder, Hog Breeding, Exhibiting Hogs, Home-made Pork Products.



ILLUSTRATIONS.

The book contains 31 full-page half-tone engravings, and are the best that money could buy; besides these, there are 22 line drawings, giving plans for houses, appliances, etc.

The book is bound in cloth, contains 256 pages of text, and is well indexed. The feeding tables and values of foods are very full and of great value. We want to send a copy to you—every one of you swine breeders in California. Send us $2 and we will pay the postage and send you a copy by return mail.

Cow Testing in the Napa District.

To the Editor: The Napa-Sonoma Cow-Testing Association, with more than 900 cows signed up, will commence work September 15. The herds in this association are located in three counties but they are all within twenty-five miles of Napa. One hundred and seventy are located in Solano county near Vallejo, three hundred in the Sonoma Valley and adjoining hills and the remainder in the Napa Valley. Of the total number three hundred and seventy are in herds selling whole milk.

A new line of work is being undertaken in this association. During the first month, September 15th to October 15th, the tester will test such herds as wish it for tuberculosis by the intradermal method, in place of the regular butterfat and milk test. The whole purpose of this part of the work is to acquaint the dairymen with the tuberculosis test, that they may take measures to eliminate the disease. The owners of several hundred cows have already indicated their purpose of taking advantage of this opportunity. The only additional cost will be the wholesale price of the tuberculin.

The feeding conditions in this territory are exceedingly varied, running from home grown alfalfa hay and corn silage in the valley to nothing but range on the hills with almost continuous feeding of concentrates. Some dairymen make grain hay the basis of their winter feeding, others alfalfa.

The butterfat records will doubtless show what is now the most profitable feeding practice for these different conditions.

Mr. Hugh Asselstine of Humboldt county, a graduate of the Farm School at Davis, and formerly engaged in official testing, has been chosen from a large number of applicants, as tester for the coming year. **Paul I. Dougherty,**

Napa, Sept. 7. Asst. Farm Adviser

HIGH-CLASS BERKSHIRE BOAR COMES TO CALIFORNIA.

W. S. Guilford, author of our new "California Hog Book," informs us that Butte City Ranch at Butte City in Glenn Co. bought one of the best Berkshire boars sold in the sale of W. S. Corsa, the noted breeder at Whitehall, Ill., recently.

The boar purchased is Schoolmaster Premier 209275—an animal in which is combined the best blood of the Masterpiece and Lord Premier's Rival family on a Royal Empress foundation. He is sired by Schoolmaster 2d, one of the best sons of Masterpiece. There is already considerable of this blood in the Butte City Ranch herd. The sows closely related to this boar will be bred to a son of Improver B that is in service in the herd, and other herd boars, and Schoolmaster Premier is to be mated with other sows not so closely related.

Schoolmaster Premier is described as being very smooth, with an extra good head, good length and depth of body, good hams and good feet and legs. He was selected for Butte City Ranch by Mr. Geo. Martin of the Breeders' Gazette of Chicago, and was approved by Mr. Frank S. Springer, secretary of the American Berkshire Association.

BLACK LEG LOSSES SURELY PREVENTED by Cutter's Blackleg Pills. Low-priced, fresh, reliable; preferred by Western stockmen because they protect where other vaccines fail. Write for booklet and testimonials. 10-dose pkge. Blackleg Pills $1.00 50-dose pkge. Blackleg Pills 4.00 Use any injector, but Cutter's best. The superiority of Cutter products is due to over 15 years of specializing in vaccines and serums only. Insist on Cutter's. If unobtainable, order direct. THE CUTTER LABORATORY, Berkeley, California.

HORSE AND COLT SHOW AT RIO VISTA.

(Continued from page 265.)

next year. This prize was awarded to E. W. Westgate on a purebred. While there was a goodly showing of foals, about 15 in all, they were overbalanced somewhat, as will be noted by the total enumerations of the various classes represented, viz: 12 stallions, 65 mares, 10 geldings, 3 jacks, and 11 mules. Next year more colts will be shown because of the preparations that will be made farther in advance than was possible this year.

We have said this was essentially a "horse day," and so it was; but it could not be expected that all of the 1,500 people present would care to devote all of their time to the judging ring. For the benefit of those not interested, a fine program of aquatic sports was provided on the Sacramento River directly adjacent to the town. The evening was also given over to the river entertainment.

"Who," one inquired, "made this gala day possible?" Of course, the farmers brought in their horses, but who got the money?" Now, this is the gratifying part of the whole show, it seems to us, for the farmers got the money themselves, and what was more important, spent it themselves on things which were going to help farmers. Altogether, through public subscription and $500 from the Board of Supervisors, they raised over $1,200. This looks rather insignificant alongside of the thousands of dollars' worth of horseflesh which is annually produced in the surrounding country, and so it is, but it is certain that never was an equal sum spent for a better cause or purpose than for the still further improvement of Montezuma Hill drafters.

While every member of the County Farm Bureau, under whose auspices the show was held, deserves credit for his loyalty to the show, communities contemplating the holding of such shows must not forget that it takes leadership to accomplish big things, and in this Mr. E. W. Westgate and Messrs McCormick Bros., members of the Rio Vista unit furnished excellent material toward the practical carrying out of each detail.

Following are the awards as given by Prof. Rubel of Alameda County:

Purebred Percherons—Aged Stallions: 1st, Lucon, Perry Anderson; 2nd, Photo, P. Drouin & Co.

Two Year Old Stallions: 1st, Newbob, Rio Vista Horse Co

One Year Old Stallion: 1st, Rolph, Ruble Estate.

Aged Mares: 1st, Louise, Ruble Estate; 2nd, Bess, Perry Anderson.

Best Mare and Foal: Bess, Perry Anderson.

Belgian—Aged Stallions: Sultan de Villian, Drouin Co.

Shires—Aged Stallions: 1st, Boro Wedger, N. C. Anderson; 2nd, Severn Pilot, J. McCormick.

Three Years Old: 1st, Severn Donal, J. McCormick.

Two Years Old: 1st. Osborne Chief, E. W. Westgate.

Yearling Stallion: 1st, Osborne Prince, E. W. Westgate; 2nd, Severn Clyde, J. McCormick.

Best Stallion Foal: Osborn King, E. W. Westgate.

. Aged Mare: 1st, Boro Mayflower, E. W. Westgate; 2nd, Rio Vista Belle, J. McCormick.

Mules—Best Jack: Napoleon, P Anderson.

Best Three Year Old Mule: 1st, P. Anderson; 2nd, Dozier & Pressley.

Best Two Year Old Mule: 1st, Bronn Bros.; 2nd, Dozier & Press-

Best One Year Old Mule: 1st, P. Anderson; 2nd, Dozier & Pressley.

Best Mule Team: Lentholz Bros.

Grade Horses—Best Aged Mare: 1st, Blackie, N. C. Anderson; 2nd, Belle, P. Anderson.

Three Year Old Mare: 1st, Baby Doll, Tom McCormick; 2nd. Montezuma Queen, John McCormick.

Two Year Old Mare: 1st, Montezuma May, John McCormick; 2nd, Belle, Dan McCormick.

Yearling Mares: 1st, Beauty, Tom McCormick; 2nd, Dan McCormick.

Best Mare and Foal: 1st, Queen and foal, P. Anderson; 2nd, Bliss and foal, N. Anderson.

Best Foal either Sex: Neil Anderson.

. Best Three Year Old Gelding: 1st, Tom McCormick; 2nd, Alec Stewart.

Best Mare and Two of Her Get: Lambie Bros.

Three Best Animals Any Age or Sex: John McCormick.

Best Mare and Two of Her Get: E. W. Westgate.

Grand Champion Shire: Boro Wedger, N. Anderson.

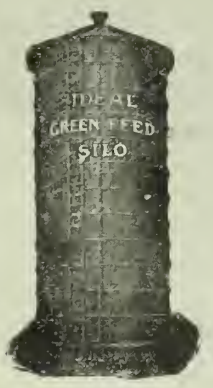
Grand Champion Belgian: Sultan de Villian, Drouin Co.

Grand Champion Percheron: Lucon, P. Anderson.

. Grand Champion Foal: Shire colt, E. W. Westgate.

Best Draft Gelding: 1st, Rock, Tom McCormick: 2nd. John, Lambie Bros.

Grand Champion Mare: E. W. Westgate.



There is a Difference

BETWEEN THE

Ideal Green Feed Silo

AND

Other Silos

IT DOESN'T TAKE AN EXPERT to tell the difference between an **Ideal Green Feed Silo** and some others.

ON THE CONTRARY, it is an easy matter if the prospective purchaser will remember that a silo to be of any value whatever must be "air and water-tight" and capable of producing good ensilage from every pound of good feed put into it.

IF HE WILL THEN TAKE FIVE MINUTES to compare:
The details of construction,
The quality of material and workmanship,
The contact of the doors with the door frame,
The kind and size of hoops and lugs used,
The quality of the paint for the inside,
The type of roof and whether or not it is fitted with a galvanized ventilator,
What provision, if any, is made for keeping the silo round and preventing its collapsing,
In fact, everything that enters into the design and construction of a silo that will make it a thoroughly practical piece of equipment,
He will then see the difference.

THE MAN WHO TAKES even the first step indicated in seeing for himself the difference between the **Ideal Green Feed Silo** and others does not put his money into any other, one time in a thousand.

THE COMPARATIVELY FEW BUYERS of other silos are those who merely read printed claims, or listen to the argument of some self-styled "advisor" who is probably working for a commission only and whose sole purpose is primarily to sell a bill of lumber.

THE WISE BUYER OF A SILO today does see the difference when buying his first silo while the unwise or careless one usually finds that his presumed saving in first cost actually means a loss to him in spoiled feed and **represents the difference between success and failure in the use of a silo.**

OUR PURPOSE in selling a silo is to develop the dairy and stock raising industry on a more substantial basis than heretofore, and in order to do this we must supply a silo that is a thoroughly practical piece of equipment.

THAT IS THE REASON WHY four buyers out of five are buying **Ideal Green Feed Silos** and why the use of the **Ideal Green Feed Silo** will, before long, be as nearly universal on the Pacific Coast ranch as it is in the Eastern States and Canada.

DAIRYING.

Van Tiger of Live Oak is building a new 30x36 calf and bull barn.

W. H. Olson, a dairyman of Ohio, recently purchased the J. W. Considine Woodland stock farm.

Frederickson & Donaldson of Biggs are moving their herd of dairy cows to their new ranch near Woodland.

Samuel Pedrotti of Napa has leased for a period of five years the Frank Whitlach dairy ranch near Penngrove.

During the month of August, eight cows in the Gridley Cow Testing Association made fifty or more pounds butterfat.

The California Central Creameries Company is planning the construction of a new plant at Riverdale, Fresno county.

T. E. Posee of Biggs is running a small nursery with his dairy. He has two registered Holsteins and wishes he had more.

One dairyman near Gridley said hay was too high-priced to feed to cows. He is not a member of the Cow Testing Association.

H. E. Wickman has just erected a 70-ton silo on his ranch near Gridley. He will rebuild the barn that burned down a few weeks ago.

S. A. Mealey is building on his 100-acre ranch south of Gridley a cow barn 56x64 with a 16-foot shed. There will be stanchions for 44 cows.

A new barn is being erected on A. Harvey's ranch near East Biggs. It has stanchions for 18 cows on one side and horses on the other, with the haymow in the center.

The August report of the Stanislaus Cow Testing Association shows that 1395 cows were tested during the past month, 86 of them reaching 1.50 pounds butterfat daily.

King of the Pontiacs 14th, owned by the Stanford Ranch at Vina, weighs 2600 pounds and is four years old. His oldest daughters will soon begin to freshen, and are a very promising lot.

Farmers in the southern part of San Joaquin county are organizing an association for the purpose of pooling their cream and offering the entire output to the creamery that will pay them the best price.

The Butte Valley Land Company, with holdings amounting to about 25,000 acres in Siskiyou county, are planning a large creamery at Macdoel. They also plan to subdivide their land into 160-acre tracts for dairying purposes.

Seabell's Governor now stands at the head of T. J. Baltimore's Guernsey herd at Gridley. He has a five-year-old daughter, two granddaughters, and one great-granddaughter of Governor of The Cbene, the greatest bull of the Guernsey breed.

A. B. Humphreys, of Mayhews, will have the new home for his Guernseys completed by the 1st of January. Already three barns, concrete silo, and house have been finished. The milking barn and milk house have their foundations laid.

McBride & Son of Los Molinos have erected a 50-ton silo on their ranch and are now filling it. They are getting started in Holsteins. At present they have 11 registered animals, and are planning to attend the sale at Sacramento to buy a few more.

There is talk of a West Side Cow Testing Association to include the districts around Newman, Patterson, and Crows Landing. C. A. Starkweather and others will address a meeting of the Farm Bureau the last of this month at Patterson. They will organize if 800 cows are signed up.

Kisser Bros. of Biggs are erecting an 18x38 silo this fall. They are members of the Gridley Cow Testing Association, and say it is the best investment they have ever made. Their herd of about 70 cows will average for the year over 300 pounds butterfat per cow. One cow made 415 pounds butterfat in 10 months.

E. Wyndham of Redding has four registered Ayrshire females and three registered bulls. His herd bull's dam produced 10,000 pounds milk in one year and his grand dam, 12,000 pounds. Mr. Wyndham finds that the half and three-quarter blood Ayrshire cows are much better rustlers than the common bred cows.

Geo. W. Wendt, who has charge of the dairy department of the Stanford Ranch at Vina, states that they now have 301 registered Holsteins on the ranch. All the increase will be kept to enlarge the herd. The bulls are being used on the range cows, and it has been found that this makes a very satisfactory range animal.

Stanislaus county dairymen have been receiving circulars from the Dairy Bureau in regard to cooling, sterilizing, and production of clean milk. These circulars were sent in June to West Side dairymen; and, according to Inspector C. A. Starkweather, within a month the creameries reported 25 to 50 per cent improvement in the cream. A very sanitary cooler protected against flies costs about $11.

E. F. Young of Modesto says he is always going to have corn to put in his silo. He tried oats last year; the silage kept all right, but the cows did not keep up on their milk flow as well as when corn silage was fed. He cut the oats when they were in the dough. He says also that when watering the silage, always run the stream into the blower and not direct into the silo. The moisture is distributed better the first way.

HORSES AND SWINE.

England has purchased thus far 1880 mules in California.

C. E. Barrows of Los Molinos exhibited his show herd at the Redding Fair.

B. M. Mitchell of Oakdale recently shipped a car of fat hogs to the San Francisco markets.

T. R. Nickalls of Los Molinos has found that raising purebred Berkshires for the block pays.

O. G. Nelson has rented the Brothers' place near Chowchilla and will engage in purebred Durocs.

The Pure Gold Stock Farm, of Elk Grove, plans to take their show herd of Berkshires to the Exposition.

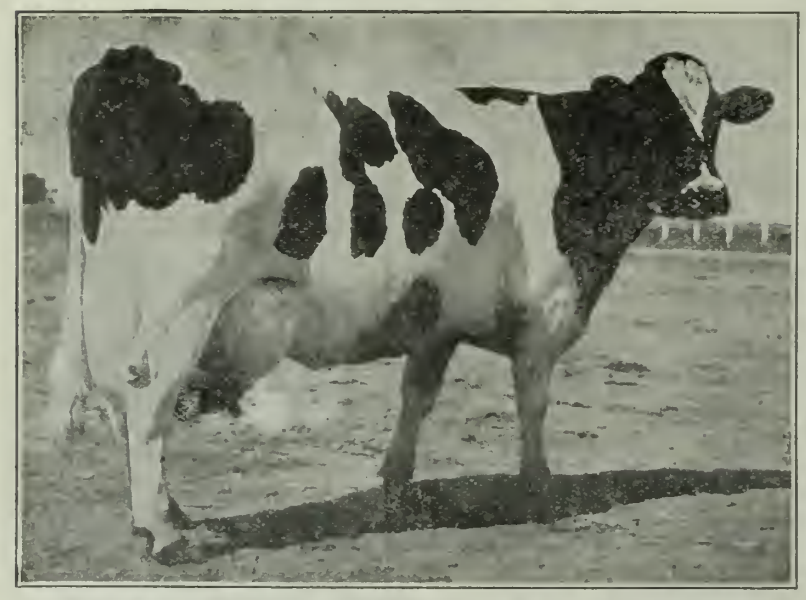
N. M. Lester of Gridley sold to Mack & Ingle of Imperial county four registered Poland-China sows for $153.

To reduce the cost of raising purebreds, H. Ward and B. S. Brothers of Chowchilla use the same boar in partnership.

G. L. Stearns, formerly of the Stanford Vina Ranch, now has charge of the Meadowbrook Stock Farm swine near Merced.

Walter Logan of Redding is building up a herd of registered Poland-Chinas. He expects to enter quite extensively in the breeding business.

A. L. Stevens who lives near Los Molinos has a very fine start in Berkshires. He expects to increase the number of his breeding sows to 20.



John P. Daggs of Modesto recently shipped two Duroc-Jersey hogs to C. G. Clay, Merced; two to F. E. Stevens, Lincoln; and one to H. J. Hoyt, Hanford.

Merced county has a hog cholera quarantine law and a livestock inspector, Dr. L. C. Kennon, who enforces it in spite of threats that he will be shot.

Peter Seh of Palo Cedro has four daughters of Robins Ruby, grand champion Poland-China sow at the 1914 State Fair. Robins Ruby is owned by F. W. White of Elk Grove.

Henry Webb of Madera has about 80 summer pigs almost purebred Durocs. They are lively beauties, but he wishes he could sell them for breeders' prices rather than for pork.

A four-year-old mule belonging to Dan Sullivan near Weed, Siskiyou

ANSELMO CRANE—One of the good cows that Morris & Sons are to sell at Sacramento in the October Holstein sale.. She has a record of 608 lbs. butter in a year at 4 years. She is sired by Anselmo, the sire of a 29-lb. 4-year-old, and several others above 24 lbs.

county, recently gave birth to a horse colt; it is stated that the owner has refused $1000 for the mare and colt.

Chas. Gatewood of Fresno reports the sale of the Poland-China boar, Fresno King 75142, and two registered bred sows, all eastern bred stock of the large type, to T. G. Boam of Kerman.

A report from Kansas City, Mo., states that during the last two months agents for the British government have purchased over 15,000 pack mules there, some of the animals being more than 15 years old.

H. R. McCoy of Los Molinos has 80 head of hogs and is growing them on six acres of alfalfa and the skim milk from 11 cows. He expects to go into the purebred Berkshire business on an extensive scale.

E. J. Robinson of Oroville killed for his own use two registered Tamworth nine-months-old pigs that weighed 350 pounds each. One ham weighed 25 pounds; and from the two hogs they secured 30 gallons of lard.

J. W. Mills, Farm Adviser of Solano county, reports that a truly live Pig Club was formed at Vacaville on Sept. 1, and the Dixon Pig Club members were enthused to the extent of showing interest in the trip East.

E. W. Williams of Fairmead recently started in registered hogs on the advice of Farm Adviser T. C. Mayhews. He bought a boar and sow pig last Christmas, and now has seven little ones. He will replace his scrubs with purebreds as soon as possible.

The Madera County Swine Breeders' Association is in the process of formation, to secure co-operation in making hog cholera quarantine laws and enforcing them. Local inspectors will report all outbreaks and all members will placard their places.

A campaign against hog cholera will be carried on in Stanislaus county from Sept. 17 to 30 by Dr. Cady of the University of California, assisted by County Farm Adviser Conner. Meetings and demonstration lectures will be held at the various branches of the Farm Bureau.

Roy J. Turner of Trowbridge, Sutter county, is starting in the Poland-China business right. His herd boar and three sows were secured from the best herd in Texas. This promising young boar is a direct descendant of the famous Master Meddler. The get of this animal is showing up true to the breeding.

Hawley Bros. of Madera intend to go into purebred hogs. Though they have a purebred Poland-China boar, they will attempt to get their local branch of the swine breeders' association to adopt one breed for all members, and the Hawleys will go into that breed for the sake of community effort and advertising.

The Dunham-McLaughlin Company have just received from the East a carload of registered Percherons to fill their classes at the Panama-Pacific Exposition Horse Show. Among these are Turquoise, a yearling filly that won the grand championship and first prize in open class at the Ohio Fair and a two-year-old filly, Futurity, winner in 1914.

H. B. Thornberry of Stockton recently sold to Mrs. Anita Baldwin one registered jack, 23 registered jennets, with 3 young jacks. Mrs. Baldwin is showing the jack and three of the jennets at the Panama-Pacific Exposition. The jack as a two-year-old won over jacks of all ages at Lexington, Ky., defeating the one that won grand champion the same year at the State Fair.

H. Ward of Chowchilla has a fine bunch of purebred Duroc shoats and a lot more just coming. He paid $50 in May, 1914, for an 8-months sow. From her pigs he has sold $125 worth, and has 8 left of her second litter which are six months old, and another litter farrowed Sept. 16. Of her first litter he reserved two sows which have 18 pigs. "Couldn't do that with scrubs," says he.

CATTLE AND SHEEP.

It is estimated that 109,692,264 sheep were shorn last season in Australia and New Zealand.

Thos. Anderson of Anderson is building up a small herd of purebred Shorthorns. Later he expects to secure a number of registered Shropshires.

M. F. Pimentel of Fowler raised 22 lambs from 25 thin, old ewes bought less than a year ago. He sold 11 lambs last May for $59.65, besides $40.10 worth of wool from the ewes.

From a flock of 35 ewes, Walter Allen of Lincoln sold the fleece for $56; 28 lambs for $156.80, and kept 7 lambs for breeding stock. The lambs were dropped in January and sold in June.

Miller & Lux have rented several hundred acres of beet land near Chualar, Monterey county, where they will fatten several thousand head of cattle this coming fall on beet tops and pulp.

G. W. Williams of Fairmead was disappointed last week by the absence of the sheep article we had promised. He intends to get a big band on pasture on adjacent stubble fields and neglected lands.

S. W. Cheyney uses a bunch of 60 ewes as scavengers on his 2000-acre ranch south of Chico. They clean up the fence rows, ditch banks, deriving most of their living from what would naturally go to waste on most ranches.

J. R. Pretzer of Fairmead says you can't get a lamb in that country to weigh 60 pounds at six months, but G. W. Baxter who lives not far away says he sold 15 last April aged two and three months, which weighed 840 pounds. Mr. Pretzer's lambs must have been the wrong breed.

A queer disease recently caused the death of five cattle on the ranch of Robert McGrath near Marysville. The affected animals were seized with an uncontrollable itching. As

Veterinary Queries and Replies.

[Answered by Dr. H. B. Wintringham, Petaluma, Cal.]

DEHORNING AND DRYING COWS.

To the Editor: When is the best time to have my cows dehorned, and what shall I put on them? I would also like to know what is the best method of drying up a heavy milking cow.—E. B., Hughson.

[It is safe to dehorn at any time of the year, providing one is careful in this operation. A common meat saw is as good an instrument as any to use; and after dehorning, apply stockholm tar to the stumps of the horns. One or two applications are all that are necessary at the worst time of the year.

In drying up a cow, it is essential to leave a small quantity of milk in a gland, but not enough to cause caking of the udder. Gradually take less and less out each milking. The application of spirits of camphor rubbed in well on the udder helps to decrease the activity of the gland.]

INFLAMMATION OF THE UTERUS.

To the Editor: I have a cow that calved on June 29th on time. At the time of calving she seemed in good health, was in good flesh, and came in with a good milk flow. But she began failing in milk and flesh soon after calving, and in the last month has been rather stiff in her legs; in the last ten days she has contracted a cough. I have not done anything for her except to douche her out three times just after calving. I have not bred her though I think she would have taken about a week ago. Am only feeding dry alfalfa hay. Any treatment you can suggest will be very much appreciated. The douche I used was 2 tablespoonfuls of lisol to a gallon of water.—S. L. W., Hughson.

[This is chronic inflammation of the uterus, and it is very doubtful if any line of treatment will give benefit. You might try iron sulphate in two drachm doses twice a day and douche with mild antiseptics in a warm solution once a day.]

ROUP.

To the Editor: My chickens are troubled with some disease on their heads. Their eyes swell and run water, and in a week or two they shut. My little chickens seem to have it worse than the big ones. Is it contagious? Several of my month-old chicks get sick and die in a few days. They open up their mouths wide for breath, and I noticed the other day that they have big, white sores on their tongues. Please let me know what the trouble is and what to do for them.

[This is roup. Wash out the false membranes with a strong solution of soda bicarbonate, then paint the raw surfaces with Lugall's solution of iodine. Separate immediately all the sick from the healthy chickens. Look to your houses and see that there are no drafts, but good ventilation.]

LUMPY TEATS.

To the Editor: My cow has had two small lumps in one of her front teats for some time. I have treated her for mammitis. She seems in good health, but the lumps remain the same, neither growing nor diminishing. Only once I got a slight discoloration from this teat in the milk and I have since milked that teat into a separate pail. There has been no apparent difference in this milk from the rest. Is it fit for the six months old calf's use? I have not quite dared use it myself. We are feeding the cow the University Farm's ration of beet pulp, cocoanut meal and rolled barley, with alfalfa hay.—H. F. C., Ben Lomond.

[Have a veterinarian operate, removing the tumors inside of the teats.]

DEPRAVED APPETITE.

To the Editor: Can you tell me what to do for our cow? She eats hearty, but is a string sucker. Is it all right to use her milk?—P. M. S., Fullerton.

To the Editor: I have a cow that has a very peculiar habit. Whenever she manages to get loose in the stable she licks the stable floor with her tongue. She gets plenty of salt and has a salt stone. What can be the matter?—A. N., Hayward.

[These are cases of pica or depraved appetite. Place in separate containers the following substances and allow the cows free access to them: Iron sulphate, powdered sulphate, black antimony, salt, and saltpeter.]

ABORTION.

To the Editor: I fed my cows grape pomace after they had tested free from abortion, but one aborted a week after eating the pomace. The veterinarian still insisted it was not contagious abortion. The cow is 7 months along with another calf. Did some action of the grape seeds cause her to abort?—H. B., Modesto.

[This is very probably not contagious abortion. Any sudden change of feed substances when taken in large quantities will cause sporadic abortion. In changing feeds, do so gradually and this trouble will be eliminated.]

HARD MILKER.

To the Editor: My heifer is two years old and has been giving milk four months. One teat has been hard to milk, but lately she has been very hard to milk in the one teat and it seems that it is growing up. The milk is very hard to start and it comes out in a spray—indications of closing up. Will you tell me what to do? Would it be wise to open up the teat?—J. H. S., Boulder Creek.

[Get some teat plugs and insert, leaving in between milkings. Be sure you sterilize these plugs by boiling before insertion each time.]

COW HAS BLOODY DISCHARGE.

To the Editor: My heifer had one calf born in December. From that time she came in every 21 days and was bred each time until April 2. Since that time there has been a bloody discharge about once a month. Any information regarding cause and treatment will be appreciated; also let me know if you think she is with calf.—Mrs. A. J. S., Turlock.

[Douche this cow once a day with a warm solution of potassium permanganate, one drachm to the gallon of water.]

GLANDERS, PERHAPS.

To the Editor: I have a mare who seems to have a running at the nose continually, sometimes very thick. At present she is on pasture; in the barn in winter. What can I do to stop it?—J. E. S., Santa Rosa.

[Have this mare tested for glanders immediately. If she reacts, destroy her as the condition is very dangerous and communicable to the human.]

MAY BE TUBERCULOSIS.

To the Editor: I have a New Zealand doe which has a very troublesome cough. Do rabbits have tuberculosis? She is large for her age—five months—and has a very good appetite. I have been feeding her green alfalfa, rolled barley, dry bread, etc.—R. S., Fresno.

[Have this rabbit tested for tuberculosis by the intradermal method. Some competent veterinarian can do this for you.]

Opportunities in Great Herd Sires

At Sacramento Oct. 6th and 7th

We will sell KING SEGIS PONTIAC EMPEROR, one of the greatest bred bulls living today, and several other young bulls fit to head any herd in the world, including:

A son of SEGIS PONTIAC DE KOL BURKE, out of the highest record daughter of DE KOL BURKE (7 thirty-pound daughters), 32.76 lbs. at 4 yrs. 1 mo. Dam and sire's dam average 32.52 in 7 days and 125.36 in 30 days.

A son of ARALIA DE KOL PONTIAC SEGIS from a 31.78 lb. daughter of DE KOL BURKE.

A son of ARALIA DE KOL PONTIAC SEGIS from DE KOL OF VALLEY MEAD 2D, for three consecutive years awarded FIRST PRIZE BY HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA on her butter records in long distance tests, and for three years first-prize heifer in show ring. His dam and sire's dam average 1077 lbs. in one year, both having made world records.

A son of SEGIS PONTIAC DE KOL BURKE, out of MISS BLANEY, 27.60 lbs. in 7 days and 1008 lbs. in one year. Dam and sire's dam average 29.95 in 7 days and 1047 lbs. in a year.

In every respect the best lot of young bulls that have ever gone out from our herd—THE RIGHT BREEDING—THE RIGHT TYPE—backed by VERY LARGE RECORDS in both short and long time tests—the kind that will add prestige to your herd and sell your surplus stock at top prices.

Buy your herd sire here and have the advantage of seeing what you are buying and the assurance of immediate delivery.

Breed From Prolific Hogs.

To the Editor: I see an article in which the writer is telling the opportunities in the hog business, in which he says, "at the conservative rate of three litters from one sow every two years." I have 5 Duroc sows to farrow their third litter since Oct. 10, 1914, between Sept. 10 and 20, 1915. West Hope, the best one, farrowed 13 pigs Oct. 22, 1914, and raised 8. April 5, 1915, she farrowed 13 more and raised 10. She is due to farrow again Sept. 12, which is 41 days less than 12 months from the first to the third litters.—R. J. Ross, Modesto.

[Go to it, Mr. Ross; if you can get thrifty, vigorous pigs and keep your sows in good condition at that rate, we would advise you to register your pigs and build up a strain of such prolificacy and vigor that by advertising them you can beat the State. We believe in using those animals for breeding from which you can raise the largest litters of properly formed pigs without too much damage to themselves or to the pigs.

This is the practice of F. W. White of Elk Grove, who does not aim to let go of sows which raise good litters. His Berkshire, Robins Ruby, has raised eight of each of her past two litters, and her daughter Ruby Lee 6th, has eight beauties now as her first litter. Harry Chamberlin of Live Oak has a sow which has had 12 pigs in each of her past three litters. L. F. Killenbeck, who breeds registered O I C hogs at Orland, has one sow that farrowed 12 pigs in her first litter, then 9, then 15, then 10, then 18, but he kills off all but 10. Chas. Goodman, Berkshire breeder of Williams, notes that sows often alternate between big litters and smaller ones.

It is a question, however, on general principles, whether it is best to breed for a strain of hogs that will average more than ten pigs per litter, since it often happens that there are not enough teats for more and the rest get stunted. Even if they don't, the drain of more pigs on a sows vitality is likely to be too severe to enable her to raise two good litters per year.

It is also a question whether even two litters a year are as profitable as three every two years. E. C. Rand, purebred Berkshire breeder of Santa Rosa, believes there is too much strain on the sow and slower development of the pigs, when bred oftener than three times in two years, though we know breeders throughout the State who raise about two litters a year, though not many have accurately determined its full effect.

Your sow carrying two litters of pigs in a year and suckling three is certainly outdoing most sows, but how are the pigs, how long can she keep it up, and what is your system of feeding?—Editors.]

ALFALFA ON WHITE ALKALI

[Written for Pacific Rural Press.]

A man with an imagination is Mr. Tweed of the Tweed Ranch and Land Company of Willows who settled on a large farm in a country which had been cropped to grain so many years that it produced nothing and had long been unplowed. Much of the same land was deemed worthless on account of alkali, but Mr. Tweed had been in the vineyard business with Theo. Kearny of Fresno county and had seen spotted vineyards in which acres had been killed out by alkali.

It was one morning during the discouraging days of 1896, when raisins could not be sold at living prices, that Mr. Kearney said to him, "Tweed, you can have the use of these four or five hundred acres of vineyard if you pay the taxes and the water bills." "I don't want it," said Mr. Tweed.

Forthwith Mr. Kearny pulled out the vines and put the land into alfalfa. It was difficult getting a stand of alfalfa on the alkali places, but Mr. Tweed vouches for the fact that the second year there was a perfect stand.

With this experience in mind, he moved to the forsaken alkali-spotted, worn-out grain land of his present location and planted alfalfa. Last winter on account of lack of adequate drainage, the alfalfa drowned out; but since there is first-class drainage there, Mr. Tweed is leveling 180 acres for alfalfa alone.

To irrigate this, his present pumping system from three connected shallow wells not over 50 feet deep will be insufficient. He is already finding trouble to irrigate the 100 acres of rice.

Motor Pumps from Four Wells.—His 35 h.p. electric motor is easily capable of handling far more water than is available from the three wells, so he is putting down one which will give at least 300 feet to where his well-driller believes there is artesian water. This he expects to be enough to irrigate the whole 1280 acres of silt land on the farm.

The water is pumped into a reservoir covering about an acre on the high point of the place and will be distributed through ditches which are built on the contours deep enough so that they may be used for drainage ditches in the winter time and high enough so that they may be used for irrigation in the summer. A big drainage ditch through the center of the 180 acres will take the water from these small ones.

The alfalfa will be inoculated with Westrobac bacteria to give it a start under its rather difficult location in the alkali.

GRANDSONS OF TILLY ALCARTRA

At Prices within Reach of Every Breeder and Dairyman.

A Grandson of Tilly Alcartra.

We have several splendid grandsons of this now famous cow which we can deliver to you at prices which will suit the pocketbooks of every dairyman wishing to improve the quality of his herd, whether it be a grade or pure-bred herd. These bulls are sired by our herd bull, Prince Alcartra Korndyke and out of A. R. O. cows, and are the only living grandsons of a cow having a record of over 30,000 pounds of milk in a year. Such an opportunity for increasing production has never been offered DAIRYMEN AND BREEDERS in California, price and quality considered. Buy one of these bulls and solve your low production problem. When Grain is High Feed DIGESTER TANKAGE

Whether intended for show or market, the hog attains perfect condition and more quickly and economically if his ration includes some DIGESTER TANKAGE. The growing pigs needs DIGESTER TANKAGE as a bone and muscle builder. Write for free pamphlet on hog-feeding.

WESTERN MEAT COMPANY,

Animal Food Dept., 704 Townsend St., San Francisco, Cal.

WITH THE LIVESTOCK MEN.

(Continued from page 279.)

the disease progressed, the animals sought relief by rubbing their bodies against buildings and fences so that the flesh became rubbed off to the bone. The local stockmen fear the disease will spread and have called for assistance from State Veterinarian Keane.

H. E. Coyle of Woodland is starting in the breeding of purebred Hereford cattle on quite an extensive scale, having purchased the 30 females and bull from the Simon-Newman herd of Newman, some months ago. Mr. Coyle has 620 acres a few miles north of Woodland and has erected two stave silos, expecting to feed his purebred stock alfalfa hay and corn silage. He states that he is finding the demand heavy for good range bulls, and expects to experience no difficulty in selling the young stock as soon as old enough for breeding purposes.

The Iowa State Fair of 1915 has just passed into history as the greatest State Fair regarding livestock that has ever been held on the American continent. The attendance during the week crossed the quarter of a million mark. This fair was more or less of a feeler in regard to what the other state fairs might expect this year. Many of the stockmen of the Middle West knew that the foot and mouth disease was absolutely under Federal control and that there was no reason whatever to fear that another outbreak such as took place in this country a year ago would occur. The recent outbreak in the State of Illinois in a few of the northern counties was traced to the use of impure hog cholera serum. These counties are now under Federal control and the disease now is where there is no danger of its getting loose. At the recent Iowa Fair there were nearly 300 Shorthorns, better than 200 Herefords, and as many Aberdeen Angus; and the other breeds of livestock carried the same proportion of exhibits as the beef breeds. The states represented at the Iowa State Fair reached from Ohio to Nebraska and from Mississippi to the British line. This alone shows the great confidence the breeders have in our Federal authorities taking care of the dreaded foot and mouth disease.

MISCELLANEOUS.

Receipts at the Portland Union Stock Yards for the week ending Sept. 7 were: Cattle, 1098; Hogs, 2248; and Sheep, 460.

Jason Warren of Gridley believes in diversified farming: cows, hogs, chickens, and fruit; he says the pocket book keeps in better condition this way.

The Livermore Center of the Alameda County Farm Bureau is preparing for a combined land product and stock show to be held Saturday, Oct. 9.

Geo. Plummer of Fair Oaks says he is going to buy some purebred Berkshire sows this fall and start in the hog business right. He has a very fine boar which he purchased from the Pure Gold Stock Farm.

A corporation known as the Kings County Land & Cattle Company has recently been formed in Corcoran. They have purchased 3054 acres near there and will devote it to dairying and raising alfalfa hogs.

Farm Adviser W. H. Heilman of Glenn county reports that the organization of livestock industries in his county is progressing with interest. A report from the Oriand Center district indicates a hog census of 3390 and a dairy census of 2820.

Such success has been attained by the management of the packing plant of the Anaheim Beef & Provision Company since its opening three months ago, that arrangements are now being made to enlarge the quarters.

M. T. Kite of Redding sold all of his grade goats, 300 in number, to Tork of Manton. This leaves him with a band of 54 registered Angoras. He states that they shear from 3 to 4 pounds of mohair which is worth this year between 30 and 40 cents a pound.

The owner of the Hawkeye Hatchery of Tulare is preparing to make additions to the plant that will have a capacity of 30,000 chicks per month.

Chas. Raines of Folsom will be numbered among the exhibitors from Sacramento county at the Exposition poultry show in November. He will make an extensive entry of his prize strain Anconas.

ALMOND PRICES ANNOUNCED.

The annual meeting of the California Almond Growers' Exchange was held September 11 at the offices in San Francisco, and the following directors and officers were elected for the ensuing year: Geo. W. Pierce, Davis, president; A. S. Lasell, Lodi, vice-president; J. B. Wrangham, Fairoaks, secretary; and the directors are Geo. W. Pierce, Davis; A. S. Lasell, Lodi; John Trembath, Antioch; E. S. Norton, Sutter City, and R. Lauppe, Antelope.

Three growers have withdrawn since the last crop, and a total of 291 growers have signed up since the 1914 annual meeting. Total Exchange membership is now 908.

The financial condition was especially pleasing as the Secretary reported comfortable surplus balances on hand, ample to care for the present requirements.

The following prices have been set by the Exchange: Nonpareil, 15c; IXL, 13½c; Ne Plus Uutra, 13c; and Drake, 11c.

LIVESTOCK DIRECTORY.

Rates in this directory, 3c per word each issue; or if carried weekly for one year, 2½c per word.

DAIRY CATTLE.

Farm Poultry for Profit.

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

CATERING TO THE MARKET IS PROFITABLE.

During last year there has been quite a little feeling among poultrymen of the southern part of the State on account of what they term favoritism for outside egs. Petaluma eggs are brought into Los Angeles and sold at a higher price than fresh local eggs. And a lot of these eggs that command a higher price are not Petaluma's select eggs either, though they are sold as such by some store keepers. But that has little to do with the question. What we want to know is why eggs that are brought in a distance of over 500 miles command a better price than the product that is produced within a radius of fifty or seventy-five miles?

This ought to interest us, because if the difference is due to feed, to the care of the eggs or to anything that lies within the power of the poultrymen to change, he ought to know it. If the difference is due to climatic conditions, we ought to know it just the same so that we may be satisfied to produce an inferior product, take what the law allows us to get for it, keep our mouths shut, and be thankful for small mercies.

At first glance one feels like admitting that the fault is due in part to climate; anything that smacks of the "north" is usually called good though it may not be a particle better than what is raised some hundreds of miles south. The feed question is not at all allowable, because we feed just as good quality feed as Petaluma; all districts are likely to get adulterated feed once in awhile, and the only thing on which Petalumans can beat us is horse flesh. I don't believe that is any benefit to the quality of eggs; in fact I think it is rather a detriment than a benefit, but as all Petalumans do not feed it—it is out of the consideration.

Now if the fault is neither to be found in the feed nor the climate, we are narrowing the question down. From what I have seen of the large poultry ranches in this section they are kept in a clean sanitary condition, and very little disease is to be found on any of them, water is good and plentiful; nearly everyone has a good, cool storehouse to keep their eggs in, and except the cases and eggs nothing is kept in them that will pollute the eggs in any way. So now the question is practically unanswered as to any outside influences being the cause of the local product commanding such a small price compared with Petaluma's best.

Where Difference Lies.—The next query is what constitutes the best, or, as they are termed, "Petaluma selected"? And there is the answer. "Selected." Petalumans have bred up, at least those who produce "selected" eggs, a strain of hens that lay a fair-sized egg in general, then the Federation or dealers have raised the standard for weight and size, color, etc., to cater to a high-class market.

Now it is just possible that the necessity of having to find an outside market for their product was the real cause for the improvement, and some day the same necessity may impel the poultrymen in this part of the State to make a grade of selected eggs. If it does, I think they will find our eggs equal to Petaluma's. If it were not for necessity prodding us it is just likely that we would be content with every little improvements in anything, but necessity urging us on is a blessing in disguise.

National pride, State pride, city pride, family pride, and pride in producing things equal to others, may be mere "illusions," but they help the race along to better things; so they must be worth something. When a grade of eggs can be built up to command a ready market at a higher price than the strictly fresh egg of local production, all the way from Seattle to Nevada, and at all large cities like Los Angeles and Seattle, why it is time we were thinking seriously of building up something ourselves.

Ready Sale for Selected Eggs.—It pays to build up such a grade for several reasons, the principal one being a ready market. Dealers are always ready to buy what they think they will have a ready sale for, so that at the last, it is not what the commission man wants, or the storekeeper, but what the public wants, the wage earner, who is the real buyer in the market of good things to eat. Small eggs, pullet eggs, and all the poor grades are bought by boarding-house keepers and public bakeries and caterers of all kinds. The people who know what a good thing is always buy the best grade and are willing to pay a better price to get it. But even though the price was no higher it is worth something to have a ready market. So far Los Angeles County has had to bring eggs in, the local production not being equal to the demand, but the time is coming when the conditions will be reversed and the supply will exceed the demand. If we have not been wise enough or far-sighted enough to build up a select grade of eggs ready for the emergency we will sure see blue then, for in competition with others we will fall short.

Personally, I see no reason why we could not have a grade of selected eggs placed on the Los Angeles exchange, then if it was not necessary to ship any outside our own territory they would not get much of a name all at once; but in time the fact that Los Angeles market had "selected" eggs would leak out and be making a name in other markets.

Market Needs Improvements.—Our poultry market needs a lot of building up, too. It is like a run-down flock; needs new blood, perhaps a little honest blood would do the most good, for there are the worst lot of sharks engaged in it that I ever dealt with. But some day the poultrymen are going to get tired of being cheated and then they will combine to make things better and perhaps raise the grade of dealers, that being the greatest need at present. There are just as good grades of table fowls sent into Los Angeles market as anywhere in the State, and better than some markets ever get, for a great many of the poultrymen around the city have Orpingtons, Cornish, Wyandottes and all the rest of good table and general purpose fowls; but they meet with poor encouragement from the market. There are great possibilities in store for the southern part of the State both in table fowls and eggs, but we need a good many reforms in both. Since the Federation was organized the egg market has been improved very much so we are all hoping for better things, and the best way to get them is to work for a higher grade of goods and cater to those who are willing to pay for quality.

CONDITION POWDER FOR RABBITS.

The following condition powder is used by S. F. Streaner of Hughson, who now has about 800 rabbits: Fine ground charcoal, 3 pounds; fine ground oilmeal, 3 pounds; fenugreek (costs 25c a pound), ½ pound. Mix thoroughly and feed one teaspoonful to every ten grown rabbits once daily. Best to feed with a little bran.

Since feeding this, Mr. Streaner says they have had no trouble with internal parasites or that dreaded rabbit disease, of which the manifestation is fatty spots on the liver.

POULTRY NOTES.

Thursday, Nov. 16, has been entered on the calendar as Poultrymen's Day at the Panama-Pacific Exposition.

W. D. Bond of Gridley will set his incubators about Sept. 20. He is receiving orders almost daily for fall hatched chicks.

The Sebastopol Poultry Association is preparing to particlpate in the Panama-Pacific Poultry Show at the Exposition in November.

The law regulating the importation of eggs, known as the "Chinese Egg Law," was declared unconstitutional by Superior Judge Geo. E. Sturtevant on Sept. 1. Notice of an appeal to a higher court was served.

J. E. Russell and his sister are preparing to herd 1600 two-thirds grown turkeys in the wheat stubble fields near Terra Bella. Mr. Russell says this will add one-third to the weight of the turkeys. Ten cents per acre rental is paid for the use of the stubble fields.

The first annual poultry show of the Livermore Valley Boys' and Girls' Poultry Club will be held on October 9. A meeting of the various school branches of the club was held at the home of Judge A. J. Emery, secretary of the club, on Sept. 4 to discuss the arrangements.

According to figures sent out from the State Capitol of Aug. 31 the value of the eggs produced in California during 1914 was $18,000,000, the number about 70,000,000 dozen from all records available. This is supposed to be a new mark, and from all indications the present year will run beyond that mark, in spite of lower prices.

A number of poultrymen were visited at the request of the secretary of the Castro Valley Center (Alameda county). At a recent meeting Dr. Beach told of work in controlling chicken-pox. Poultrymen were very much interested and turned out well to the meeting. It is planned to have a demonstration on a large place where the disease is prevalent.

The Sacramento Poultry Association (fanciers) met at the Home Products League on Sept. 2 at which meeting Prof. J. E. Dougherty, head of the poultry department of the University Farm, delivered a lecture on poultry feeding. On Sept. 9, T. E. Quisenberry, poultry commissioner of Missouri, gave an illustrated lecture. This association is planning to have other lectures during the winter months.

Poultry Breeder's Directory

Rates in this directory, 3c per word each issue; or if carried weekly one year, 2½c per word.

BABY CHICKS—R. I. Reds, Barred Rocks, Black Minorcas, White and Brown Leghorns. All from fine stock. Hatched right. Shipped right. Also Flemish Giant rabbits. Write us. Campbell Poultry Ranch, Campbell, Cal.

LIFE'S MIRROR.

Give Love, and love to
Your life will flow
A strength in your
Utmost need.
Have faith and a store
Of hearts will sow
Their faith in your
Word and deed.

Give Truth and your gift
Will be paid in kind
And honor will
Honor meet,
And a smile that is
Sweet will surely find
A smile that is
Just as sweet.

For life is the miror
Of king and slave.
'Tis just what we
Are and do,
Then give to the world
The best you have
And the best will
Come back to you.

—Madeline S. Bridges.

"IN FUN."

Billy sat all alone. He was, as he said himself, "not feeling good." He really meant that he was not feeling happy, or cheerful, or contented. The grown-ups, however, would have said he could not be feeling good because he had been behaving badly.

He seemed to have started the day out wrong, somehow. He had begun by chasing the turkey till the turkey put an end to that by chasing him. Next he had pulled the cat's tail till she too turned and scratched him. After this you might have thought that he would settle down and be good; but, no! he hid the dog's bone, and upset the kitten's milk saucer, next he took Susy's new doll away and (but this was an accident; he didn't mean to do this) cracked her nose,—of course, the doll's nose, not Susy's! At that point father came home to dinner and heard about the misdeeds, and said Billy had better not do any more stunts like that before supper or he certainly wouldn't go to grandmother's next Sunday, So, not to get into any more mischief, Billy sat alone in the yard, though every minute it seemed getting colder.

"I did it only in fun," was all the excuse he could think of.

"Well, don't have any more fun of that sort," said father.

The afternoon seemed very, very long and very cold, so that at last Billy had to go indoors, although he could not hope that any one would be particularly glad to see him. As a matter of fact, Susy put her toys quickly into a box and sat on the box. Mother smiled at him (you could always count on mother's smiling), but she was hushing the baby to sleep, so she couldn't do more than that.

Billy took a book,—one of his Christmas presents,—put a stool by the fire, and sat down to look at the pictures. But the fire made him sleepy. He wanted to be out in the fresh air. But he also wanted some one with him. He thought that he would not get into so much mischief. Even if he did the other person would get some of the blame!

He looked at Susy.

"Come out and play," he said.

Susy "wasn't speaking to him." But—it was so very quiet when mother was getting baby to sleep—Susy felt inclined to answer. However, what she said at first was,—

"You can't play with my things."

"Don't want to! They're only girls' things, anyway."

If the baby had been either awake to play with or safely asleep so that mother was at liberty, Susy would have refused to speak again. But it was dull, the sky was getting beautifully red, and she daresayed she wouldn't be allowed out without Billy, who was nine, while she was only seven.

"I'll go for a little teeny while," she decided. "And I'll come in when I want to."

Billy said nothing to this. She couldn't come in unless he opened the door. Perhaps she had forgotten that.

Mother looked toward the nail where coats and caps were, so they put those on and went out. Oh, how nice the air was, after the fire! Billy gave a shout, and ran over to the snow man.

"Oh!" cried Susy. Her tone sounded as if she had seen something new. Billy looked.

At the foot of the tall tree that leaned against the wall of the house a chipmunk was trying to fix a little wad of paper into his mouth. Susy crept up to him very quietly. Billy followed her.

"Sh-sh!" she whispered. "Let's see what he does."

So they stood very quietly, and Master Chipmunk began to climb up the tree in a very jerky way. Every now and then he would stop and seem to have trouble with his paper. But at last he went up and out of sight.

"What's he doing?" asked Susy.

"Taking up paper for his nest, and it's a sign it's going to be colder," replied Billy, who had been told this the last day of school. "When he comes down, I'll shoo him up again That'll be fun!"

"Oh, no!" cried Susy. "Let's put some more paper for him, and watch him take it up. That'll be more fun."

Billy was surprised.

"So it will," he said.

Susy ran back into the house—Billy opened the door!—and brought out some soft tissue paper, left over from Christmas presents. She and Billy had a beautiful time for half an hour. They put the paper in nice-sized bits at the foot of the tree and then hid. Master Chipmunk didn't seem surprised at all. He took the bits quite as a matter of course, and soon had the last one up. He didn't come down again.

"How nice and warm and soft his nest is!" Susy cried. "Wasn't it fun!"

"What was fun?" Father had come when their backs were turned.

Susy told him.

"Did you like it, Billy?" father asked him.

"Fine," replied Billy.

"Then"—father laid a hand on each shoulder as they went to the house—"always have plenty of that fun—the fun that helps, and doesn't hurt!"—Frances Harmer, in Sunday School Times.

Sanleigh—Clever? Oh, very! Why, she has brains enough for two.

Miss Keen—Then she's just the girl you ought to marry.

Do It Electrically

PACIFIC GAS AND ELECTRIC COMPANY — PACIFIC COURTEOUS CONTINUOUS SERVICE

ELECTRIC APPLIANCES in the household not only add to the convenience of all members of the family, but they are economical and time-savers. **ELECTRIC APPLIANCES** include **CHAFING DISHES, COFFEE · PERCOLATORS, VACUUM CLEANERS, ELECTRIC IRONS** and every other appliance that is needed in the modern home, not forgetting **ELECTRIC FANS.**

CLEAN WATER, GOOD SEWERS, AND FEWER TYPHOID DEATHS.

Clean water to drink—this is the long first step to take toward making typhoid fever as rare in California as the mastodon or the sabre-toothed tiger.

To help people get clean water to drink, and to help prevent the present wicked and inexcusable sacrifice of several hundred innocent lives every year to typhoid fever, the State Board of Health has just established a Bureau of Sanitary Engineering, with its offices and laboratories at the University of California, and has appointed as Chief Engineer and Director of the Bureau Chester G. Gillespie, of high reputation as a sanitary engineer and one of the first men who ever completed the full professional course in Sanitary Engineering in the University.

Since Gillespie's graduation, eight years ago, he has been actively at work designing and building chlorination and filter-plants, sewage-disposal systems, water works, etc., in various parts of the United States.

The State's new Sanitary Engineer has only just arrived in Berkeley to to begin his work. Already requests are waiting for him from more than thirty California towns for advice as to how they ought to go about getting clean water and how to protect themselves against typhoid, intestinal complaints of children, and other water-borne diseases.

Not only as to water-supply problems will the new bureau be of great service, but also in the matter of sewage disposal, for advice will be given to the engineers and authorities of towns and villages throughout California as to how best to treat sewage so as to render it harmless to the commuinty which seeks to dispose of it, and to towns downstream as well.

There are already laws requiring that all public water supplies must have permits from the State Board of Health, approving the sanitary quality of sources and supply. There are laws, also, that a community must not discharge sewage into inland waters, such as lakes or rivers, nor into tidal estuaries, without permits from the State Board of Health. In order that this legislation may be carried out, the new bureau will make a careful study of water-supply and sewage-disposal conditions throughout the whole State.

Remarkable advance has been made in California in the last few years in reducing the death-rate from typhoid. Last year only about three-fifths as many people died of typhoid in California, in proportion to population, as did four years earlier. In 1910 there were 477 deaths from typhoid, which, with a population of 2,386,000, represented a death rate of 19.9 per hundred thousand from this one disease. In 1914, with an estimated population of 2,763,000, there were 374 deaths, or 13.54 per hundred thousand.

Yet, most of these 374 deaths were totally unnecessary!

Among the great factors which brought about this gratifying reduction were the work of the State Board of Health in arousing the interest of the whole community in the fight against typhoid, the investigations of typhoid outbreaks by the State Hygienic Laboratory, such as its investigation resulting in the discovery of one woman, a typhoid carrier, who had given the disease to ninety-four people by preparing one single dish of spaghetti, and the work of the State Board of Health in sending free to any physician in California anti- typhoid vaccine, prepared at the State Hygienic laboratory at the University, a vaccine by the use of which anyone who desires may be immunized against typhoid fever.

The creation of this new Bureau of Sanitary Engineering insures valuable co-operation between the State and the individual communities of California for the suppression of sources of typhoid infection, through purification of contaminated water-supplies and through improved methods of sewage-disposal. Another great task to be done is to arouse every farmer and every country-dweller in California to the importance, for the protection of his own family and of the community in general, of seeing to it that his own farm or ranch has a proper sanitary method for the disposal of human wastes, so that streams may not become contaminated, and milk-cans and the milk supply be not exposed to infection.

Typhoid is primarily a country and small-town disease, because large cities take more care to have clean water and adequate systems of sewage disposal. There are two rural counties in the interior of California, for example, that have an annual death rate from typhoid eight times as heavy as that of San Mateo county, for instance. The great reason for this is that the sources of water-supply in San Mateo county have been better protected from danger of pollution. Its towns do not pour their sewage into streams from which other people must take their drinking water.

The new Chief Engineer and Director of the Bureau of Sanitary Engineering began his professional work by spending several years in filtration experiments for the People's Water Company of Oakland. Then he went East, participated in the designing of the filter plant for Minneapolis, had charge of the designing of a water-filtration plant for Evanston, Illinois, and returned recently to Sacramento to design a sewage-screen for the treatment of sewage from the annexed districts and from certain older portions of the city of Sacramento.

HOUSEHOLD HINTS.

When washing windows add a small quantity of bluing to the water. This makes them clearer.

Scatter grated white potato over the carpets if you wish to freshen their colors.

When packing away rugs or carpets for any length of time fold in powdered alum and a few moth balls when rolling up.

To remove stains from the tops of zinc kitchen tables use a cloth dipped in vinegar.

In laundering the sheer white collars so much worn use borax instead of starch (a tablespoonful to a quart of water). It leaves them more transparent.

Furniture polish may be made at home after this recipe: Take equal portions of linseed oil, turpentine, vinegar and spirits of wine. Shake well and apply with a linen cloth for cleansing. For polishing use a dry flannel cloth.

When using a double boiler the food will cook more quickly if the water in the outer vessel is salted in the proportion of a fourth of a cupful of salt to a quart of water.

One short row of nasturtiums in the garden at this time is worth all of the other flowers put together, they are so lovely in the dining room. Put a handful of them in a wide-mouthed green glass vase and you have a decoration that is as charming as any expensive bouquet of orchids could be.

Remember that youth is playful. Be glad that this is so and prolong the period with your own young folks.

White	1.40@1.45

CORN.

Tbere is no California corn offered at present, and it is not worth quoting. Trading in other lines is inactive, and values stand as before.

Eastern Yellow	1.80@1.85
Milo Maize	1.75@1.80
Manchurian	1.40@1.60
Kaffir	1.80@1.85

BEANS.

Bean values have not yet settled down to a very definite basis, and it looks as if there would be a good deal of uncertainty until the new crop is well in hand, as the output is not at all well known, and the probable extent of the shipping business is problematical. The old Blackeye quotation is allowed to stand, though a sharp decline is expected, as the crop is very large and dealers are in doubt what to pay. Cranberry beans show a further advance, and horse beans are also firmer, though there is a good deal of poor stock that is hard to sell at any price. Red Kidneys are easier, while Limas are stiffening up.

(On wharf, San Francisco.)

Bayos, per ctl.	$4.40@4.60
Blackeyes	3.50@4.00
Cranberry Beans	4.00@4.50
Horse Beans	2.25@3.00
Small Whites	4.60@4.85
Large Whites	4.50@4.75
Pink	3.75@4.00
Limas	4.90@5.05
Red Kidney	5.75@6.00
Mexican Reds	5.25@5.75

SEEDS.

Tbus far there bas been no demand of any consequence, but dealers are beginning to get their stocks in shape for the active season. Values remain as last quoted.

(Wholesale Prices, San Francisco.)

Alfalfa	17 @18 c
Brown Mustard, per lb.	Nominal
Canary	9 @10 c
Hemp	3 @ 3½c
Millet	2½ @ 3 c
Timothy	7½ @ 8 c

HAY.

The principal development this week is a rather sharp advance in alfalfa. This has been in strong demand right along, with a large shipping movement east from growing districts; and the choice late cuttings now coming from the river district find a good, healthy demand locally. Arrivals in general show some curtailment, but are still quite large and everything of good quality moves off readily at firm prices. Choice and fancy hay is scarce, and higher prices are looked for. Most of the hay will be under cover by the end of the month, and a general advance is expected after that.

No. 1 Wheat, per ton.	$12.00@13.50
do No. 2	8.50@10.50
Tame Oats	9.00@13.50
Wild Oats	7.00@10.00
Alfalfa	10.00@13.00
Stock Hay	5.00@ 6.00
Straw, per bale	.25@ .40

FEEDSTUFFS.

Cracked corn has been marked up a little. Middlings are lower, and rolled barley is rather easy, but without quotable change. Trading in most lines is limited to current needs.

(Wholesale prices per ton, carload lots, San Francisco.)

Beet Pulp, per ton	$20.00@21.00
Alfalfa Meal, ton	16.00@19.00
Alfalfa Molasses Meal per ton	19.00@20.00
Bran, per ton	27.00@28.00
Oilcake Meal	38.00@39.00
Cocoanut Cake or Meal	23.00@25.00
Cracked Corn	41.00@42.00
Middlings	34.00@35.00
Rolled Barley	25.50@26.50
Rolled Oats	30.00@32.00

VEGETABLES.

The local market is hardly as active as at last report, and wbile offerings in some lines are lighter the general tone at the moment is ratber easy. String beans are holding up fairly well, with limited offerings, while limas are lower. Arrivals of tomatoes were consderably lighter for a few days, but there are still more than will move readily and last week's top figure has been reduced. Bell peppers also are easier. Summer squash is coming in less freely, and the price has stiffened considerably. Green corn is about the same as last week, with fancy stock bringing a premium.

(Wholesale prices, San Francisco.)

String Beans	2 @ 3 c
Lima Beans	2 @ 3 c
Peppers, bell, box	30 @45 c
Tomatoes, lug	30 @60 c
Cucumbers, lug	20 @30 c

DECIDUOUS FRUITS.

Business continues active, and most arrivals are readily absorbed, though offerings in some lines are too beavy for any firmness in prices. Huckleberries are fairly well held, wbile strawberries are easy again. Plums are still stiffening up. Bartlett pears show quite a wide range, according to quality; and some offgrade stock sells below quotations. Peaches are not very plentiful, and fancy stock is firm, though there is a good deal of ordinary stock that is hard to move. Apples are fairly steady, except belleflowers, whicb are slightly lower. Cantaloupes are decidedly easy, though they are moving in large quantities; watermelons also have been marked down a little at the inside figure. The demand for grapes has been decidedly heavy, and while offerings also have increased, the general run of prices are pretty well maintained.

Huckleberries, lb.	6 @ 9 c
Strawberries, chest	$1.50@4.00
Blackberries, chest	3.00@4.00

DRIED FRUITS.

The dried fruit market shows little change this week. According to some reports the demand is limited, but there seems nevertheless to be a very fair movement of nearly all varieties to distributing markets, and the situation shows about as much strength as last week. Apples have been shaded a little, but with a light crop in many quarters a firm market is expected. Apricots are closely held, and while tbe movement in some quarters is a little slow, the remaining stock in the country is expected to clean up readily. Only strictly fancy stock, however, would bring the top figure quoted. There have been reports of offerings of prunes in the east at low prices, as a result of which some packers have reduced their offers, but growers are holding out quite firmly. Peaches have dropped a little as the movement is limited, though no further decline is expected. There bas been a large movement of raisins during the last few weeks. Tbe New York Journal of Commerce says:

"Late Coast advices report an unsettled tendency in the market for Santa Clara prunes early fall shipment. Packers appear to have a wide range of prices and it is found almost impossible to establish a ruling market quotation.

"The tone of the future prune market during the trading last week was inclined to be exceptionally quiet, though the New York operators perhaps show less interest in the situation than any other market.

"Future apricots are inclined to be slightly easier. There are a few offerings made of Santa Clara apricots at 8c for extra choice, 8¾c for fancy and 9½c for extra fancy f. o. b. steamer; but apparently there is little inclination in the market to buy.

"Raisins maintain a very strong tendency. Spot stocks seem to be

CITRUS FRUITS.

The eastern auction markets are taking all of the valencia oranges that California ships at good prices. The markets on this variety of fruit has been hetter this season than for several years past. Lemons continue in the dumps and as the warm season is about over, no increase in the demand is looked for this year.

At New York on Monday, Sept. 13th, valencias on the auction market averaged from $3.55 to $5.60 per box. Lemons averaged from $1.35 to $3.20 per box. At Chicago the same day, valencias brought $3.50 and $5; lemons $2.25 to $3 per box.

Shipments from California for the season are nearly up to the amount shipped last year to date.

Prices show no further change in the San Francisco market. Oranges are still moving in a rather small way locally, but lemons and grapefruit have found a very fair sale in the last week.

(Wholesale prices, San Francisco.)

SPECIAL DECIDUOUS MARKET REPORT.

By J. L. Nagle.

Sacramento, Cal., Sept. 13, 1915.

During the past week the movement of grapes has been on the increase. All markets, however, have taken care of the supply readily and the demand has remalned active. The quality of the grapes this season is considerably better than for several years past and this has in a great measure stimulated consumption. There will be a noticeable falling off of Malaga shipments from now on, hut if the weather remains favorable the Tokay season should last several weeks. We see no indication of the market declining and though all markets are loaded with Eastern peaches, California pears and grapes seem to have the preference.

Late Bartletts from the mountain districts are bringing fancy prices and the stock is holding up exceptionally well.

There is some demand in the southeast for cling peaches and already several cars are rolling at prices that will net the growers a few dollars a ton better than that offered by the canners. The distribution of a portion of the California cling peach crop throughout the east, wrapped in the regular boxes, has somewhat relieved the pressure felt by the inactivity of the canners to pack, and as a result we look for some activity from the canners within the next week or ten days. Practically all freestone peaches will have been shipped and out of the State within the next four or five days.

The following prices have ruled for the week:

New York — Bartletts averaged $1.68; Malaga Grapes, $1.14; Tokay, $1.40; Cornichon, $1.40; Duke Plums, 83c; Gross, 91c; Phillip Peaches, 55c.

Chicago—Bartlett Pears averaged $2.15; B. Hardy, $1.47; Malaga Grapes, $1.03; Tokay, $1.50; Duke Plums, 96c; Gross, $1.41; Salway Peaches, 45c.

Total shipments to date, 8951 cars; total shipments same date 1914, 10,050 cars.

REPORT OF PRUNE GROWERS COMMITTEE.

It appears from growers' reports to this committee that the feeling is intensifying that the 5c basis, demanded by the growers at the mass meeting in May, is what we should have for our fruit.

Reports almost universally show that crops are turning out materially lighter than was anticipated and the shortage is so general that we caution growers from giving credence to statements made by huyers as to crops in other districts. It is a simple matter for the buyer to state that some other district is heavy whereas investigation shows conditions to be the same shortage of crop in almost all districts.

We quote as follows from the New York Journal of Commerce: "The dominating tone in the future prune market appears to be stronger. Though buying from all quarters continues to be light there was a firmer feeling in evidence."

We request growers to continue to report all information that may come to them relative to crop conditions and prices to the committee of their districts, so that we may have full material from which to formulate our next report.

J. H. Bone, Chairman,
H. O. H. Shelly, Sec'y.
San Jose, Sept. 11th, 1915.

Publisher's Dep't.

OUR NEW HOG BOOK.

The publisher was quite elated last week when the first copies of "California Hog Book" came from the printer. Our new "baby" looks fine. The binding of the book is quite attractive, and the printing on the inside is well done. The photo halftones, of which there are 31 full-page plates, are especially good, and the line cuts came out clearly.

Mr. Guilford, the author, was equally pleased at the appearance of the book, and whether he makes a dollar or not from its publication, we believe he feels that he has given to the public a work that is worth while and one that was needed hy the swine breeders of California. Mr. Guilford made a thorough job by covering every phase of hog production, from the pig to the market. In every chapter are practical points that will help the reader to a hetter understanding of the hog and through this knowledge to a greater success. Feeds and feeding, breeds and breeding, housing, appliances, farrowing, climate, diseases and how to avoid many of them, fitting and exhibiting, all are treated quite fully and in a very readable way.

We anticipate a growing demand for this book as its merits become better known. One book in a neighborhood will be the cause of the sale of many more.

The work contains nearly three hundred pages, is cloth bound, well illustrated, and the price is $2 per copy postpaid. Address the Pacific Rural Press.

The Superior Serum Company of Kansas City has opened a western office at Los Angeles with L. B. Green in charge, who is ready at all times to give information to breeders about hog cholera, and the serum his company is advertising in another column.

The Bean Spray Pump Company of San Jose has been awarded the grand prize and three gold medals at the Panama-Pacific Exposition on their exhibits of spraying outfits and centrifugal pumps. The new all-brick factory of this company covering three acres at Lansing, Michigan, is now running at full capacity.

Membership Books Closed

for the 1915 season. The Exchange expense for the 1914 season, exclusive of Eastern brokerage, was 1.92%. Growers are cordially invited to sign up now for the 1915 crop.

"BIG BULL"

A Combination Tractor and Portable Engine

Guarantees 20 Horse Power at Pulley Belt; 7 Horse Power at Drawbar.

$585

F. O. B. MINNEAPOLIS MINN.

Why 10,000 Farmers Have Bought "BIG BULL"

1—Because it does the work of seven horses at the Drawbar in one-third their time, and at a tremendous saving, and has an overload capacity up to 10 Horse power at the Drawbar.

2—Because it does the work of a 20-25 Horsepower stationary engine on skids, costing as much as this combined Tractor and Portable Engine.

3—Low Cost—Small interest on investment; depreciation negligible.

4—Single Wheel Drive—Only four Gears; no extra Clutches; half as many Bearings; less Wear; less Friction; less Fuel.

5—Bull Wheel in Furrow—Does not pack ground; subsoils Hardpan 4 inches below plow line; self-steering; can run on the land if desired.

6—Tractor Engine—Low Speed Engine; Few Parts; **NOT** an adapted automobile engine; **NOT** an adapted stationary engine; 2¾-inch Crank-shaft; 5½-inch Bearings.

7—Bull Gear in Sections—**DROP-FORGED** instead of cast; wears longer than a cast gear; reversible, can be worn on both sides; five to ten times cheaper and quicker to replace.

8—Low Cost of Parts—Making more tractors than **ALL** the other Tractor Companies in America combined, we can make lower prices on Parts.

9—Read the "Big Bull" Guarantee.

10—Ask Bull Tractor owners about our Service.

Successfully Preventing Hog Cholera

There are three phases in prevention of hog cholera: (1) keeping germs off the ranch; (2) preventing sickness if germs get among hogs; (3) preventing spread or recurrence of disease if hogs get sick.

[Written for Pacific Rural Press.]

We have recently visited the hog-pens of leading breeders all up and down the Sacramento and San Joaquin Valleys and some of the Coast counties, and have been freely invited to go into the pens to inspect the hogs. We have always been careful to inquire in regard to sickness on the place and to look at the hogs as carefully as possible before entering the pens; but whether we had or not, we would have been welcome.

Preventing the Germs.—The invitation of visitors into the pens, regardless of whether they have previously been among sick hogs, is most severely to be condemned, and is one of the greatest means of spreading the disease. Mr. Tweed of Glenn county one time rightly refused to allow a neighbor on his place, because the neighbor had just been attending cholera-stricken hogs.

Madera county has a swine-breeders' association, whose members agree to prohibit strangers, and especially vendors of patent hog remedies, from visiting their pens. They also agree to keep their hogs as far from the highways as possible, to avoid possibility of their going onto the roads, or of stray hogs and other animals getting into their pens. Chas. Goodman of Colusa county calls special attention to the danger of roaming hogs, who fight through the fences and often break them down and serve as ready carriers of the disease. Merced county has an ordinance which also prohibits dogs and other animals from running loose from cholera-infested ranches. Imperial county has an ordinance compelling all hogs brought into the county to be quarantined at their destination at least thirty days before being turned in with the herd.

On our trips through the State, we have, time after time, seen hogs wallowing in the irrigation ditches. This is a most prolific way of spreading the disease where the water runs onto neighboring ranches. Rain water and drainage water are equally bad.

VACCINATING YOUNG AND OLD HOGS AGAINST CHOLERA.
When hogs have been exposed to infection but have not become visibly sick, they should receive serum alone or serum and virus, which are now produced at the State University and sold at one cent per cubic centimeter, to be used by qualified persons.

Even blackbirds and buzzards are guilty of spreading cholera, as shown by the experience of John Wannop of Butte county. His neighbor lost his herd by cholera and did not bury the carcasses. Buzzards fed from them and roosted in the trees under which Mr. Wannop's hogs slept, and Mr. Wannop lost his herd, too. The neighbor introduced cholera into another herd at a considerable distance by hauling slops in the same wagon which he had used for the first herd. Chickens which pick flies from sick hogs carry the disease on their feet to neighboring pens..

Many cases of cholera are traceable to importing hogs in stock cars which have not been disinfected. Dr. L. C. Kennon remarked that he could sit at his office in the north side of Merced and tell when there was an outbreak of cholera anywhere north of the city. Immature and unfinished hogs would be brought to market with a rush, and all that remained was to find out where they came from.

It is quite certain that many of these were sick before they reached their destination, and would leave the stock cars in dangerous condition for future shipments. Experienced breeders always disinfect the cars before shipping their hogs to the fairs.

Resisting the Germs.—Since visitors, birds, stray animals, wagons, wind, water and imported hogs may introduce germs onto a ranch, it is well to be prepared for their reception.

Many very successful breeders have seldom or never had cholera outbreaks on their ranches, because they kept the hogs in healthful cholera-resistant condition. This is done by allowing them to keep clean, by disposing of lice and worms which reduce the hogs' vitality, though often unnoticed by unobservant breeders, by feeding them mixtures of charcoal, sulphur, etc., in non-patented combinations. They have avoided patent medicines, which, so far as is known by hog cholera authorities, have never yet cured a sick hog; but have provided shade from the hot sun, shelter from cold rains, and wallows which are capable of being cleaned. These measures are all supplemental to the feeding of balanced rations, without which no animal can become most vigorous.

Serum Treatment.—In case the germs are introduced in such

California Weather Record.

The following rainfall and temperature record is furnished the PACIFIC RURAL PRESS by the United States Department of Agricultural Weather Bureau, at San Francisco, for the week ending at 5 p. m., September 21, 1915.

STATIONS	Rainfall Data: Past Week	Rainfall Data: Seasonal To Date	Rainfall Data: Normal To Date	Temperature Data: Max'm	Temperature Data: Min'm
Eureka	.01	.29	.83	66	50
Red Bluff	0	T	.37	94	56
Sacramento	0	.01	.18	94	52
San Francisco	0	.01	.08	80	52
San Jose	0	.04	.22	88	46
Fresno	0	T	.04	98	56
Independence	0	.08	.02	90	48
San Luis Obispo	0	.01	.23	98	48
Los Angeles	0	0	0	82	56
San Diego	0	T	0	72	58

THE WEEK

It certainly begins to look as though Jupiter had slipped a cog in his quadrature or else the Santa Clara prophet, Dr. Porta, has taken a wrong squint at it. According to his forecast these are the days during which we would be having "fisherman's luck" as to our garments, but we are still dry in every thread thereof and it looks now as though the week would finish dry in spite of the declaration that we should probably have five inches of rain in San Francisco as we did the third week of September, 1904. We do not seem to have gained much water by changing from a sun-spot prophet to a quadrature prophet. Some heavy showers have stolen into Southern California from the Mexican storm-system, as they frequently do, but the state as a whole is as dry as Connecticut has been since the recent election. Of course, we are not complaining, for September rains do far more harm than good and we have gained a lot of late fruit, dried fruit, bright beans, rich dry-feed, etc., etc., by not having rain to muss them up. We only mention the matter to point the reflection that the way to farm in California is to go right ahead with whatever it is seasonable to do and not be sidetracked by the prophets. And the things to get, by all those who have to wait for rains, are these: information and organization.

Let the Farmer Extend Himself.

This is the time of the year which is nearest to leisure of any of the California seasons. It is the time when Californians ought to get out from their own acreage into contact with their fellow-citizens in the same speical lines of work and study, to learn, by sight and word, what is good for their business. Our columns are very full of suggestions in such lines these days. Last week we had a paragraph showing how two Hemet farmers gassed up their motor and toured for hundreds of miles to see what other farmers are doing to make their production profitable. They returned to their homes wise, confident and hot for action toward doing their business in a stronger, better way. This was in lines of fruit handling, and what they did is commended to other growers. We wish we could feel that every time our field-writers send in outlines of good things which they find people doing locally, there would be scores of our readers who would take to their motors, or to public conveyances, and go to the spot and hold up the doers of progressive things for information and inspiration. In the nature of things, with such a variety of farming interests to serve, we can often give little more than a pointer toward a good thing. Let all who can, follow up these pointers personally, or by sending delegates from their neighborhoods to investigate and report to them like the Hemet people did. For what are you paying your taxes to meet the cost of California's new system of highways? Are you paying this vast amount of money so that throngs of automobiling tourists can fly by and admire your front gates? If that is all you are doing it for, take a hoe and go out and cut the weeds from around the gate posts, while the throngs are passing so that our inspecting visitors can at least see that California is not a still-life picture, but that California is a place of action and that its desirability as a place for homes and investments lies largely in the beneficent industry of Californians. But thousands upon thousands can do better than this, if they will. Get out on the highways yourselves and collect the equivalent of your taxes by spinning around the state, looking for sight and speech with men who are doing things better than you are. This is the best way to learn how to do progressive things and it will make you, and save you, a lot of money in the end. We do not believe any too strongly in spoon-fed farmers. University Extension will help them, good rural books and journals, which deal with California conditions, will help them; but these are only help and inspiration to agricultural extension of the highest efficiency, by which a man grabs himself by the nape of the neck and yanks himself out of his ruts with frank, cordial, co-operative contact with his fellow-men. Do it now, while the rains linger.

Live Stock Activity.

Although the foregoing exhortation to activity was suggested by the enterprise of two fruit-growing citizens of Hemet, it by no means belongs wholly to that branch of California production. Our readers must have noticed that we are fairly launched now on a systematic effort for the upbuilding of our live stock industries, which we promised, some weeks ago, to enter upon. Have you not heard the pigs squealing, the sheep bleating, the horses neighing, the cows lowing, the bulls bellowing, and the hens cackling, through these columns for the last two months as they never did before? Are you not becoming interested in better dairying, hauling, meat and egg making as one of the most promising lines of California upbuilding? If you have not caught on yet you will later, for we have only begun bugling for the charge on these lines of profit. And just now we wish you to get this heat into your boxes: the Panama-Pacific Exposition for the next month and more is to be a live stock college, which it will only cost a few dollars to enter and graduate from — with a diploma printed on the inside of your skull. Our special stock writers will keep you informed of the particular things which will happen at the Exposition during the coming weeks. It is our function only to sound the tocsin; and that cries out that to see all kinds of stock judging (the most concrete way to demonstrate excellence), to hear all kinds of live-stock talk and to become personally acquainted with many of the greatest stock men in the country, is to stay long at the fair and to get some harder knocks on the head than were ever laid on at Donneybrook! It is to be a great occasion for demonstrations, for discussions, for essays and details of organizations, and its educational value cannot be exaggerated. We have hope also that out from so great occasion will come something a preparation for trade in live stock, by the growers thereof, which will place them at much better advantage on the marketing side than they have been hitherto. Therefore take a course at the Fair if you can and you will better understand some of the things we shall be writing about.

A Revel in Rural Credits.

For about ten days California promoters, developers, financiers and publicists have been fairly reveling in rural credit discussions and inchoate transactions. Last week we gave advance intimation of it in the reference to the International Irrigation Congress which has been flowing over the state like a main canal out of its banks, and has had a lot of fun and some edification from its outbreak. Naturally this body, which brought forth the U. S. Reclamation Service, has taken to rural credit discussion like a duck to water, because this Service has to be re-financed, perhaps through no fault of its own, because it cannot come through with the funds now in sight or likely to be secured by resources hitherto productive. Ex-ambassador Herrick, whose publications constitute him a leading authority on the subject in this country, told his audiences that he had the conviction that the only way sufficient money could be secured for reclamation would be by selling long-term, amortizing debentures upon the lands reclaimed, and he believed government credit would be properly used in carrying through such development enterprises for the good and advancement of the whole country. He thinks such debentures, bearing three or four per cent interest, could be sold to whatever amount the making of productive land out of deserts and swamps could be reasonably carried, and settlement on such lands would be rendered practicable and profitable, because of the very small annuities which would be required to meet the low interest and the small amortizing payments to wipe out the obligation in the course of seventy-five years—on the European plan. This is of course a great national plan which political conventions will be planking and Congress will be tearing up, for a decade perhaps. It is an imminent question no doubt, but rather remotely imminent as compared with other phases of the rural credit question which both Congress and state legislatures have on their carpets.

Immediately Pending Questions.

Through the calling of an election for votes on proposed constitutional amendments, the first rural credit issue to arise squarely before the California people is that of allowing state credit to be used in land improvement, sub-

division and settlement. The vote on this question, if we are correctly informed, will come on October 26th in all precincts in the state, as noted in these columns last week. As soon as we get the text of this amendment and the authorized declarations for and against it, we shall put the matter definitely before our readers. It is now announced that Mortimer Fleishhacker of San Francisco has been added to the names printed last week as constituting the advisory committee on rural credit legislation provided for by the last legislature. This committee is to report before October, 1916, and while its report will probably be determined largely by the result of the vote on using state credit for colonization, it will still have many things to decide. We trust that either before or after the sky is cleared by the October election, this committee will hold public hearings and endeavor to bring the subject a little closer to the farming industries and a little farther away from statesmanship, development, etc. No one has now any idea whatever what the farming interests, in whose name this legislation is invoked, desire and we shall not be surprised if they knock it all endways unless some attention is paid to their convictions and circumstances. In fact, we cannot see how they can be rationally expected to do anything else with it. It is being wished onto them by the publicists. So far as public records go we have not seen an intimation that a single man, known to be a farmer more than anything else, has been asked to contribute his opinions and experience on a State-wide endeavor which is being promoted in his name. We do not say, of course, that for this reason it may not be for the good of the State. We simply remark that he is not likely to vote for a thing affecting his business, as this does, which is wholly vouched for by outside people.

Money for Operation and Improvement.

All the foregoing applies to long-term rural credit for development, for the landing of the landless man and all that. Theoretically, that matter is more for the general good than for the present-producing farmers' good, and that may be the reason why it may have to be wished on him. It is a great, humane movement for nation-building, and the former has the patriotic interest in it which other good citizens have, but it has hardly more direct connection with fair-finance for existing farmers than the memories of the old olive trees in Gethsemane have to do with properly circumstancing the ripe-pickled-olive industry of California. It is statesmanship: it is loaded with politics, and as all political parties have platformed themselves in favor of it, the only question among them is which one will beat all the others to it. That is the reason why 1916 presidential possibilities of two national political parties, the G. O. P. and the Progressive, philosophically embraced each other on the Exposition platform of oratory—the Democratic possibility being too busy preserving rational neutrality at Washington to be available. Our attitude toward this race for rural credit is: devil take the hindmost!

Quite another matter is the struggle which the present generation of food producers should be resolutely making for money for better production on terms which will make that better production possible and profitable. Read an article on another page about "money for beef-growing," which indicates what is required also for development of dairying, fruit production and every other kind of production. There is a popular belief that agricultural security is fundamentally best of all and that exactions of money lenders from farmers must be done away. We believe they will be done away, if producers present organized force and collective security. This is the reason why we attach so much importance to the movement among our fruit exchanges, led by S W. Baker of the California Cured Fruit Exchange, as outlined in our issue of August 21. We understand that Mr. Baker is receiving enthusiastic responses. This is the form of rural credit which has least politics and most business in it, and it contains the issues which should be settled first of all. As James Madison of the Raisin Growers' Association said at one of the meetings: if you can organize and circumstance the producers so that they can produce economically and sell their product profitably—that fact will settle nearly all the other problems. We are keen for securing that fundamental condition. Without that the best we can do for humanitarian and statesmanlike development of agriculture may be but a parody on the hog-and-corn philosophy of the Middle West; viz., to make more farmers to grow more crops to get less money, to make more farmers to get less money — and less money still, to the vanishing point, at which all your promoted farmers will go to the—I. W. W. But this catastrophe will never be reached, because farmers will rise in their might and effectively organize for their own finance and marketing. As they succeed in this, securing whatever legislation may be necessary to its accomplishment, state undertakings for assisted farm development, will become rational and statesmanlike.

Queries and Replies.

Querists must give name and address

Where "Pusley" Grows.

To the Editor: Kindly let me know the name of this weed and how to get rid of it. I have some of it in strawberries and where I water the berries it will not die when cut and thrown on top of the rows.—Subscriber, Capitola.

The plant is purslane, commonly called in humid climates "pusley" and considered the meanest weed in the plant world—in fact to call a man "mean as pusley" is the last word for him. Refusing to die when desired to do so, is one of the old tricks of pusley. Pull it out or cut it out with a hoe and feed it to the pigs or chickens. It is good for them, and they are the best things we know of for "pusley." The reasons why we have so little of it in California are two: it does not like dry heat; it is kept from seeding by our clean summer cultivation. Your free surface-watering in a moist coast climate gives it a chance for life which it does not widely enjoy in this State.

Spring and Summer Feed for Hogs.

To the Editor: I want to plant two separate fields of green forage crop for hog pasture to cover the periods from March 15th to May 15th, and from May 15th to July 15th, respectively. I have pasture of bur clover and wild oats and other natural grasses on which I can carry the hogs until about March 15th; and after July 15th I have oat stubble, etc. Will you kindly advised me the best thing to plant for the desired purpose, and when to plant same in order to have it during the period mentioned. I mention it as two periods instead of one, for I intend to have two fields, either of the same forage plant or different, if one can come later than the other, into which to turn the hogs successively.—Subscriber, Santa Rosa.

For your earlier period you can get good green forage from oats and vetch sown together early in February. For your later period we know of nothing to beat alfalfa. You can get good returns from unirrigated alfalfa on land which many people will tell you will not grow it. We have seen volunteer alfalfa growing rankly in fence corners in July on the farms of such people in your part of your county. Of course, if you can irrigate it you will get much more growth. Unless you are in a frosty place you can sow it as soon as your land gets wet by rains—if they are not delayed too long.

Wants Wisdom on Water Grass.

To the Editor: I see so many questions answered in a practical, common-sense fashion through the Press that I have concluded that what the Editor does not know about ranching, and conditions in California that ranchers get up against, never will be known. I would be pleased to see you state what you know about "wild millet," or "water grass," and how to hold it in check. Would plowing bury the seed so deep that it would not get out of the ground for a couple of months later than otherwise? Does all the seed germinate together, or does some hold over indefinitely, like wild mustard? —F. W. M., Orland.

Just how it is that strange plants, never noticed in the region before, appear and thrive wondrously when the soil conditions are radically changed, may be one of the things which you mention as likely to be never fully known. When dry land is made continuously moist or moist land continuously dry, the wild vegetation is likely to change radically. The change is sometimes so rapid that the inference is that the seed of the new plants is waiting in the ground for conditions which will wake it up, and it has been demonstrated that some seeds can remain dormant for a very long period. The plant to which you refer wild millet (Panicum crus-galli) has been noticed here and there in the interior valleys for decades. It has never become conspicuous because conditions were not right, but it has held on in water-holes or in corral corners, where water has been wasted, all these years, and it has kept on making seed which has been blown or carried by animals and birds all over the plains. It has lain dormant because the requisite amount of moisture and heat which it requires did not come together. There was moisture enough when the soil was too cold to start it and there was heat enough when the soil was too dry to start it. Now, when we start in flooding the land in the summer, as for rice, we combine the heat and moisture, and up it comes, and it beats the rice because it is a stronger grower and is more hardy. The land generally is probably full of the seed from the surface to the depth it has ever been plowed, and it is not likely you can bury it entirely for two reasons: you are not likely to plow deep enough nor to turn so completely that all the land which has ever been plowed will go to McGinty. You may, however, get a good deal of it below a starting point, and if you can start what is above and weed-cut you may get a cleaner bed for the seed you wish to sow, or if you practice rotation and let the land go back to a grain crop or a dry summer-fallow, you will reduce it very much. But you need not expect to get the start of all of it, but you may reduce it so that you can hand-pull what does start and thus keep fresh supplies of seed from the soil.

Olive Growers Organizing Statewide.

With last year's crops not yet paid for, and no prospects of selling the crops on the trees, it remains for a Statewide growers' organization to develop a taste for ripe olives in the Eastern markets.

[Written for Pacific Rural Press.]

Olive growers are organizing a Statewide association for the purpose of avoiding their present inability to sell the crops, and their present inability to get the money for their last year's crops. They are realizing that the past high tide of prosperity, which fell last year and gives no promise except to fall farther this year, is due to the present system by which no one will develop the market because that is expensive and would benefit the other fellow.

Though, as C. T. Worst of the General Advertising and Sales Agency of Chicago told about 70 growers at a meeting in Lindsay, Saturday, Sept. 11, if New York City ate as many ripe olives per capita as Oroville or Corning or Lindsay, California couldn't supply New York City, and though California has a monopoly of the American supply, and though we furnish only 1-5 of those sold in U. S., still the packers of California have half a million dollars' worth of last year's crop on hands and the producers are looking for last year's money and for this year's buyers. And according to Sec'y R. L. Underhill of the temporary State Ass'n the packers are estimating a 500,000 case crop (3,000,000 gallons) on the trees now, with 2,000 acres just coming into bearing; they say that the present market requirements would be for 200,000 cases, leaving 300,000 cases to be the additional carryover.

Poor Excuse for Any Carryover.—Whether these figures are right or wrong, whether the packers are continuing a game of starving growers into submission, it remains true, according to W. N. Woodson of Corning, that the Heinz Co. and the Maywood Packing Co. have disposed of their entire last year's crop by energetic salesmanship. There is no reason why all the olives should not be already sold. G. V. Reed, cashier of the First National Bank in Lindsay, told the meeting that he had made investigations showing that people east of the Sierras do not know a ripe olive. One wholesaler in Cleveland insisted that his stuffed bottled olives were ripe because olives were always ripe when they were picked.

Whether there is a heavy holdover or not, it is the province of the growers to have the information through their own organization, and to retain for themselves the profits now supposedly made by the packers et al., and to reduce the price to consumers so ripe olives would be in the food class rather than luxuries. Mr. Worst pointed out that they retail in the East at about 65 cents per pint, or $2,000 per ton—that they could be retailed at 20 cents, average, giving the grower $170 a ton average.

The packers haven't and won't develop the taste of Easterners for ripe olives. Overstocked as the packers claim to be, the officers of the temporary California Ripe Olive Ass'n asked their newly formed organization in Southern Cal. for about four gallons a day to distribute free at the World's Fair to develop a taste in Eastern visitors that would serve to spread the taste for ripe olives throughout their neighborhoods on their return home—easily $50,000 worth of advertising at practically no cost—but the southern packers could not spare their olives.

Growers Must Develop Markets.—If the packers won't develop the Eastern markets, as they haven't, we cannot depend on the jobbers or wholesalers or retailers to do it, for their ripe olive business is to the total of their business somewhat as a ripe olive is to the total on a tree, and if they cannot sell ripe olives they will handle something else instead.

If no one will develop the markets and see that "Mrs. Smith" in the East can buy food value in olives as cheaply as in meat, eggs, and bread, (20 cents a pint), then the olives will stay on the trees till they are uprooted—to be replaced, mayhap, with peaches.

But the matter is vital to the growers, and to the growers alone. Without state-wide organization, they could do little toward "cultivating Eastern markets as much as they cultivate their trees," but the 1200 to 1500 olive growers in the State (according to Mr. Underhill), if combined, could teach "Mrs. Smith" to call for 20 cent olives, and the growers could supply her at a profit and do it every year, by controlling the middlemen's profits. There is not much perishable about canned ripe olives.

The present movement for a California Ripe Olive Ass'n started at the Exposition on Ripe Olive Day when a number of growers and packers organized temporarily and elected seven directors from northern, central and southern California, who elected J. J. Avis of the Chas. C Moore (president of the Exposition) Co. as president and R. L. Underhill of Berkeley secretary. To make it a distinctively growers' organization the packers were later requested to resign, which they did. President Moore of the Exposition is one of the largest olive growers in the State and is planting more acreage. He donated postage and stationery, $135, and the use of his secretary and stenographers to send circular letters to all known olive growers in the State. The secretary gave his time to organization and Mr. Worst is a leading co-worker. Meetings have been held at Corning, Fair Oaks, Oroville, and Lindsay. One hundred and ten members, including much of the largest acreage in the State, had signed up previous to the Lindsay meeting. Fifteen signed up there, and half a dozen took the blanks home to consult, perhaps with their better halves, as the writer would do. Those of Lindsay who sign up after the meeting send their blanks to W. B. Kiggens of Lindsay, who gave his hearty support.

The officers of the temporary organization are ready to step out, when permanent organization is effected by an executive committee to

composed of a delegate from each strict, elected by the signed up embers. No definite plan of action outlined and no by-laws drawn up that is left for the growers' representatives to decide, as the plan the organization was told by Mr. nderhill. Each member advances thin a year $15, which will later deducted from such pro rata per re assessments as may be necesry to carry on business until rns come from the first crop haned. The $15 is to be used for stage, organization expenses, adertising (including cultivation of a taste for ripe olives in Exposition visitors), stenographic work, etc.

The meeting at Lindsay was a success, largely due to the efforts of R. C. Merryman of Exeter, who had made personal investigation of the proposition and of the personnel of the temporary association, at San Francisco, and who presided at the Lindsay meeting.

One aged gentleman subscribed his $15 though he had only one olive tree, remarking that he had seen walnuts go begging in southern California before the Walnut Growers' Association was formed.

Avoid Upright Lemon Shoots.

Old settler cuts out vertical growth in October, leaving short stub to die back and kill dormant buds which would produce more shoots.

[Written for Pacific Rural Press.]

"I am seventy-five years old—so am, and I have brought into bearing five different patches of lemons." hus spoke H. C. Crumrine, to hose tender mercies we had been ommended last March by Dr. Mcinn, Baptist minister of Santa aula, Ventura county.

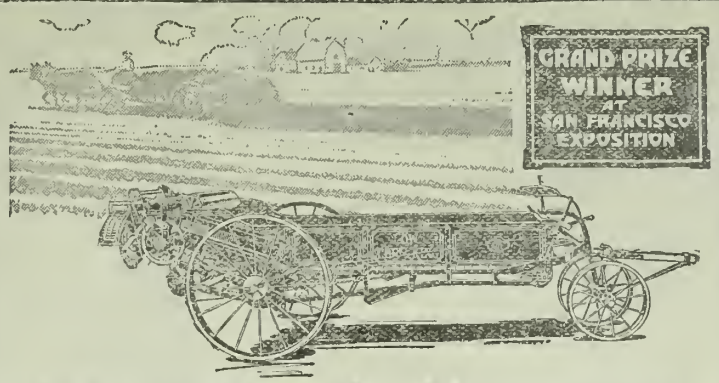
"I do not want to quarrel with ther folks or force my system of runing on them, but after I had ised four orchards to bearing, I ecided there had been something rong and I had better change my stem. I cut off what I had been aving on; I left on what I had been utting off—so I did. My last patch f lemon trees was seven acres orth of the house, which was lanted eleven years ago, and see, ook at those trees—lemons all over hem. Look inside—the inside is ull of them. Look at the top, at he bottom—there are lemons all ver them, and I picked 3068 field oxes from them and two acres of ld trees south of the house last nonth (February), that weighed 27,285 pounds at the packing ouse. In December, I picked 33,-40 boxes, and 43,605 boxes in November. I get more of a crop from ny nine acres than were picked rom the twenty-four acre orchard ust above. The seven acres of oung trees pruned according to my ystem produced 388 boxes per acre, while the two acres of twenty-four ear old trees across the drive, pruned according to the old system, ave 240 boxes per acre.

"The old trees, you notice, are full f those upright sprouts that everybody else has to cut out every year nd they always come up quicker han ever when they have been cut ut. I have to cut them out, too, rom these two acres, because the rees were not started right, but you notice in the young orchard there are very few of them.

"That upright growth that has to be cut out is waste energy both for the tree and for the pruners. It is fruit wood all right, but the fruit it bears is all in a bunch way up on the top, and it whips around so there is not much value in it and it is hard to pick. Better have all the fruit down in the main body of the tree and save the trouble of pruning each year.

"Most folks leave only three to five limbs at the head. Here in my young orchard is a fine tree with ten big limbs. See, here is the small fruit wood growing all way up and down the limbs clear to the crotch. The inside is full of fruit. Most folks would cut that lower wood out and leave all the fruit on the outside. You can see it in any orchard you pass here. I used to do that, too, but I quit it. I want to leave all the dependent limbs I can and as soon as I see a vertical growth well started, I cut it out, and here is the secret of avoiding the vertical growth in the older trees; cut it out in October or November when the tree is most dormant and leave a stub of an inch or two. During the dormant season the stub dries up and dies back. It prevents the growth in the spring of the dormant buds that may have been formed around its base. It doesn't prevent all the vertical growth, but it does some of it. That is why I do not prune in the spring, because the dormant buds would be ready to break out and go to growing as soon as the older vertical shoots were cut off."

WORKS CAPRIS ON WHITE FIGS.



[Written for Pacific Rural Press.]

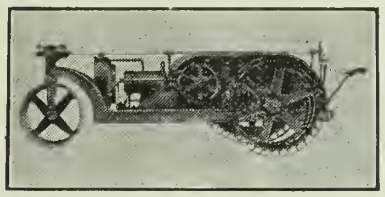
Lack of overwintering Capri figs has disheartened many of the Smyrna growers of Tehama county, and set G. B. Abbott to thinking. He grafted and budded some big Adriatic trees in recent years to Capri figs; now a good growth of the grafts has completely covered the stubs and the buds are working well over the cuts. Very few scions or buds failed to grow.

He sawed off the limbs for grafting when the sap was starting to flow in the spring. A long triangular slit was cut in the bark at the top of the stub and the scion cut to fit the triangle closely. New growth on grafts must be topped back during the first summer or they will break their connection. Mr. Abbott prefers, however, to bud by the ordinary deciduous system because it is easier and he can do it any time the bark slips, all through the summer. Last winter was the first in which he had a Capri crop to winter over.

QUEENS ON OLD OIL OLIVES.

Old oil olives fortunately budded over to Queen olives three years ago on a ranch near Corning are developing a fine crop of big olives in the season of 1915, which are sold for $200 a ton for all 15-16 in. in diameter. Budding is done in April when the sap starts to flow.

International Harvester Manure Spreaders



FOLLOW an **International Harvester** manure spreader—**Low Corn King, Low Cloverleaf,** or **Low 20th Century**—at work in the field, and you will say that no device, human or mechanical, does better work in the proper and even fertilizing of the soil. That applies whether the spreader is new or has seen years of service.

This year all **I H C** spreaders can be had equipped with a most efficient wide-spread attachment. This will spread smoothly and evenly to a width of 8 feet, or more, as desired. Yet it does this on a narrow box, convenient in stable, yard and field.

International Harvester spreaders are low, strong and durable, correctly designed, simple in beater and apron mechanism, with good traction, light draft and plenty of clearance.

Ask the local dealer who handles them to show you an **I H C** manure spreader. If he can't do it, drop us a line. We will send you a copy of our booklet, "Why You Should Use a Manure Spreader," and will tell you where you can see one. Drop us a card and we will do the rest, but—don't stop until you have seen an **I H C** spreader.

Confidence in Deciduous Fruits.

Naturally the fruit business of California, which is a world affair, is affected by the half-world war. The results of the war cannot increase competition in the world supply of fruits, but may open new opportunities.

The nursery trade is a very delicate barometer of the public attitude toward fruit planting, and it is widely interesting to know how the mercury stands. In their report to the California Association of Nurserymen, the committee on deciduous fruits, consisting of Max J. Crow, W. T. Kirkman, Jr., and D. J. Boone, made the following points:

Conditions appear favorable for fair prices for all deciduous fruits with the possible exception of dried peaches, which, as is well known, have been unprofitable to the growers for several years. In consequence, thousands of freestone peach trees have been grubbed out or worked over within the last two years. Notwithstanding, there has recently been considerable inquiry from prospective planters with the idea that the market will soon turn and that the man with a freestone peach orchard will really be the fortunate one.

Clingstone peach trees should sell better than freestone and there will probably be a fairly good demand notwithstanding the fact that the canneries are largely overstocked at this time. This is the result of inability to ship canned goods to European points as usual. However, there is a general tendency among the larger canning concerns to build new warehouses and store their product, expecting that there will be a tremendous demand for all food-stuffs as soon as the way is cleared for shipping into Europe.

The unsettled and very unsatisfactory condition of the wine market, caused by the war and the prohibition wave, should greatly stimulate fruit tree planting. Last season thousands of acres of vineyards were set to orchard, the trees being planted among the vines with the idea of retaining the vines until the trees come into bearing; and indications are that many more vineyards will be so planted this coming winter. Therefore, it is our opinion that the demand for trees suitable for this purpose will be quite heavy. Prunes and apricots seem to be the favorites for planting among vines and unless there is a bad slump in the prices of these two fruits, nurserymen may expect at least the usual demand for the trees.

The general impression is that almond and Bartlett pear will probably be our most valuable varieties, and that there will be a normal demand for trees of shipping plums, nectarines, figs, etc. Indications are for a light demand for grape vines of both table and wine sorts, though this may change within the next few months.

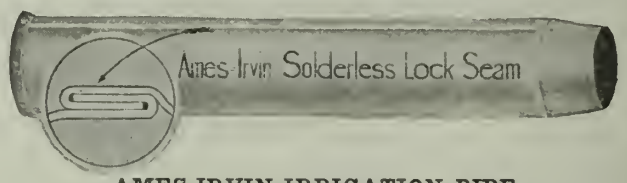
Summing up the present situation we can see no reason for discouragement among our members. While just at present the outlook is not particularly bright, yet conditions do not appear to be as bad at this time as they have been in some previous seasons and we would not be at all surprised to see the coming selling season turn out to be really very satisfactory to the nurseryman.

We feel that California orchardists have every reason to be entirely satisfied with their profits during the last decade; no other line of agriculture has averaged better anywhere in the world; and while the present outlook is far from satisfactory in some respects, yet the future was never so promising—there was never a better time to plant new orchards.

The orchardists of this state have an absolute monopoly on at least two of our most valuable fruits, the sun-cured prune and the apricot, for nowhere else in the U. S. can these fruits be grown and dried in competition with the California product. And every indication is for increased demand; the European production of prunes is bound to be seriously curtailed for a number of years after the present war is closed; our own population is increasing at the rate of about one million per year and the consumption of our dried fruits is increasing in proportion; new foreign markets are constantly being opened up; the Panama Canal will permit of placing our products on the European markets at a considerable saving in freights, and as soon as conditions become normal there is every reason to believe that the orchardist will receive better prices for his product than ever before.

Of course, the old, old cry "Overproduction," slaps the nurseryman in the face every so often. And yet it is an indisputable fact that our fruits are bringing better prices today than twenty years ago and it is also a fact that the planting of deciduous fruit trees in this state is scarcely more than keeping pace with the trees which are passing their day of profitable production.

KILLING WEEVILS IN BEANS.



To the Editor: I have heard that there is a method of killing weevils in beans with formaldehyde practiced in Ventura county. Will you tell us what it is?—Reader.

[Answered by W. B. Parker, Farm Adviser, Ventura.]

So far as I know there is no method of processing dried beans with formahldehyde which will protect them against insect attack. In the first place the weevils enter the beans in the field, are carried in sacks to the warehouse where they multiply very rapidly. Eggs are laid on the dry beans, and the larvae enter the beans; in a short time the infestation may become quite severe.

While in the government service I was working on the use of heat to kill the weevils in beans. The data is being completed by R. E. Campbell at Haywards. We constructed a machine which was to be placed at the end of the cleaning machine, and the beans when passed over this were raised to a temperature of from 145 to 150 degrees F. When they come out the weevils would probably be dead and the beans could be put into insect-free sacks, and stored in insect-free warehouses. Our experience led us to believe that 150 degrees, or thereabouts, was sufficient to kill all forms of the weevils in the beans. The germination of the bean was not affected by these temperatures.

Quicker Raisin Drying.

[Written for Pacific Rural Press.]

At the season of raisin drying, there are likely to be occasional showers which seriously reduce the value of the raisins. Time saved in drying them is therefore of great value.

When the advantages of a system are so obvious and the extra work required is so little, it is strange that not over half of the people in a district adopt that system.

Many of the raisin vineyards in San Joaquin valley are prepared for drying quickly, by throwing up a ridge running east and west along the north side of the space between rows. When trays are laid with one end on this ridge, they bridge the furrow, leaving considerable air space under them, and they present their surfaces covered with grapes squarely to the slanting rays of the sun, thus getting their maximum effect. The space centerly under the trays enables them to be picked up for turning, without picking up a handful of dirt.

A still better system for drying raisins quickly is to run a V-shaped clod crusher along the ridge to make a flat surface sloping southward as wide as the trays are long. This gets good and hot before the trays full of grapes are placed on it. This heat of the ground helps to dry the grapes from beneath, finishing them more evenly and quickly.

PAPER RAISIN DRYING TRAYS.

The cheapest equipment consistent with first-class results and economy of effort is the most profitable, because it reduces the losses of interest on investment and depreciation. These are not the only advantages of paper for raisin drying. Often enough wooden trays cannot be had when needed. More time is required to stack wooden trays in case of showers, than to roll up paper trays. The heat of the sand acts through the paper more quickly than through wood.

Tray paper is bought by the ream in bundles. A bunch of the sheets are laid on top of a wooden tray in the vineyard. The top sheet is lifted and some dry dust thrown under it to make it slide easily, later, when it is loaded with freshly picked grapes. The ground is usually smoothed with a clod crusher or sloped toward the south, in alternate rows, with a V-shaped smoother before picking begins. The loaded sheet is pulled sidewise from the pile of tray paper onto the smoothed sand and the next sheet dusted for its load. There is a little extra work in turning the raisins, for the sheet must be slipped back onto a wooden tray and then turned as usual. When the raisins are dumped into sweat boxes, the papers are thrown away, to be later burned with the prunings. This avoids loading wooden trays on a wagon, hauling them through the sand to a shed and stacking them for a year.

PEACH DRYING HELPED WORKERS.

"I am drying my peaches," says W. N. Woodson of Corning, "for I figure that the price cannot go much lower and if I hold them awhile I will get enough to pay the labor of drying and have something left for the fruit."

G. B. Abbott figured the same way, playing safe by offering folks work if they wanted to do it and wait for pay until he realized on the peaches. This many of them were willing to do. It was a good proposition even if the drying paid only the labor; for the folks wanted the work and there was very little danger that the labor would cost more than the peaches would bring.

PEACHES WASTING; TREES DECREASING.

As we have traveled up and down across the State, we have observed great quantities of peaches falling to the ground and rotting. Many orchards were allowed to overbear and the trees are broken into all sorts of pieces. Not only do the trees suffer from the broken limbs, but also from the sunburn to which the remaining bark is exposed. The fact that so many people are neglecting their orchards or pulling them out, and that so many are letting this crop go by the boards, makes it reasonable to expect that the holdover which has been used as a club these six or eight years since it began to exist will disappear this year and peach prices take on a more normal aspect next year.

R. C. Merryman, who has sold olives for three years on a ten-year contract, was told by his packer recently that they had half of last year's crop on hand and could not carry out their contract unless they could sell the olives. Mr. Merryman suggested this at the meeting of olive growers as an urgent reason why the growers should organize to develop the markets on which their own prosperity most depends.

Grafted trees have sent up many sprouts which should be cut off close now if not already looked after.

The hold-over of olives, about which we hear so much, consists mostly of the smaller undesirable sizes, according to R. L. Underhill, secretary of the California Ripe Olive Association.

Mechanical Power on the Farm.

[Written for Pacific Rural Press.]

SELF-PROPELLING WELL DRILL.

A well-boring outfit partly assembled from pieces of other machines is being used by A. O. Dokken of Colusa to put down a 300-foot well on the Tweed ranch in Glenn county.

A 16 h.p. Samson marine type engine is set on a 3x10 frame about 20 feet long, the front end of which rests on a single big wheel while the back end holding the 30-foot derrick rests on two wheels taken from some old tractor.

The machine is rigged to these wheels so than when it is not used in boring, it may be thrown in gear to propel itself and the whole outfit to the next job. Extra tools are loaded onto the wagon and hitched behind the outfit in moving.

On the Tweed ranch they were putting down a 16-inch casing and were boring out the clay over 100 feet deep at a very rapid rate. The casing is forced down by a hydraulic jack worked by a Keystone pump situated among the rigging. Mr. Dokken and one man run the outfit at a cost of $12 per 10-hour day for labor, oil, and 10 gallons of distillate. He has put down over 200 wells and never lost one. The outfit, including engine, jack, tools, derrick, and boring machine cost about $4000.

OLD CATERPILLAR ENGINE PUMPS.

His old 45 h.p. Caterpillar motor was too small to suit G. W. Gibson of Colusa county so he took it off and had a bigger one made. He mounted the old one on an I-beam frame big enough to hold the engine and a shaft from it 6 feet to a belt wheel 2 feet in diameter. This is connected to a 7-inch centrifugal pump by a vertical drive shaft held stiff by the timbers on which the engine frame rests, so that the engine frame may be jack-screwed forward or backward to loosen or tighten the belt. A jack against a post on the opposite side of the engine frame prevents it turning "catawampus."

The water is forced through 2000 feet of pipe to irrigate the alfalfa, etc., so the outlet pipe is about 16 inches in diameter to avoid friction of the water which would require more power. Though the well is 1100 feet deep, no water comes from below 600 feet and it rises to 50 feet below the surface.

Not all the power that could be developed by the motor is used because it is set to run only 320 revolutions per minute, though built for 550.

"We could run it still slower if we had a larger belt wheel on the engine, but had to take it off because we needed it elsewhere. Slow running is the life of the machine. Twenty-five gallons of distillate supply it for a day of 13 hours."

GRINDS AND CHOPS STOCK FEED.

Ground grain for calves, cows, pigs, and horses and chopped straw for the five horses are considered profitable by Mr. Tweed of Willows; but he lives several miles out of town and it would be extravagant to haul the grain thither for grinding.

A 5 h.p. electric motor runs a grinder by one belt which runs to a wheel above the line of another belt running to the straw chopper so that either one of them may be used without moving the motor, simply by removing the other belt.

NO HAND PUMPING FOR DAIRY.

The question of having fresh water for milk-cooling operations and for livestock is a serious one where the water has to be pumped by hand. But N. E. Mulick of Willows has a small International gas engine which forces water into a tank on a tower, whence it runs to the barnyard. Fresh water is also run to the separator room for cleaning purposes and for use on the milk cooler.

ON FENCING PUBLIC LANDS.

To the Editor: What is the law and court decisions regarding fencing government land not in the forest reserves? Is one allowed to fence across public domain and include a portion of same while fencing one's own land? Is one allowed to fence one's land (staying entirely on one's own property with the fence) which may include some public domain? Is one allowed to construct a "drift fence" which may keep others' cattle from the use of public domain? In other words, does the law look any differently on drift fences? Does one have to leave gates or lanes for public use across one's property for the use of stock in crossing to public domain, no such pass previously existing? Assuming you have a township plat before you or in mind, is the owner of secs. 1 and 11 compelled to allow an owner in sec. 2 a right of way across his land in or-

der that owner of sec. 2 may use sec. 12, which is public domain? — H. V. N., Red Bluff.

[Answered by J. D. Yelverton, chief of Field Service, U. S. General Land Office.]

To the Editor: Referring to the letter of H. V. N., Red Bluff, California, you are advised that Sec. 1 of the Act of February 25, 1885, 23 Stats. 321, provides:

"That all enclosures of any public lands in any state or territory of the United States heretofore or to be hereafter made, erected or constructed by any person, party, association or corporation, to any of which land included within the enclosure the person, party, association or corporation making or controlling the enclosure had no claim or color of title made or acquired in good faith or an asserted right thereto, by or under claim, made in good faith with a view to entry thereof at the proper land office under the general laws of the United States at the time any such enclosure was or shall be made, are hereby declared to be unlawful and the maintenance, erection, construction or control of any such enclosure is hereby forbidden and prohibited; and the assertion of a right to the exclusive use and occupancy of any part of the public lands of the United States in any State or any of the Territories of United States, without claim, color of title or asserted right as above specified as to enclosure, is likewise declared unlawful, and hereby prohibited."

Section 3 of the same Act provides:

"That no person by force, threats, intimidation or by any fencing or inclosing, or any other unlawful means, shall prevent or obstruct, or shall combine and confederate with others to prevent or obstruct any person from peaceably entering upon or establishing a settlement or residence on any tract of public land subject to settlement or entry under the public land laws of the United States, or shall prevent or obstruct free passage or transit over or through the public lands."

The courts have held that drift fences which prevent free access to the public lands are also unlawful.

The question of right of way over lands which are in private ownership is one over which the General Land Office has no jurisdiction. Such matters are for the local authorities to decide.

The ELECTRIC SIDE OF THE FENCE

is the side where the corn is *big* and the labor *little*.

G-E motors driving irrigation pumps mean *big* crops.

G-E motors driving farm and dairy machinery mean *little* labor in handling the big crops.

G-E motors will last a lifetime, give you no trouble and prove your most profitable investment.

A G-E motor will do the work of six men at less cost than the wages of one. Its first cost is less than one-third that of a good horse and it will do more than eight times the work in a day.

Booklet No. 3166 will show you how G-E motors will *increase* your *profits* and *lessen* your *labor*.

General Agricultural Review.

CITRUS AND SEMI-TROPICAL.

A banana plant in bearing is attracting much attention on the property of Mrs. Nellie Mott of Newcastle.

During the past season 1,434,236 packed boxes of oranges and lemons have been shipped out of Pomona Valley by the Exchange Packing House.

Plans are under consideration for the organization of an irrigation district comprising about 2000 acres in the orange land of the Thermalito colony of Butte county.

Tulare county oranges slightly infested with scale last year are seriously infested this year, and fumigation is practically universal, only fumigating machines being used.

It is announced that the Superior California Citrus Exchange will support the eight-to-one ruling of the United States Bureau of Chemistry in making shipments of citrus fruits.

Horticultural Commissioner Chas. Collins of Tulare county is authority for the statement that it was demonstrated beyond doubt last season that fumigation is the only practicable way of reaching fruit scale on the tree.

At the annual meeting of the Lindsay Packing House Company held recently, the following officers were elected: H. C. Morrison, president; G. V. Reed, vice-president and treasurer; T. E. Anderson, manager; R. E. Eddy, secretary.

The Mutual Orange Distributors' Association of southern California plan to erect eight new packing houses during the coming year at East Highlands, Sunny Slope, Duarte, Lindsay, Glendora, Naranjo, Yorba Linda, and San Fernando.

A local association of the California Fruit Growers' Exchange was recently organized with headquarters at Dinuba and a packing house at Sultana. C. C. Threlkelb was elected president and E. S. Scruggs, secretary. Its fifteen members control practically all of the citrus fruit in the Dinuba, Sultana, and Orosi districts.

A report collected from all the big eastern auction markets recently showed that for the June Valencias, the Exchange sold on all auctions 192,693 boxes, whose average price was $3.45. Other shippers during the same time sold 98,255, at an average price of $3.13. These oranges came from the same districts, were the same sizes, etc., as the Exchange oranges so that the difference of 32 cents per box is considered directly due to the uniform pack and the advertising of the Exchange brands, which are the "Sunkist" and "Red Ball" oranges. The report goes on to say that there was three to 46 cents a box difference between the Exchange advertised brands and others on the eastern auction markets during the six months from December to June, the higher price being always in favor of the Exchange.

DECIDUOUS FRUITS.

To date, 325 cars of pears have been shipped from El Dorado county.

Prune picking is well under way in Tulare county, and a bumper yield is expected.

To date, 450 cars of apples have been shipped from Pajaro Valley this season.

It is stated that Georgia ships practically twice as many peaches as any other state.

The Central California Cannery at Yuba City completed the season's pack on Sept. 16.

Many Kings county prune orchards are being pulled up on account of black knot on the roots.

The packing of prunes began on Sept. 20 at Chico; it is estimated that the district will produce 2500 tons this season.

W. A. Yerxa of Princeton is now harvesting his 40-acre prune crop, which he estimates will yield 240 tons, or six tons to the acre.

H. T. Davis, manager of the Corralitos Fruit Growers' Association of Watsonville, recently sold 90 cars in one lot to a San Francisco firm.

L. L. Hicok of Colusa says the prune crop in his vicinity is an average of former years, several orchards yielding from 4 to 5 tons to the acre.

The Nevada county pear shipping season is at an end; the season on the whole has been very profitable and growers have received good prices for their fruit.

The dried apricot crop in Orange county, according to a prominent grower, is cleaned up to within a nominal amount held by some half dozen growers. The price paid by buyers started with 4¾ cents a pound orchard run. But a few growers got 7 cents, the price reached last week. The average price paid there is probably close to 5¾ cents. With a small crop and a low price, every grower has been a loser.

GRAPES AND SMALL FRUITS.

Grape picking commenced Sept. 20th in the Napa Valley.

Mealy bug has been found on the vineyards of Kings county, injuring both grapes and vines.

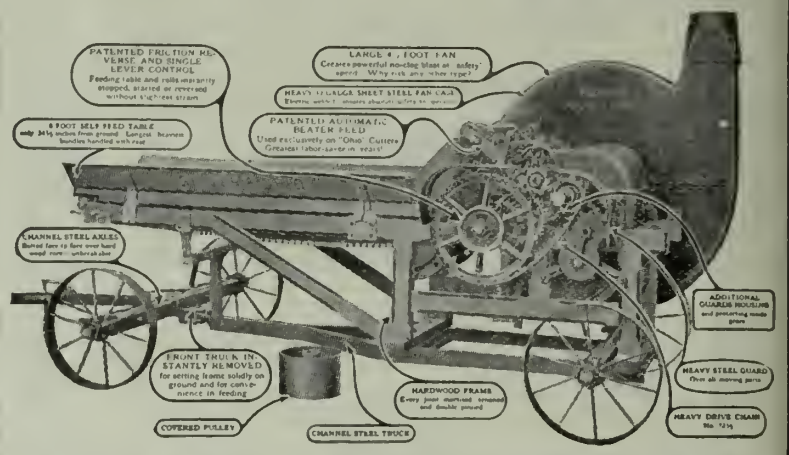
The present season is said to be the best in the history of the raisin industry in Colusa county.

The sum of $2001 was received in the east for the sale of the first car of straight Lodi Tokays.

It is stated that thousands of tons of wine grapes are being dried in the Fresno section to be used as hog feed.

A consular report gives the official estimate of the new currant crop in Greece as 130,000 tons, with the quality of the fruit medium.

A bunch of Thompson seedless grapes 16 inches long and 9 inches wide was recently picked from the M. K. Jones' vineyard near Del Rey for exhibit in the Chamber of Commerce at Sanger.



One arm 1¼ inches in diameter from an old vine in G. M. Flint's vineyard near Del Rey produced grapes and wood weighing 20 pounds, with very little wood growth beyond the last bunch.

A huge bunch of Thompson Seedless grapes was picked in the vineyard of J. W. Bale of Sutter county recently. It measured 18 inches in length, 33 inches in circumference, and weighed about 20 pounds.

C. W. Adams of Del Rey has a 60-acre vineyard 35 years old from which he harvested 87 tons in 1911, 87 in 1912, 60 in 1913, 45 in 1914, and was recently spreading trays for 100 tons of the 1915 crop.

It is reported that a fairly large percentage of the grapes in the

The "OHIO" Monarch Silo Filler with the DIRECT DRIVE

The most complete line of Feed Cutters built today. The Ohio Cutter is the only machine with drive pulley, cutting cylinder, Fan and Fly wheel on one shaft; there is no transfer of power from knife shaft to blower.

The machine here illustrated is made in five sizes—12, 15, 17, 19 and 22 inch throat, making it the largest capacity and most powerful feed cutter made.

A regular Base can be supplied if so desired.

THE JOHN DEERE PLOW CO. OF SAN FRANCISCO.

Get All the Water

Lack of water is not always the fault of the well—it is often the fault of the pump. No matter how good a well you have, if your pump is not right, if air leaks in around the shaft or if you have to tighten up the stuffing box till there's excessive friction, or if for any other reason your pump does not do efficient work—you cannot get the quantity of water your well should yield.

BEAN CENTRIFUGAL PUMPS

are built to get ALL the water.

The water-sealed stuffing-box prevents leakage of air and practically eliminates friction at this point. The automatic water-balance prevents end-thrust and does away with a lot more friction. And in many other ways Bean Centrifugal Pumps are built for downright efficient service.

Dinuba district that formerly were made into wine will he dried this season; they are mostly of the Malaga and Zinfandel varieties.

It is stated that the growing of currants on a commercial scale in the San Joaquin Valley is now practically assured as the result of efforts made by Geo. C. Husmann, pomologist, of the U. S. Dept. Agri. to interest growers in the industry.

The California Associated Raisin Company is making wine at the Parlier and St. George wineries, according to their agreement with the growers so that inferior grapes will not he made into raisins. So far, no definite plans have been made by the company to market the wine.

GRAIN AND FIELD CROPS.

Rice prospects in the section north of Live Oak are reported to he very promising at this time.

Sutter county growers have hegun harvesting their heans; the season's crop is estimated to be the largest on record.

Growers in the South Honcut District of Butte county expect an average rice crop this season of 70 sacks to the acre.

The Tweed Ranch near Willows is leveling land and sinking wells in preparation to sow a large acreage of rice next year.

J. J. Morris of Grimes, Colusa county, estimates his 75-acre field of Lady Washington beans at 25 to 30 sacks per acre.

Blackeye bean harvesting has just commenced in Colusa county; the crop is proving to be pretty fair considering the season.

A cannery for handling the surplus tomatoes raised there is under consideration for the Corral de Tierra section of Monterey county.

It is stated that buyers for alfalfa hay are coming in great numbers to the Los Molinos colony, many large orders being filled at $8.50 a ton.

As many as 12 tons of alfalfa have been cut from land that never received a drop of irrigation water in the vicinity of St. John, Glenn county, says R. T. Jones, a rancher of that place.

The Colusa county barley crop, according to A. E. Duncan, who did considerable threshing hetween Hamilton City and Princeton, was very light in both yield and weight, some sacks weighing only 60 pounds. A hot, dry wind caught it in the dough stage.

On account of the success thus far attained, the culture of beans in commercial quantities bids fair to become one of Tulare county's permanent industries. After experimenting with various varieties, the tepary has heen found the most adaptable to their conditions.

OLIVES AND NUTS.

The almond crop of Sutter county is reported light, about 60 per cent of normal being the estimate.

Mrs. Rosa Hann of Orland has found a new process for drying olives without the use of salt, making a very palatable article.

The Southern California Walnut Growers' Association voted to take no more members into their association after Sept. 25, and will announce prices for the season's crop on Sept. 30.

It is reported that some of the almond growers in western Yolo are establishing the industry of the manufacture of almond oil which is said to have a higher food value than olive oil.

The sale of 228 acres of land in the South Palermo district of Butte county to Messrs Weisman, Foley, and Woolf of San Francisco is reported; work of planting 100 acres of the land to olives will be commenced immediately.

A prominent grower reports that Orange county is well started on harvesting walnuts, and the Association packing houses opened on Sept. 20 to receive the crop. This will be lighter than late expectations, and not over two-thirds of early indications. There are many culls from the blight, and not a few from the codling moth. The sound nuts, however, will he of exceptional quality.

MISCELLANEOUS.

The Merced County Fair opens on Sept. 23, and will run for two days.

The Oregon State Fair will he held at Salem the week heginning Sept. 27.

P. F. Richardson of the Farmersville section of Tulare county recently shipped a carload of honey from his apiary to Kansas City.

Strength

A distinctive feature of the Yuba Ball Tread Tractor is the tread. It is of manganese steel—strong, durable, and highly resistant to abrasive wear.

The Yuba Ball Tread Tractor is built throughout to withstand more than ordinary wear and tear. It is able to resist the hardest kind of punishment, because expensive steels and skilled workmanship are used in the construction of it.

Money for Beef Growing.

The Montana bankers get a straight talk about their attitude toward money for live stock growing. Why a man should be helped to turn feed into food and not have his security frowned upon. A good part of the talk fits California bankers at this moment.

Before the Montana Bankers' association this month, A. E. DeRicqles, general manager of the American Live Stock and Loan Co., today delivered an address on "Live Stock As a Security in Its Relation to General Business." In part he said:

"It may interest some of you, who are not familiar with the question, to know that 160 acres of alfalfa, producing three tons to the acre, will winter and take care of a number of cattle sufficient to eat the grass from 10,000 acres of the ordinary summer-grazing lands of Montana. This would mean about 400 cattle and twenty horses for the various operations in handling them. Now, it is a great deal better to produce such a property and utilize the grazing land than to confine oneself to producing 160 acres of wheat. To market these cattle, it is not necessary to be on the railroad; but after you get a certain distance from the railway with a wheat crop, the haul proposition enters into it, and grain alone does not enable you to utilize the rough lands in the neighborhood for pasture. This does not mean that I am a champion of the proposition of loaning everyone who has 160 acres of alfalfa sufficient money to buy 400 cattle and twenty horses, but this statement is made to show what it is possible to do, and what is being done continually in this country.

Financial Problem Serious.—In these new states most of the problems of the people are financial ones. So we find in some sections great quantities of hay and other feeds produced; and people are no better off than before they had it, because they have no means of securing anything to eat it. I know of thousands of tons of hay that have been allowed to go almost to ruin and waste in the states of Wyoming and Montana during the last year, because those who produced it could not get money with which to buy live stock. It should be an established situation that the man who owns his own place and raises feed should be able to borrow at a reasonable rate of interest, enough money to buy sufficient live stock to eat what he has produced. If such people could get this money when they need it, in the fall of the year, and in that way buy enough cattle or sheep to consume their crops, such operations would go a long way toward keeping railroad earnings up to normal, and do away with the present depressions in the big cities. It will do no good to loan cheap money in New York to a big merchant or manufacturer, if the man who consumes what the merchant in New York has to sell, and who may live away out in Montana, cannot get money to enable him to market what he produces.

Putting Out Much Money.—"At this time a great deal of money is being put out on live stock, because money is cheap, and people cannot find opportunities at home to loan it. This is not a good situation, because, as soon as money tightens up, this money will likely be taken out of live stock paper, and some one will get hurt. It is my belief that the best way to put out money on live stock is through the local small country banks in the vicinity of where the live stock is produced and being fed. This in event of the loaner not having an intimate acquaintance with the borrower. It is much better for the borrower, even though he may have to pay a little more interest, to get his money through his home bank than to seek outside and strange sources. Money can be loaned at a lower rate of interest through the home bank than it can be direct.

Borrowers and Time Money.—"At this time the borrowers do not object to the six-month maturity period; for they realize the restrictions of the federal reserve banks, and also that banks in the cities do not want to buy paper that runs longer than that, and it gives the one who is loaning the money an opportunity to keep track of the security, especially as regards winter preparations. However, even those in the banking business who claim to be well informed about this matter make very awkward rulings sometimes on paper offered to them. For example, we had one big bank, which was very willing to take a lot of our paper, send back a loan of $50,000 that had $100,000 security back of it, besides good indorsements, with the statement that it did not wish to carry it because it was not "self-liquidating." This loan included a lot of young steers which are sold for feeders every year at a big price, and the bank thought that perhaps such a man should make beef steers out of his yearlings, or turn them into some form of quickly convertible security yet unknown to live stock owners. Another bank, with wide information about live stock, absolutely turned down some paper that had three-to-one security, made by one of the best men in the West, secured by purebred cattle; saying that was not the kind of paper it could carry—it wanted something that could go to market and be sold as beef cattle.

What the Grower Needs.—"If you are going to do something for the benefit of the business of the country, make up your minds to help in this matter of financing the live stock people of the West; and that you are not going to ask a man who is raising yearlings to give you beef steers for security; and that you will not turn down men who have worked a lifetime to build up a fine herd of thoroughbred Hereford cattle, for the purpose of improving the herds of the West; but that you will look favorably on his paper and take care of some of it, if offered to you. Endless lectures and demonstrations have been given all over the country in connection with the best methods of handling live stock, and the proper kind to buy and handle; and people have been lectured by the hour in connection with improving their herds. Now, all of this goes for nothing if the man who is producing the very kind of breeding cattle talked about is turned down in his financial undertaking."

California's Opportunity for Dairymen.

[Written for Pacific Rural Press.]

THE LOSS OF SKIMMING CREAM THIN.

Few if any dairymen would purposely throw good skim milk on the ground or in the irrigation ditch, yet a system fully as wasteful is being practiced daily by a great majority of dairymen who sell butterfat to the creameries and its effect is more far-reaching than most of them suspect.

The loss is directly attributable to the practice of adjusting the separator to skim milk thin rather than heavy, it apparently being the notion of many dairymen that by so doing a larger per cent of the fat in the milk is secured.

That this is not true is established by numerous experiments; in fact, it has been proven that there is less fat left in skim milk which was skimmed heavy than when thin skimming was practiced. The greatest loss, however, is in the skim milk which is wasted, or rather given to the creamery.

An example of this was recently seen on a dairy where the separator was set to skim 17 per cent cream. This meant that in every hundred pounds of cream sold there was approximately 83 pounds of skim milk. On a neighboring dairy the separator was set to skim 34 per cent cream, thus cutting down the skim milk to 66 pounds in every hundred pounds of cream sold. On the first mentioned dairy there was being delivered 588 pounds of skim milk with each 100 pounds of fat, while on the latter named one but 294 pounds was delivered. This meant a difference of 294 pounds or over 36 gallons of skim milk to every 100 pounds of fat sold in favor of the dairyman who skimmed thin. As both dairies were selling about 30 pounds of fat a day this meant a monthly difference of approximately 2700 pounds of skim milk, or at a valuation of 25 cents a hundred, $6.75 a month or $81 a year. On large dairies this loss would of course be very much greater.

The loss of the skim milk as a hog, calf and chicken food was not, however, the only loss. Both dairymen were shipping by rail to the creamery and were paying the express charges.

In this as with the skim milk factor the dairyman who was skimming thin was the gainer as he paid express on 2700 pounds less a month than his neighbor. Then, too, his cream could be kept in good condition longer because it is not the fat that sours quickly but the skim milk in the cream, and the more skim milk the quicker fermentation starts. Where cream is graded, as it is by some few creamerymen at this time, the test is an important point and low-testing cream is seldom graded as A grade.

The above reasons, together with the fact that fewer cans and cooling tanks are needed for thick skimming than for thin skimming, show that the annual loss to the dairymen of this State from this source alone is sufficiently large to warrant immediate action on the part of the dairymen to remedy the situation.

SeriouslyNeeded

A letter received from W. H. Saylor, editor of the Pacific Dairy Review, speaks very, very highly of our

"California Hog Book"
By W. S. Guilford.

Here are excerpts from the letter: "I have received copy of the 'California Hog Book,' which I assure you is highly appreciated. I am reading it page by page and have worked up to about half of it, and find it both interesting and instructive. I am including it in our list of dairy and farm books, and hope we can help to swell the sales of the book that imparts a class of knowledge that is seriously needed among California farmers.

"Wm. H. Saylor."

This book contains 256 pages of text, besides many full page illustrations, is bound in cloth, and will be sent postpaid for $2 per copy.

Mutton Sheep for Small Farmers.

[Written for Pacific Rural Press.]

PURE SHROP SIRES IN FIFTEEN YEARS.

Four Merino ewe lambs left at John Wannop's gate near Chico one day 15 years ago became his wife's pets. Mr. Wannop had raised sheep in the old country in the years gone by, and even yet not all of the bur has gone from his speech.

The thrifty growth of the lambs suggested the buying of a purebred Shropshire buck, and the offspring has been bred in each of the succeeding years to a different purebred Shropshire buck. While the offspring of his ewes can never be registered as purebreds, they are very high grade and are fine animals, due to the persistent use of purebred sires.

By sheltering the ewes every night about lambing time and attending to them himself, Mr. Wannop has raised 55 lambs this year from 45 ewes, 122 per cent, having lost only five. This, too, from ewes nearly half of which were raising their first lambs. He prefers not to have twins the first time because one of them is pretty sure to be a weakling.

Lambs Need Shelter.—One day about two years ago, Mr. Wannop had to be away from home one bright afternoon and evening. It was so late when he got home that he did not put the ewes inside as usual. About 2 a. m. a cold rain started and in the morning he found dead, 10 fine, big lambs dropped during the night.

Lambs are now bred to come in January or February, or "earlier if one can care for them in lambing," and rams are sold at 8 or 9 months old for breeding at about $20 each.

When visited in August, he had 25 pretty young rams on alfalfa pasture from which three crops had been cut without irrigation before the sheep were turned on.

Young Bucks, Easier Lambing.—"I expect to sell all of these young rams by October 1; but if I do not I will keep them over till next year," said Mr. Wannop, independently. "Many people prefer bucks over a year old, but I prefer them younger rather than older. With those about 8 months old, there is no trouble in lambing; but if the buck is over a year old the lambs have too big heads and many must be pulled from their mothers."

His $50 buck bought this year from Bishop Bros. of San Ramon was turned out with the 45 ewes and 25 ewe lambs in August. The ewes at that time were on the pasture most of which was Napa thistle, and were keeping fat.

A couple of weeks before lambing, they are shut up and fed a little grain and bran to loosen them up so that they will have less trouble in lambing; mothers with lambs are turned into pasture and allowed to take care of themselves. After weaning, Mr. Wannop turns them onto alfalfa, but he says they will thrive on any other kind of pasture, too. Some fields he has on which grain grows one year and weeds are allowed to grow the next year, making good sheep pasture.

Ten Acres, 50 Sheep.—"You can run sheep where you can't run anything else, but they do better if they have good feed all the time. Ten acres of alfalfa will support 50 head."

Shearing comes in April and again in late August; the weather is too hot to hold the wool on a year, and anyhow the fleece gets ragged and begins to pull out around the neck.

"In the old country we used to run sheep through a water-hole about four times to clean the wool before shearing. I believe in time we must all produce clean wool here in America."

There has never been a particle of disease and no trouble except pulling an occasional foxtail out of the eye. The sheep are kept as much as possible away from the foxtail.

CULL SWEET POTATOES.

[Written for Pacific Rural Press.]

Hogs to eat cull sweet potatoes are a paying proposition in the San Joaquin valley. The culls would be good for nothing else, but they are as valuable as corn, according to Geo. F. Woods of Ceres. And crooknecked squash is just as good. He started to fatten a lot of a dozen hogs weighing about 125 pounds Sept. 1 last year. On Nov. 20, he turned them off at the age of 10 months and 4 days, averaging 277 pounds. They had been raised on nothing but alfalfa and buttermilk. During the feeding period, they received about 200 gallons of buttermilk a week and all the cull sweet potatoes and crookneck squash they would eat. Several butchers, thinking they were fed nothing much but buttermilk, estimated their weight at 220 to 237½ pounds, but all concerned were much surprised when the hogs were weighed. Cull sweet potatoes cost $2.50 to $3 per ton according to their distance from good roads, while squash are raised beside the pig pen—125 tons last year from 2½ acres, besides what were thrown directly to the hogs.

SOUR HOGPEN IN CALIFORNIA.

[Written for Pacific Rural Press.]

Once, when a boy, a hog pen some distance off intruded its unwelcome presence on our attention because it was so sour that it is strange the pigs could exist in such atmosphere.

We have thought that the days of those conditions had gone by, and that certainly we would not find them here in California. It was, however, only recently that we were unfortunate enough to be stopped near a California hogpen for a few minutes while interviewing a farmer.

The hogpen was built of four wooden fence panels 18 feet long and contained six shoats. Hay was thrown in one corner as an island of refuge, for the pen was deep in the same kind of sour mud, though with a very little effort the panel fences could have been moved to dry, clean, sweet ground. Our head ached for some time after leaving the place.

A creamery is under consideration for Corning.

Otto McClure of Modesto reports lots of inquiries for female Holsteins.

Chas. Lenard of Glenn has increased his registered Jersey herd to 62 head.

Considerable activity in silo building is being shown at this time by the dairymen of Gridley.

J. A. Youngreen of Orland is going into Oregon in a few days to buy a few carloads of milk cows.

Dairymen were paid $4500 for cream delivered to the Exeter Creamery for the month ending Sept. 15.

The proprietors of the Lawson Ranch near Woodland announce an auction sale of all their dairy cattle on Oct. 2.

The various creameries of Kings county paid dairymen $165,000 for cream delivered during August, an increase of several thousand dollars over the preceding month.

The Good Luck Creamery and the Dairymen's Co-operative Creamery Association of Tulare county paid out $56,981.90 for cream delivered during the month of August.

A 200-ton, reinforced continuous door, concrete silo has just recently been built by H. F. Harrold on his ranch near Orland at a cost of $700. The walls are 8 inches thick.

Southern breeders bought heavily at the recent Hanford dispersal sales. C. W. Anderson of Burbank bought 11; Stalder Bros. of Riverside also bought 11, at prices averaging well over $200.

The Florendale Dairy of Grimes is producing very high-class ice cream and butter and selling them on the local market. Lee Mumma, the manager and owner, believes in selling a finished product.

H. F. Harrold of Orland has received word that Mabel De Kol Ormsby, dam of his herd sire, King Pontiac Order (a son of King of the Pontiacs), has made a record of 32 pounds butter in seven days.

Roeber Bros. of Delevan have just purchased from the J. S. Gibson Co. of Williams, Clifden Jetze of Oakwood, whose sire's dam is half sister to eight cows whose butter record averaged 875 pounds in one year.

E. C. Crumley, official tester for the new San Diego Cow Testing Association, reports that his efforts are meeting with success and that from present indications, before many months it will be necessary to hire an assistant tester and enlarge the Association.

C. G. McFarland of the Willowwood Jersey Farm of Tulare has recently completed some register of merit work. Philadelphia's Glory Zella finished a year's record May 31 of 631 pounds of butter at 11 years old. She has been re-entered for a still greater record.

Promoters of a milk-canning plant have been interviewing dairymen in Sutter and Yuba counties in an effort to learn whether it would be feasible to establish such a plant at Sacramento, using 5000 gallons of milk daily. It is said that the dairymen are lending their support to the proposition.

C. C. Lester of Gilroy, who has 60 purebred Holsteins in the Sacramento consignment sale next month, points out the only advantage of having grade stock on the ranch. He expects to stock his ranch with grades, stating that if they are injured by the abuse of hired help, the loss will not be so great. He has 175 grades now on hand.

Stalder Bros. of Riverside bought their bunch of heifers at the Hanford sale principally because they have a bull, Prince Aralia Walker out of Aralia De Kol 3rd (a daughter of Aralia De Kol), and sired by Prince Gelsche Walker. They figure that the use of the bull on these females will produce some very high testing animals. They have 15 heifer calves from him and will begin testing next spring.

The Lucerne Cream & Butter Company of Hanford and the Los Angeles Creamery Company also, in their factory at Hanford, commenced grading cream July 1. The former pays two cents premium for "A" grade cream containing 30 per cent butterfat or more. The latter pays the same premium on the butterfat test and a premium of five cents over the "A" grade for sweet cream delivered at Lemoore station.

H. H. Sisson of Willits reports the sale of two young Holstein bulls—one, Fobes Netherland Homestead, whose sire was De Kol Fobes Homestead 6th No. 106925 and whose dam was Hazeltine Mechthilde Netherland No. 223906, to John Hooper of San Francisco; the other, Count De Kol Homestead, whose sire was the same and whose dam was Miss Piebe De Kol Colantha No. 199519, to Chas. Underhill of Sherwood, Mendocino county.

The Visalia Co-operative Creamery started five years ago in competition with the creamery which had all the business there. This Co-operative Creamery started last May to pay different prices for different grades of cream; two cents less for that testing under 30 per cent butterfat and one cent extra, besides omitting charges for hauling, on sweet cream delivered by the patrons. Only one patron has been lost, though many cans of cream have been and some are still being, refused.

HORSES AND SWINE.

Four registered Duroc-Jersey sows owned by T. B. Scribner of Orland farrowed 64 pigs.

J. L. Mendenhall of Williams says that Shetland ponies sell faster than he can raise them.

W. L. Merrill of Colusa, a young Holstein breeder, finds registered Poland-Chinas pay as a side line.

The Berkshire sow R. C. Hannon of Corning sent to the Redding Fair took second prize as a sow under one year.

W. F. Bernstein of Hanford will exhibit 40 Poland-Chinas at the Panama-Pacific Exposition; many of these are young stock.

Ray C. Hannon of Corning finds purebred hogs make the gains; he has one young Berkshire sow that at ten months old weighs 350 pounds.

An estimate places the number of horses in the United States at the present time at approximately 21,000,000 and the number of mules at 4,000,000.

"Raising Berkshires and grain farming means lots of hard work," says Chas. Goodman of Williams. He adds, "They are a money-making combination."

Forty growing pigs from six young sows is increasing the registered Duroc-Jersey population on the Reed & Wychoff ranch close to Butte City at a rapid rate.

Slocum & Son of Willows, recently sold two registered Duroc-Jersey boars—one going to F. B. Scribner and the other to A. H. Bagnham, both of Orland.

J. R. Carrico of Orland finds that he can produce pork much cheaper with his purebred Durocs than with common stock. He has 150 head of hogs on the ranch.

M. Bassett of Hanford will send to the Panama-Pacific Exposition a carlot of pigs farrowed last November, now weighing 300 pounds. He will also send 16 for the breeding classes and six barrows.

It is reported that M. Bassett of Hanford will show his grand champion stallion, Ithos, at the Panama-Pacific Exposition; also that W. G. Morgan will exhibit his Belgian draft stallion.

F. C. Clark states that he will hold at his ranch, northeast of Willows, a dispersion sale of all his farming tools, horses, and other stock. Included in this sale are 46 head of registered Berkshire hogs, the foundation stock of which were purchased by Mr. Clark from the Brookline Stock Farm of Aurora, Ill.

The Poland-China sale at Hanford was called off because the State Association wanted to include all breeds in the sale, while the Hanford Poland-China breeders feared that such a mixture of breeds would gen-

BEWARE OF POORLY MADE HORSE COLLARS

More shoulders are being ruined by poorly-constructed collars than by the work the animals are doing.

W. DAVIS & SONS' FELTFACE COLLARS are guaranteed to prevent sore shoulders.

Look for the felt at the edge of the stitching.

Made to sell as follows:

FELTFACE, medium draft, $5.00
FELTFACE, heavy draft... 6.00

If your dealer does not have them, we will tell you where they are to be had, or send direct if no dealer is within reach.

Our CUSHION COLLAR, a canvas and leather Boston Team Collar, is now to be had for $3.00.

GRANDSONS OF TILLY ALCARTRA

At Prices within Reach of Every Breeder and Dairyman.

A Grandson of Tilly Alcartra.

We have several splendid grandsons of this now famous cow which we can deliver to you at prices which will suit the pocketbooks of every dairyman wishing to improve the quality of his herd, whether it be a grade or pure-bred herd. These bulls are sired by our herd bull, Prince Alcartra Korndyke and out of A. R. O. cows, and are the only living grandsons of a cow having a record of over 30,000 pounds of milk in a year. Such an opportunity for increasing production has never been offered DAIRYMEN AND BREEDERS in California, price and quality considered. Buy one of these bulls and solve your low production problem. erate so much discussion as to detract attention from the stock on sale.

W. H. Ginn & Son of Corcoran bought two purebred Duroc sows about three years old two years ago this fall, costing $100, already bred to Colonel Chief. Since then he has bought no females at all, but has sold $335 worth of breeding stock, $100 worth of pork, and has 120 head left. It is not so hard to get into the purebred hog game extensively.

Last fall Arthur H. Brinton of Woodland attended the Illinois State Fair and Berkshire Congress and purchased the boar, Symboleer's Duke 196366, by Symboleer 5th. The latter animal was Grand Champion of the Berkshire Congress Show of 1913. Symboleer's Star, a brother to Symboleer's Duke, was Junior Champion of the Berkshire Congress Show 1914. Symboleer's Duke weighed 220 pounds at six months of age and 450 pounds at 12 months. To mate with this boar, he selected 8 young sows of the same type—all sired by prize winning boars or out of sows with good records. Several of these sows are by Baron Duke 170th, Grand Champion of the Berkshire Congress Show of 1911. From these matings he now has a choice lot of youngsters ready for delivery.

CATTLE AND SHEEP.

Z. T. Blankenship of Tulare county is looking for a purebred Hampshire ram.

E. F. Parks of Red Bluff is selling off all his purebred Shropshires and will use crossbreds instead.

Cokely & Murphy recently brought 2900 head of sheep from Currie, Nev., to their ranch in Yolo county.

Twenty head of beef cattle were recently purchased by C. P. Smith of Ukiah from M. C. Briggs and J. H. Sweeney of Potter Valley.

Twenty-eight cars of sheep were recently shipped by J. E. Noble of Winnemucca, Nev., to the Western Meat Company of San Francisco.

Chas. Kimble of Hanford says that we must keep small bands of sheep on small farms and the sooner that condition becomes general, the better.

AMERICAN BERKSHIRE CONGRESS.

A letter from F. S. Springer, Sec'y of the American Berkshire Association, states that the Berkshire Congress dates have been changed to Nov. 2 and 3 at the Panama-Pacific Exposition, San Francisco. Berkshire judging will take place on Nov. 4 and 5; and the Congress Sale of Berkshires will be held on the 6th, of which we will have more to say later. Papers will be read at the Congress by prominent breeders as follows: President's Address, A. H. Tryon, Willoughby, O.; Reminiscences, N. H. Gentry, Sedalia, Mo.; Seed Hogs, W. S. Corsa, White Hall, Ill.; Hog Cholera, J. L. Thatcher, Riverside, Cal.; Value of Inheritance in the Breeding Industry, Prof. C. F. Curtiss, Ames, Iowa; From the Atlantic to the Pacific, J. H. Dodge, Lowell, Mass.; Berkshire Conditions in the West, W. M. Carruthers, San Francisco; Relations of the Seller and Buyer, Chas. M. Talmadge, Newport, Wash.; Berkshire Type-Demonstration with Live Animals, F. A. Scott, Belleville, Ill.

CALIFORNIA DRAFT HORSE BREEDERS' ASSOCIATION.

A letter from Prof. J. I. Thompson, Sec'y. of the California Draft Horse Breeders' Assn., states that the annual meeting of the Association will be held in Congress Hall in the Exposition Grounds, San Francsco Oct. 1, at 5:00 o'clock p. m. At this time the annual report of the President and Secretary will be given, and besides the regular business meeting a general discussion of the draft horse business and its future will take place. At 7:00 p. m. a banquet will be held at the Stewart Hotel, together with the following program: "The Draft Horse," by John Truman, President Truman Pioneer Stud Farm; "Draft Horse Breeding," by Samuel Bell, President American Belgian Horse Association; "The Horse and its Relation to Agriculture," by C. F. Curtis, Dean Iowa State College of Agriculture.

SWINE.

I HAVE SOME EXTRA GOOD BOARS about one year old, now ready for service. These boars are the Big Type; strictly high class and fit to head any herd anywhere. They are large and have splendid length, depth and thickness. I also have some March pigs that are among the very choicest young boars that I have ever owned. Visitors say they are the best they ever saw anywhere. I also have some of the best weanling boars that it has ever been my pleasure to see. They have the size, the hams, the shoulders, the strong backs, the length and depth of body, with plenty of smoothness and mellowness—in fact, they have two good ends and a good middle. All the above-mentioned young boars are sired by my great herd boar Iowa Wonder, who is a son of A Wonder, the greatest Poland China boar living or dead. Their dams are all strictly first class, either directly from the "corn belt," or from sires and dams from the "corn belt." On account of extra demand I have had for this stock, I have no females for sale at present. Yours for the big type, Geo. A. Smith, Corcoran, Cal.

BILLIKEN HERD of pedigreed O. I. C. Swine; weaned pigs of both sexes for immediate shipment; pairs and trios mated, not akin. All from big type stock of extra heavy bone. Immunized against hog cholera, crated and shipped free. Write for descriptive circular and price list. C. B. Cunningham, Mills, Sacramento County, California.

O. I. C. SWINE—Poor health is the reason for this offer. Will sell my herd of pure-bred O. I. C. Swine at prices that will turn them quick. Pigs two to eight months old, either sex. Write me for special prices. Every hog registered. G. H. Dubois, Box 13, San Martin, Cal.

BLUE-RIBBON HERD DUROC-JERSEY HOGS—Bred Gilts a specialty. 15 bred now. 20 ready to breed. Sires and dams win all blue ribbons 1912, 1913, 1914 State fairs. 15 first, 13 seconds, 6 thirds, 7 fourths, 1 fifth. Will show 1915. For prices, write John P. Daggs, Modesto, Cal.

BERKSHIRES—Headed by Bandmaster 2nd, junior champion Iowa State Fair. My females were winners at Iowa, Wisconsin and Minnesota State Fairs. Farm at San Mateo. Address W. M. Caruthers, 218 Hearst Bldg., San Francisco.

ROSS' DUROCS—90 little fellows, farrowed since first of September. Will book orders for November delivery. Foundation stock from Daggs and Johnson herds. R. J. Ross, Route B, Modesto.

[Answered by Dr. H. B. Wintringham, Petaluma, Cal.]

CALF DIARRHOEA.

To the Editor: I have calves which suck the cows. They also have the running of the bowels so bad that they die from it. Can you tell me what is the cause and wbat can be done for it?—H. O., Gardnerville, Nev.

[Your trouble is white diarrhoea. Give the calves two 30-grain tablets sulpho-carbolates three times a day; also paint the navels of all new born calves with tincture of iodine as soon as possible.

HOGS' FEET SORE.

To the Editor: I have several hogs that seem to have sore feet. I feed mostly skim milk, a little middlings mixed with it. Other hogs I have fed in the same way never acted like that. Can you tell me the cause and cure?—W. J. W., Lemoore.

[This is foot rot due to the bacillus necrophorus. Make the animals stand in a 2 per cent solution liquor cresolis compositus for 5 or 10 minutes each day for 6 or 7 days.]

NON-CONCEPTION.

To the Edltor: I have a registered Duroc-Jersey sow, five years old, that will not get with pig. She comes in heat regular to tbe day. I bave bred her four times and she is in again. She runs on alfalfa pasture and gets two pounds ground barley and half a pound tankage per day. Can you tell me what to do to make her breed? She is a very valuable sow, the mother of the Grand Champion sow and other prize winners at the State fair last year.—E. L., Ceres.

[Give this sow 1-12 grain yohimbine three times a day for at least two weeks.]

GARGET.

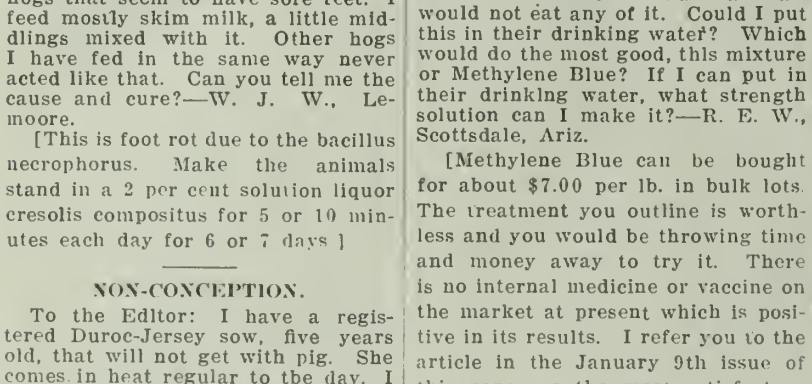
To the Editor: My cow has one side of her udder very hard She gives no, or very little, milk out of it. She has been fresh only six weeks. Is there any danger using the milk from the other two teats? The two on the right are the ones that give no milk. I would like very much to know what I can do.—M H. B., Pleasant Grove.

[This is Garget. Look up back numbers of this paper for treatment.

CONTAGIOUS ABORTION.

To the Eidtor: I am baving little trouble with contagious abortion, or at least I believe it to be such. I would like to treat my herd of one hundred cows and heifers in the most beneficial way, but hav not money enough to give them a very costly treatment. I have read your different articles on this subject and decided to give them a treatment of Methylene Blue. A local druggist charged me $7.50 for 100 tablets (30 grain). Directions to give two to four tablets once daily for a week. Repeat this treatment after intervals of four weeks until three treatments have been given. This would take lots of time as well as money to give. Did not the druggist charge too much for the Methylene Blue? What would I be able to get it for? Could not I get Methylene Blue in a powdered form and put it in their drinking troughs? We tried one mixture recommended by the Arizona Agr. Extension Service. Our animals would not eat any of it. Could I put this in their drinking water? Which would do the most good, this mixture or Methylene Blue? If I can put in their drinking water, what strength solution can I make it?—R. E. W., Scottsdale, Ariz.

[Methylene Blue can be bought for about $7.00 per lb. in bulk lots. The treatment you outline is worthless and you would be throwing time and money away to try it. There is no internal medicine or vaccine on the market at present which is positive in its results. I refer you to the article in the January 9th issue of this paper as the most satisfactory method of combating this trouble at present.]



NON-CONCEPTION.

To the Editor: I have a Jersey cow which had her fifth calf last April. I have since bred her four times, but have not succeeded in getting her with calf. Have had no abortion in my herd. Have my own bull and breed no outside stock. Four other cows which calved since th one mentioned were bred but once and are anaprently with calf. Is there anything I can do in sucb a case? The cow comes in heat regularly.

Have a heifer which calved May 24, and have had no evidences that she has been in heat since so tbat she could be bred. Is there any way besides her disposition and attitude toward other cows by which one can judge when a cow comes in heat?—N. Y. Z., Hughson.

[Constant douching with bicarbonate of soda, 2 oz. to tbe gallon of water, at body temperature daily, is the best means of overcoming this cow's trouble and this may take a long time in bringing results.

Give the heifer two drachms iron phosphate daily. Her disposition is the best index to her period of heat.]

Relatives of Noted Produ cers.

Pacific Rural Press: When raising stock one always tries to get the best. Why not get Holsteins? In my consignment in the fall sale I am offering some very fine animals, something that will be an honor to any herd.

A daughter of Arcady Pontiac Wayne Hengerweld who has 13 A. R. O. Daughters; she has an A. R. O. record also. Some choice young heifers of Arcady Pontiac Wayne Hengerwold and bred to my Jr. herd sire Judge Hengerweld De Kol 6th a son of Judge Hengerveld De Kol who has 14 A. R. O. daughters, one the world's champion senior 3 year old. The cows I am offering are related to such sires as Juliana King of Riverside, Ignara De Kol and Paul De Kol, all noted sires of the breed.—R. F. Guerin, Visalia.

King Segis Pontiac Emperor

Will be sold at

The Combination Sale, Sacramento, Cal.

OCT. 6th and 7th

MR. BREEDER—Do you realize that the reputation and success of your herd depends very largely upon the sire that you use?

Do you realize that KING SEGIS PONTIAC EMPEROR has no superior in respect to type and breeding—that he has two sons and a grandson now in service in our herd, which are not for sale at any price—that his reputation as a sire has already been well established—that his sons have found ready sale at $500.00 to $2000.00, and that a number of his daughters are yet to be tested in our herd, as well as many of his granddaughters and near relatives?

Consider what it would mean to place this great sire at the head of your herd, and come to Sacramento on October 6th and 7th prepared to buy him.

Successfully Preventing Hog Cholera.

(Continued from page 289.)

numbers that hogs actually get sick, wideawake farmers give all those which are not visibly affected the serum treatment, which has been perfected to a stage in which qualified veterinarians can administer it with safety to prevent the sickening of exposed animals either temporarily or permanently. One man in Solano county ordered enough serum C. O. D. to vaccinate his endangered herd. The charges were $70, and he had the serum returned. He lost all but 14 hogs out of 70. Englefelt and Stewart of Glenn county have all of their sows permanently immunized.

Preventing Recurrence of Spread.—The most effective means of preventing spread of cholera practicable at present is by quarantining sick herds. This is practiced in several counties, including Imperial, Merced, Yolo, and others.

The quarantine provides that the infected places shall be placarded, no dogs or other animals shall be allowed to run loose, hogs shall not be allowed in irrigation ditches, all dead animals shall be cremated or buried deeply (usually with quicklime), and the places disinfected after the outbreak is over One hog man lost one herd after another by replacing them on the same place and allowing each successive herd access to the same strawstack. Yards must be thoroughly treated with quicklime or coal tar disinfectants, buildings cleaned thoroughly and well sprayed with the same.

In Merced county last year some 30,000 hogs died of cholera. Up to the middle of September this year only 75 are known to have died. Last year the Doctor would drive over the county and find dead carcasses all along the roads and in irrigation ditches often with pieces of wire around their legs, which indicated that they had been dragged into the ditches.

"But what could I do?" says the Doctor. "There were no marks on the hogs by which I could prove who did it, and the guilty parties would swear that some one else had done it or that the hogs had drowned." Nevertheless, his rigid enforcement of the quarantine ordinance has had the exterminating effect on cholera noted above.

Breeders Help Enforce Ordinances.—The difficulty of enforcing county ordinances, and especially quarantines, is largely overcome in some sections by the formation of swine breeders' associations to report the disease and help the authorities to enforce the ordinances.

Merced county has no such association, but her neighbor, Madera county, is going at the problem from the other direction. Their Farm Bureau is organizing units of a county swine breeders' association under the auspices of the Farm Bureau units. The members of the association pledge themselves to report all cases of sick hogs known to them, keep strangers, and especially patent hog-medicine vendors, out of their pens, voluntarily submit to quarantine if their hogs sicken, change clothes and disinfect hands after caring for sick hogs, and not visit other pens. One of the principal objects of the association is to secure the enactment of county ordinances which will make cholera a thing of the past in Madera county. Thus, when the ordinances are passed, they will be more rigidly enforced than they could possibly be by the county and State veterinarians without the pledged co-operation of the breeders.

Oak Grove BERKSHIRES

CHOLERA IMMUNE

Our herd is Cholera Immune, the only Immune Berkshire herd in the State.

Five herd boars in use and they are second to none on the coast. Our sows are of equal merit.

We have at present some 300 Berkshires and we know that we can supply what you want.

DAIRY SALES SHOW NEED OF RECORDS.

[Written for Pacific Rural Press.]

Several pointers were gained by close observers of the Gilkerson-Weldon double dispersion sale of purebred Holsteins and the Royal Jersey herd of R. L. Waltz, auctioned at Hanford, September 15th and 16th, by Col. Ben. A. Rhoades and T. J. Gilkerson. Among the first things the Colonel told the crowd was that the sellers were at a disadvantage because very few of the animals had been tested for butterfat production. This fact hurt not only their own prices, but also those of their offspring and other relatives. The 22-months bull, Prince Gelsche Walker Korndyke, went to Fred Keisel of Sacramento at $4,000. The high price was very largely due to the records of his relatives. His fourteen nearest dams have records averaging 28.33 pounds, eight of them averaging 31.59. The other bull, Juliana De Kol King Segis, brought $1,800, paid by A. B. Comfort of Guernsey. His sire has four A. R. O. daughters and his dam made world's records in 30, 60 and 100 day tests. The spectacular cow sale was that of Beauty Snowflake of Sunnyside to C. W. Anderson of Burbank for $450 on account of her many relatives in the A. R. O.

More money might have been realized had there not been several more sales to come, offering stock with known records, and at a season when farm work is less urgent, and when more money will have been realized on crops. Another lesson is that no matter how great possibilities are born in an animal because of his good ancestry, his possibilities cannot be developed on salt grass. Buyers expect purebreds to be well developed for their age.

Following is a partial list of the buyers: J. W. Jones, Hanford, heifer, $300; B. F. Gilbert, Angiola, yearling bull; $100; C. W. Anderson, Burbank, 9 heifers and 2 cows, $2,150; C. D. Barbour, Leemore, cow, $275; L. Y. Montgomery, Hanford, cow, 2 calves and 2 heifers, $635: P. L. Ryan, Wheatville, yearling bull, $110; A. B. Comfort, herd sire, $1,800; J. M. Gillespie, Fowler, 2 cows, heifer, $750; F. C. Fickler, Lemoore, yearling bull, $90; W. H. Smith, Hanford, heifer calf, $120; M. Buyeme, Hanford, yearling bull, $125; Clark and Overland, Hanford, 2 heifers, $345; A. F. Fuller, Burrell, bull calf, $145; E. D. Robinson, Hanford, yearling bull, $130; Fred Keisel, Sacramento, herd sire, 2 cows, heifer, $4,630; A. Milnes, Riverdale, bull calf, $60; T. J. Allen, Laton, yearling bull, $75; J. P. Towe, Hanford, yearling bull, $65; J. Ganeia, Visalia, yearling bull, $80; Clarence Topham, Tulare, young bull, $100; W. J. Higden, Tulare, cow and heifer, $550; J. A. Crawshaw, Hanford, bull calf, $85; S. Cline, Hanford, yearling bull, $80; W. Polkinghorn, yearling cow, $210; R. E. Jubelt, Laton, bull calf, $75; J. E. Fruto, Hanford, yearling bull, $85; Frank Andrews, Riverside, cow and bull calf, $130; A. Lachman, San Francisco, young bull, $90; S. M. Ashley, Fresno, 3 cows, 2 heifers, $940; R. C. Sturgeon, Tulare, heifer and yearling bull, $225; A. E. Dixon, Hanford, cow, $200; E. H. Dye, Tulare, yearling bull and heifer, $130.

The Jersey Dispersion Sale.—The dispersal sale of R. L. Waltz' Royal Jersey herd at Hanford, September 16th, included some fancy cows, which sold at less satisfactory prices than had been expected. The cash terms, coupled with the lack of cash at this season and the extra work on hand, kept most buyers at home. Lack of adequate advertising was also partly responsible. A heifer calf dropped June 28, 1915, sold to R. E. Shore of Lemoore for $100; several cows sold at $200 and over. Twenty-six head were sold mostly to local people, including Ellery Church of Hanford and C. G. McFarland of Tulare.

175 Holsteins of Quality 175

The Sacramento Sale Oct. 6 and 7 is Synonymous with Quality

In fact, never before at any public sale has there been offered as many advanced registry cows, as many great yearly record cows, as many daughters of great record cows, and as many sons of great record cows. For size, growth and conformation of offerings, the Sacramento Sale leads all others.
Most of the females are in calf to such great sires as Tilly Alcartra Son; Segis Pontiac De Kol Burke; Aralia De Kol Pontiac Segis, King Klondyke Pontiac, and King Segis De Kol Mead. This means their calves will be worth all if not more than their dams bring.

Does your farm pay?

Perhaps not as much as you would like, or perhaps even losing money. If so, it is because you have neglected to engage in the most profitable branch of the industry.

Last January a herd in New York was dispersed for $150,000, the recent owner making over a quarter of a million in a dozen years out of Holsteins alone. A start toward wealth can be made by buying at the

More About Giant Grass for Fowls.

[Written for Pacific Rural Press by Geo. H. Croley, President Federated Poultry Ass'n. of California.]

In Sept. 11 issue we published an article under the above heading that has brought us an avalanche of letters and some money; the money we have returned to the senders as we have no seed to sell; and as quickly as possible we will reply to any special letters that are not completely answered in the following paragraphs.

Recently the writer, while experimenting with a certain material that may be valuable as a fertilizer for sugar cane (sugar cane may some day be raised commercially in California), had occasion to refer to two recent works on Indian corn (Zea Mays) known in countries outside of America as maize, in which some statements were made that set us to thinking hard.

For thirty years the writer has advocated the use of green corn stalks for summer and fall poultry feeding in California. Each year hundreds of poultrymen with limited water supply complain that they cannot possibly produce green feed for their fowls after July. Of the thousands of such to whom green corn fodder was recommended, only an occasional one would seem to consider it worth while to properly prepare the soil for the production of this crop with little water. As a result, few succeeded; and gradually we came to avoid recommending it; although we each year raise it for our own fowls at home and consider it brings greater returns than any other summer green crop that grows.

It occurred to us that as people in Africa, as well as California, were for similar reasons indifferent to the great value of corn, why not attract their attention to this valuable poultry food by the method suggested in one of these books.

In order that we might not overstate the value of this plant, we made use of the claims for it as presented in the chapter on grasses that appear in Prof. Henry's "Feeds and Feeding" except that we did not claim as great returns per acre as stated therein. This chapter opens with this statement:

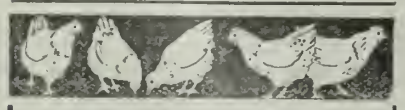
"Indian corn (maize) is the imperial agricultural plant of America; this giant annual grass reaches a height of from 7 to 15 feet in four or five months, producing under favorable conditions from 30,000 to 50,000 pounds of green fodder per acre, etc."

The following are condensed statements that appear in a recently published South African work by Joseph Burtt-Davy, a former professor at the University of California, now connected with the Department of Agriculture of the Union of South Africa; this volume is entitled "Maize: Its History, Cultivation, Handling and Use," containiug 831 pages, price $7.50:

"If we should hear today, for the first time, of a grass which would yield up to 18 tons of dry forage (54 tons green) from an acre of ground, and of which the supply of seed was limited and the cost exorbitant, there would be a scramble for it. People would willingly pay 10 shilliugs ($2.40) a pound for the seed, and everyone would soon be growing it.

"Maize is a fodder grass that offers just such returns at 2½ pence (5 cents) a pound for choice seed, yet most farmers do not think it worth the trouble to find out what can really be done with it. Why should there he this indifference to the value of the most wonderful fodder crop on earth, the world's 'Wonder Grass'? Because maize is an old and well-known crop it does not appeal to us as an attractively advertised novelty would.

"Maize is not only the staple crop of South Africa (which is in many respects similar in climate to California), but it is essentially the dry-farmer's crop."



The Victorian Journal of Agriculture (Australia), June, 1910. refers to a yield from maize of 55¾ tons of green forage per acre.

For obtaining quick growth of tender greens for poultry feeding, we use the following method: Dig a trench the width of a spade. First throw out to one side the top soil to the depth of one foot, following by digging out suhsoil for about one foot, keeping it separate from top soil as much as possible. Break up the bottom of the trench and on this broken soil throw leaves, weeds, straw, grass, twigs, vine cuttings to the depth of about a foot, or anything that will rot and make heat, and incidentally future food and humus for the soil.

Now rake the largest lumps of subsoil on this rubhish and tread it down into as compact a layer as possible; cover with a layer of manure (poultry droppings preferred) and wet sufficiently to insure fermentation of the ruhbish. On this rake the finer portion of the suhsoil in which mix about one-fourth of the top soil, following with all of the top soil except enough to cover the seed corn to the depth of one inch. The surface should be smoothed and in some soils rolled or packed before spreading on the seed corn.

We scatter the seed about one inch apart all over the surface and a little beyond the sides of the cultivated soil so that the seed covers a space about one foot wide. On this carefully spread the remaining top soil to the depth of not over one inch and on top of this layer of earth spread well-rotted manure to the depth of from one-half inch to one inch. If additional rows are wanted, leave a six-inch wall of earth between the trenches. In case the soil is dry, this top dressing must be well sprinkled to start the germination of the seed. Afterward the frequent application of small amounts of water produces hetter results than heavy drenching. This plant loves mists, heavy dew, and sun showers. Where water is scarce, we know of no other plant that will produce such abundant results with so little applied moisture, provided it is supplied in small amounts and frequently. We usually expect to hegin using some of the most vigorous stalks two weeks after planting, but it is usually five or six weeks before it becomes too woody to be considered tender greens.

We trust that the method adopted in our effort to call attention to this valuable green food for poultry will be accepted in good part by our readers and that it may result in great benefit to a large number.

QUESTIONS REGARDING BALANCED EGG RATION.

The following questions and answers refer to our articles relating to balanced ration for egg production that appeared in issues of Aug. 21 and 28 and Sept. 4:

"I have read with much interest the articles on the importance of a balanced ration; the article of Aug. 28 contains much that I desired to know after reading that in issue of Aug. 21, but I yet desire to know the value of the enclosed list in addition to those already mentioned."—O. B., Jr., Sauta Rosa.

In reply we have tabulated the egg value of the above mentioned list of materials and present them herewith:

	Whites	Yolks
1 pound Cocoanut Meal or Slah makes	2.63	2.09
1 pound White Flour Middlings makes	2.82	2.10
1 pound Bolted Barley Meal makes	1.89	2.35
1 pound Common Rolled Barley (average quality) makes	1.23	2.37
1 pound Swiss Chard (estimated) makes	.29	.32

It should be understood that these figures are only approximate to a certain extent; we try to give as nearly as possible the value based on an average quality of the materials as they are found in the open markets. As an illustration: Nearly all rolled harley contains more or less roughage such as beards, light grains, etc., while the average lot of whole barley sold for feeding as dry grain or for sprouting is cleaner and contains fewer immature grains and consequently contains more protein in proportion than the average rolled barley of commerce; this accounts for the variation of the values of whole barley as stated in issue of Aug. 28 and of rolled barley as stated above. The same applies to bolted barley meal because it would be unprofitable to grind any hut the very best quality of recleaned barley for this purpose; besides, the hull and fibre taken out in the holting process are chiefly carbohydrates.

In regard to cocoa meal: This value holds good only for a very limited amount of this material mixed with other feed for the reason that the carbohydrates or yolk and heat-making elements are largely oil and too much of this material would cause a perpetual molt and check egg production instead of aiding it. It must also he fresh and sweet. If rancid, it should not be used.

The White Flour Middlings we mention are real middlings and almost flour white, containing much of the wheat germ which is rich in sugar and oil and the glutens. Middlings are easily adulterated; many feeders who will not buy ready

HOPLAND STOCK FARM
HOPLAND, CAL.

Standard Bred S. C. White Leghorn Cockerels, selected for Breeders. **Four months old, $12 per dozen; Yearling Hens, $12 per dozen.** Standard Bred White Plymouth Rock, Fishel and Owen Farm Strains **Direct.** Hens one and two years old $18 to $24 per dozen. Four to five months' old pullets, $18 per dozen. Selected Cockerels and Cock Birds, $5 each and up.

mixed poultry foods for fear of getting much filler and little real feed would take a fit if they only knew what they were passing to their hens in their home-made mixture. The writer remembers one instance that was certainly startling: In tracing the origin of the middlings used by a certain unbeliever in commercial mixed feed, we found that it contained over 90 per cent finely ground straw, knuckles, stems, chaff, and a various assortment from the smutter and less than 10 per cent real flour middlings; and these "middlings" were not so bad—to look at—either.

We are unable to obtain any exact feed value of Swiss Chard, but as it is nearly related to the sugar beet and runs mostly to top and little to root, we base our estimate on the average value of sugar beet leaves, tops, and crowns; and we believe this will very closely represent the feeding value.

Sacramento, Jan. 14-18. California State Poultry Show, first annual exhibition held under auspices of the Sacramento Poultry Association. Entries close Jan. 1. C. A. Wilkins, Sec'y, Box 1117, Sacramento.

Ontario, Jan. 27-8-9. Annual show of the Ontario-Upland Poultry & Pigeon Association. O. T. Nichols, 223 East Nevada St., Ontario, Sec'y.

POULTRY NOTES.

The Cascade International Stock Show will be held at North Yakima, Wash., on Nov. 22-27.

At a joint meeting of the Coalinga Chamber of Commerce and the Coalinga Poultry Association, held Sept. 16, it was decided to hold an agricultural exhibit in connection with the annual poultry show which takes place during the last week of November.

The Sacramento Poultry Show to be held in Jan., 1916, will be judged by score card. Hinds, Russell, and Luce have been engaged to judge and two or three other judges will likely be secured. The Alameda County Poultry Association has donated $200 in cash prizes for exhibits from Alameda county.

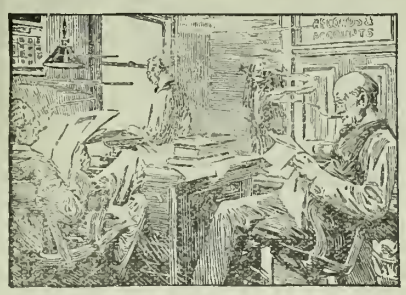
Turkey breeders of the Sacramento Valley are taking renewed interest in the breeding of purebred turkeys. N. E. Mulick, of Willows, recently sent one tom and two hens for display at the Exposition; these were selected from his flock of 200. And C. A. McAuliffe, of Glenn, who already has a flock of over 100 Bourbon Red turkeys, has sent an order to Kentucky for five gobblers to mate with his present flock.

The Livermore Valley School Boys' and Girls' Poultry Club was organized last February for the purpose of encouraging the breeding of standard bred poultry and to help to develop the poultry interests of the valley. This being the first club of this kind to be established on the Pacific Coast, it has caused a great deal of interest as to the workings and rules of the club; numerous inquiries have been received by A. J. Emery, the secretary, from all over the Coast, asking for information about the club.

O. T. Nichols, secretary of Ontario-Upland Poultry and Pigeon Assn., writes: "We have close to 100 members in our Association with an attendance of about 35 at each of our monthly meetings. Have up now for special consideration the question of a proper market for our eggs and stock. Have hopes that the new Market Commission law will be of help to us. Your issue which contained Mr. McPherson's article I handed to our local paper and they printed it in full. That helped some, too."

Over 700 acres of the Burgess tract adjoining Concord, commencing near the O. A. & E. tracks and extending along the boulevard for about two miles has passed into the hands of Mrs. A. L. Gardiner, Judge W. S. Russell, and Chas. H. McBurney, and is to be sold in one, two, and three-acre lots for poultry ranches. The promoters intend building an incubator factory and a hatchery.

At a meeting of the Sonoma County Poultrymen's Federation held Sept. 4 a committee was appointed to arrange for the entertainment of T. E. Quisenberry, the poultry commissioner of Missouri, who will soon visit Petaluma to deliver a lecture which will be illustrated with lantern slides showing the one hundred-acre experimental farm of that state's poultry department and the various equipment used thereon. It is planned to give an entertainment and social in connection with the lecture.

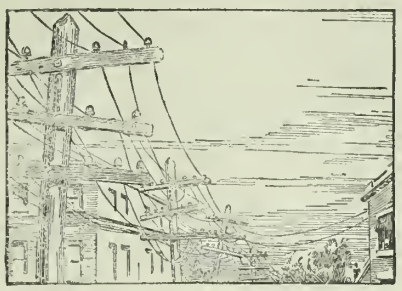


At a meeting of the San Francisco Poultry, Pigeon, and Pet Stock Association, held at the Ferry Bldg. on Sept. 16, T. E. Quisenberry gave an interesting lecture, illustrated by 95 lantern slides, regarding the one hundred-acre poultry experimental farm which is maintained by the state of Missouri with an appropriation of over $81,000, supplemented by an additional $20,000 for extension work, etc. The chief object of the meeting, however, was the establishment of rules and regulations governing the utility division of the Panama-Pacific Exposition Poultry Show, Nov. 18 to 28. It was decided to call upon all poultry keepers for suggestions in regard to the methods of handling this new feature of poultry shows. The American Poultry Ass'n. is preparing a utility standard which will no doubt be adopted at the convention to be held at the time of this show, but any rules or plans established at that time cannot be applied to this show. Poultry keepers everywhere who breed poultry for utility or market purposes are urgently requested to send their suggestions to T. E. Quisenberry, superintendent of poultry, Panama-Pacific Exposition, San Francisco, at once.

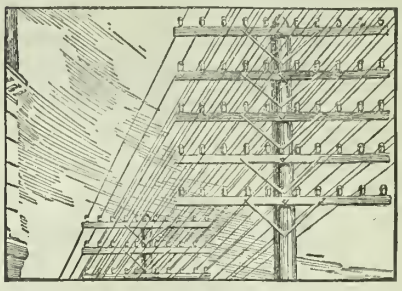
Among recent callers to this office, southern California was represented by our special writer in charge of "Farm Poultry for Profit," Mrs. Susan Swaysgood of Pomona, who has been visiting numerous friends and former neighbors in the northern part of the State in connection with a trip to the Exposition. Also by A. R. Jackson, the well-known engineer and poultry and live stock food expert of Long Beach, who with his family has been taking in the Big Show. Both report an increased activity in poultry culture in the South, due to recent improvement in marketing conditions and prospects for lower-priced feed during the coming year.

Fresno county has purchased 500 show coops for use at the poultry show to be held in connection with the district fair. In anticipation of increased entries over last year, the enlargement of the poultry pavilion is under consideration.

C. E. Barrows of Los Molinos showed 11 head at the Redding Fair and won with them: first prize, with boar two years old and over; first, on sows one year and over; first and third, on sows one year and under; first, on get of boar; first, on produce of sow; and first, second, and third on boars under one year. He is going to take his herd to the Eposition.



Hidden Factors of Service



Records kept like this are practically useless for the management of a business. Efficiency is impossible and funds for improvement cannot be obtained.

Records, statistics and accounts kept like this are available for a complete knowledge of the cost and efficiency of each department of the business.

Such methods result in a telephone line which can give only poor service.

The result of such records is a telephone line like this, which gives good service.

The subscriber knows the difference! He demands a well-informed, intelligent business management.

WHILE THEY LAST for $3 per dozen. Plymouth Rock Homer Pigeons. Very fine. Geo. M. Bosworth, Geyserville, Cal.

The Home Circle.

DREAMS OF YOUTH.

O Time, whatever thou dost steal
Of things that make man's high estate,
The instinct fine, the conscience leal
To sympathies inviolate.
By all the sanctity of truth,
Take not away the dreams of youth.

Despoil me of my outer sight,
And rob me of the power to bear,
But spare to me the inner light,
And unimpaired the inner ear;
Leave me the melody of truth,
The beauty of the dreams of youth.

The cunning of my hand destroy,
Let limb and lobe grow impotent;
Let dullness all my senses clog,
My spirit still will be content,
If in me is the soul of truth,
The raptures of the dreams of youth.

Relentless Time, let winter's frost,
With every season tinge my hair,
And with the aging years be lost
What comeliness my frame may bear.
Still let my joy be in the truth,
My ecstasy the dreams of youth.

—Kansas City Journal.

A BRAVE LITTLE SOLDIER.

A great surgeon from across the sea was visiting in a small Southern city, and because he knew so much about some kinds of disease all of the hospitals and doctors within reach wanted his help.

One morning he was visiting, with a doctor, the different wards of a children's hospital. The morning was close and warm and the sky outside was heavy and gray, as if a storm might break at any minute.

The sick children were nervous and fretful, while the crippled ones complained of everything and soon grew tired of books and pictures.

The hospital was not out in the green fields or down by the seashore, but right in the heart of the city, where low roofs and other houses and a strip of blue sky made up the outlook from the windows.

Even the house doctors and the nurses looked fagged out and tired and the great surgeon seemed depressed by it all.

"You've no business with a hospital down here in the city," he said sharply, "and especially a hospital for children!"

"Well, you mustn't blame me for that!" said the doctor irritably, and they might have gone on and said more that was quite as useless, only just then a wonderful mocking-bird poured out his rich whistling song all through the dark building.

The surgeon stopped short and listened, and soft lights came into his steely blue eyes and little tender smiles began settling down on his rugged face. "A nightingale here in this country?" he said wonderingly. "No, it must be your Southern mocking-bird that I've read so much about. How wonderful it is! It makes one believe in angels!"

"It's a little human bird," answered the doctor with a tender softness in his voice. "That's our Little Soldier."

"A soldier in a children's hospital?" asked the surgeon. "I don't understand that."

"Well, you know there are two kinds of soldiers," said the doctor. "One kind wears bright uniforms with gold lace and shining swords and go marching off to war; and the other kind wear no uniforms at all, but just stay at home and face their duty every day as it comes along. Our Little Soldier is one of this kind."

Then the doctor led the way to where a small boy with a thin white face sat by an open window. One leg was all bound up in an iron brace and little twinges of pain now and then flew over his sensitive face, but a brave light shone out of his true blue eyes, and the most beautiful bird music came out of his little whistling throat.

The great surgeon tiptoed softly over to where the Little Soldier sat, and touching him gently on the arm said, "How do you do it, my lad?"

"Oh," said the boy, smiling as best he could, "it's the pain that makes me do it so much. You know when you are burting very, very much you just can't be quiet, and if you don't whistle you have to groan, and whistling seems much braver, and then it's much nicer for other people who have to listen to you. On days when the leg doesn't hurt so much I can read to the other fellows in here or I can paint pictures, but when the pain is too bad I can't do anything but whistle or groan, and whistling seems better!"

Then the great surgeon from over seas threw his head back to keep some tears from spilling out of his steely blue eyes, and taking a small iron cross from the inside of his coat he stooped over and pinned it on the shabby little coat of the brave Little Soldier.

"There, my boy," he said tenderly, "there's the Cross of the Legion of Honor from my country. My king gave it to me for a trifling service, and I thought I was proud of it; but today I have met a man who shames my courage and deserves it more than I."

The Little Soldier said, "Thank you!" very sweetly, and then as the two men left the building they no-

"Fred"—

"Put this can of Ghirardelli's Ground Chocolate in your basket. You'll find it the most convenient, nourishing, delicious, economical food beverage you can get. There are imitations but I don't handle them as my trade always demands Ghirardelli's."

And Fred took his grocer's advice. He now uses Ghirardelli's Ground Chocolate as a beverage—morning, noon and night. You can make a cup in a minute. For unusual desserts it hasn't an equal.

ticed the other children had quit fretting, and the house doctors and nurses were smiling or chatting good-naturedly together, while the golden music filled the place with happiness.

"It's always that way," said the doctor, with a little choke in his voice. "We are doing what we can for the little chap and hoping and praying for him to get well, but all we can do isn't half what he does for us."—Francis McKinnon Morton in Sunday School Times.

HOME RECIPES.

Tomato Catsup. — Pare one-half bushel tomatoes and cook until very soft, sift them, taking all the seeds out. Then cook until as thick as you desire the catsup and then add one quart vinegar, one-half pint salt, and the following spices: One tablespoonful each of cloves, ginger and cinnamon, two tablespoonfuls each of mustard, black pepper and allspice, and one-half teaspoonful cayenne pepper. Let it cook 10 minutes, then bottle and cork tight, no further sealing is needed as it will keep for years simply corked.

Tomato Catsup No. 2.—Wash and cut in pieces a half peck of ripe tomatoes. Cook in a porcelain-lined or granite iron preserving kettle till soft enough to put through a sieve, which will remove skins and seeds. To the pulp add two tablespoonfuls of salt, two tablespoonfuls pepper, one-half tablespoon allspice, one-half tablespoon cloves and one-half pint vinegar. Let the tomato cook for several hours before adding the spices and vinegar. Mix the salt and spices dry in a bowl and blend well before putting into the tomato. Cook till quite thick and put in bottles. Store in a cool cellar.

Dill Pickles.—Put the cucumbers down in layers in stone jars or wooden firkin, with a layer of salt and one of the dill seed over each layer of pickles, then pour in enough boiled and cooled water to make a brine to cover the pickles, which should have a board or heavy plate on top to keep them under the brine. A liberal sprinkling of the dill should be over each layer of cucumbers, but there is no special rule. Scum should be taken off and the brine should be strong enough to keep pickles from becoming soft. In time the brine and cucumbers will form sufficient acid so that vinegar will not be needed, although sometimes it is added for flavor. Layers of cucumbers can be added from day to day.

Cottage Pudding. — During the peach season make an occasional cottage pudding as follows: To two well beaten eggs add one cupful of sugar, two tablespoonfuls of melted butter, 2½ cups of flour sifted with two tablespoonfuls of baking powder, a pinch of salt and one cupful of rich milk. Beat well. Place a pint of ripe, sliced peaches in a baking dish, sweeten slightly, and pour the batter over the peaches. Bake in a hot oven. When nicely browned invert on a platter and serve with whipped cream.

At a meeting of the Alameda County Farm Bureau Board of Directors held Sept. 11 a resolution was adopted requesting the supervisors to appoint a tree commission consisting of one farm bureau member each from the four country townships of this county, this commission, together with the farm adviser, to act in an advisory capacity in the campaign which the farm bureau is starting to have trees planted along all the highways in the county.

An Irishman was walking through a pasture when a bull rushed up and tossed him over the fence. Picking himself up quickly he faced the animal and said with suppressed wrath —"If it wasn't fer yer bowin' and yer scrapin' and yer apologizin' I'd o'thought you did that on purpose!"

Yells from the nursery brought the mother, who found the baby gleefully pulling small Billy's curls. "Never mind, darling," she comforted. "Baby doesn't know how it hurts." Half an hour later wild shrieks from the baby made her run again to the nursery. "Why, Billy!" she cried. "What is the matter with the baby?" "Nothing, mozzer," said Billy, calmly, "only now he knows!"—Harper's Magazine.

THE REASON SCHOOL TEACHERS NEED LONG VACATIONS.

Schoolboy answers reported from Philadelphia:

A deacon is the lowest kind of Christian.

Modern conveniences: Incubators and fireless telegraphy.

Franklin produced electricity by rubbing cats backwards.

In India a man out of one cask may not marry a woman out of another cask.

Tennyson wrote "In Memorandum."

Tennyson also wrote a poem called "Grave's Energy."

The Markets.

Unless otherwise noted prices are f. o. b. San Francisco.

San Francisco, Sept. 22, 1915.

WHEAT.

Northern club has stiffened up a litte, but otherwise values remain stationary, with very little strength, as the expected export movement is showing up rather slowly.

Sonora	$1.55	@1.60
Cal. Club, ctl	1.52½	@1.55
Forty-fold	1.60	@1.65
Northern Bluestem.	1.65	@1.70
Northern Club	1.55	@1.57½
Northern Red	1.55	@1.65

BARLEY.

There is nothing new in shipping, but speculative buying shows more activity, resulting in a slight advance in spot feed.

Shipping	$1.25	@1.30
Choice Feed, ctl.	1.17½	@1.22½

OATS.

Most grades are quoted a little lower, though the market shows no particular weakness at the decline. Feed grades are in very fair demand, but supplies are ample.

Black	$1.85	@2.00
Red Feed	$1.25	@1.30
Red Seed	1.40	@1.50
White	1.30	@1.40

CORN.

California corn, with the exception of the sorghum varieties, is still out of the market. The latter are moving fairly well, at steady prices, but there is no unusual activity.

Eastern Yellow	$1.80	@1.85
Milo Maize	1.75	@1.80
Manchurian	1.40	@1.60
Kaffir	1.80	@1.85

BEANS.

Quotations on most varieties have been marked down sharply, the prices quoted being those prevailing on the wharf, for stock as it comes from the fields. Recleaned beans are of course higher. The market shows some signs of firmness, with a good deal of inquiry from outside points, but it is too early to tell how extensive the demand will be. The lima harvest has been under way for the last fortnight in the southern district, but reports on the crops are still rather divergent.

(On wharf, San Francisco.)

Bayos, per ctl	$4.10	@4.20
Blackeyes	3.25	@3.35
Cranberry Beans	4.00	@4.35
Horse Beans	2.25	@3.00
Small Whites	4.25	@4.50
Large Whites	4.10	@4.20
Pink	3.25	@3.50
Limas	4.90	@5.05
Red Kidney	5.50	@5.75
Mexican Reds	5.25	@5.75

SEEDS.

Prices show no quotable change, most lines being practically nominal, as there is no demand of any consequence at present. A larger movement of alfalfa is expected, however, within the next few weeks.

(Wholesale Prices, San Francisco.)

Alfalfa	17	@18 c
Brown Mustard, per lb.	Nominal	
Canary	9	@10 c
Hemp	3	@ 3½c
Millet	2½	@ 3 c
Timothy	7½	@ 8 c

HAY.

Arrivals here are still falling off, as the holdings still in the fields are rapidly cleaning up, and the movement is expected to subside greatly by the end of the month. The export demand and active local buying are cleaning the fields much earlier than usual, and the market is developing more firmness right along, even the poorer grades being stronger, though they constitute most of the arrivals. Everything sells readily, and choice grades are still higher, with indications of a general advance before long. The crop is said to be very light in southern California, as well as in the north. Good alfalfa is in strong demand.

No. 1 Wheat, per ton	$12.00	@14.00
do No. 2	8.50	@11.00
Tame Oats	9.00	@13.50
Wild Oats	7.00	@10.00
Alfalfa	10.00	@13.00
Stock Hay	5.00	@ 6.00
Straw, per bale	.25	@ .40

FEEDSTUFFS.

Prices remain as last quoted, with about the usual jobbing movement in a jobbing way for current requirements.

(Wholesale prices per ton, carload lots, San Francisco.)

Beet Pulp, per ton	$20.00@21.00
Alfalfa Meal, ton	16.00@19.00
Alfalfa Molasses Meal per ton	19.00@20.00
Bran, per ton	27.00@28.00
Oilcake Meal	38.00@39.00
Cocoanut Cake or Meal	23.00@25.00
Cracked Corn	41.00@42.00
Middlings	34.00@35.00
Rolled Barley	25.00@26.50
Rolled Oats	30.00@32.00

VEGETABLES.

Values in general continue easy, with heavy arrivals in many lines. Tomatoes are in especially heavy supply, causing a further decline in general offerings, though some fancy stock will still bring fair prices. String beans show a wider range, and good limas are higher, with a good deal of poor stock offered in both lines. Peppers and summer squash are noticeably weaker, while cucumbers are doing a little better at the moment. Okra has dropped sharply. Ordinary lots of green corn show little change, finding a very fair market, while choice offerings are held more firmly.

(Wholesale Prices, San Francisco.)

Okra, lug	30	@40 c
Eggplant, lug	30	@50 c
Celery, doz.	25	@30 c

POTATOES AND ONIONS.

Little change has taken place in this line. Sweet potatoes are piling up a little, resulting in a rather sharp decline. Garlic is firm, some northern offerings being sold out; and onions are steadier than they were a few weeks ago. Potatoes are moving off fairly well at the old prices.

Salinas Burbanks	$1.40	@1.50
Delta Burbanks	.75	@ 1.05
Sweet Potatoes, ctl	$1.25	@1.50
Onions, ctl	60	@70 c
Garlic, per lb., new	7	@ 7½c

POULTRY.

Local demands have been rather less insistent for the last few days, and with continued liberal arrivals the market shows some easiness. Small broilers have been marked down considerably, and fryers and roosters also are slightly lower.

Turkeys, old, lb	17	@19 c
do, young	23	@25 c
Broilers, 15 lbs. to doz and less, lb	26	@27 c
do, over 15 lbs to doz	22	@24 c

Cheese	12	12	12	12	12	12

DECIDUOUS FRUITS.

Many lines are still offered in rather excessive quantities, and while others are slowing up, the movement also is rather slow and prices show little improvement. Strawberries are higher, and blackberries are fairly firm, but huckleberries have taken another drop. Plums are easier, while prunes show a sharp advance. Figs are much lower, with very heavy arrivals of the black variety for the last few days. Bartlett pears have been marked up, but there is still more or less poor stock that sells at irregular prices. Bulk peaches of rather poor quality are plentiful and lower, while good stock in small boxes is steadily held. A good many quinces are appearing at the prices quoted. Casabas are doing a little better, while cantaloupes are arriving in excessive quantities and prices show considerable weakness. Grapes are in heavy supply and as a rule of mediocre quality, bringing the general range of prices down.

Huckleberries, lb	4	@ 7 c
Strawberries, chest	$3.50	@4.50

"No more bran or shorts for me as long as I can get Larrowe's Dried Beet Pulp"

—that's what MR. A. L. HARTMAN of Chehalis, Wash., says in a recent letter.

Hundreds of other dairymen have also found that wheat bran is no longer a necessity or even an economical feed—so long as they can get dried beet pulp. A ration composed solely of alfalfa and Larrowe's Dried Beet Pulp provides not only the correct proportions of protein and carbohydrates but in addition thereto, an abundance of succulence and bulk.

Larrowe's Dried Beet Pulp is clean, wholesome, appetizing; aids digestion; contains five times as much nutriment as silage with as great or greater succulence—swelling to fully six times its original bulk when moistened. It will not only increase the quantity and quality of milk, but keep the herd in better health with less bag trouble and greater contentment. Try it now. Go to your feed dealer today and buy one sack, either plain or with molasses. Test it on one cow whose milk record you know and watch results.

Our booklet—
"PROFITABLE FEEDING"
gives valuable information and feeding instructions. Should be in the hands of every dairyman. Write for a copy—free.

THE LARROWE MILLING COMPANY

DRIED FRUITS.

The movement of dried fruits has slowed down again, according to reports about town. A few weeks ago packers showed a disposition to pick up any odd lots that were offered, but they are now holding off a little, owing to delay in the export movement, accompanied hy a tendency in the Eastern trade to limit their purchases, as they did last year, to nearhy requirements. Growers, however, as a rule, are taking quite a firm attitude, preventing any quotable decline, and the outlook is not discouraging so long as holders do not press their stock on the market. Apricots are getting fairly well cleaned up, and while the top figure is only for strictly fancy stock the range quoted covers most transactions. Figs are in very fair demand. Prunes are not getting much attention at the moment, but are steadily held, and some business is going through. Peaches are steady, with some call for fancy offerings, though ordinary stock moves very slowly. Raisins have been quite active, and the seedless varieties are about cleaned up, with a strong export demand. The New York Journal of Commerce says:

"Packers appear to have a wide range of prices on prunes and it is almost impossible to establish a ruling market quotation. October shipments of Santa Clara prunes are being generally held at a 4c basis for 40s to 60s, inclusive, with a quarter of a cent premium on straight 40s. There are prices which shade this figure and a few operators even demand higher quotations.

"Future Apricots are inclined to be slightly easier. There are a few offerings of Santa Clara apricots at 8c for extra choice, 8¾c for fancy and 9½c for extra fancy f. o. b. steamer, but apparently there is little inclination to buy.

"Raisins maintain a very strong tendency. Spot stocks seem to be well cleaned up and the coming crop has been the center of considerable activity for some time. Prices have been withdrawn by the Associated Company on seedless, though a few outside packers continue to offer limited supplies at advanced prices."

CITRUS FRUITS.

The eastern citrus auctions are strong for oranges and the recent hot weather has helped the sale of lemons. At New York on Monday, Sept. 20th, Valencia oranges averaged from $2.55 up to $6.40 per box, most of the thirteen cars offered selling for better than $5 per box. Lemons brought an average from $1.40 to $2.65 per box. The Chicago market on the same day paid an average of $5 to $5.50 for Valencias, and lemons $2.25 to $3 per box. Grapefruit from $3.50 to $5.00.

At this time the outlook for oranges for next season in California is that the crop of navels will be nearly as large as this year, valencias a little heavier and lemons about the same.

The San Francisco demand for oranges is not especially heavy, but recent arrivals have been a little lighter, and prices have been raised 5c. Other lines show no change, the movement being fairly active as for some time past.

(Wholesale prices, San Francisco.)

SPECIAL DECIDUOUS MARKET REPORT.

By J. L. Nagle.

Sacramento, Cal., Sept. 20, 1915.

Up to the present writing from 50 to 60 per cent of the Tokay crop and about 75 per cent of the Malaga crop has been harvested. Despite the fact that there has been a shortage of both varieties, the shipments during the past week of Tokays was exceptionally heavy and when this tonnage arrives in the East it will unquestionably have a depressing effect upon the market.

Weather conditions from now on will, of course, regulate the movement to a considerable extent and we figure that the entire crop of Tokays will be harvested within the next thirty days.

It is reported that Emperors are of exceptional quality and the crop heavier than last season. The harvesting of this variety will commence in from two to three weeks.

It is more evident today than when the bill went into effect that the Standardization Law has heen a safeguard to the industry, especially as it prevented the shipment of unsugared grapes. The grapes this season have carried better and have been accepted more readily by the trade.

The shipment of peaches, both cling and freestone, will probably be cleaned up this week. At the present time there is very little market for either variety as the Eastern markets are all overstocked with home-grown fruit.

Good quality, clean stock Bartletts have met with a ready demand in practically all markets and though the shipments of this variety have practically ceased, there are quite a few cars rolling which should bring highly satisfactory prices.

As we indicated in our last report, there has been some activity among the canners, and though the prices offered would not have interested the growers any previous season, they are higher than the quotations made by the canners a month ago. Good, well-colored clings can be sold from $10.00 to $11.00. Practically all of the stock has been contracted for and is moving. Quite a few cars of clings have been wrapped and sent East on orders, hut the demand for this variety is limited, though the prices received for this fruit will be a few dollars better than that offered by the canners.

The following prices have ruled for the week.

New York—Tokay Grapes averaged $1.45; Malaga, $1.20; Bartlett Pears, $2.50; Gross Plums, $1.25; Kelsey, $1.25; Orange Clings, 88c.

Boston — Tokay Grapes, $1.55; Malaga, $1.25; Bartlett Pears, $2.20; Kelsey Plums, 90c; Grand Duke, $1.30; Orange Clings, 85c.

Chicago — Gross Plums, $1.37; Grand Duke, $1.07; Kelsey, $1.12; Bartlett Pears, $2.30; Tokay Grapes, $1.35; Malaga, $1.10; Levi Clings, 40c.

Total shipments to date, 9942 cars; total shipments same date, 1914, 10,984 cars.

Membership Books Closed

for the 1915 season. The Exchange expense for the 1914 season, exclusive of Eastern brokerage, was 1.92%. Growers are cordially invited to sign up now for the 1916 crop.

In writing us about the "California Hog Book," F. A. Dixon of Hunt Brothers Company says: "The book is gotten up in very nice style and believe it is going to be worth many times what we have paid for it. As a matter of fact all the Rural Press books impress us as being extremely practical and of greatest possible value to the industries of which they treat." Every breeder should secure a copy of this book—sent for $2 postpaid.

A satisfied subscriber is one that continues to renew. Last week we received from Mrs. S. P. Stow of the Lea Patera Ranch, near Santa Barbara, the forty-third renewal of her subscription to the Pacific Rural Press.

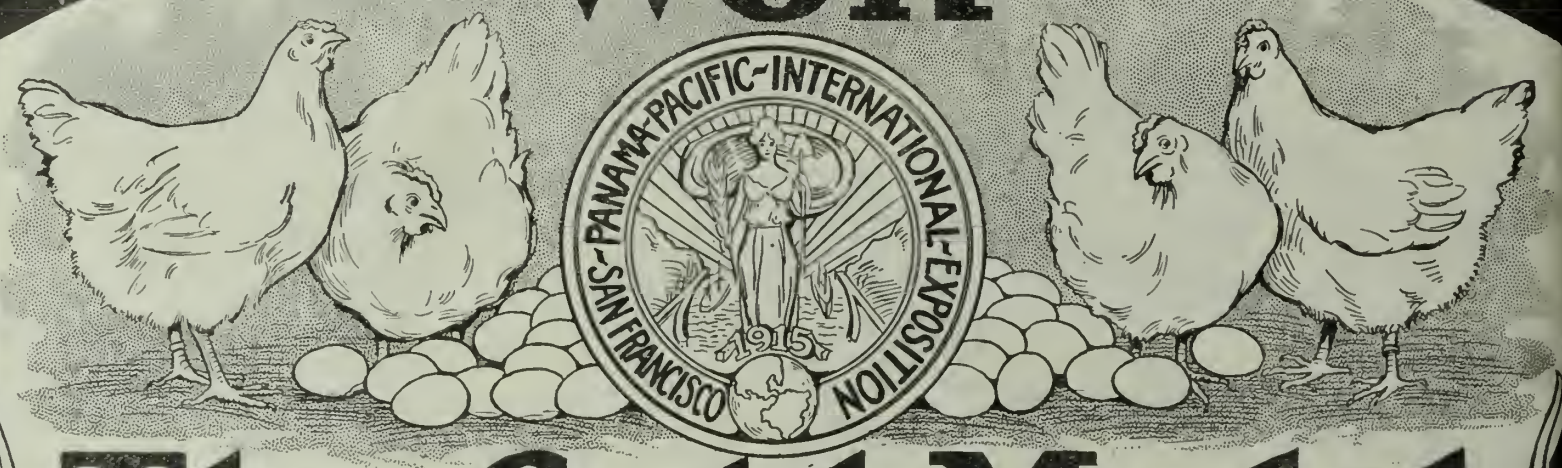
The gardening season is at hand and you should have a copy of Prof. Wickson's California Garden Fowers, Trees, Shrubs and Vines, at your elbow to refer to in planning your garden work. Send for a copy before you start in on your fall work. Price $1.50 postpaid.

California Garden-Flowers

SHRUBS, TREES AND VINES

Being Mainly Suggestions for Working Amateurs.

By Edward J. Wickson,
Hon. President, California State Fiorai Society.



FIRST EDITION—1915.
262 pages; 5½x7½ inches; illustrated; cloth bound;
12 full-page photo-plates and numerous text illustrations.

This book aims to tell the beginner in California, whether he be a scholar struggling with his school garden, or a suburban gazing vacantly on his residence lot, or the farm-home-maker, who is puzzled to transiate his experience with teams, piows and pasture fields into troweis, pruning-shears and iawns, just what to do to make garden-soiis grow piants and surround his abode with beauty under the peculiar ciimatic conditions of California.

Price, $1.50 per copy, Postpaid.

SPERRY SURELAY Won

The Gold Medal

At the Panama-Pacific-International-Exposition

BECAUSE

It is a perfect food for egg producing. It contains just those food elements that keep the hens strong and healthy. It is a perfectly balanced egg food. It contains the proper proportion of protein for the white—the proper proportion of fat for the yolk—the proper proportion of lime for the shell.

What SPERRY

SURELAY

BALANCED EGG FOOD

is composed of is plainly stated on each sack and **what's on the sack is in the sack and that's what's in the egg.** The awarding of this Gold Medal is but another tribute to the goodness and merit of **SURELAY.** It confirms the judgment of those poultrymen who feed it. It serves as an unusual inducement for all other poultry raisers to follow suit.

SURELAY is Packed in New YELLOW STRIPED Sacks. Be Sure You Get SURELAY.

Growers Can Help Raisin Marketing.

Continuation of the present successful system of marketing raisins depends on the growers in two vital essentials: loyal support of the present organization so that it may handle the crop satisfactorily in this peculiarly trying year; and production of such good quality that consumption will be increased at ruling prices.

[Written for Pacific Rural Press.]

THOUGH occasionally rumors of discontent with the local tactics of the California Associated Raisin Company may be heard, yet it remains a fact that the growers are assured of getting profitable prices this year in the fact of a considerable hold-over, an extra large Muscat crop, and complications with wine grapes; and if the present crop is sold satisfactorily, there is no doubt but that the contracts will be renewed.

The money spent by the Company in advertising and otherwise stimulating consumption in the United States and abroad is a good business investment, and will prove one of the greatest factors in securing a profitable market for the rapidly-increasing raisin crops of the years.to come.

However, should illicit sales of raisins by growers under contract to the Company, as well as by outside growers, furnish a sufficiently big stick to weaken the Raisin Company's command of the situation, and should the Company decide not to continue, there would be real chaos and ruin, both for the short-sighted and grasping or piqued independents, and also for those who have valiantly stood by the Associated. It is, however, becoming a matter of remark that outside growers who thus furnish a club for their own undoing and that of their neighbors, are becoming ostracized to a greater or less degree.

FRESNO COUNTY SUN-MADE RAISINS.
Bumper Crops do not worry California Raisin Growers now; though economical production, larger berries, more clusters, and proper care in picking and drying them, may make much difference in Net Profits.

First Class Raisins Stimulate Consumption.—Aside from persuading outside growers to let the organization handle the crops, there seems little that the growers can do to help the market except to produce first-class raisins which will make the consumers eat more of them than ever before. This is a matter of great profit to the grower at very little increased expense, by using better methods of raisin growing.

With the crop on the vines and trays this may not be the time to remedy this year's cultural troubles; but it is the best time of year to compare the results of different systems of pruning, cultivation, irrigation, picking, etc., to determine the cultural policy for next year, in order to produce the best raisins which will make marketing easier.

Picking the Grapes Late.—The Raisin Company has been asking growers not to pick the grapes until they have developed a certain per cent of sugar, because they dry away too much, leaving inferior skin-and-stone raisins. Of course, as remarked by Howard Russell of Sanger, raisins will be 15 per cent greater weight if left two weeks on the vines after they are full size, on account of the great elaboration of sugar at that stage.

C. W. Adams and G. M. Flint, of Fresno county, are two vineyardists who realize this, and had not started to pick this fall when their neighbors were half done.

As the grapes on the trays receive less injury by showers if they are not yet fully colored, and as showers often come in late September, these gentlemen figure that they will make better raisins if they pick just before the showers. Any sand washed onto them will fall off during the wrinkling instead of being beaten into the wrinkles already formed. Sand in raisins stops consumption.

Another advantage is that the raisins dry quicker when they have more sugar. Anyway, October weather is generally considered better than late September. The raisins are heavier with sugar and more of the second crop are ripe. Mr. Flint thinks that the general practice of early picking is due to the old regime when the first raisins delivered to the packers were sure to be sold, and the "devil take the hindmost," which he did.

Producing Clusters. — Since cluster raisins bring the highest price, every man likes a large per cent. Of the hundred tons expected on the Adams' ranch, 60 tons will be clusters, according to Frank Henryof Sanger, under whose direction the pruning, cultivation, and irrigation have been done this season, as printed in the Pacific Rural Press last spring. Certainly, most of the bunches are heavy, of great size, and with large berries compactly set on the bunches, like wine grapes.

To avoid mixing clusters and layers with the common raisins, Dave Porter of Hanford has dried them separately on the fruit-drying ground. Geo. Ritchie of Armona avoids spoiling layers and clusters in handling by insisting that the pickers lay (not throw) the bunches on the trays and no bunch on top of another. He never allows the pickers to "maul over" grapes by hand after laying them on trays, because that knocks off the bloom and makes them look like they were rained on or picked green.

If mildew or sunburn are not controlled, the affected berries must be cut out of clusters and layers at considerable expense. When allowed to stay in the bunches they reduce the quality and make it harder to increase the demand. The effective control of these two troubles will have an important bearing on marketing, and especially in the price which must be received to cover cost of production.

San Diego	0	0	.04	76	56

THE WEEK

Of course we shall not object if Uncle Sam decides to use a California standard with which to measure the climates of other parts of his domain. It might occur to an objector that he find a closer fit by choosing the climates of Labrador or of Cuba or a mean of the two—but evidently Uncle Sam desires for a standard something that is really fine: an ideal to which he may lead up his other climates, as a teacher is apt to exhort obstreperous kids to behave like the best boy in the school. But the climatologists tell us that reformation of climates is a matter of geological time and not of human history. However, Uncle Sam is at least justified in choosing a Californian to tell him how bad his other climates are, for he only who has tasted heaven can fully describe the loss of it. On this ground we are justified in expressing satisfaction that William G. Reed, last year instructor in climatology in the University of California, has now taken up his new work at Washington on the "Atlas of the Agriculture of the United States" which is being prepared by the Section of Agricultural Geography of the office of Farm Management of the United States Department of Agriculture. Land classification maps are being prepared. Charts of the occurrence of frost and climatic charts are being compiled, their type and character being specified by the Section of Agri-Geography, but the actual work being done mostly by the Weather Bureau.

While Mr. Reed is making his agricultural charts it might not be amiss to slip in one showing how the Californian climates compare with the Mediterranean, which have a similar range of products. It would be good agriculture, of course, and besides it would comfort thousands of eastern winter-refugees who may not find things comfortable in Europe for some time to come. Our "tourist-trade" during the coming winter is pretty sure to be very brisk anyhow, and if Mr. Reed could so stimulate it that our visitors would eat up all our surplus products it would save a lot of freight. It would be a great agricultural achievement and we are proud that California has produced a man who can do it.

Let the Farmer Extend Himself!

Last week we gave a brief exhortation to all farmers, who could command time and gasoline, or car-fare, to get off their own acres and see what they could learn from other people. The Mecca for all such pilgrims during the next six weeks should be the University Farm at Davis (13 miles from Sacramento), where short courses in many farm subjects will be in progress with open doors to all who desire to see or listen and to learn thereby. Three longer Short Courses, each lasting six weeks, are offered, from October 4 to November 12, viz., agriculture, horticulture, and poultry husbandry. The course in dairy manufactures, which is of eight weeks' duration, will also commence October 4 and will continue until November 24. During the last three weeks, October 25 to November 12, still shorter special courses are offered in deciduous fruits, citrus and semi-tropical fruits, and in viticulture and olives. These are particularly designed for general reviews of the latest practice which practical farmers chiefly desire. There are no entrance examinations to the Farmers' Short Courses and no restrictions as to sex, but applicants must be at least 18 years of age.

We strongly commend these courses to any real-farmer or near-farmer who can take them even in fractional amounts. One can hardly come into contact with the University Farm instructors and with the illustrative material they have in corral, field, orchard, vineyard, creamery, workshop and laboratories, without waking up some hidden line of thought which will continue to rub its eyes for months and give him no peace until he learns to do some better thing. Besides, the acquaintances one forms among others, who are living the same lives and have the same problems, are not only a great social joy but of great practical helpfulness. Socially, too, they are mighty good for Pa and Ma, who may need to be taught, by actual sight, that there are no dearer people in the world than they themselves — mighty good also for bachelor uncles and aunts, for each of them may catch sight of the joy which life actually has for them, even though they had begun seriously to doubt it. We have had some experience with Short Course work and we are free to confess that we have been surprised to learn how many charming girls, of forty odd, there are in the world—and what fine farms some of them have also and how much they need companionship and protection. And probably many a lady in our class of years can conscientiously invert the proposition from a feminine point of view. Therefore we say to all who are alert for doing better in the world —especially for those who desire to branch out of themselves and their hitherto narrow environments—go to the University Farm during the next six weeks. As the announcement says, years are no detriment, providing you have enough of them.

A "Mix-Up" in Rural Credit.

We regret to say that the "statesmen" who are reveling in rural credit dissipations in this state are falling into sad confusion. When one makes a public oration on "long-term credit" another orator is apt to follow on "short-term credit" and they may diplomatically lambaste each other for contrary opinions, but most ineffectively, because the punishment does not meet the crime. A most dramatic exemplification of this fact occurred at last week's Exposition congress. Ex-Governor Herrick of Ohio spoke on two days on the two branches of the subject. The first day he spoke on long-term credit and favored government aid for some phases of it, as we stated last week. His subject was "Reclamation of the Public Domain a Legitimate Use of State Aid." The second day's address dealt with ordinary mortgaging and short-term credits, for which Governor Herrick prescribed not state aid or guaranty but improved laws which would enable the people to do it for themselves. On the program Professor Mead followed Governor Herrick and he was intrduced by the chairman, Mr. Rowell, as favoring state aid as demonstrated to be most salutary in New Zealand and Australia, and he made a very clear and forcible address on that line favoring the pending constitutional amendment No. 5, which we shall vote upon on October 26, as capable of building up California. The audience generally took it that Professor Mead's speech was controverting that of Governor Herrick which immediately preceded it, whereas the fact was that it was generally in accord with the speech which Governor Herrick made on the preceding day. Governor Herrick did not say whether he would include State credit for purchase of land for colonization with the National credit for reclamation of public domain, but it is fair to presume that he would, for the purposes, motives and methods are similar and all very different from mortgage transactions and other credits, for which he holds that State aid is neither desirable nor necessary. This is the first mix-up.

Another Uncreditable Mixture.

The first mix-up, mentioned above, would hardly be worth mentioning except for its possible influence upon the voting upon Amendment No. 5 on October 26. In the pamphlet now being sent to all voters entitled "Amendments to the Constitution and Referendum Measures," there is the following, as it will appear on the ballot:

> **RURAL CREDITS.** Senate Constitutional Amendment 17, amending section 31 of of article IV of constitution. Present section unchanged but clause added authorizing Legislature to provide land colonization system, establish rural credits system in aid of agriculture, authorize issuance of bonds secured by first mortgages on farms, declaring same exempt from taxation and acceptable as security for public deposits, provide for state participation in rural credits system by establishing trust fund, authorize trustees thereof to issue bonds, guaranteed by state, upon securities thereof, and deal generally in rural credit bonds. Authorizes Legislature to effect purposes of section notwithstanding contrary constitutional provisions.

As the law provides, the pamphlet contains brief arguments for and against this amendment. The arguments favoring this amendment are by Senators Brown and Madux and every voter should read them as the pamphlet comes to him. The argument against the amendment is by Senator Ballard and it is largely made of quotations from Mr. Herrick's book entitled "Rural Credits" and from the reports of the "American Commission on Rural Credits." This is proper enough, of course, except that the same mix-up occurs, because Mr. Herrick is quoted as against all state aid when, as seen

above, he is clearly in favor of state aid for certain purposes, and developed that view in detail in the first of his Exposition addresses. This fact should be borne in mind by voters, as they read their pamphlets, for, if it matters what Governor Herrick thinks, it certainly matters that his convictions and the conclusions from his long study of the subject should be correctly understood.

As we have previously stated, the statesmen who are working for rural credit facilities in this state have in mind to provide for more than amortizing loans for those who are qualified to take up State-subdivided lands. They propose also to furnish them shorter loans for buildings, stock, implements, etc., and the legislature is capable of doing all that if the enabling amendment to the constitution is passed. Whether they will undertake to refund mortgages on lands not sold by the State is another question which is not involved in the present issue and which will not arise at first, probably. Whether the State does it or not, there can hardly be any doubt that the influence of State transactions will be to induce others to handle this business at much less cost and easier terms than now prevail. Our readers will of course consider this matter carefully and vote as their judgment dictates. We will only suggest that as most proposed amendments to the California constitution concern themselves with forbidding rather than promoting it may be just to loosen up the document a little so that producers may be able to carry on their legitimate and essential business of feeding people with a better chance of a square meal, now and then, for themselves.

For Juster Taxation.

There is another amendment to be voted upon October 26, which we also commend for careful attention. It is this:

> **TAXATION.** Senate Amendment 38. Amends constitution article XIII, sections 1 and 9, repeals sections 10 and 14 thereof. Declares Legislature shall provide by general law for taxation, classify subjects thereof, designate classes wholly or partly taxable for state, county, municipal and district revenues, same class being uniformly taxed within territory of taxing authority; may make tax in lieu of other taxes or licenses; tax commission to administer state taxation. Defines exemptions. Declares completed assessments not affected by section. Continues in office present board of equalization members until January, 1919, and present duties thereof, and existing laws, until changed.

As we understand this it is to provide a means by which the existing law adopted in 1910, largely by the vote of farmers who energetically worked for it for several years, may be administered more justly. In spite of the evident purpose of that law of 1910 which was to fairly apportion burdens between corporations and private owners, the former managed to shoulder the lighter load because of the continued operation of the old methods of assessment and equalization, which did not "equalize," and the legislature has been forced to raise the rate of corporate assessments twice by direct legislation. The new arrangement simply makes it possible for the legislature to amend the tax-machinery of the state so that the law of 1910 may be administered in its spirit of equal burdens upon all property of the same kind and provides expert agency for ascertaining just what is equality in these lines. It is held that the change is in line with the laws of other states—nearly two-thirds of the states of the Union provide for an appointive tax body.

Will This Be One Lesson of the War?

It is impossible to foresee how much the current plague of mankind will really teach those for whom the sun will continue to shine at its close. Owing to the high prices which buyers for Germany have been willing to pay for foods, Swedish speculators have sold the country so short of supplies that the people are in danger of starvation. The account says that the Swedish government has forbidden exports and has appointed food commissioners which are already fixing maximum prices on the ordinary food commodities. Milk which has been selling for about 6 cents a litre has already fallen to 5 cents, at the instructions of the commission, and a maximum price of $6.25 per hundred kilos of wheat has been set by the government, to last until the fifth of October. This is telegraphed from Stockholm: "It is thought that the prohibition of exports and the recommendations made by the commission will effectively reduce the speculative prices which now prevail, but to further help in the matter and to do away with the middlemen and agents' commissions, the government has established a food bureau, with branch offices all over the country, to buy all available supplies and sell them directly to the consumer without profit."

Who can be sure that this necessity of war may not be a blessing of peace? And yet what a hullabaloo is being made because California is only trying to go a little way to help producers get what their products are worth!

Queries and Replies.

Querists must give name and address

Sweet Clovers for Hogs and Sheep.

To the Editor: Have any of your readers had any experience with sweet clover as pasture for hogs or sheep? How about its value as compared with alfalfa? Also, which is the better variety—white or yellow? Where can I get best seed, method of seeding, etc.?—C. P., Lone Pine.

There was much information about growing these plants in connection with their use as cover crops on page 220 of our issue of September 4 and on page 246 of the issue of September 11. For forage purposes white sweet clover is the one to grow, because the root lives two years instead of one year, and the flavor is less objectionable to stock. In nutritive qualities white sweet clover resembles alfalfa, but animals have to be taught by hunger to like it. They will not usually eat it if other forage is to be found. But there are stock feeders who speak well of it. In our issue of January 2, 1915, W. S. DeWitt of St. Helena gave a detailed account favoring it. We shall, however, be glad to have wider recital of experience. Who grows sweet clover for stock of any kind, other than bees, and finds it profitable? All advertising seedsmen can furnish you the seed.

Frosted Corn and the Silo.

To the Editor: Please tell me if it is advisable to use frost-bitten corn for silage. We have twelve acres of good corn frosted two nights ago, and wonder if it would pay to cut for silage now, and whether cows would eat it. —R. W., Mendocino County.

Why don't you keep quiet about it? What right has California to have frosted corn in September? Of course we have to go East to learn about frosted corn. In his book on "Soiling and Silo Crops," Prof. Thomas Shaw of Minnesota says: "When corn is struck with frost and is then allowed to stand for some time it will be greatly injured for feeding. But if when thus stricken, the crop is at once cut and put into the silo, the value of the silage made from it, though reduced, is not seriously impaired."

Grafted and Seedling Walnuts.

To the Editor: I would very much appreciate a statement of the present relative extent of seedling orchards and grafted orchards of the Persian walnut in California. Could you give an estimate of the relative yield of somewhat similar orchards differing practically in no other respect except that one is seedling and the other grafted? I should also be glad to have information as to the relative merits of grafted trees on Persian roots and on native black.—J. R. S., Round Hill, Va.

It is too soon to make such a comparison as you desire, because, though grafting is now strongly leading, it has been largely done during the last five years, and the trees are too young to act as an appreciable factor in the present commercial production. Our product is still from seedling soft shell trees, but each coming year will see a larger grafted encroachment upon it. Comparisons between the bearing of the two kinds of trees is impossible for the same reason—except, perhaps, for single trees or small groups of them. There is practically no grafting on Persian roots except in working over large trees. Nearly all grafted orchards are on black or hybrid walnut roots.

Lime for Soil Texture.

To the Editor: How should lime be applied to improve the texture of adobe soil of a prune orchard? After plowing or before? In the spring or fall? How much lime to the acre? Is ground limerock better than lime for this purpose? The orchard will be irrigated as soon as the prunes are all picked. What other method of improving this kind of soil do you recommend?—W. B. H.

There are all kinds of ways and no general agreement. If you do not mind wheeling or tramping over the plowed ground you can spread after plowing and avoid burning your horses feet and your own shoe leather. It is easier to spread before plowing, and in that case do it some time before, so the rain may slake and carry much of it into the ground—that is, do not lime and plow immediately. Liming should be done early in the rainy season. Caustic lime acts on texture more quickly and effectively than ground limestone. Other ways to improve texture are to use stable manure and grow cover crops—also to watch and work the soil when it crumbles best. You can use 500 lbs of lime per acre and keep doing it for two or three years.

Winter Cover and Pasture.

To the Editor: Which is the better, hairy vetch or rape, to grow as a cover crop, on gravelly, clayey soil? I would also like to use it for green feed. The ground is not inoculated for veteh to my knowledge. How much would you sow per acre—alone or with oats — of both plants?—W. O. W., Livermore.

We would not use rape in such a way. We would sow about 30 lbs. of vetch and 30 lbs. of red or black oats per acre. If your land grows bur clover naturally it is probably inoculated all right.

Machine Guns on Citrus Gray Scale.

Gray scale has spread to all citrus sections of the State, though the first practical control work was done in the season of 1914.

[Written for Pacific Rural Press.]

"Last year there wasn't a fumigating machine used in Tulare county," according to Horticultural Commissioner Chas. Collins, "only the old generating pots were used, but this year there is nothing but fumigating machines."

The machines work easier, better, and more quickly than the old fumigating pots, without danger of burning the tents or men, and with less danger of suffocating the men.

Quick Work Needed.—Where the gray scale has come, there is much need of quick and universal work. One orchardist near Lindsay, who last year refused to treat his trees because there were only a few gray scales scattered on isolated branches, has found his whole orchard infested seriously this year and is both spraying and fumigating.

Last year the county had several outfits fumigating orchards, the county paying the cost, which averaged 33c per tree for the season, and collecting from the orchardists. Since this led to legal difficulties, no county outfits are operating this year, but quite a number of contractors have rented "cyanofumers" from the Braun Corporation of Los Angeles to use in the work. Similar machines are also made by another corporation and in use in southern California. The contractors charge about 15c per tree for the fumigation and about 75 of the cyanofumers are kept busy until late in the season, besides machines of the other make. The cyanide costs about 2c per ounce, the usual dose being 8 to 10 ounces per tree. Some of the orchardists furnish their own cyanide and sulphuric acid.

Each gang of five men uses one machine and about 45 tents. The tents are all filled with gas and left on the trees 45 to 55 minutes, leaving time to rest between each "set." It used to require 6 to 8 minutes to generate the gas in the pots after they were set under the tents and five men could handle only ⅔ as many tents. Now, the machine with one spurt fills the tent accurately and a horse pulls it ahead as fast as the "taper" can measure the tents.

They expect to continue work until the middle of October, though the amount of cyanide required to kill the scale has already been increased about 10 per cent and may be increased as much as 25 per cent before the effective and safe limit of fumigation, which is about the middle of November. The scales are all the time becoming more resistant but the fruit is less tender to the cyanide burning. Humidity of atmosphere or tender succulence of fruit and leaves when young, increase the danger.

Discharges Correct Amount.—The machine rests between two wheels and is pulled by one horse. It consists of two tanks bolted together, one above the other. The upper tank surrounds the bottle-like neck from the lower one and contains 12½ gallons of sodium cyanide solution.

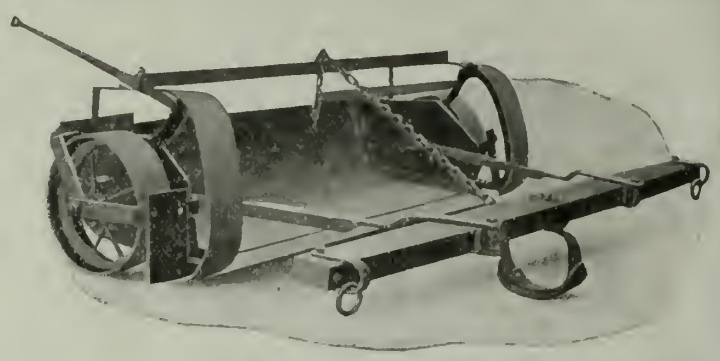
The solution is made by punching holes in the bottom and low on the sides of two 200-pound cases of sodium cyanide and setting the cases on bars submerged two or three inches below the surface of the water in a 100-gallon tank. The cyanide dissolves and is withdrawn to fill the machine at the end of each setting of the tents. Then if the average dose for the one set is estimated at 10 ounces of cyanide per tree for 45 trees, they place in the lead-lined, bottle-shaped acid tank about 3½ gallons of sulphuric acid. Slow explosions indicate that the acid has most all been used. On the outside of the tank is a graduate indicating the ounces of cyanide used. A movable block is set at the correct mark when the taper calls out the measure of the tent, and the "generator" raises a knob sliding over the graduate up to the movable block. This draws the required amount of cyanide solution into a chamber below the graduate. Then the generator pushes the knob down and this forces the cyanide solution through a check valve and a pipe up to the top of the machine and down through the neck into the sulphuric acid solution. The cyanide combines with only the correct amount of sulphuric acid and explodes.

The hydrocyanic acid gas created by the explosion passes through an open-ended lead pipe which extends from the neck of the acid compartment down to a big hose about ten feet long whose end has been previously placed under the tent.

The force of the explosion used to blow up the other side of the tent and waste some of the gas, besides tending to burn foliage, so a muffler placed over the end of the hose now breaks the force.

When all of the tents of the set are filled, the machine is returned to the supply tanks to be refilled. On the way a dragging hose is opened to empty the corrosive residue from the sulphuric acid tank in a small stream midway between the trees. At first, a sediment was found in the pipe through which the explosion passed to the hose, but now it is found that filling the pipe with water at night dissolves the sediment without further trouble.

PRUNES PEACHES TO SAVE TREES.



[Written for Pacific Rural Press.]

The most expensive orchard practice we know is pruning so the fruit and leaves grow out on the ends of the limbs; shade the inside of the tree tops so that no fruit can develop, and so they pull the top open in midsummer and expose the inside to sunburn, breaking the limbs until the tree is all out of shape and half out of commission.

G. B. Abbott of Corning prunes peach trees to repress top growth. This leaves the center open and encourages the development of fruit shoots in the body of the tree, which bear the biggest, best fruit where it is easy to pick safely and with less labor and time. His system saves the trees from breaking and sunburn.

Richard F. Burgess of El Paso, Tex., was elected president of the International Irrigation Congress at Sacramento on Sept. 18.

--dragging the life out of your horses

ARE you still dragging the life out of your horses with the old style Fresno Scraper?
Dragging your load to town on runners would be about as sensible as using the old-style Fresno scraper now.
You are slowly pulling the life and vitality out of your teams, and working your men more than twice the amount required with the new

COVER CROP

Vetch, Bur Clover
and Yellow Sweet Clover

If you intend putting in a cover crop this Fall, write to us now for prices and samples.

We always have stocks of Fancy Alfalfa and all kinds of grasses and clovers and will submit samples and prices upon request.

VALLEY SEED COMPANY
506-508 Jay Street, Sacramento, Cal.

ALFALFA SEED

Our success in the Alfalfa seed game has astonished the most skeptical. We were advised that clean, reliable seed could not be furnished in quantity. We found that it could be, if the dealers would go to the expense of inspecting the seed fields before they were harvested. We do this thing and therefore know what we are serving is right. If it is not right then we are to blame and are going to make it right.

We have seed for sale in quantities from 1-lb. to car lots. It is the 1915 crop—the best to be had at any price, anywhere. We have no bargains to offer you, but if you are interested to the extent that you want good seed at honest prices, we are on the job to the finish. For prices, samples, etc., wire or write,

Horses Push Bean Harvester.

Horses pulling bean harvesters tramp out many beans, working hard. They push this one easily walking on clean ground. It may be made at any blacksmith shop. The inventor will not patent it.

[Written for Pacific Rural Press.]

Harvesting blackeye beans on a large scale is rather unsatisfactory with even the best machines in general use. Yet the acreage of blackeyes has recently greatly increased in some sections of the State, including Stanislaus county. T. J. Crispen of Modesto has had two crops on old alfalfa ground. Last year's harvest required four mules to pull a sledknife arrangement to cut two rows at a time on account of the heavy intertwined growth.

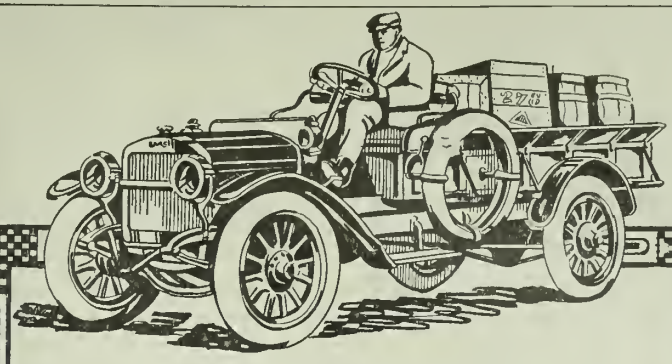
His neighbor, H. B. Brubaker, had similar troubles, and he did not like to have his horses walking on the beans in order to pull the sled knives. They tramped out and wasted too many, and it was too hard on the horses.

To design and build a machine, to be pushed by two horses which would walk on clean bare ground, a machine which could be operated by the driver and would not work the horses too hard, became Mr. Brubaker's steadfast purpose; and he succeeded in spite of the difficulties pointed out by his neighbors and overcome by himself. On account of ridicule for the first weeks of active work on it, he took all of the blacksmithing to various country shops. "Everybody shot it to me hard and heavy—said it wouldn't work." Each difficulty overcome, a test was made and new troubles arose, so that it was not until late August of this year that it was in satisfactory working order.

Since Mr. Brubaker is a Dunkard, one of a people who do not believe in making use of the law, he will not patent the machine for fear it would be necessary to prosecute infringers, but, he says, "I tell people that whoever does patent it can pay me what he thinks the idea is worth to him."

How It is Made.—We describe the machine below. It is built in two parts, the knives being raised or lowered, for turning at row ends or on uneven ground, by a lever adjustment working on a 4x6 laid across the axle of two iron wagon wheels 2½ feet in diameter and four feet apart. The cutting knives are at the front end of the 4x6 which serves as a tongue on either side of which a horse walks. Under the back end of the tongue is a sharp-edged wheel two feet in diameter working in a pivot casting from an old buck rake, to guide the whole outfit. The pivot of this wheel has a gaspipe extension, and a short horizontal piece at the top, so that the driver straddles it and guides the wheel with his legs on the trip across the field, like a header. Just in front of the driver and fastened to the tongue between the horses is the adjusting lever of an old corn plow or something. From this, a piece of gaspipe extends forward to a strap iron, bent to the shape of a hand cycle used in cutting grass. The gaspipe reaches to the upper or handle end of the cycle. A double iron strap is bolted to the center of its curved part, and reaches vertically to another bolt through a pair of straps fastened to the tongue. The point end of the cycle supports the frame including the knives; and is connected by a bolt which permits the knife frame to be raised and lowered within a fixed frame fastened to the tongue and wheels. These frames are of dressed 3x4's and are strengthened at corners and all places of strain by strap irons. They might as well be heavier, for two sacks of dirt are now used as a weight to force the knives quickly into the ground when their frame is lowered at the beginning of the rows.

The knives are 4½ to 5 feet long, three inches wide, set at an angle of about 60 degrees with the point forward and the heels about 5 feet apart. Forward from their point is an upturned extension about a foot long which is to run along the surface between the rows. The knives are held in place by 3x4's set at the same angle just inside and along the knives. A vertical 3x4 rises from their apex and its top end is braced with strap iron back to the crosspiece of the knife frame. This strap iron also extends forward to hold the top end of a slanting three-inch roller which rises from the extension of the point of the knives, and serves to separate the tangled vines. Galvanized iron sheets just above the knives encase the frame and shove the vines to either side.



A broad 10 inch wheel just inside the angle of the knives and fastened to the vertical 3x4, serves to hold the knives from going too deep under the surface.

Improvements Proposed. — Now for improvements. The two wagon wheels are 4½ feet back of the front end of the tongue. When they run over a levee, it takes quick and excessive work with the lever to let the point down to continue cutting properly on the other side. To remedy this, it is proposed to let the tongue rest on a larger wheel in the apex of the knives, do away with the two wagon wheels, and use two disked-rimmed wheels side by side at the rear end to guide and prevent tipping over.

Where there is such rank growth of vines as on Mr. Crispen's field and on part of Mr. Brubaker's field, the roller does not separate them and they bunch up. So a plow coulter will be arranged so it can be lowered when a patch of heavy vines is reached and cut them just ahead of the knives.

The beans are planted in rows 28 to 30 inches apart, the two horses easily work the machine all day, shoving four rows of vines into two windrows where they cure. The machine will work across rows to work on the driest parts of a field first. Mr. Brubaker has calls to harvest the beans of many more of the surrounding previously ridiculing neighbors than he can possibly do. Mr. Crispen has discarded his old sled and engaged the new machine for his 75 acres. Others of Mr. Brubaker's neighbors are already building similar machines for the present harvest.

Prof. E. R. Lake, a government walnut expert, was in Stockton recently studying the possibilties of that section as a walnut growing center.

Dried Albertas Eight Cents.

[Written for Pacific Rural Press.]

"I sold a ton of dried Elbertas at 8 cents a pound last year to private customers," says G. B. Abbott of Corning, who has 3 acres of them which yielded 25 tons green last year.

This year, Mr. Abbott has been meeting eastern folks who have come out West, and making arrangements to send them samples of his dried fruit. They will use these samples to take orders on a percentage basis among their friends in the home neighborhoods at the ordinary retail prices where they live. Peaches will be shipped in bags or 25-pound boxes. His mother has kept some of his dried peaches shipped this way to the far East for two years without spoiling.

This will advantage Mr. Abbott by eliminating the large loss between producer and consumer, and will advantage the consumers very greatly, for Mr. Abbott's dried peaches look good enough to eat; in fact, they are splendid examples of the results of good cultivation and thinning and of clean careful cutting, sulphuring, and drying.

He grades them into 1sts and 2nds when they are just dry enough to handle, piling them up in rather thick layers on the trays to finish drying more slowly. His No. 2s are better than the average dried peaches we can get on the San Francisco markets at 15 cents per pound.

"I was offered 3 cents per pound for my No. 1s by the agent of a San Francisco packer last week," says Mr. Abbott. "This is better than I did last year on my crop of Muirs, which were stored until June, 1915, at a disheartening cost for grading, storing, insurance, picking, and drying, and sold in June at 2½ cents straight. I do not like that kind of business. No use grading for the packers. They want that profit. If I sell to the California packers I must pay their local buyer his commission; also the general agent of the company; and also lose the weight which the company puts into them by wetting and resulphuring, which is enough to pay all the expenses of packing."

WHAT THE HALE PEACH IS GOOD FOR.

To the Editor: In the Press for Sept. 11th, "S. H." writes of the J. H. Hale peach and states that the flesh is so red around the pit that it discolors the juice when canned. During the past week one of the great canneries of the state made a small-scale canning experiment with this variety. Here is the verdict: "Fruit stringy, coarse, badly frayed. Syrup a dirty, offensive-looking compound."

Basing our opinion on fruit that has come to us from Nevada and Placer counties, we are satisfied that J. H. Hale is a magnificent, main-crop, shipping peach. When that is said, all is said. It is not a canner in any sense of the word. We believe the nurseryman who introduced J. H. Hale is right in proclaiming it the greatest market peach, but think he goes too far in recommending it for canning. In our own catalogue we allude to the fact that it has the fine texture and firm, heavy meat of the clings—using the comparison to describe the character of the flesh—but we have not felt justified in recommending it as a competitor for the the clings in the canning field. J. H. Hale is very large, highly colored, beautiful, firm, extra heavy, good quality, a fine shipper, and a perfect freestone, ripening with Elberta or a little before. Where a peach of the Elberta season is desired we believe J. H. Hale will be the most profitable kind to plant, but if your San Jose correspondent wants canning peaches he had better carry out his own suggestion without delay and graft his trees to Tuscan or Phillips.

Your Modoc county correspondent, whose thrifty Lambert cherry trees bloom well but do not hold their fruit, will most probably get satisfactory results if he will graft a few of the main limbs to Llewelling. The latter is said to be one of our best cross-pollinators, and we assume that his trouble is in that direction.

Grass Valley. A. L. Wisker.

MEADOW LARKS AND FIGS.

To the Editor: When a subscriber needs help and asks for it through your columns it seems to be equivalent to getting the advice of every farmer in California and half of Missouri. I need some help. I have a three-year-old Kadota fig orchard which came into bearing this summer, and when my second crop of figs ripened about Aug. 10 the meadow larks swarmed into the orchard and despite all protests on my part decided to camp there. They flit about in sociable groups of 5 to a dozen to a tree, and sample hundreds of figs and move on to the next tree. Then the pumpkin bugs climbed up and finished the figs which were pecked into by the birds or stayed on the ground and ate the punctured fig when it ripened and fell. I could get nothing salable out of the figs either way. In a considerable portion of the orchard the bird damage was certainly one dollar to the tree. I was shipping the figs fresh when the birds came, and as my third crop will come on in a few weeks and continue until Thanksgiving, if the sun shines, I desire to be advised how to abate the nuisance. Since it is unlawful to shoot the things and they are poor eating, I cannot induce sportsmen nor near-sportsmen to come and help me shoot. Tell me how to poison or trap them and still keep out of jail, and yet save my figs the balance of the season, and next year also.

Sultana. W. Sam. Clark.

[Who will help Mr. Clark save his crop?—Editors.]

PEACH DRYING ON HORSES.

[Written for Pacific Rural Press.]

Part of the credit of the exceeding high quality of G. B. Abbott's dried peaches last season was due to the system of drying part of them on wooden horses two or three feet off the ground, and the rest of them on clean bare ground where bur clover had ripened and been cleaned off.

The wooden horses make a great deal less work laying out trays, make it lots easier to grade, and to double the fruit up when nearly dry; keep poultry off, and allow air circulation over and under the trays, and avoid most of the dirt which blows along the surface of the ground, or is lifted and spread by little whirlwinds.

COYOTES FOR CHERRIES.

To the Editor: Tell G. W. C. of Standish, Modoc Co., to kill some coyotes and bury one 2 ft. deep and 4 or 5 ft. away from the trunk of each cherry tree. I have made barren trees fruitful by burying dead animals at the roots. I never burn a dead animal. Butcher's offal is equally good. Sam'l. Haigh.

San Jose.

The biggest alfalfa crop of the season is reported being cut at this time in the Earlimart section of Tulare county.

CREOLIN FOR CORN-EAR WORMS.

TO THE EDITOR: Apropos of your notes on the corn-ear worm in the Pacific Rural Press of August 21 and September 4, I would state that this year I sprayed one row of sweet corn with a solution of Creolin, a tablespoonful to a gallon of water, as soon as the silk appeared and only found one wormy ear. The adjoining row had not a perfect ear in it. This row was not treated, but left as a check row. Powdered arsenate of lead, I think, would be of little use here on account of the strong winds that blow throughout the summer months. I will test the two side by side another year.—Samuel Haigh, San Jose.

Making Apricot Trees Bear Young.

[Written for Pacific Rural Press.]

Young apricot trees send out limbs which grow unbranched for several inches, then throw out laterals all along. The reason many orchards do not bear young is that these brancnes are cut off below the laterals, according to F. E. Goodrich of the Santa Clara valley.

When the trees are a year and a half old, Mr. Goodrich prunes to get fruit. This is done in the fall or winter. He leaves 4 to 6 of the laterals on the new growth and claims he gets 50 to 125 pounds of fruit on 4-year trees. He did this on a 16-year apricot orchard pruned this way while young; and it practically always bears all that the trees can mature. The neighbors at the time he pruned that way said he would kill the trees because he developed so many fruit buds by leaving the laterals. "But there are no better apricot trees in California now."

The laterals are cut off to about 3 inches long and next season they are full of fruit spurs. The year following, these spurs are full of fruit. The young orchard now 20 months old will be pruned in the same way this fall.

The same system of pruning is followed until the tree is as tall as it should be for convenience in spraying and picking. The young growth is cut off below the burst of laterals to keep the growth down. This is allowable because there are plenty of fruit spurs throughout the tree at that age. But by cutting off the young growth of young trees below the laterals, the fruiting age would be delayed 2 to 4 years.

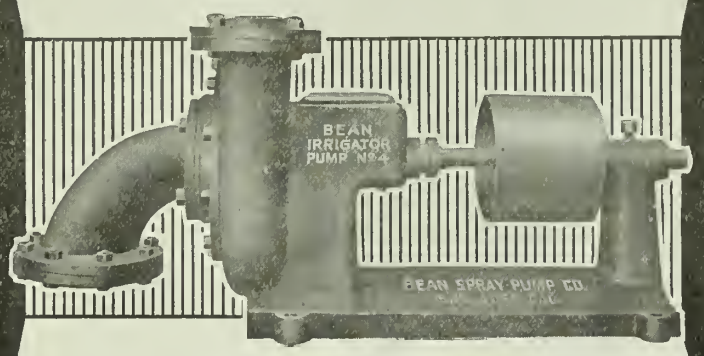
WANTS BETTER PRICES FOR ALMONDS.

To the Editor: I wish to make a comment on what has been done this fall in the way of selling our almonds. Money matters are tight, but there has been no panic and no real reason for the money being squeezed so tight that the Indian's head has turned red. It is true there is an uncertainty about the future which makes people extra cautious. Certain buyers went over the country telling the independent growers that the market was bad and would not reach 15c top price this season. They continued to hammer the price down until the grower got scared and closed contracts long before harvest time. From one to three months before he had anything to deliver, he cut the price down 3 to 4c per pound lower than last year, in the face of the very fact that we have imported from 15,000,000 to 18,000,000 pounds of almonds yearly from the south of Europe. This importation cut off this year, the grower allowed the buyer to scare him into cutting the price and they were able to secure a considerable tonnage. These same men instructed their brokers to sell to the eastern jobber ⅛ to ¼c per pound less than the opening prices named by the State Exchange. Hence the disastrous results in naming prices by the California State Almond Growers' Exchange.

No doubt the State Exchange is perfectly able and capable to look after their own business and interests, but here is a point they overlooked. While they may represent 900 growers, there are many more independent associations in the State that are working and striving to the best of their ability to maintain a price that will pay the producer and at the same time allow the nuts to reach the consuming public at a price that they can afford to eat them.

We of the Durham Almond Growers' Association have this year tried to maintain prices and were somewhat steadying the market until the State Association made public the price which they named—and it was no price at all. And for what reason did they name 15c as a top price where it would have been just as easy to name 18c or 19c and they would have got it just as quickly. I believe the State Association has this year dealt a blow to the almond industry that it will take years to overcome.—C. A. C., Durham.

[We are disqualified from answering our correspondent's question. Probably the Association knows a lot more than we do why they should name the price they did. We would not be surprised if it should appear later that they know more than our correspondent does about the situation this year. How does he know that European almonds will not be imported? They are not grown in the war zone and Europe will surely try to sell us everything they can deliver. As for the general prosperity of California producers, we think we know that the way to get prices right and otherwise advantage the business for producers is to forsake opposition as independents and get into the boat which is going to cross over. If the boat is not steered right you can change its course better by getting hold of the rudder than you can by trying to make waves on the ocean.—Editors.]



L. and C. Moreing of Stockton are busy putting their 25,000-acre tract on the Natomas Consolidated section on the Sacramento river under cultivation; before the end of the year they expect to have all their wheat and barley sown.

Get All the Water

Lack of water is not always the fault of the well—it is often the fault of the pump. No matter how good a well you have, if your pump is not right, if air leaks in around the shaft or if you have to tighten up the stuffing box till there's excessive friction, or if for any other reason your pump does not do efficient work—you cannot get the quantity of water your well should yield.

BEAN CENTRIFUGAL PUMPS

are built to get **ALL** the water.

The water-sealed stuffing-box prevents leakage of air and practically eliminates friction at this point. The automatic water-balance prevents end-thrust and does away with a lot more friction. And in many other ways Bean Centrifugal Pumps are built for downright efficient service.

HOT AIR THAT MADE THINGS GO.

To the Editor: As many of your subscribers are no doubt owners of gas engines for pumping water and other purposes, it may interest them to know how I overcame the trouble we had with our 6 h. p. engine. We bought it 4 years ago; for 1½ years it ran fairly well, then for no apparent reason it began to "buck" and sometimes I would give up in despair attempting to get it started. We had several so-called experts tinkering at it, and each one declared that the other fellow knew nothing about it. After following their advice and allowing them to carry out their theories at our expense, which, by the way, in two seasons mounted up to nearly one-half the original cost of the engine, I concluded to try my hand at it myself. One expert said the cylinder was untrue and would have to be rebored, and a new piston cast, etc. This was done, but still the exhaust vomited thick black smoke when first started. They all had different ideas as to the cause, but none of them could remedy the defect. To run the engine at all the damper in the intake air pipe had to be partly closed and the relief valve left open or the engine would only run for a few minutes and then stop. I thought that possibly the oil was at fault, and had the oil company send down a man to test it. He said I was using too rich a mixture of distillate, in other words, too much oil and too little air, and to remedy it he opened the damper and closed the relief valve. As the engine was hot this worked for awhile and he left impressed with the idea that he had solved the problem. For an hour or so it appeared as though he had, then it began to slow down as usual and finally stopped; the imperfect combustion coating the ignitor points with soot as before. Last winter having abundant leisure I determined to find out what the trouble was. My first experiment was to draw off the cold water from the water jacket and refill it with boiling water. For awhile this worked fairly well, though I had to remove and clean the soot from the ignitor every few hours. In my next experiment I attached to the intake air pipe an apparatus for heating the air as it passed through this pipe, but as the lamp took fire once or twice I considered this too dangerous. I now could see that if I could manage to heat the air as it entered the intake air pipe my troubles would be at an end. I therefore purchased 10 or 12 feet of 2½-inch galvanized sheet iron leader pipe, and two elbows, one 2½-inch one and one 4-inch one; this last one had to be large enough to allow the 1½ elbow of the exhaust pipe to be enclosed within it. The enclosed sketch will explain how I arranged the heater. Since installing this device I have never had a minute's trouble in starting or running the engine, and can now go away and leave it for hours with the assurance that it will run all day if kept supplied with distillate, lubricating oil, and water for the cooler, as the combuston in the ignition chamber leaves no deposit of soot on the platinum points as was the case before I attached the heater, therefore the ignitor does not require to be taken out every day. The galvanized iron pipe and elbows cost $1.25. The elbows are capped and circular holes cut in the caps for the insertion of the exhaust pipe in the square elbow and larger ones in the 4-inch elbow to take the jacket pipe. (See sketch enclosed.) Samuel Haigh.

San Jose.

Samuel Haigh's hot-air attachment for gas engine.

CONCRETE PERMITS STEADY PUMPING.

[Written for Pacific Rural Press.]

On Geo. Roeding's alfalfa farm near sanger they "pulled the bottom out of their well" and the alfalfa seemed likely to go thirsty last August. At this critical time, C. F. Walker, whose ranch adjoins the alfalfa field, came to the rescue.

For 18 days and nights his 25 h.p. Fairbanks Morse engine pumped steadily, except Sundays, with only one stop on account of a dirty spark plug. They used a No. 7 centrifugal pump and a single well, but Mr. Walker thinks he could get more water from a double well and a No. 6 pump.

The remarkable continuous running was very largely due to the concrete base which holds the engine steady with "no jar at all." The engine rests three feet below the surface on a large concrete foundation reaching 4 feet farther down to the hard-pan.

"I spent extra money to get it solid," says Mr. Walker. "It paid me, though," and was fortunate for the alfalfa.

Peach growers of the Richfield colony of Tehama county did not lose the season, for many of them grew corn between the rows, irrigated by electric motor-driven pumps and both the orchards and the intercrops are thriving.

PUMP FOR EARLY FALL PLOWING.

[Written for Pacific Rural Press.]

In Merced county is an irrigation ditch system from which most people can get water until a very dry, hot time of the year, about August, when they must hope for rain or something, even in this year after two wet winters. Landholders must contract to pay $2 an acre for the ditch water whether they use it or not, but unless they have the supplementary irrigation they must raise early maturing crops.

The Meadowbrook Stock Farm is more independent than most because the main canal runs through their place and they pump from it after other people have irrigated by gravity for the last time.

A 12-inch centrifugal pump run by an old Johnson tractor engine supplies what is needed for the 640-acre farm. This permits them to water the land so they get early fall plowing.

DAIRY DUE TO AUTOMOBILE.

[Written for Pacific Rural Press.]

A cream haul of 11½ miles would have prevented the establishment of a dairy a few years ago, but it doesn't worry F. L. Cooke, who has about 20 head of purebred and high grade Jerseys near Corning, nine miles from a creamery in one direction and 11½ in the other.

He is working up a fine herd, developing the old grain land into alfalfa and starting the purebred dairy stock idea in the grain and fruit country which badly needs stock.

This is all made possible by his ability to dispose of the cream even at a distance. He finds it more desirable to run down to Orland 11½ miles three times a week with his cream in the automobile.

"I run around in it; it's an actual necessity."

STATE MARKET DIRECTOR.

To the Editor: Answering one of your subscribers asking the present status of the McPherson State Commission Market Law, I would say that as yet the Governor has not made his appointment of the man who is to serve as general director of the market. Until the Governor makes that appointment the entire law is held up.

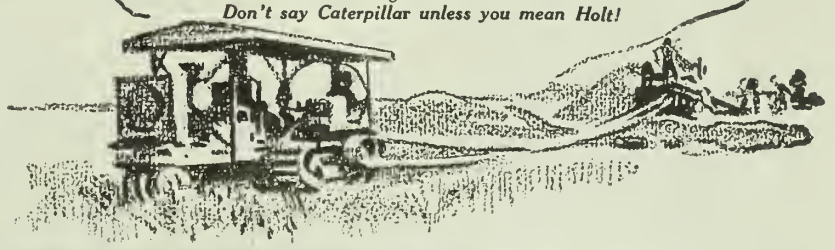
In the last letter which I have received from the Governor in regard to this matter it is evident that he is giving it serious consideration. He says: "The appropriate man may be found whose genius is so transcendent that he can take up this bill and do great good to the state. It was upon the theory that, if the proper man could be appointed with the initiative and the vision necessary, the results might be in a degree accomplished. To administer the law successfully will require the very best brains that can be found."

I believe the Governor is taking the vesy best attitude in the matter, for I am sure none of us wish to see the market installed until it can be installed properly. The more I have investigated the subject the greater have I found its problems, and under the circumstances the progress so far has been most satisfactory.

Santa Cruz. H. E. McPherson,
Assemblyman 43rd District.

Little Stories of Success

No. 9



Mr. Fred Rollins of Chico, who bought a Caterpillar "60" in March, 1914 — and incidentally cleaned up $1700 the first month he owned it, plowing night and day for his neighbors — dropped in the other day to tell us bis story of success.

Much of Mr. Rollins' work with the Caterpillar has been stationary work, and for this he says the Caterpillar has them all beat. In the rice fields, where a separator sinks in mud up to the sills, Mr. Rollins can go with the Caterpillar, and be ready to run right away without stopping to build up any foundation or blocking for the tractor. He threshed a rice crop for one neighbor, where a short time before when this same crop was harvested, the binders had to be pulled through the fields on sleds.

Mr. Rollins is convinced that the right motto in buying a tractor is "Quality First." What's *your* problem? Write us.

General Agricultural Review.

CITRUS AND SEMI-TROPICAL.

A consular report gives the Seville, Spain, orange crop as a normal one.

From Jacksonville, Fla., comes the report that the grapefruit crop this season is decidedly short, while oranges are only slightly below normal.

E. M. Chase and C. G. Church of the U. S. Dept. of Agri. were in Porterville recently arranging for the establishment of the government laboratories for the testing of oranges.

The Board of Supervisors of Tulare Co. have approved the plans for the proposed Strathmore-Lindsay Irrigation District. The plans call for an expenditure of nearly two million dollars for the irrigation of over 20,000 acres of foothill orange lands.

Experiments will be carried on in the Butte county orange districts to determine the applicability of the 8 to 1 standard of maturity to fruit from that section; growers there have protested against the test, and will carry the fight to Washington.

The Comet Citrus Association of Porterville has petitioned the Superior Court to be allowed to reincorporate under the name of the Mid-California Citrus Association, stating that the latter would be more expressive throughout the East.

The Riverside Mutual Orange Company was recently incorporated at Riverside. The directors of the corporation include John L. Bishop of Highgrove; A. McDermont and G. G. Cole of Riverside; E. T. Wall of Los Angeles; and E. C. Merryfield of Colton. They have leased a packing house at Riverside for a period of ten years.

DECIDUOUS FRUITS.

It is estimated that the Ukiah valley prune crop will amount to about 450 tons.

An estimate places the Anderson prune crop at 1500 tons, or a valuation of $112,500.

An estimate places the California dried fruit crop at a valuation of $22,500,000 for 1915.

The fund subscribed by growers to finance the California Peach Growers' Company is rapidly approaching the $100,000 mark.

The Libby, McNeill & Libby cannery at Selma broke all previous records on Sept. 21, when 19 carloads of peaches were received at the plant.

On Sept. 22 the steamer Korea sailed from San Francisco for London via the Panama Canal with dried fruits and barley forming the bulk of her cargo.

The big packing house of the Rosenberg Bros. at Yuba City has commenced work for the season and will probably continue practically all the fall and well into the winter.

A material increase in the price of apricot pits is noted this year; previously the highest price paid was $25 a ton, but this year as high as $30 has been paid, due, it is said, to English buying.

A peach which is said to be better than any on the market has been grown by G. M. Williams of Fresno. It is called the Spencer Seedling and somewhat resembles the Salway variety, though Mr. Williams claims it is larger, later, and more prolific.

The Kings County Canning Company had sold out their entire pack of extra and fancy peaches a month ago—before the canning season was completed. One concern bought 18 cars of a minimum of 60,000 pounds each to be sent to Salina, Kas. Three have already been shipped; the rest have been held to await reduction in freight rates. Many who gave trial orders of two or three hundred cases last year came back this year with carload orders.

OLIVES AND NUTS.

At Arbuckle, 40,000 acres of almonds have already been planted. Five hundred acres are in bearing and about 1500 acres will be planted in 1915.

The Arbuckle-College City Almond Association recently shipped a carload of almonds to New York; the sale was made through the State Exchange and the shipment was made direct.

The Plant Introduction Gardens near Chico recently received 106 varieties of almonds from all parts of the world, which will be grown there in an effort to determine the variety best adapted to that locality.

The Los Verjels Land & Water Company of Oroville, recently purchased 1020 acres of olive lands near Bangor from the W. T. Boulware estate. The company expects to place the land under irrigation and subdivide.

R. L. Underhill, secretary of the California Ripe Olive Association, recently made a trip to Oroville and stated while there that the Association now had approximately a membership of 100 growers in northern and central California, and that the campaign south of the Tehachapi was about to be started.

Farm Adviser Parker of Ventura county reports that his assistant has lined up about 350 walnut trees on which the growers will keep records. The object of this work is to show that some trees in the orchard are "boarders," that some barely pay expenses, and that others are profitable and worthy of propagation.

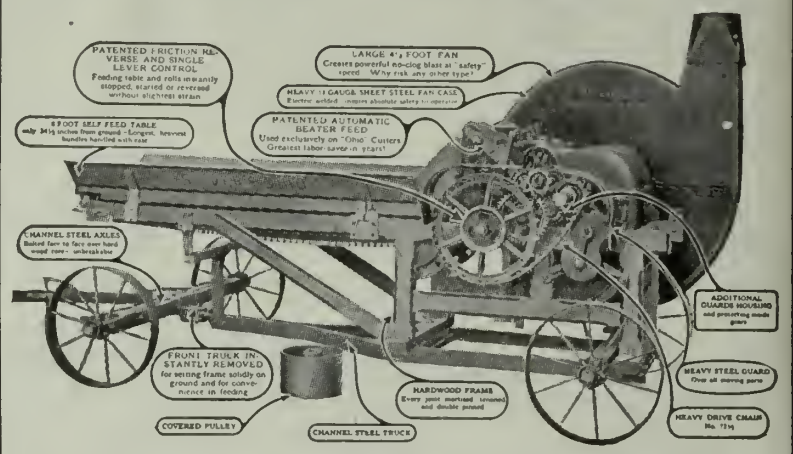
GRAPES AND SMALL FRUITS.

It is estimated that California sends out 200 cars of grapes daily.

Collector of Internal Revenue J. J. Scott and Revenue Agent J. A. McCabe recently left San Francisco for a trip through the San Joaquin Valley to investigate the wine grape situation.

It is stated that practically the entire crop of 1914 raisins have been sold and that there are enough orders on hand from Europe to clean up what remains.

The California Wine Association will be made the defendant in a suit by a committee of wine grape growers for the fulfillment of contracts involving $5,000,000.



One hundred tons of Tokays are being crated and shipped East from Arbuckle. Reports on these grapes show a high sugar content, as they are grown without irrigation.

It has been announced that the Roma Wine Company of New York has made a contract with the Woodbridge Winery of San Joaquin county to purchase their entire output for the next five years.

Horticultural Commissioner Kercheval of Sacramento county states that grape standardization is responsible for the increase in price of Tokays from Florin sold on the eastern markets; Tokays are selling for 20 cents a box more this year than last.

David Bloom, a cannery man with large establishments in Australia, will affiliate with Albert F. Etter, strawberry wizard of Ettersburg, Humboldt county, to erect a cannery

The "OHIO" Monarch Silo Filler with the DIRECT DRIVE

The most complete line of Feed Cutters built today. The Ohio Cutter is the only machine with drive pulley, cutting cylinder, Fan and Fly wheel on one shaft; there is no transfer of power from knife shaft to blower.

The machine here illustrated is made in five sizes—12, 15, 17, 19 and 22 inch throat, making it the largest capacity and most powerful feed cutter made.

A regular Base can be supplied if so desired.

at Ettersburg to can the Etter strawberry. Mr. Etter is now working on a road project to facilitate the industry.

The Kings County Canning Company canned 500 cases of grapes last year, most of which were used as samples. This year they canned one carload of Muscats and two of Thompsons, including about 3000 cases. They turned down one order of 1000 cases because it came too late. The grapes must be rather tart for canning; and they compete with the Phillip peaches if they come too late.

GRAIN AND FIELD CROPS.

A Rice Carnival is to be held in Marysville, Oct. 25.

An estimate places the Chico hop crop at 6000 bales this season.

The Oregon Hop Growers' Association estimates the yield in Oregon this year at 80,000 bales.

Fifteen hundred acres of barley on the L. Bemmerly ranch near Yolo averaged over 20 sacks per acre.

G. P. Hatcher of Yolo cut 100 tons of hay from 10 acres of alfalfa; and if the weather permits, another crop will be cut.

The Hop Growers' Association of California have under consideration the plan of establishing an office at Sacramento.

Growers of Yuba and Sutter counties are now preparing to harvest one of the largest bean crops ever produced in those sections.

It is stated that growers in the Hallwood irrigated district of Yuba county will start cutting rice about Oct. 3 to 5 and expect a record crop.

Beans are proving to be especially adapted to the overflow section near College City. H. V. Traynham has in this year over 100 acres. Threshing began on Sept. 20.

The V. A. Peterson Alfalfa Seed Co. of Arbuckle has 220 tons of clean alfalfa seed which they have begun threshing in southern Colusa and northern Yolo counties.

At a meeting of growers, shippers, and millers in conference with farm advisers at Stockton recently, the plan of handling grain in bulk instead of in sacks was discussed.

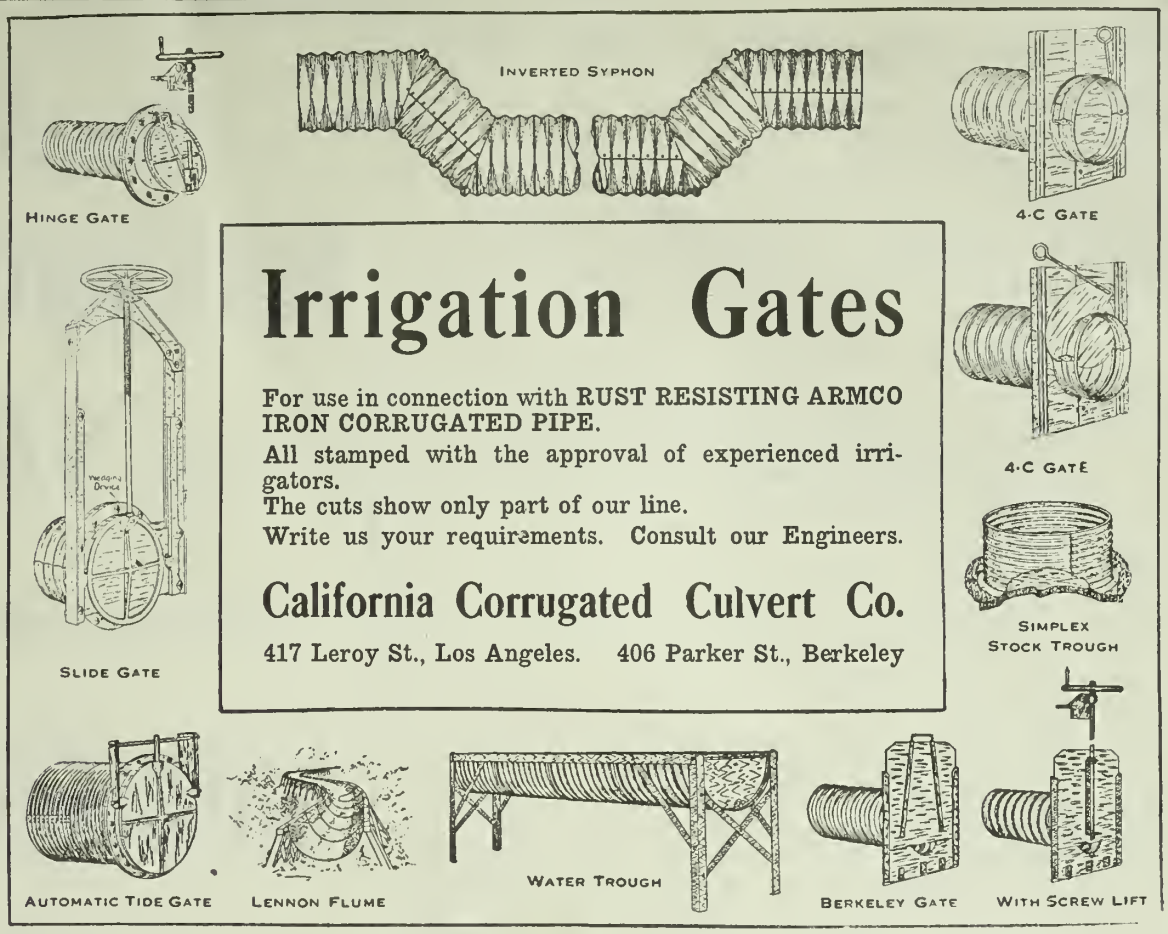
S. H. McCurry of Washington, D. C. and W. R. Weir of the University of California have been in Butte county looking into the question of drainage of the rice territory.

According to an announcement made by District Freight and Passenger Agent R. J. Smith, material reductions in the rates heretofore charged by the Southern Pacific Company for rice, alfalfa meal, and beans, have been made.

The threshing of beans has commenced on some of the ranches at Goleta, Santa Barbara county; although the crop is not up to normal, the quality is reported to be exceptionally good. Growers have started a movement to market the 1915 crop.

At the recent potato growers meeting held at Stockton it was decided to hold another one soon at San Francisco, at which owners of potato lands will be urged to be present. Potato growing has reached a critical stage in the delta section through diseases which have developed, which, with the aid of government experts and co-operation of land owners, it is hoped to overcome.

MISCELLANEOUS.



A Farm Bureau Unit will be organized at Blacks, Yolo county, soon.

An agitation has been started for the appointment of a farm adviser for Merced county.

One hundred and nineteen thousand acres of land, some of it adapted to farm and stock raising, have been opened in south central Oregon for settlement.

Prof. Clothier of the U. S. Dept. Agri. is in Woodland to determine whether the government shall make a general survey of Yolo county.

The Luther Burbank Company of San Francisco, sole distributors of Burbank creations, have made several changes in their management. They have secured the services of W. F. Pitts, formerly of Chicago and New York, as general manager succeeding Rolla Hough. Mr. Pitts has an extensive business acquaintance and is well and favorably known throughout the United States. Chas. A. Chambers, formerly Secretary-Treasurer of the Fresno Nursery Co., will fill the important position of manager of their nursery department. Mr. Chambers has had 25 years' experience in growing and selling nursery stock; and is considered one of the best posted men in the West on varieties, soil requirements, etc. W. D. Fraser, who has been with this company for some time, will remain manager of the seed, bulb and plant department.

P. P. I. E. LIVE STOCK PROGRAM

This week saw the Exposition's livestock show ushered in. From the following program of each day's happenings, it will surely keep the farmer and stockman busy from now on till the middle of November viewing his most favored breeds and keeping his ears wide open at the various conventions.

The program by date follows:

Mon., Oct. 4. Judging Shires, Jacks and Jennets, and Mules. Amer. Shire Horse Ass'n. meeting.

Sat., Oct. 16. Cal. Conference of Boys' and Girls' Agricultural Clubs.

Mon., Oct. 18. Judging Shorthorns, Red Polled, Brown Swiss, and French Canadians.

Tues., Oct. 19. Judging Herefords, Jerseys, Shorthorns (concluded), and Red Polled (concluded). Red Polled Cattle Club of America meeting.

Wed., Oct. 20. Judging Aberdeen Angus, Dutch Belted, Herefords (concluded), and Jerseys (concluded). Ayrshire Breeders' Ass'n. meeting.

Thurs., Oct. 21. Judging Galloways, Guernseys, Aberdeen Angus (concluded), and Dutch Belted (concluded). Amer. Galloway Breeders' Ass'n. meeting.

Fri., Oct. 22. Judging Polled Durhams, Devons, Galloways (concluded), and Guernseys (concluded). Amer. Shorthorn Breeders' Convention.

Sat., Oct. 23. Judging Holstein-Friesians, Dairy Shorthorns, and Kerry and Dexters.

Mon., Oct. 25. Judging Ayrshires, Simmenthals, Holstein-Friesians (concluded), and Dairy Shorthorns (concluded). Amer. Aberdeen Angus Ass'n. meeting in forenoon.

Tues., Oct. 26. Judging purebred steers and spayed or Martin heifers, grade and cross bred steers, and champion steers by ages. Polled Durham Breeders' Ass'n. meeting.

Thurs., Oct. 28-30. Cal. Creamery Operators' Ass'n. meeting.

Tues., Nov. 2 Berkshire Congress.

Wed., Nov. 3 Judging Shropshires, Leicesters, Rambouillet B., and Persian Fat Tails. Judging Poland-Chinas, Chester Whites or O. I. C., Tamworths, Large English Blacks, and Victorias. Poland-China Get-Together Day. Amer. Milch Goat Record Ass'n. meeting in the afternoon. Berkshire Congress.

Thurs., Nov. 4. Judging Leicesters (concluded), Hampshires, Rambouillet B (concluded), and Shropshires (concluded). Judging Berkshires, Poland-Chinas (concluded), Chester Whites or O. I. C. (concluded), and Tamworths (concluded). National Swine Growers' Ass'n. meeting. Romney Sheep Breeders' Ass'n. meeting in the evening.

Fri., Nov. 5. Judging Cotswolds, Exmoors, Rambouillet C., and Hampshires (concluded). Judging Duroc-Jerseys, Hampshires, Yorkshires, Cheshires, and Berkshires (concluded). Continental Dorset Club meeting. Amer. Rambouillet Sheep Breeders' Ass'n. meeting. Chester White Swine Record Ass'n. meeting in the evening.

Sat., Nov. 6. Judging Southdowns, Dorsets, Karakule, Cotswolds (concluded), and Rambouillet C. (concluded). Judging Mule-Foots, Essex, Duroc-Jerseys (concluded), and Yorkshires (concluded). Amer. Southdown Breeders' Ass'n. meeting in the forenoon. Amer. Hampshire Swine Record Ass'n. meeting in the afternoon.

Mon., Nov. 8. Judging Southdowns (concluded), Dorsets (concluded), Merino B., and Cheviots. Judging Fat Swine, purebreds, and Fat Swine, grades and crossbreds. Amer. Oxford Down Record Ass'n. meeting. Amer. Hampshire Sheep Ass'n. meeting.

Tues., Nov. 9. Judging Lincolns, Tunis, Merino B. (concluded), and Cheviots (concluded). Amer. Angora Goat & Mohair Day. Amer. Angora Goat Breeders' Ass'n. meeting in forenoon. Duroc-Jersey Swine Breeders' Convention, afternoon. Amer. Cheviot Sheep Society meeting in the evening.

Wed., Nov. 10. Judging Romneys, Merino C., Tunis (concluded), and Lincoln (concluded). O. I. C. Swine Breeders' Ass'n. meeting in the forenoon. Amer. Tamworth Swine Record Ass'n. meeting in the afternoon.

Thurs., Nov. 11. Judging Merino C. (concluded), Angora Goats, Milch Goats, Fat Sheep, purebred, and Fat Sheep, grades and cross-breds. National Mohair Growers' Ass'n. meeting in the afternoon. Amer. Shropshire Registry Ass'n. meeting in the evening at 7 p. m.

Fri., Nov. 12. Judging Angoras (concluded), Milch Goats (concluded), Fat Sheep, purebred (concluded), and Fat Sheep grade and cross-breds (concluded).

Other Feeds Help Alfalfa to Make Pork.

The important question of whether it is profitable to feed other feeds with alfalfa is tested in interesting experiments in Imperial Valley.

[Written for Pacific Rural Press by R. B. Peters of Peters & Lamson of Holtville.]

Men from the corn belt who start hog raising in the southwest meet conditions so different from those to which they are accustomed that they are considerably baffled at the start. Not a few start enthusiastically and end sadly.

The success of the few and the failure of the many is chiefly due to the use or abuse of one of the three most valuable of hog feeds, namely, alfalfa. We discovered this soon after we began hog raising in Imperial valley, a couple of years ago.

Too many people have been led to believe that the hog will grow and thrive on alfalfa alone, this belief being based on too trusting a faith in glowing real estate advertisements. When the grower finds that his hogs are not doing well, he blames the climate, or the hog, or the alfalfa, but the trouble is nothing but his own ignorance.

The writer, like many others, was enthused over the value of alfalfa, but found disappointments at weaning time and in the rate of growth afterward. After a fruitless search of California and other literature covering experiments with hogs which are on green feed practically all the year, we decided to start out ourselves to find a ration that would give both rapid and economical gains.

If a hog runs loose and has alfalfa only, at a year of age he will weigh from 75 to 150 pounds, likely nearer the first than the last. He is not good to look upon, but has made a very economical growth and will finish fast and cheap on grain. This grass growth may be produced at from $2.00 to $4.00 per hundred pounds of pork, depending upon how valuable the alfalfa is and the number that starve. It may be a cheap gain, but it is a very unsatisfactory one and few who follow it stay long in the hog business, due to the number of hogs that are stunted and the long wait for the hog to grow.

In the corn belt in a dry lot, it takes from 500 pounds of grain up, to make 100 pounds of pork, and generally up. If tankage is used; the amount of feed will run from 400 to 500 pounds.

Then the question is, how much barley or milo does it take to make a hog in California, along with alfalfa, and how much can we get for the grain, via the hog.

Our feeding tests on our ranch have shown us that if wheat, barley, or milo be fed with a proper amount of tankage, they are so near the value of corn that it is next to impossible to tell the difference in the finish of the animal; and also that by feeding all the cut green alfalfa they will eat, the amount of grain used per hundred pounds of gain, is decidedly less than in the corn belt where green feed can not be had a large part of the year.

We used soaked barley, ground milo, and milo in the head. We find that if two to three pounds of grain per hundred pounds of pig be fed daily, the gain of the pigs will be from .4 to .7 pounds per day, increasing of course as the pig reaches six months; this means the use of from 300 to 500 pounds grain per 100 pounds gain, the amount being governed by physical conditions and the kind of care the animals have. This is a fair rate of growth and with good stock will finish thrifty looking hogs around eight or nine months, weighing 175 to 200 pounds, and will bring around the top of the market. With grain at $1.25 this would have a feed cost of about $5.00 per hundred pounds of pork, plus pasture.

Now when we add ten per cent tankage, then we start in to get the growth we ought to get. We then use only from 200 to 350 pounds of feed per 100 pounds gain. This is, as stated above, in addition to all the alfalfa pasture, or if in dry lot, all the cut green alfalfa they will eat. We get better results also by feeding twice a day, and we water four times a day. With this ration, we get one pound per day gain in a pig, this gain constantly increasing till we finish him around 200 pounds at six months, a hog that will top the market and a beauty to see.

This hog with proper attention and plenty of green feed, may be produced on an average of 270 pounds grain and 30 pounds tankage, per 100 pounds gain. If the grain is worth $1.25 and the tankage $3.00, this makes a gain at a cost of $4.27 per hundred weight, not counting labor nor green feed.

Hogs on pasture with the above amounts of grain, do not eat large quantities of alfalfa, but it is highly valuable as a conditioner, aid to digestion, and decidedly reduces the amount of grain. I do not believe the green feed need be figured over $1.00 per hundred pounds of gain in weight of pig. Hogs so raised, if pure bred, or uniform cross bred stock, should be worth about $8.00 per hundred in the southwest. This means that the man with properly bred hogs fed green alfalfa and barley or milo, may realize near $2.00 per hundred on grain raised on the place and marketed this way.

The amount of tankage may be reduced with abundance of green feed, but never eliminated. To successfully raise hogs, a highly concentrated protein feed is necessary. Growers having plenty of milk can use it partly or entirely as substitute for tankage and for pigs that are to be rushed to the butcher, but on breeding stock the possibilities of tuberculosis in the milk are dangerous, and also in pigs that are not rushed, the meat may be affected and condemned in the packing house. Of course this does not apply to pasteurized milk or tubercular free herds.

We firmly believe that a feeding system as outlined above, joined with the superior climatic conditions of the southwest, enables us to raise hogs both cheaper and better than can be done in the corn belt. A barley fed hog has few equals and no superiors. The value of alfalfa pasture for carrying over brood sows is important also.

The attached table shows some

The American Berkshire Congress SALE

Exposition Grounds, San Francisco

Saturday, Nov. 6

at 1 o'clock p. m.

The leading PRIZE-WINNING BERKSHIRES at the Exposition, will be offered at auction without reserve.

Among the Contributors will be the following well known breeders:

A. M. Alexander, Suisun, Cal.
A. H. Brinton, Woodland, Cal.
W. M. Carruthers, San Francisco, Cal.
Stephen S. Day, Sacramento, Cal.
Farmers' Farm, Farmington, Minn.
F. L. Hall, Perris, Cal.
Hamilton Farms, Gladstone, N. J.
A. B. Humphrey, Mayhews, Cal.
Hood Farm, Lowell, Mass.
Iowana Farms, Davenport, Iowa.
G. A. Murphy, Perkins, Cal.
H. L. Murphy, Perkins, Cal.
Pure Gold Stock Farm, Elk Grove, Cal.
F. R. Steel, Grant's Pass, Oregon.
Chas. M. Talmadge, Newport, Wash.
Thatcher, Ennis & Williamson, Riverside.
F. W. White, Elk Grove, Cal.

AUCTIONEERS

COL. BEN A. RHOADES, Los Angeles, Cal.
COL. W. H. HORD, San Francisco, Cal.

For catalogues address

Frank S. Springer, Secretary

Springfield, Illinois.

results with three lots of pure bred Duroc-Jersey gilts on our ranch in Imperial Valley. Lot one was as fine a looking lot of pigs as could be found any place, but a little too fat for a sultry hot day. Dry days, no matter how hot, do not bother them. Three other lots were fed special feeds of local interest, so I do not give them here:

Pigs on Feeds Supplementary to Alfalfa.

Peters & Lamson, Holtville, Cal.	Lot 1, 90% Soaked Barley 10% Tankage 12 lbs. per day per lot	Lot 2, 90% Milo in Head 10% Tankage 5 lbs. per day per lot	Lot 3, Milo in Head (No Tankage) 8 lbs. per day per lot
No. days fed	44	44	44
No. pigs in lot	5	5	5
Average weight at start	58	51.6	59
Average weight at finish	99.6	78.6	80.4
Average gain per day, per pig	.95	.61	.45
Feed eaten for 100 lbs. gain (not including alfalfa)	Barley 228 lbs.	Milo 135 lbs.	Milo 330 lbs.
	Tank. 25.4 lbs.	Tank 15 lbs.	.....

All pigs in test were pure bred Duroc Jersey gilts, winter pigs, fed in dry pens fourteen by fourteen feet and given all the fresh cut green alfalfa they would eat.

Lot 1 made very satisfactory growth in every way. Lot II made economical growth but did not look quite as well as Lot I. Lot III grew too slow to look well and it will be noticed that this lot without tankage ate twice the amount of grain and made less gain than the lot with tankage. In all cases the gain was economical, and Lot II, with milo equivalent in amount to the barley, would probably have made a gain equal to lot I.

California's Opportunity for Dairymen.

[Written for Pacific Rural Press.]

THE LITTLE LEAKS IN DAIRYING.

In dairying as in most other work it is the seemingly small thing which very often causes the most trouble and this is particularly true in the matter of cream handling.

State dairy inspectors long ago learned to look for these small points around a dairy before offering their final conclusions and it was while on such an inspection that the following experience was encountered.

The inspector called at a large dairy where he was gladly met by the owner who took great pride in showing a newly whitewashed stable and milk house, both of which were well ventilated, lighted and drained. The inspector remarked that "You will certainly get a good score on your barn," and then passed into the milk house, where were found two large galvanized tanks, both having a large faucet near the bottom for emptying. The inspector looked into the first tank and saw that it was clean, then put his forefinger into the faucet. When he pulled it out it was covered with a slime that showed it had not been properly cleaned for some time.

The owner looked surprised and called his foreman, asking him why such a condition existed. The foreman replied that the tank in question was only used for skim milk which was fed to the calves and hogs. Upon a similar examination of the second tank, however, the condition was found to be equally as bad. This time the foreman had no excuse to offer and the owner was the most humiliated man imaginable. "Mr. Inspector," he said, "I am very sorry that you have found that slime and assure you I did not know my men were so careless in their work. You can depend upon it that it will never occur again while I am around."

While his barn and milk house were well taken care of, because slackness on the part of the men was easily discernible, that little dirty faucet out of sight was adding millions of bacteria to every milking, thus making it far more difficult to ship sweet cream to the creamery, for which he received more money than he could for sour cream. That small faucet had probably cost him a good many dollars each month, and would have continued to do so but for the inspector who was familiar with the hiding places of germs. Every dairyman should be his own inspector and catch these small leaks in his businesss.

WHO WILL CURE THIS HORSE?

To the Editor: I have a mare that has a habit of going backwards if I cinch her up too tight at first. She does not rear up but just goes down so quick I hardly know how she does it. She always goes back before I start to mount her. Can you tell me a cure for the habit, and are her colts likely to inherit this habit? Also when I first saddle her to go away from home, she does not want to stand while I mount, but wants to start before I get my foot in the stirrup. After I lead her a short distance she is all right. Can you tell me a cure for this habit? I am afraid if I try to make her stand, she will go backwards.

Manton. George E. Wright.

The Fair Oaks Ranch of Willits reports the sale of a registered Duroc-Jersey brood sow, Fair Oaks Fancy, sire, Cholly Francisco 51875, dam Cols Fancy 107666, to Mrs. J. A. Oaks, Willits.

CALIFORNIA
HOG BOOK
Valuable to Farmers.

"W. S. Guilford of Orland is the author of 'California Hog Book,' which has the merit of being adapted to conditions in this State. The author is a practical farmer, who realizes the possibilities of the swine industry. The book is replete with valuable information for the hog raiser, given in every-day language, avoiding technical terms used by writers of similar works. Those who know Mr. Guilford have unlimited confidence in the book. The 'California Hog Book' is from the Pacific Rural Press, San Francisco, and promises to become one of the most popular stock books written for the California farmer."—Sacramento Union.

DAIRYING.

D. J. Altamont of Esparto is shipping 200 gallons of milk to Oakland daily.

Guy H. Miller of Modesto is fitting about a dozen head of Jerseys for the Panama-Pacific Exposition.

The California Creamery Operators' Association will hold their convention at San Francisco Oct. 28, 29, and 30.

The Alpine Creamery Company of Gonzales, after running short-handed for the past two months, is now operating full time.

J. J. McMahon of Modesto has sold his 523-acre ranch near Modesto to R. N. Park of Michigan, who will establish a dairy there.

Judging of Jersey Cattle at the Panama-Pacific Exposition will begin on the morning of October 19th, and be finished on October 20th.

A consular report states that cow-testing centers have been established in Canada under the direction of the Dairy and Cold-Storage Commission.

A. F. Scheidecker of Zamora, Yolo county, grows all his own heifers and often buys a few from his neighbors. Each year he has a nice bunch to sell.

Philadelphia's Glory Gertie, 14 years old, belonging to C. G. McFarland of the Willowood Jersey Farm of Tulare, finished Feb. 28 a record of 592.1 pounds.

Clausen & McCune of Zamora, Yolo county, are planning to test officially several of their registered Holsteins. At present they have 29 head registered cows and heifers.

Petaluma parties are at Arbuckle, negotiating for a location to establish a large cheese factory. They already have 250 cows of their own and will buy milk from other dairies.

Fleurette of Riverside Farm, of the Dupee herd of Santee, San Diego county, just finished a yearly test, making 13,690 pounds milk, 692.52 pounds fat, the average test being 5.06 per cent.

A 350-ton resaw silo is being erected on the D. J. Altamont ranch near Esparto. The approximate cost is between $350 and $400 complete. Egyptian corn will be used as ensilage.

The California Jersey Breeders' Association will hold its annual meeting in Congress Hall, Exposition Grounds, on the evening of October 20th. Every Jersey breeder in the United States is invited.

The N. H. Locke Co. of Lockeford are fitting for the Panama-Pacific Exposition the fastest bunch they have ever gatherd together, and their four-year-old and senior yearlings will be hard to beat.

The J. S. Gibson Co. of Williams expects to begin official test on several cows, including Aaggie Acme of Riverside, when they begin calving about the first of October. They expect to test all their purebreds.

Geo. Belloni of Grafton plans to have all his cows registered Jerseys in a few years. At present he has five registered females. He believes that Jerseys can produce butterfat more economically than any other cow.

On Sept. 15 at Florham Farms, Madison, N. J., Jos. L. Hope offered 81 head of Guernseys, which brought at auction $43,235, this being an average of $533.67. The highest price, $2500, was paid for Florham Gold Lassie, a beautiful young cow.

J. H. Harlan Company of Woodland recently shipped to Mrs. Elliott of Tulare a fully marked 19-months son of Kind Mead. Another bull was sent to T. F. Spurlock of Covelo. This firm now has 80 head of registered Holsteins. Official testing of all cows as they freshen will soon be started.

Farm Adviser Frank F. Lyons of San Joaquin county reports that at a meeting at Ripon, Sept. 16, the Ripon Farm Center Cream Pooling Association was organized, and election of directors held. Already 896 cows have been signed up by 68 dairymen.

A. A. Jenkins of Tulare, who has been in the purebred Jersey game only three years, having started with two purebred heifer calves, has recently sold out all his grades and has 53 head of registered stock, eight of which have finished authenticated records. His start in the purebred game cost him $70 worth of hay.

Tilly Alcartra is coming back the second year with another great record. The first six months she has produced 16,300 pounds of milk. At present she is giving over 80 pounds of milk daily. Mr. Morris says that from present appearances, she will break Riverside Sadie's two-year record which is still the world's record for that length of time.

W. L. Morris of Yolo bought of the butcher at Woodland, eight cows which were billed for the block. Two of those cows were entered in the Yolo Cow Testing Association and in 31 days one made 80.07 pounds butter and the other 77 pounds. They were the leading cows in the Association. No one can tell about a cow unless record is kept of the milk produced.

Frank Morris of A. W. Morris & Sons Corporation states that one reason for their great success in making large milk and butter records is in their method of feeding. Starting in with the calf, they feed to develop size and capacity. Having once developed the cow, they place such feed in the right proportion before her that she will consume large quantities of it. The average weight of a matured cow on this ranch is 1600 pounds.

H. M. Tichenor advises us that the Carnation Stock Farms will sell their entire herds of purebred and grade Holsteins which have attracted so much attention at the Exposition, at public auction Dec. 1. Included in this offering are 50 head of matured cows, 20 head of heifers, and about 10 head of bulls, all of which are registered. Also will be sold the herd bull, Dutchland Governor Sir Colantha, and 100 head of exceptionally fine grade Holstein cows.

CATTLE AND SHEEP.

Bullard Bros. of Woodland have sold 400 rams and 300 ewes this season.

J. R. Garnet of Willows sold his fall wool clip to E. H. Tryon of San Francisco for 13½ cents a pound.

G. K. King of Red Bluff recently sold 20 cars of sheep to San Francisco purchasers for market purposes.

Dr. Geo. S. Rey, County Veterinarian of Tulare, has issued a warning to the ranchers to vaccinate for blackleg at once.

Wm. Bemmerly of Madison now has a herd of Herefords numbering 100 females. The demand for purebred Herefords for the range is increasing.

The Gibson Company of Woodland, of which Dr. H. M. Elberg is manager, is planning to enter in the Portland stock sale some of their Shorthorns.

Sunnyside Herd
31 head of females from this famous herd will be sold at the
Breeder's Consignment Sale
at Hanford, October 14th and 15th
Some A. R. O. Cows and some choice bred heifers bred to my herd bulls, Arcady Pontiac Wayne Hengerveld, who has 13 A. R. O. daughters, and Judge Hengerveld De Kol 6th, my junior herd sire.
NO BETTER BRED SIRES IN THE STATE.
R. F. GUERIN
R. R. 3, Box 58, Visalia, Cal.

G. K. Swingle of Davis reports the demand for Shropshire bucks has been greater than the supply. At present his flock numbers 40 lambs and 310 ewes, 20 of which are registered.

The Fair Oaks Ranch of Willits reports the sale of the registered Shorthorn bull, Grand Duke 1st, sire Landseer 379318, dam Diana Duchess 5th 127039, to Dowling Bros. of Ukiah.

Huston & Company have on their Winters ranch a purebred herd of 75 Shropshire sheep which they secured from the Howard Cattle Company. They are also getting a start in registered Berkshire hogs.

G. T. Dunlap of Winters has purchased the N. E. Moore ranch in Sonoma county, consisting of 4147 acres of valuable stock range. It is said that the new owner will devote his time to raising blooded stock.

"Why sell a calf for veal when you can raise a purebred animal and get six times as much?" asks A. V. Arvedson of College City. He only has two registered Jerseys, but these he says pay him much better than several common cows.

At a recent session of the Nevada State Board of Equalization, it was decided to take lambs and kids from the tax rolls and reduce the assessed valuation of hogs, which decision means much to the stockmen of that state.

J. N. Horne is improving a 1500-acre ranch west of Arbuckle. The house, barn, and other buildings will cost about $12,000. The ranch will be stocked with Herefords. A registered bull and 20 registered heifers have already been purchased.

H. H. Gable, manager of the Diamond G. ranch of Esparto, reports that they now have 12 Hereford females, 5 males, 12 grade Herefords, also 200 head of grade Herefords on the range. The original females were secured from O. Harris & Son, Harris, Mo.

Kaupke Bros. of Woodland have recently secured a fine English buck to head their flock of 45 Hampshire ewes. W. S. A.'s No. 9790 arrived from the East Aug. 10. He was champion at the Royal Stock Show in England; since coming to this country he has twice held the championship at the Indiana State Fair.

The Agriculture and Live Stock Company of Madison, Yolo county, of which W. F. Stephens is manager, have rented to Gheflakes Bros., proprietors of the Western Yolo Cheese Company, 2500 head of sheep. New buildings are being erected by the Company on their ranch north of Esparto, especially suited for the business.

HORSES AND SWINE.

L. W. Millsap of Yolo has five registered Essex hogs. This herd is said to be the only one of its kind on the Pacific Coast.

Twenty-four colts from 30 mares is an extra good record. This was secured by H. C. Hinkly of Grafton. A Shire stallion was used.

G. W. Williams of Fairmead has some hogs "almost purebred," but not eligible for registry. He intends to replace them with registered stock.

H. D. Stokes, swine herdsman at the University Farm at Davis, states that they will show about 25 head at the Exposition, five breeds being represented.

A. F. Debrowsky of Redding is disposing of his Poland-China sows and buying Durocs. He expects to have a herd of 20 or more sows in a short time.

W. O. Pearson, of the Swineland Farm, Woodland, reports having sold 8 Tamworths to ranchers near Williams, 4 Durocs to Bullard of Woodland, and 1 to Ploker Bros., Woodland.

Frank Elston of Woodland has recently purchased five sows from Hiram Bullard of Woodland. He now has a herd of 12 Duroc-Jersey sows. Bullard is closing out all his registered hogs.

J. P. Daggs of Modesto recently sold four Duroc-Jersey sows to W.

SWINE.

I HAVE SOME EXTRA GOOD BOARS about one year old, now ready for service. These boars are the Big Type; strictly high class and fit to head any herd anywhere. They are large and have splendid length, depth and thickness. I also have some March pigs that are among the very choicest young boars that I bave ever owned. Visitors say they are the best they ever saw anywhere. I also have some of the best weanling boars that it has ever been my pleasure to see. They have the size, the hams, the shoulders, the strong backs, the length and depth of body, with plenty of smoothness and mellowness—in fact, they have two good ends and a good middle. All the above-mentioned young boars are sired by my great berd boar Iowa Wonder, who is a son of A Wonder, the greatest Poland China boar living or dead. Their dams are all strictly first class, either directly from the "corn belt," or from sires and dams from the "corn belt." On account of extra demand I have had for this stock, I bave no females for sale at present. Yours for the big type, Geo. A. Smith, Corcoran, Cal.

REGISTERED POLAND-CHINAS.—Large type. Sir Superbia, three times Grand Champion, 25 times first. Dams sired by Grand Champion, first prize boar Idaho. Exceptionally choice boars old enough for service. Also young stock, both sexes. Satisfaction guaranteed. Prices reasonable. A. J. Robinson, B. 4, Box 125, Modesto, Cal.

BILLIKEN HERD of pedigreed O. I. C. Swine; weaned pigs of both sexes for immediate shipment; pairs and trios mated, not akin. All from big type stock of extra heavy bone. Immunized against hog cholera, crated and shipped free. Write for descriptive circular and price list. C. B. Cunningham, Mills, Sacramento County, California.

O. I. C. SWINE—Poor health is the reason for this offer. Will sell my berd of pure-bred O. I. C. Swine at prices that will turn them quick. Pigs two to eight months old, either sex. Write me for special prices. Every hog registered. G. H. Dubois, Box 13, San Martin, Cal.

BLUE-RIBBON HERD DUROC-JERSEY HOGS—Bred Gilts a specialty. 15 bred now. 20 ready to breed. Sires and dams win all blue ribbons 1912, 1913, 1914 State fairs. 15 first, 13 seconds, 6 thirds, 7 fourths, 1 fifth. Will show 1915. For prices, write John P. Daggs, Modesto, Cal.

BERKSHIRES—Headed by Bandmaster 2nd, junior champion Iowa State Fair. My females were winners at Iowa, Wisconsin and Minnesota State Fairs. Farm at San Mateo. Address W. M. Caruthers, 218 Hearst Bldg., San Francisco.

ROSE CREST BERKSHIRES of Masterpiece and Rival's Champion Best breeding. A choice lot of Fall and Spring boars; also a few sows and gilts. F. L. Hall, Perris, Cal.

ROSS' DUROCS—90 little fellows, farrowed since first of September. Will book orders for November delivery. Foundation stock from Daggs and Johnson herds. R. J. Ross, Route B, Modesto.

LARGE YORKSHIRES—Gilts open or bred to our imported boar, winner at 1915 Canadian National and Ottawa shows. Choice Fall and Spring boars. Riverina Farm, Box 74, Route 2, Modesto, Cal.

ANYONE WISHING TO START a herd of registered Berkshires, write to Alexander and Kellogg, Suisun, Cal. Our berd is of the best breeding and cholera immune.

REGISTERED BERKSHIRE SWINE—All ages, for sale. Grapewild Farm, Mayhewa, Sacramento, Cal. A. B. Humphrey, Prop., P. O. Box P.

REGISTERED PUREBRED BERKSHIRE PIGS—(Weanlings) both sexes. Reasonable prices. Write for full inormation. J. E. Hall, Sebastopol, Cal.

REGISTERED BERKSHIRES—Fine 3 to 6 months boars by Panama Lee, Gold Medal winner at 1914 State Fair. C. E. Barrows, Los Molinos, Cal.

BLATCHFORD'S PIG MEAL weans easily and safely; no trouble; no milk. Write for free folder, "The Safety Route from Pighood to Porkage." Coulson Co., Petaluma.

BREEDER of Registered Holsteins and Poland China Swine. E. E. Freeman, R. 5, Modesto, Cal.

Veterinary Queries and Replies.

[Answered by Dr. H. B. Wintringham, Petaluma, Cal.]

RHEUMATISM.

To the Editor: One of my big sows puts scarcely any weight on one hind foot. She holds it mostly at an angle forward and pats it up and down while standing still. When she takes a step, the foot never gets farther back than perpendicular under her. The foot is not tender nor the hock. Quarters are dry and she has the run of an alfalfa pasture.—L. D. C., Denair.

[This is rheumatism. Give her good, dry, warm quarters. Place 15 grains urotropine in her feed twice a day.]

COW HAS DISCHARGE.

To the Editor: Bought a young cow (second calf) fresh two weeks ago; had her walk to my place. On the way she became frightened, slipped, and fell. A couple of hours after placing her in my stable, I noticed a discharge; a thick matter; color and consistency like that of brains; amount about a pint. Since then the discharge is less, but frequent, about a small spoonful at a time. Appetite good and cow appears well and is in good condition. What is the trouble? What shall I do for her?—A Subscriber, San Leandro.

[This is Purulent Metritis and a very grave condition. Warm douches with a 1-2000 solution chinisel, 2 gallons at a time, twice a day and 1 oz. doses fluid extract echinacea every three hours is the best treatment for this case. This must be carried over a long period and the results are doubtful.]

BARLEY STRAW FOR DAIRY COWS.

To the Editor: I planted 20 acres of barley last spring with the intention of selling it, but the hot north wind blew for 2 or 3 days and made the barley turn yellow before it fully matured. The barley is considerably shrunk and I think it is not fit to sell, so I expect to feed it with my dairy cows. The barley goes about 85 lbs. to the sack. The straw is quite tender and sweet; do you think it would be profitable to cut up the straw fine and mix it with my barley (rolled) and some other concentrates? What kind of concentrates should I use? And how much? Is molasses good? And how much does it cost by the ton? I feed alfalfa hay.—Subscriber, Byron, Cal.

[Answered by Prof. F. W. Woll, University Farm, Davis, Calif.]

Barley straw has a similar feeding value as oat straw, and contains about 40 per cent digestible carbohydrates. A considerable portion of this is, however, in the form of fiber and is of doubtful value for productive purposes, but there is enough valuable digestible nutrients in it to fully justify its use for feeding farm stock. It is used as a regular part of the rations for horses and fattening cattle in European countries, being cut fine and fed wet mixed with concentrates or sliced roots. Since the correspondent is feeding alfalfa hay it will be advisable to feed the cut straw with either rolled barley or molasses. All these feeds are high in carbohydrates (starchy components) and, therefore, supplement nicely alfalfa which is high in protein (flesh-forming substances). A good method of feeding will be to wet the cut straw with molasses diluted with three to four times its weight of water and mix rolled barley with it. The latter may also be fed alone.

Molasses generally costs about $20.00 to $25.00 a ton ($6.00 to $8.00 a barrel). This may be considered a fair price at ordinary market prices for our cheapest concentrates (barley, dried beet pulp or cocoanut meal), since it compares favorably with these in feeding value.

JANE KORNDYKE OF RIVERSIDE..
Milk, 7 days, 703.00 lbs. Butter, 7 days, 31.47.
Milk, 30 days, 2870.00 lbs. Butter, 30 days, 119.00.
To be sold at the combination sale at Sacramento, October 6th and 7th.

COMBINATION SALE, OCT. 6 & 7.

A note from F. L. Morris, Woodland, says that catalogues will not be available to mail out before the sale of Holsteins, but that copies may be had two or three days before the sale at the pavilion on the Fair Grounds, Sacramento, and on the days of the sale.

In a letter from Mr. McAlister, Jr., he makes a good point for dairymen to think of when he said: "Owing to the severe financial depression, the price of Holstein cows in this State has been depressed below their normal value, and less than they have been selling for. At the coming sales there will be offered more high-grade record cows, and sons and daughters of these cows, than at any previous time anywhere in this country. At the prevailing prices these great animals may sell for less than ordinary pure-bred bulls have brought in the past. Undoubtedly the Holstein cow will sell for as high prices as ever in a very short time, as the financial depression is passed, which means that those buying now stand a chance to double their money. It should be understood that every one of the 175 animals offered at the sale will be sold at the highest bid, and absolutely no by-bidding allowed."

GRAND PRIZE

PANAMA-PACIFIC EXPOSITION

Awarded to

DE LAVAL

CREAM

SEPARATORS

as the Highest Award has been at every International Exposition since the invention of the Centrifugal Cream Separator in 1878.
And likewise as at all previous expositions, all higher dairy product awards at San Francisco have been made to users of the De Laval machines.

165 Broadway NEW YORK | 101 Drumm Street SAN FRANICSCO | 1016 Western Ave. SEATTLE

50,000 BRANCHES AND LOCAL AGENCIES THE WORLD OVER.

Mr. Holstein Breeder:

This is our last chance to call your attention to the opportunities that await you at the MORRIS-McALISTER COMBINATION SALE at Sacramento, October 6th and 7th. The high standard of quality in the animals which we are offering in this sale means success to the breeder who secures his foundation stock here. The cows have large A. R. O. records and the heifers are from high record dams, all bred to bulls that are in the foremost ranks of the breed.

In addition to our two great herd sires—KING SEGIS PONTIAC EMPEROR and LORENA KORNDYKE, either of which will add fame and prestige to your herd, we are consigning a number of young ones just ready to use, with breeding, conformation and high-record backing, which amply qualifies them to head any herd in the world.

You are invited to be present at the sale whether you are in the market or not.

Sheep Clean Irrigation Ditches.

[Written for Pacific Rural Press.]

Cleanlng irrigation ditch banks for nothing and making a profit in the transaction are accomplished by Dan Sturm and Lou Reager of the Orland project at practically no labor. Their neighbors' ditches grow up rankly to weeds, and the more enterprising of them burn off the outsides of the ditch banks, but can not burn the green weeds on the sides next to the water. Many of the ditch banks in this neighborhood are ragged, disreputable distributing points for weed seeds. The Government which put in the irrigation project recognized the damage due to the distribution of weed seeds and offered to fence one side of each irrigation ditch, if the owner would fence the other and maintain sheep on the banks.

Mr. Sturm took advantage of this and had the fence put in when the ditch was grown up "as thick as the weeds could stick last fall." He put a dozen common ewes, bought from the range at $5 apiece, onto the narrow strip between the fences on his 800 feet of ditch. They cleaned it with a vengeance, packing but not injuring the banks as heavier stock might. Half a dozen of them had lambs last October; the others had not been bred. This summer the ditches are clean of everything except turkey mullen, which the sheep do not eat, and a little fringe of growing water grass or German millet along the water's edge, which the sheep keep down, but do not exterminate. "The millet grows 18 inches a month and would be expensive cleaning out with the water in the ditch."

But the space allowed would not support so many sheep, so Mr. Sturm recently sold all of the old ones at the price paid for them; he intends to keep only the half-dozen young ones, which are sufficient, as he believes, to keep 1000 feet of ditch free of weeds. Sheep thus prevent seeding the place with weed seeds; there is no labor or expense aside from the fencing; the lambs and wool are clear profit, for the ditch banks they run on would be waste anyway, and would otherwise require considerable labor to prevent a discreditable appearance, which would reduce the value of the place and also impair the man's credit at the bank.

BULL VALUES DIFFERENT.

[Written for Pacific Rural Press.]

Many a farmer will turn off a poor cow to the butcher because she does not give enough milk, but there are few who will turn off a bull as long as he will breed, or so long as he can be used without extreme inbreeding.

There is as wide a varlation in the value of a bull as there is in cows, some are good and some are bad. Since the establishment of the official test by the various breed associations, there is not, however, so much chance in bull selection as there formerly was. Most breeders of purebred cattle are recognizing the value of the official test, and there are always opportunities for the dairyman to purchase herd sires with authenticated records back of them at a very fair figure.

Even though one takes the precaution of looking into the past records of the bull's dam, grandams, etc., there is a chance that he may not have transmitting powers. The only way to accurately decide on a bull's value is to weigh and test regularly the milk from his heifers. If they average up well, he should be kept as long as possible. If they average low, he should be sent to the butcher right away. If left in the herd, he might cost more than several boarder cows.

The slogan should be not only to weed out the poor cows for the butcher, but the poor bulls as well.

ANY BREED GOOD.

[Written for Pacific Rural Press.]

It doesn't make any difference what breed of dairy cows you keep; if you test and weigh your milk you will get good ones. That is the belief of Mr. J. Lindrinn of Humboldt county who has increased his average herd production from 226 pounds of fat to 277 pounds in the six years he has belonged to the Ferndale Cow Testing Association.

Mr. Lindrinn milks about 70 cows, the original herd being Durhams. In later years, however, he has used purebred Jersey bulls, and now he is contemplating the purchase of an Ayrshire bull as he believes them better suited to his conditions.

His method of increasing production is exactly the same as one finds on all high producing dairies, viz.: saves heifers from his best cows and weeds out herd with tester and scales. As the creamery which purchases Mr. Lindrinn's milk pays more for sweet milk than sour, he pours all of his milk over a milk cooler directly after it is drawn from the cow. There is no extra expense to this other than the small initial investment and it adds materially to the value of his milk.

On account of a severe attack of cholera, G. P. Hatcher of Yolo has stopped selling O I C breeding stock.

175 Holsteins of Quality 175

The Sacramento Sale Oct. 6 and 7 is Synonymous with Quality

In fact, never before at any public sale has there been offered as many advanced registry cows, as many great yearly record cows, as many daughters of great record cows, and as many sons of great record cows. For size, growth and conformation of offerings, the Sacramento Sale leads all others.
Most of the females are in calf to such great sires as Tilly Alcartra Son; Segis Pontiac De Kol Burke; Aralia De Kol Pontiac Segis, King Klondyke Pontiac, and King Segis De Kol Mead. This means their calves will be worth all if not more than their dams bring.

Does your farm pay?

Perhaps not as much as you would like, or perhaps even losing money. If so, it is because you have neglected to engage in the most profitable branch of the industry.

Last January a herd in New York was dispersed for $150,000, the recent owner making over a quarter of a million in a dozen years out of Holsteins alone. A start toward wealth can be made by buying at the

A. R. O. Cows and Heifers

Bred to PRINCE JULIANA DE KOL WALKER, will be in our offering at the California Holstein Breeders' Sale at Hanford, October 14-15. PRINCE JULIANA DE KOL WALKER is sired by PRINCE GELSCHE WALKER, whose dam is GELSCHE WALKER, 30.54 pounds butter in 7 days, and whose seven nearest dams average nearly 30 pounds butter in 7 days. His dam is JULIANA DE KOL, former world's record 2-year-old, whose sire has 8 daughters averaging 867.82 pounds butter in one year. This is the kind of Blood for Foundation Stock.

HEWITT & HEWITT, Hardwick, Kings County, Calif.

WITH THE LIVE STOCK MEN.

(Continued from page 327.)

V. Bennett of Chico; and one boar to each of the following: D. W. Scofield of Visalia, R. R. Houston of Byron, and H. H. Bromk of Merced.

"Prevention is better than cure," reasons Haden Smith of Woodland. Visitors to see his herd of Durocs are invited to rinse their shoes in a solution of sheep dip before entering the pens. This treatment kills all lurking choiera germs.

Duke's Lady Lee 13th, daughter of Baron Duke 170th, farrowed on Sept. 12 ten strong littie Berkshires. The pigs are by Symboleer's Duke, son of Symboleer 5th. The above pair was seiected by A. H. Brinton of Woodiand on his trip East last year and brought to this Coast.

The Yolo Orchard Company of Yolo kept 30 sows and 160 pigs from about the first of June until the middle of September on eight acres of alfalfa divided into six fields; and a system of irrigation and changing fields was followed. A little culi dried fruits and about 150 pounds of barley was fed during this period.

The Browning Stock Farm of Woodland, Poland-China breeders, report that they have just recently shipped 10 year-old sows to D. M. Swim of Vacaville, 1 boar pig to E. G. Watkins, Davis, 1 boar to C. Kellogg, Yuba City, a boar and sow to H. C. Wilson, Princeton. Since the middle of August, they have sold 30 head, and have 125 more to sell.

MISCELLANEOUS.

The Fifth Annual Livestock Exposition will be held at the Union Stock Yards, North Portland, Ore., Dec. 6-11.

The judges for the Panama-Pacific Exposition cattle show next month have been named and are: Thos. Dempsey, Westerville, O., will judge Jerseys; Eiiiott Davis, Lincoln, Neb., Red Polied; Calvin Ewing, Youngston, O., Gaiioways; Chas. L. Hiii, Rosendaie, Wis., Guernseys; M. A. Judy, West Lebanon, Ind., Aberdeen-Angus; Phil C. Lee, San Angelo, Tex., Herefords; Hugh Van Pelt, Waterloo, Iowa, Ayrshires; W. H. Standish, Lyons, O., Holsteins; Capt. T. E. Robson, London, Ontario. Shorthorns.

A BOOST FOR THE GUERNSEYS.

I have 60 cows in one herd that are now bringing me 50 to 55 pounds per day, and my feed has been short for the last 60 days. We have green feed the year round which makes the dairy business more of a succes. Thirty-six of these cows are Guernseys and the balance are mixed. My Guernseys test from 6 to 7½, the baiance of the cows from 3 to 5½. To my notion, the Guernseys are the best. I am running my 60 head on 80 acres and making a go of it. I have 20 six-months-old calves and 12 horses on the same piece of land. I have 70 cows on my other 80 acres; they are Durhams and Jerseys, but they are not in it with the Guernseys

Farm Poultry for Profit.

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

POULTRY ITEMS FOR CHANGEABLE WEATHER.

The scribe has been taking a vacation and seeing how other peopie do things. This is one of the best ways to get a littie practicai knowiedge of the poultry interests in this great State.

Feed Beet Pulp. — A great many pouitrymen are having a scarcity of green feed just now, and as this is the season when beet pulp is coming on the market it wiii pay to use it as a substitute. The hens will perhaps not take to it quite readiiy at first, but by serving a smaii quantity at a time they can be taught to eat it as well as anything eise. To feed it just pour water over it and let stand a few minutes, sprinkle a iittle salt over it if necessary, and serve in dishes or in troughs. Be sure to not ieave it iying around very iong or it will sour; that is the oniy thing to be afraid of, for sour feed causes bowei trouble.

Watch Roosting.—As the cold nights are approaching, it will also pay to find out if the chickens are all going to roost in the proper houses, as chickens often take a notion to sleep in trees. While they may keep healthy in trees, the chances are against them laying any amount of eggs; besides, roup very often attacks chickens that are too much exposed to contrary winds.

Good Tonic.—A little iron tonic, say half a teaspoonful of tincture of iron in a gallon of water, will brace them up against the changes in the weather and wiii help through the molt, too. This must be put in earthenware crocks or something simiiar for the hens to get the fuli benefit.

Keep the ground stirred up so that the chickens can find new mineral matter; if the ground gets hard and dry, the hens can neither scratch nor pick the little things they are always looking for.

Sprouted Grains.—I found a number of people that would have liked to feed sprouted oats and barley, but they did not have just the right idea of how to prepare them for a number of fowls. If nothing better is at hand, just soak the quantity of barley you need for one feeding. We soak it in warm water, as that starts the germ quicker and saves time. Four or six hours' soaking will do in warm water, but cold water takes longer. When it is soaked, put in gunny sacks and set out in the sun. If the sacks of bariey are sprinkled every day and then stirred by taking the two ends of the sack, one in each hand, and shaking the contents back and forth a minute, the barley will be sprouted and fit to serve in about four days. Another way is to have boxes that will hold enough barley for one day; bore holes in the bottom to allow the water to drain away, then pour the soaked bariey in the boxes. Cover over with burlap and keep sprinkled and stirred as in the gunny sacks. Oat sprouters can be used, but are not necessary in our ciimate. The thing to bear in mind is that it requires warmth to sprout grain; and another thing is that too much moisture and warmth without stirring wiii cause mold to gather on the grain, in which case it should not be fed at all. Sprouted grain of any kind is a good egg-getter.

Crowding Injurious.—Look out for crowding; if your chickens are crowded in too smaii a sieeping space they will not grow as they should, and wiii be subject to roup, colds, and many other troubles that can be avoided by giving a little more sleeping room. See that they have a good circulation of air at all times, but avoid direct drafts. Air that goes under or over without striking the chickens direct will do.

And don't forget that the fall is the best time to cull out the drones and send to market for pot pies for the peopie. Drones make very good eating, but that is all they are fit for.

Rabbits Die; Wrong Feeding.—Here is a question from a little girl that, without further information, one has to guess at. "Dear Editor: My papa says you could probabiy teii me what to do to keep my bunnies from dying. They refuse to eat, their heads swell up, and they have trouble breathing. After being sick a day or two they die.—Miidred."

Now if Mildred had toid us what she fed before the rabbits got sick it would be so much easier to diagnose the case, but the symptoms appear to me to be the effects of wrong feeding. If she has been feeding alfalfa or any kind of green feed and giving water at the same time it is safe to assume that is the cause. When green feed is served to young rabbits, water should not be given at ail; but if you feed dry hay or other dry feed, then give fresh water. All kinds of green feed contain water

HOG CHOLERA MASTERED.
The Superior Serum Co., of Kansas City, Mo., are now prepared to furnish anti-hog cholera serum from Los Angeles. All serum made and tested under U. S. Government inspection. The high potency of this serum has been shown to be perfect and the best of results have been obtained by the many hundreds who have used it. Price of serum 1½ cents per cubic centimeter. Virus free. OFFICE: 429-30 Bryson Block, 2nd and Spring, Los Angeles.. Phone Home A-1326.

LAST CALL FOR SILOS
FOR THIS SEASON'S USE
We will ship you a Remco Redwood Stave Silo, best Silo made—in 4 days—so you can silo this Fall's corn crop. Every day counts now. If you have feed that you will turn into silage accept this last call and get your Remco. If you don't you lose a whole season's benefits.
You use Tanks and Pipe all year round. Let us quote your prices on our Remco Redwood Tanks in all sizes and our Remco Redwood Stave Pipe in all diameters, 2 inches to 12 feet.
Tell us your requirements and we will quote you prices. Our factory is equipped for special orders as well as standard requirements.

enough to answer the needs of young rabbits.

Correction.—A local land company has written me that my statement that they claimed to have made $14,000.00 in one year from an acre of poultry land was incorrect and that the claim should have read $4000.00; and they say they have seen the books to prove it. However, four thousand dollars can't be made on every acre of poultry; and if any one has made that amount, it was by selling other than commercial poultry and eggs.

GALLANTRY OF THE GUINEA COCK.

To the Editor: Please state in your paper how we can tell the male from the female guinea fowl, at any age—say one year old. They look so much alike; nobody seems to be able to tell which is which.—H. L. H., Coachella.

[C. S. Valentine, author of "The Beginner in Poultry," says: "Males are distinguished from females chiefly by their cry. The males are slightly larger than the females; the voice is more strident, and where the young are being fed, the male's careful auxiliary protection of the female and her little ones distinguishes him. One may make unnumbered efforts to head off the male from his family, but he always will appear between his charges and the threatening peril, to insure protection."]

POULTRY NOTES.

At the Livermore Show Oct. 9, provision will be made for displaying utility stock grown by the various poultrymen of the valley with probably a few pens by famous breeders of utility stock with a view of showing the highest standards in their respective lines. Jas. Kepple, a utility expert of Petaluma, will judge the utility pens.

As a result of the series of illustrated articles that at the request of the Federated Poultry Ass'n of California were published during the winter of 1914-15 in the Pacific Rural Press, regarding the proper care of eggs by the producers and handlers, the average quality of the eggs now in cold storage is much superior to that of any previous year. When this becomes generally known to the mass of consumers, it is anticipated that a greater demand for storage eggs will continue through the winter; and because of this uninterrupted use of eggs as an article of food throughout the entire year, it will also stimulate an increased demand for extra quality fresh eggs. Although reports from the entire country show that never before were there so many eggs placed in cold storage, the owners are not showing any uneasiness, but all seem to anticipate the prophesied increased demand at prices that will yield fair returns.

E. N. Donaldson, formerly of Petaluma, has returned to California after an absence of eighteen years in Alaska. Mr. Donaldson's former location was at Corona and some of the "old-timers" in that district will no doubt recall that as a breeder of turkeys, geese, and pigeons, as well as fine horses, his stock could not be excelled. In all of our experience he is the most expert all round handler of animals we have met; they seem to just naturally accept him as a friend and respect and obey him at once. Mr. Donaldson is looking for a location in this State and any neighborhood that is extensively interested in breeding fine animals will be fortunate if he can be induced to "drive his new stakes" there.

Harness is like a leather boot—if you don't keep it oiled, it rots. Moisture that works into the pores of your harness robs tugs, straps and breechings of the strength they need to give you good long service.

EUREKA HARNESS OIL

keeps the pores of the leather filled with highly waterproof oils—keeps your harness soft, pliable, strong. Have your harness man dip your harness occasionally, or apply it yourself by hand. Harness costs money. It doesn't pay to neglect it.

Standard Oil Company

SLOBBERING RABBITS.

To the Editor: I have a bunch of 26 rabbits in one pen; within two days they were all attacked with the slobbers. I lost eight and some more are going to die. I feed them greens once a day and dry feed once a day, but the green feed is selected. I cannot discover the cause. Please let me know what I can do for them. I have been raising rabbits for quite a little while and never had any trouble like this before.—M. Bros., Bay Farm Island, Alameda.

[Answered by Geo. H. Croley, San Francisco.]

[Slobbers or snuffles in rabbits is a difficult disease to cure, but it may be prevented from spreading if given prompt attention. It sometimes attacks a lot of rabbits that are properly fed and cared for in the best manner possible, but it is usually due to damp or drafty quarters and first appears in the form of pneumonia. We have heard it stated that it is due to lack of salt; rabbits should be salted at least once a week. A level teaspoonful of salt mixed with a pint of dry bran; the mixture should then be moistened with water until it is thoroughly damp but not sloppy. A number of years ago C. W. Hansen, the well-known fancier of San Mateo, had much trouble with sickness among his Belgian hares. He stated to us that after making it a daily practice to give them a few poplar tree suckers, he never again had a sick hare. These suckers grew abundantly about the base of the tall poplars; they should be fed fresh, including the leaves.

Our correspondent should quickly separate the sick animals from those that show no symptoms of the disease. Clean out and whitewash inside, and outside also if possible, all the hutches on the place, using a strong solution of carbolic acid in the whitewash. Thoroughly wash all drinking vessels and feed troughs with a solution of 20 drops of carbolic acid in one gallon of water. Also give in the drinking water of those that are infected ten drops of five per cent carbolic acid solution

The Home Circle.

LAND OF "PRETTY SOON."

I know of a land where the streets are paved
With the things we meant to achieve.
It is walled with the money we meant to have saved
And the pleasures for which we grieve.

The kind words unspoken, the promises broken,
And many a coveted boon
Are stowed away there in that land somewhere—
The land of "Pretty Soon."

There are uncut jewels, of possible fame,
Lying about in the dust
And many a noble and lofty aim
Covered with mold and rust.

And, oh, this place while it seems so near,
Is further away than the moon!
Though our purpose is fair, yet we never get there—
The land of "Pretty Soon."

It is further at noon than it is at dawn;
Further at night than at noon;
Oh! let us beware of that land down there—
The land of "Pretty Soon."
—The King's Own.

BEAUTIFYING COUNTRY HOMES.

The home on the farm or orchard is, or should be, one of the most carefully planned parts of the several elementary parts of the enterprise. Its purpose is not alone to furnish shelter for the owner, but is of necessity the social and business center of the farm. While many of our orchard homes are not in the country, as the term is ordinarily used, they are not to be classed as town homes.

They are situated at no great distance from neighbors, and the general effect is to furnish a more desirable mode of life than either the close built town, or the sparsely settled country usually encountered in farming communities.

In the design of the home, the welfare of the whole family should be considered. Foremost in importance is the fact that the home is the work-shop of the women of the family, and should be designed to the end that the household duties may be done with the minimum of friction and the maximum of efficiency. Don't have all the labor-saving devices outside the house. Washing machines can be operated by power as well as wood saws. A good range is quite as important to the kitchen as a good cultivator is to the farm or orchard.

In many districts the lighting of the home can be taken care of by the power companies so widely represented in our State, but where this is not available, there is the small independent electric power plant, or the ascetylene gas plant. There is no excuse for lack of good light. Nothing in the home is of greater value, as tending to keep the family circle complete, than a well-lighted home, with the added pleasure of wholesome amusement in the form of good reading, music and the cheerful fireside.

The home located among trees, such as is found in our orchards, should be of two stories, for the double reason that the living rooms are much cooler in the daytime, and sleeping quarters are more airy at night. Outside sleeping porches are a very prominent feature of the homes of the last few years, but the casement window gives almost as great freedom of air and is in every way a desirable window for sleeping quarters.

There is another feature of the country home that is sometimes forgotten. We owe a duty to the stranger passing along the road, whose heart will be brightened by the sight of a real home covered and surrounded by vines and flowers. Don't make it too formal, but have a profusion of flowers such as roses, geraniums and the like, with a moderate variety of color, and some of the modern flowers.

By the use of care and common sense in the selection of a site, the plan, the furnishing, and ornamentation of the country home there is no reason why it should not be made more attractive both to the home people and to the visitor. When the home is complete, give it a name. Pick one that has a meaning, some such as will draw attention to some admirable feature of the home. A name that will make the stranger see some natural beauty, or some comfortable homelike element in the general plan.

This is not an attempt to plan the details of a house, but rather to point out one way to keep the young folks in love with the healthy and wholesome life of the orchard and farm. The country home need not be grand or expensive to be comfortable and homelike; in fact, the opposite is more likely to be the case. It should, however, have the power to draw to it all the members of the family, to make them glad to return to it when absent for any reason, and to impress itself in some pleasant way on the "stranger within the gates."

Pomona. J. E. Adamson.

SEASONABLE RECIPES.

Fried Summer Squash—If it is the crookneck variety, wash and cut in slices almost an inch thick, cook slowly until tender, which will be in about half an hour, having the water salted. Rapid boiling cooks things to pieces, and we wish to keep the squash in good shape. The seeds are not taken out, for the squash should be used while both seeds and skin are very tender. When it is done, remove from the fire and lay slices in a colander to drain a little. Have ready a skillet with very hot butter in it, dip slices of squash in beaten whites of egg and then in browned bread crumbs, or simply dip them in flour and fry a delicate brown in the hot butter.

Poinsettia Salad—Peel small tomatoes and cut in eighths lengthwise, but do not separate sections at the stem end. Open like flowers on beds of lettuce. In the center pile 1 tsp. of cream cheese, and 1 tsp. of green peppers, chopped very fine. Serve with salad dressing.

SELF DEFENSE.

Village grocer—What are you running for, sonny?

Boy—I'm tryin' to keep two fellers from fightin'.

Village grocer—Who are the fellows?

Boy—Bill Perkins and me!

Do It Electrically

PACIFIC GAS AND ELECTRIC COMPANY — PACIFIC COURTEOUS CONTINUOUS SERVICE

ELECTRIC APPLIANCES in the household not only add to the convenience of all members of the family, but they are economical and time-savers. **ELECTRIC APPLIANCES** include **CHAFING DISHES, COFFEE PERCOLATORS, VACUUM CLEANERS, ELECTRIC IRONS** and every other appliance that is needed in the modern home, not forgetting **ELECTRIC FANS.**

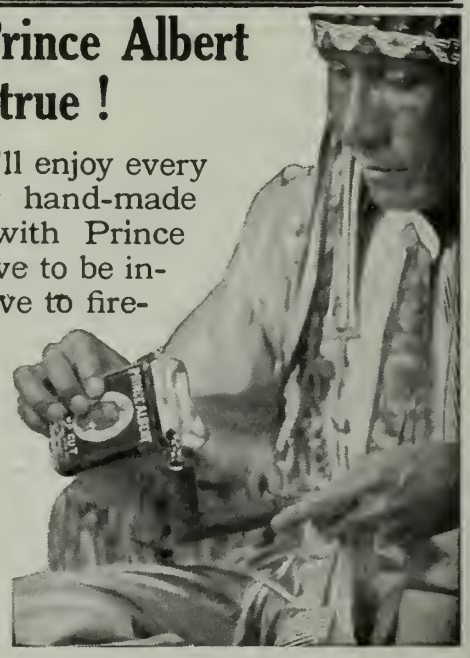
"PACIFIC SERVICE" is always "At Your Service."



Pacific Gas and Electric Company

HEAD OFFICE, 445 SUTTER ST., SAN FRANCISCO.

Branches in all principal cities and towns of North-Central California.

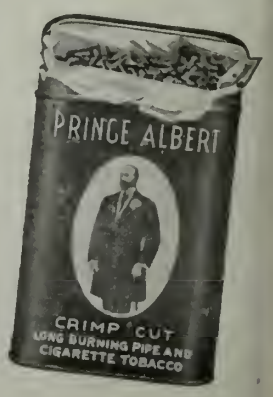
Beats all how Prince Albert will ring true!

From the start you'll enjoy every puff of a pipe or hand-made cigarette packed with Prince Albert! *Don't* have to be introduced; *don't* have to fireproof your tongue; *don't* have to do any old thing but lay low on the shade-side of the lane and hum and smoke-smoke-smoke! The patented process makes that possible—and cuts out bite and parch!

Here is a photograph of one of the finest types of Indians now living, Chief Eagle Shirt, an ardent pipe smoker, who hails from the Pine Ridge Reservation. The Chief is 32 years old, and is one of the star attractions with "101 Ranch."

It cheers up your smoke-desires most astonishingly—so chummy, so cool, so mild, so mellow, is every fragrant puff of

PRINCE ALBERT



the national joy smoke

You get out your best Sunday jimmy pipe or some makin's papers and let Prince Albert sing its sunny smoke song in the language *your tongue* and *your palate* will know right quick! Give it a real try-out, and there'll be no doubt about P. A. being your side-partner in the immediate future!

Realize, it can't cost you more than 5c or 10c to prove that Prince Albert is all the most ardent enthusiast ever claimed for it!

Prince Albert is sold everywhere in toppy red bags, 5c (handy for rollers); tidy red tins, 10c; pound and half-pound tin humidors—and—in clever crystal-glass pound humidors with sponge-moistener tops that keep the tobacco in the finest possible condition.

CHILDREN'S DRESSES.

Among the novelties in children's dresses are those made of cretonne or chintz. Some are entirely of this fabric, while others are in combination with white lawn, voile or some other sheer fabric. Dresses made of organdie in chintz patterns are favorites.

Smocking is much used as a trimming on linen, chambray and other cotton dresses. Military styles are used in the form of braid trimmings, novelty buttons, pocket arrangements and collars.

The normal waist line is preferred, although high-waisted and low-belted effects are also seen. Sleeves are usually set in at the regular arm size and are finished off with fancy cuffs to match the collars. Skirts are of various styles, among the most prominent being pleated effects, two-tiered skirts and circular skirts.

Serge and wool dresses are trimmed with plaid and checked silks which are used on the collars, cuffs and belts or in binding the seams. Combinations of navy blue and army blue and blue and red are very popular. Black and white checks and plaids are used for the entire dress or in combination with a plain color. Many colored wash dresses are made up in percale, gingham, linen, rep or novelty cotton.

IDIOT!

Grace was specially charming and attentive to her father on his arrival home from business. No more devoted, obedient daughter than she on this particular evening.

"Daddy," she said softly, when, dinner over, her parent lounged in comfort in his favorite chair, "did Cyril come to your office today?"

"He did," said papa quietly, knocking the ash off his cigar.

"What — what did he want, daddy?"

"Well, my dear, I've been waiting till I came home to see if you can tell me. As far as I could gather, he wanted to marry me; said that we had always loved each other, and that you could afford to keep him in the style to which he had been accustomed, and much more that I can't remember. So I told him to go home, get calm, and type it out and post it to me!"

ONLY A DOG!

"Only a dog!"—And yet a dog is the truest of all friends, the most forgiving, the most generous.

He will go with his master anywhere, and if fairly treated is always happiest at his side.

He would live with him in poverty the weakest half-starved cur that roams the city streets, the faithful loving heart is the same.

Whether of high breeding, and his value counted by the hundreds, or the weakest half-starved, loving heart is the same.

You cannot give the poor outcast the least kindness—a crust of bread, a dipper of water, even a pat and a kind word—without awaking a gratitude that brightens his eye and changes his whole aspect.—Mrs. Mary Johnson.

BRIGHTEN THE WAY.

They are such dear familiar feet that go along the path with ours—feet fast or slow, but trying to keep pace. If they mistake we must be mute, not turning to impute grave faults, for they and we have such a little way to go, can be together such a little while upon the way, we must be patient while we may. — George Klingle.

TIME WASTED.

"Dinah, did you wash the fish before you baked it?"

"Law, ma'am, what's de use ob washin' er fish what's lived all his life in de water?"—Philadelphia Leader.

THIS'LL PLEASE WILSON.

Ascertaining the nationality of the parents of her pupils pursuant to a school rule, a Salem street teacher called the roll something as follows:

"Uriah Umson?"

"English."

"Heinrich Haas?"

"German."

"Louis La Farge?"

"French."

"Johnnie Jones?"

The last boy, who had not been paying enough attention to the proceeding to know what it was all about, blurted out:

"NEUTRAL!"

THE EASIEST WAY.

Country Doctor (superintendent of Sunday school)—Now, children, who can tell me what we must do in order to get to heaven?

Bright Boy—We must die.

Country Doctor—Quite right, but what must we do before we die?

Bright Boy—Get sick and send for you.

The Markets.

Unless otherwise noted prices are f. o. b. San Francisco.
San Francisco, Sept. 29, 1915.

WHEAT.

The wheat market shows very little change, there being a general inclination to hold off for a development in the export trade. Northern red is a trifle easier.

Sonora	$1.55	@1.60
Cal. Club, ctl	1.52½	@1.55
Northern Bluestem.	1.65	@1.70
Northern Club	1.55	@1.57½
Northern Red	1.52½	@1.65

BARLEY.

The barley market is reported a little stronger owing to inquiry for export, though there has been no change in quotations.

Shipping	$1.25	@1.30
Choice Feed, ctl.	1.17½	@1.22½

OATS.

Red seed oats are a little higher, but otherwise there is little change. Most of the oats now coming in have to be recleaned, and this makes the prices to growers a little less than they otherwise would be.

Black	$1.85	@2.00
Red Feed	$1.25	@1.30
Red Seed	1.50	@1.75
White	1.30	@1.40

CORN.

The corn market has been a little quiet this week with no change in the offerings or in prices.

Eastern Yellow	$1.80	@1.85
Milo Maize	1.75	@1.80
Manchurian	1.40	@1.60
Kaffir	1.80	@1.85

BEANS.

The firmness which seemed a possibility a week ago has not materialized; and prices on a good many varieties of beans have made another drop. Even red kidney beans, which are reported rather scarce, have followed the lead of the others. Limas, Mexican reds and blackeyes have led in the drop. Blackeyes are showing up in large quantities; and early in the week were selling around 3 cents; but the top price is now placed at $2.90. Large whites, pinks, bayos and horse beans are unchanged.

(On wharf, San Francisco.)

Bayos, per ctl	$4.10	@4.20
Blackeyes	2.75	@2.90
Cranberry Beans	4.00	@4.10
Horse Beans	2.25	@3.00
Small Whites	4.00	@4.25
Large Whites	4.10	@4.20
Pink	3.25	@3.50
Limas	4.10	@4.25
Red Kidney	5.25	@5.50
Mexican Reds	4.50	@4.75

SEEDS.

The seed market continues inactive; and no considerable business is to be expected until the demand for alfalfa seed begins.

(Wholesale Prices, San Francisco.)

Alfalfa	17	@18 c
Brown Mustard, per lb.		Nominal
Canary	9	@10 c
Hemp	3	@ 3½c
Millet	2½	@ 3 c
Timothy	7½	@ 8 c

HAY.

Local hay men make only one change in quotations this week, though the situation is materially stronger, and more hay is changing hands at the top quotation than heretofore. Receipts in this market are decreasing rapidly, the arrivals for the past week being only about half that of the same week for last month. A government contract for export and several fires have reduced the visible supply in California by eight or nine thousand tons. Alfalfa hay of the best grades is scarce and this is at the top quotation. Practically all the hay is now under cover; and dealers here predict that prices will be advanced sufficiently at least to cover storage charges.

do No. 2	8.50	@11.00
Tame Oats	9.00	@13.50
Wild Oats	7.00	@10.00
Alfalfa	10.00	@13.00
Stock Hay	6.00	@ 7.00
Straw, per bale	.25	@ .40

FEEDSTUFFS.

The feedstuff market has been moving along with very little change. Green feed is now drying up, and there is a tendency in some lines to grow firmer in consequence, though the price changes are not large. Middlings and rolled oats are quoted lower.

(Wholesale prices per ton, carload lots, San Francisco.)

Beet Pulp, per ton	$20.00	@21.00
Alfalfa Meal, ton	16.00	@19.00
Alfalfa Molasses Meal per ton	19.00	@20.00
Bran, per ton	27.00	@28.00
Oilcake Meal	38.00	@39.00
Cocoanut Cake or Meal	23.00	@25.00
Cracked Corn	41.00	@42.00
Middlings	33.00	@34.00
Rolled Barley	25.50	@26.50
Rolled Oats	29.00	@31.00

VEGETABLES.

The market as a whole has been rather steady this week, with many small changes up and down from day to day but with no very marked movements. In several lines the range has been narrowed; and in several the receipts have reached their maximum and may be expected to diminish from now on. Lima beans are in plentiful supply and are dropping from day to day.

(Wholesale Prices, San Francisco.)

String Beans	1½	@ 2½c
Lima Beans	1¾	@ 2¼c
Peppers, bell, box	40	@50 c
Tomatoes, lug	25	@45 c
Cucumbers, lug	20	@35 c
Summer Squash, lug	25	@40 c
Green Corn, sack	.75	@1.60
Okra, lug	20	@35 c
Eggplant, lug	40	@60 c
Celery, doz.	20	@30 c

POTATOES AND ONIONS.

Sweet potatoes have recovered from the drop of last week, and are moving off well. Garlic is firm and has scored a slight advance. Potatoes are up slightly for the better grades and are selling at a wider range.

Salinas Burbanks	$1.25	@1.60
Delta Burbanks	.85	@1.25
Sweet Potatoes, ctl.	1.35	@2.00
Onions, ctl	40	@60 c
Garlic, per lb., new	7	@ 8 c

POULTRY.

Large receipts of young stock are reported from the east, and these are a little easier, though with very little change in quotations. Squabs show an advance for larger stock, the aim of local dealers being to pay on the basis of 35 cents per pound.

Turkeys, old, lb	17	@19 c
do, young	23	@25 c
Broilers, 15 lbs. to doz and less, lb	26	@27 c
do, over 15 lbs to doz	22	@24 c

Geese, per pair	2.00	@2.50
Ducks, young, lb	13	@14 c
Old	12	@13 c
Belgian Hares	8	@ 9 c

BUTTER.

The butter market has been seesawing back and forth; but is on the whole steady. So far this week, receipts have been running light; and unless there is an increase of arrivals during the remaining days of the week, an advance is to be expected. Arrivals from Oregon continue of large proportion, though the Portland quotations appear to be higher than those of San Francisco.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	26½	26½	26½	26½	26	26
Prime Firsts	25	24½	24½	24½	24½	25
Firsts	25	24	24	24	24	24

EGGS.

Eggs have been rather scarce all week and prices have been moving up steadily closing at the highest point. The present high prices are said to be pulling a good many eggs out of storage, with a prospect that heavy withdrawals from storage are still to come.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	38	38	39	40	40	40½
Sel. Pul.	32½	32½	34½	35½	36	37

CHEESE.

The cheese market has made a sudden jump; but, as this is said to be largely due to the operations

BOOK OF BARN PLANS FREE

If You Intend to Build a New Barn or Remodel an Old One You Should Have This Book

Louden Barn Plans is not a catalog of barn equipment. It is a complete and valuable book of reference and instruction on barn construction.

The 96 pages of **Louden Barn Plans** are full of dollar-saving information. It contains 51 representative designs for cow barns, horse barns, combination and general purpose barns, as well as many other designs for hog barns, pens, hay sheds, chicken houses, etc

In addition to the barn plans shown in the book, there are 32 pages devoted to general construction problems, such as concrete work, laying floors, roof construction, ventilation, etc.

When Writing for This Book Please State When You Expect to Build, and How Many Cows and Horses You Want to House

We have designs for nearly 4,000 barns, and our architects will give your letter personal attention if we learn your exact requirements.

Louden Barn Equipment

Louden equipment makes possible a clean, sanitary barn with a minimum of expense. When cows are transferred from dark, dirty barns to Louden barns the milk flow often increases from 15 to 25 per cent, and the labor of caring for the herd is reduced from one-third to one-half. Louden equipment is just as great economy for the man with a half dozen head of stock as for the man with hundreds of animals. The percentage of labor saved is the same.

The Louden Line of Sanitary Steel Equipment Includes:

Litter Carriers	Cow Stalls	Hay Loft Equipment	Sheep Pens
Feed Carriers	Horse Stalls	Cow Pens	Water Basins
Milk Can Carriers	Mangers	Calf Pens	Bird Proof Barn Door Hangers
Harness Carriers	Manger Divisions	Bull Pens	
Hay Carriers	Feed Racks	Hog Pens	Power Hoists and Other Barn Specialties
Feed Trucks

DRIED FRUITS.

The important item in dried fruits is the announcement of new raisin prices by the Association. The new prices, which are quoted below, show few changes from those of last year. Fancy seeded in 12 oz. cartons are ⅛ cent lower and 1-crown loose muscatels ½ cent higher. Prices are guaranteed until January 1, 1916. Strictly fancy selected black figs are bringing 3 cents; but the average run is said to be bringing only 2 cents. Apricots are a little weaker; and it is claimed that some have been bought below 7 cents. The usual price paid now for good stock is about 7½ cents. Large quantities of apples are being dried; but so far there has been little inquiry here either to sell or to buy. Seedless raisins are said to be pretty well sold up, ranging from 5½ to 6 cents in the great box. Peaches are weak at the low prices. Some small lots of new fruits are offering. Concerning the dried fruit situation in the East, the New York Journal of Commerce says:

"Santa Clara Prunes 1915 pack for early fall shipment are slightly easier, according to telegraphic advices from the Coast. Quotations which were being firmly maintained a few days ago are inclined to be shaded in several quarters and large offerings are being made.

Offerings are made from the Coast on a 4c basis for straight 40s for October shipment f. o. b. common shipping points. The quotations which were being made in the market a few days ago for early October shipment continue to be in evidence; and 40s and 90s, inclusive, Santa Clara prunes 1915 pack, are being offered at a 3¾c basis. Other operators are said to be willing to operate on even better terms, quoting 40s and 60s, inclusive, for shipment the first ten days of October at a 3¾c basis.

September shipments also bear an easier tone, and stocks are in evidence below the previously quoted figures which have been quoted for several days. Straight 50s are obtainable for Santa Clara prunes 1915 pack at a 3⅞c basis and 40s to 60s, inclusive, at a 4⅛c basis. A limited amount of 40s to 70s are being held by one packer at a 4c basis for September shipment.

Coast advices report that estimates of the Oregon Italian prune crop are being reduced. One packer telegraphed that the yield would not be more than one-half the earlier estimates. This would place the 1915 pack, if the reports prove true, at about 15,000,000 pounds, as previous figures have ranged close to 30,000,000 pounds for this season's production.

CITRUS FRUITS.

The top quotations for strictly fancy oranges and grapefruit have been marked up a little; but, generally speaking, the market shows slight change, little interest being taken on account of the abundance of deciduous fruits.

Shipments of valencia organes from Southern California are going east at the rate of over 30 cars daily and meeting with good demand. Lemons also are gaining some, though the season is too far advanced to expect anything more than a chance to clean up accumulated stocks.

On the New York auction Monday Sept. 27th, thirteen cars of valencias averaged from $3.35 up to $7.25 per box. Lemons brought $2.60 to $2.80. At Chicago the same day valencias sold for $4.50 up to $5.50, and lemons averaged $2.25 to $3 per box.

HOPS.

Hops are a little firmer this week, most of the sales of the last few days being at or near 12 cents and very few sales ranging as low as 10. Dealers here, however, claim that this is due to the quality of the hops offering.
1915 crop .....10@12c

WOOL.

The wool market is still dragging with little change in the situation. Not much is moving.

SPECIAL DECIDUOUS MARKET REPORT.

By J. L. Nagle.

Sacramento. Cal., Sept. 27, 1915.

Heavy shipments of Tokays during the past two weeks have more or less affected the demand in the auction markets, with the corresponding result of a slight depression. The quality, however, continues to be above the average and with the exception of a few cars, the crop is moving in good condition. We anticipate that about 65 to 70 percent of the Tokays and about 85 percent of the Malagas have been shipped. Weather conditions remaining favorable, shipments will string out for the next thirty days.

Practically all tree fruits, with the exception of pears from the Santa Clara and Monterey districts, have been shipped and unless California is visited with early rains, we estimate the crop will be within 1500 to 2000 cars short of last season.

There still continues to be an unusually heavy shipment of peaches, averaging from 400 to 600 cars daily, flooding the far Eastern markets. This unprecedented tonnage has affected the market to a certain extent on California fruits, but this competition should be out of the field within ten days or two weeks and we anticipate an exceptionally strong demand on shipments commencing ten days hence.

The following prices have ruled for the week:

New York.—Bartlett Pears, averaged $2.94; B. Hardy, $2.12; Comice, $2.37; Tokay Grapes, $1.32; Malaga, $1.06; Kelsey Plums, $1.42; Gross, $1.55.

Chicago.—Malaga Grapes, 97 c.; Tokay, $1.25; Cornichon, $1.13.

Boston.—Tokay Grapes, averaged, $1.32; Malaga, 97c.; Bartlett Pears, $1.87.

Total shipments to date 10,919 cars. Total shipments same date, 1914, 11,761 cars.

Membership Books Closed

for the 1915 season. The Exchange expense for the 1914 season, exclusive of Eastern brokerage, was 1.92%. Growers are cordially invited to sign up now for the 1916 crop.

CALIFORNIA ALMOND GROWERS' EXCHANGE
311 California Street, San Francisco.

Publisher's Dep't.

Now that the fall season is here and the evenings longer, people have more time for reading. Our subscription force are nearly all back on the job and we expect to add 200 or more subscribers to our list each week. During the past week we secured 180 new farmer readers, all of whom we trust will find the Rural Press of real help to them in their work.

In a letter received from Prof. G. H. True of the University Farm, he says: "I have told Prof. Wickson in person how much I enjoyed his little book on Garden Flowers, which strikes me as being the best thing of the kind that has ever come into my hands. This is a book that does not appear to have been made, but simply to have come out of the experience of the author in a most intimate and natural way. It is such a book as any one would like to present to all his friends who have any love for flowers."

A new book by the Lippincott Company, Philadelphia, entitled "Common Diseases of Farm Animals," by R. A. Craig, D. V. M., has just been issued. This new work contains 124 illustrations, 327 pages, bound in cloth, and sells for $1.50 net. The book especially emphasizes causes, prevention and early recognition of common diseases.

Our latest book, written by W. S. Guilford is meeting with a fine reception from the critics. Many letters and press notices have been received from those who have seen the first copies of "California Hog Book" and we know that every one who buys a copy will be well pleased. Price $2 postpaid.

TRADE MARK REG.

"Six" - - $1145

Model 86 *f.o.b. Toledo*

Just "Six" Facts—

To you who are confused with and weary of long drawn out aside-from-the-point arguments, we present these Six important basic facts:

The Overland Six has a wheelbase of one hundred and twenty-five inches.

Many a Six—*costing more*—has a *shorter* wheelbase.

The Overland motor develops full forty-five horsepower.

Many a Six—costing more—has considerably less power; considerably less speed.

The Overland is a roomy Six—seating seven adults with ease.

Many a Six—costing more—has a smaller tonneau; hence less comfort.

The Overland Six has 35″x4½″ tires with non-skids on the rear.

Many a Six—costing more—has smaller tires.

The Overland Six has high tension magneto ignition.

Many a Six—costing more—has not.

Overland electric control buttons are on the steering column—within reach.

On other Sixes, that cost more, they are not as convenient located.

These few major items alone should, we believe, convince any intelligent buyer of the downright wisdom and out-and-out economy of selecting an Overland Six.

Handsome catalogue on request. Please address Dept. 381

THE PACIFIC RURAL PRESS

SAN FRANCISCO OCTOBER 9, 1915. LOS ANGELES

California State Library

Exposition Draft Horse Honors Awarded.

Picked horses from the best breeding sections of the U. S., competed for world's honors, in weather, and at an Exposition full worthy of California's premier opportunities as a horse-breeding state.

[Written for Pacific Rural Press.]

PERFECT California October weather and well-nigh perfect stock, shown in the spick-and-span, full-fleshed condition, fit for the greatest world's fair ever held, made a great success of the Panama-Pacific International Exposition Draft Stock Show, September 30 to October 4. Most of the entries competed. The high prize-winners of the International and the various State Fairs of the United States were selected and well fitted for this, the World's Fair. The best judges obtainable studied the animals from every angle, and then studied and compared, and had to test out the most promising ones time and again. Thus it was that the judging, which was scheduled for one day per breed, always took so much time that it was continued day after day until special dispensation was required to provide rings in the great, open, turfed "Forum" for all of the breeds and several classes were postponed from day to day.

LAGOS 99093,
Grand Champion Percheron stallion, Panama-Pacific Exposition.
Foaled 1911. First in the biggest class shown.

MOUTON, 104780,
Reserve Grand Champion Percheron stallion, Panama-Pacific Exposition.
Foaled 1913. Sire was champion of France.

Exhibits, Judges and Prizes.—There were 154 individual Percheron entries, besides 54 groups; 83 Belgian entries, besides 29 groups; 62 Clydesdale entries, besides 33 groups; and 103 Shire entries, besides 45 groups. Of jacks and jennets, there were 49 entries, besides 22 groups; and there were 43 individual mules, besides teams of two to six each in 18 entries. Twenty of the 46 breeders who entered draft stock were from California; 8 from Illinois; 6 from Iowa; 5 from Missouri, all entering jacks or mules; 3 each from Kansas and Oregon; and 2 from Wisconsin. Percheron judging by Dean C. F. Curtiss of Iowa State Agricultural College, furnished a continuous show of the springy, high-stepping, free-moving drafters. These were awarded a total of $8,685 cash prizes, besides six objects of art valued at $2,000, contributed by the Percheron Society of France. Belgians showed up in smaller numbers, of horses closer to the ground, but fully as heavy as the Percherons. They were judged by President Samuel Bell of the American Association of Importers and Breeders of Belgian Draft Horses, who awarded ribbons carrying $7,685 cash prizes. Clydesdales, prettiest and springiest of all to the eyes of the spectator, were awarded ribbons worth $5,685 in cash, by Alexander Galbraith of New York City. Shires, heavy of bone and free in action, were last of the horses to be judged, beginning on Monday. Secretary Chas. W. Burgess of the American Shire Horse Association judged that breed, awarding $7,685. The Exposition Commission from Illinois awarded $675 to each of these classes. The jacks, jennets and mules were judged, beginning the next day, the former by Frank B. Graham of Kansas City, the latter by Jeff D. Gates of Chicago Union Stock yards. Jacks and jennets drew $4,280 in premiums.

A grand parade of the high-prize winners in both the draft classes and those of the smaller horses will be held October 13, when the trophies, cups and prizes are to be awarded.

Hard to Choose the Winners.—The utmost good nature was shown among the draft horse breeders; very little criticism of the judges was heard, several of the prize-winners having been recognized as such before the judging. But, most of those which drew prizes were so nearly equal in quality that the judges were slow to place them and then only after considerable testing and switching

SAN FRANCISCO | SATURDAY, OCTOBER 9, 1915. | LOS ANGELES

Panama Pacific Draft Horse Awards.

The finest quality was exhibited; American bred horses made the best showing ever in some sections, and strong in all.

[Written for Pacific Rural Press.]

From the minute the first class of Percheron stallions entered the ring till the last class was judged it was apparent that this division of the show was to be marked with surprisingly good individuals in gratifying numbers. Nor was this to be solely an importers' show, for as the judging continued, American-bred animals kept piling up victories with the result that the showing of Percherons was proclaimed by Wayne Dinsmore, secretary of the Percheron Society of America, as being the strongest and most highly representative of any ever held in America. Indicative of this was the winning of first, second and third in the two-year-old stallion class by American-bred animals and the winning of junior and reserve champion prizes in the mare classes by a mare bred in Virginia. The grand champion mare was also an American product, being bred and raised in Iowa.

The first blue ribbon winner in the stallion class, Lagos, was also senior and grand champion stallion in the show. The five tops in this, as in other classes, were conspicuous for their quality, the more so perhaps on account of the mediocre quality at the tail end.

First in the three-year-old stallion class went to Matineux, a California-owned horse, which was afterward accorded reserve senior championship honors.

The stallion Mouton, owned in California, took first in the two-year-old class, securing reserve grand championship ribbon later.

With a class of 14 aged mares, one of which was owned by the Iowa State College and judged by two other judges on that account, Dean Curtiss' task was not an easy one. The gray mare, Joie, was placed first in this class, being pushed by Oaklawn Queen for that place and later being beaten out for senior championship by the three-year-old Manon, both of which are owned in California, and displaced for grand and junior championship by Maplegrove Snowball, a two-year-old.

Shires.—Credited as being one of the finest showings of Shires in recent years, particularly in the aged stallion, two-year stallion and two-year mare classes, the Shire division stood right up in the front ranks, strong and representative.

Chas. W. Burgess, Sr., who judged this section, commented highly on the California showing, placing special emphasis on the two-year-old mare class where the three tops were California-owned animals, that were to his mind as fine an exhibt of the breed as he has seen or judged for a number of years.

In some respects the Shires outclassed all other breeds shown, the uniformity of each class being one of the noticeable features. Tail ends were more conspicuous by their absence in this division than in any other breed. This, too, speaks well for California breeders; for each class was generously filled with California, owned, and in many cases, California-bred animals, demonstrating that our breeders are getting good ones.

In numbers, this division stood second only to the Percheron exhibit, the aged stallion class having 10 entries and the aged mare class the same number.

In point of quality and uniformity too high praise cannot be given the Shire exhibit and it was so well represented by California-owned stock that we may feel justly proud of it. Groups and championships have not been awarded as this is written.

Belgians. — Represented by the best Belgians in America, also commanding attention for the strong showing of American-bred animals, the Belgian division was altogether satisfying.

In more ways than one this showing was demonstrative of the progress that is being made by American breeders. The old style, squatty European type of the Belgian was conspicuous by its absence, showing that the individuals imported in the past are reproducing their kind and that the breed is proving to be well suited to conditions in this country.

In stallions the horse Farceur received most favorable ringside comment and Judge Samuel Bell awarded him first in his class, senior and grand championships. As an individual he is remarkable in that he has proved an excellent breeder and in face of high show condition possesses a remarkably clean set of legs. Seldom has a more interesting class been seen in Belgians than this horse and three of his daughters which were shown in the stallion and three mare class.

Clydesdales.—Not so large in numbers, due perhaps to the fact that the breed has not, as a general rule, been popular in California, thereby lessening the number of local exhibitors, the Clydesdale show was nevertheless a creditable one, and would doubtless have commanded more attention, had not the other breeds previously shown been of such a high standard.

Naturally having good clean limbs and lots of action, this division, especially where the classes were fairly well filled, created much ringside comment, and to those who look with unprejudiced eyes upon the breed the showing was of vast interest.

PERCHERONS.

The following awards were made in the order given, in the Percheron division: Stallions 4 years old or over, Lagos, shown by Singmaster and Sons; Londercitos, by Dunham-McLaughlin; Jalap, by Singmaster and Sons; Jusque, by Anita M. Baldwin; Ithos, by M. Bassett.

Stallions 3 years and under 4: Matineux, shown by Dunham-McLaughlin; Majorat, by Singmaster and Sons; Mordu, by Thos. D. McLaughlin; Moscou, by Dunham-McLaughlin; Woodrow, by Singmaster and Sons.

Stallions 2 years and under 3: Mouton, shown by Thos. D. McLaughlin; Nobob, by Dunham-McLaughlin; Nandon, by Singmaster and Sons; Nadir, by Singmaster and Sons.

Stallions 1 year and under 2: Keota Jalap, shown by Singmaster and Sons; Carnarad, by W. S. Corsa; Elwood, by A. C. Ruby; Drangiana, by E. B. White; Carhall, by W. S. Corsa.

Mares 4 years and over: Joie, shown by Truman's Pioneer Stud Farm; Oaklawn Queen, by Anita M. Baldwin; Mabel, by James Edson; Italienne, by Singmaster and Sons; Livie by Anita M. Baldwin.

Mares 3 years and under 4: Manon, shown by Anita M. Baldwin; Carnoress, by W. S. Corsa; Meridionale, by Singmaster and Sons; Meninge, by Singmaster and Sons; Black Bessie, by Dunham-McLaughlin.

Mares 2 years and under 3: Maplegrove Snowball, shown by Singmaster and Sons; Cicely, by Anita M. Baldwin; Folito II, by W. S. Corsa; Incomparable, by Anita M. Baldwin; Black Besse, by Dunham-McLaughlin.

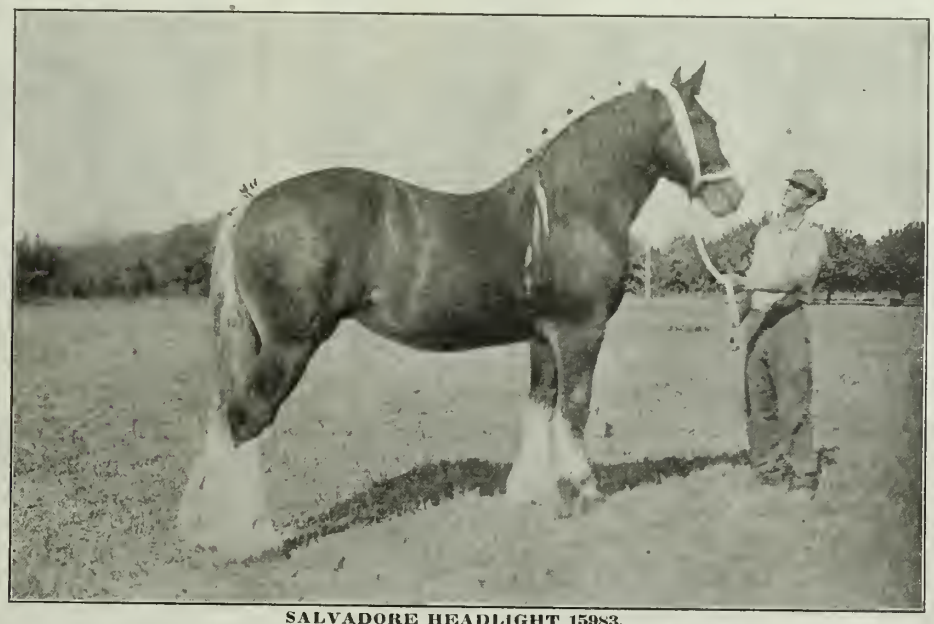
Mares 1 year and under 2: Carjante, shown by W. S. Corsa; Maplegrove Ethel, by Singmaster and Sons; Carne, by W. S. Corsa; Labelle, by Dunham-McLaughlin; Carnona, by W. S. Corsa.

Get of one sire: Get of Jalap, shown by Singmaster and Sons; Get of Carnot, by W. S. Corsa; Get of Fernand, by Thos. D. McLaughlin; Get of Carnot by W. S. Corsa; Get of Godillot, by A. C. Ruby.

Produce of Dam: Produce of Jante, shown by W. S. Corsa; Produce of Fedora, by E. B. White; Produce of Picot of Paicines, by Thos. D. McLaughlin; Produce of Senora, by C. W. Bowers.

Stallion and three mares: 1st, Dunham-McLaughlin; 2nd, Singmaster and Sons; 3rd, W. S. Corsa; 4th, W. S. Corsa; 5th, W. S. Corsa.

Five stallions owned by exhibitor: 1st, Dunham-McLaughlin; 2nd, Singmaster and Sons; 3rd, Thos. D. McLaughlin.



Three mares owned by exhibitor: 1st, Anita M. Baldwin; 2nd, W. S. Corsa; 3rd, Singmaster and Sons.

Senior Champion Stallion: Lagos, shown by Singmaster.

Reserve Senior Champion Stallion: Matineux, shown by Dunham-McLaughlin.

Junior Champion Stallion: Mouton, shown by Thos. D. McLaughlin.

Reserve Junior Champion Stallion: Nobob, Dunham-McLaughlin.

SALVADORE HEADLIGHT 15983.
First Shire mare in one and under two year class. Foaled and raised on the Salvador Stock Farm, Napa, Cal.

Grand Champion Stallion: Lagos.

Reserve Grand Champion Stallion: Mouton.

Senior Champion Mare: Manon, shown by Anita M. Baldwin.

Reserve Senior Champion Mare: Joie, shown by Truman's Pioneer Stud Farm.

Junior Champion Mare: Maplegrove Snowball, shown by Singmaster and Sons.

Reserve Junior Champion Mare: Cicely, shown by Anita M. Baldwin.

Grand Champion Mare: Maplegrove Snowball.

Reserve Grand Champion Mare: Manon.

SHIRES.

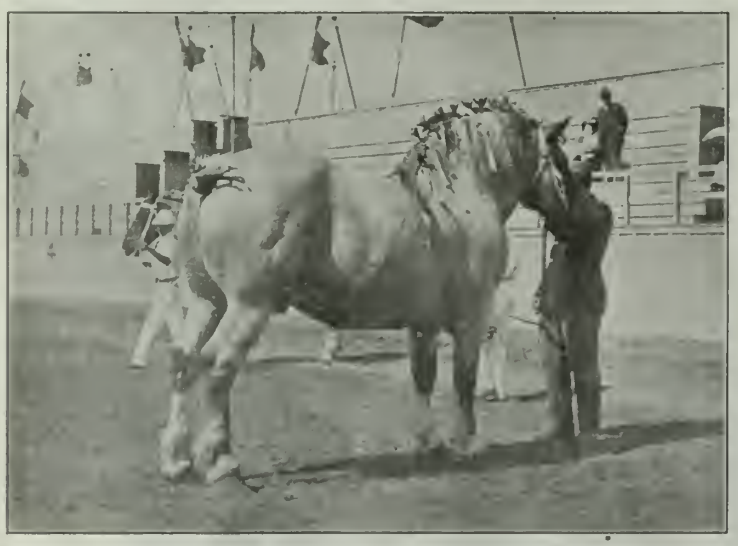
The awards as far as made up to October 5 in the Shire division were given in the following named order:

Stallions 4 years and over: Boro Blusterer, shown by Truman's Pioneer Stud Farm; Stow Royalty, by Truman's Pioneer Stud Farm; Anwick Arthur, by Easton and Ward;

(Continued on page 343.)

Breeders Commend California for Horses.

California Association maps out Future Policy and acts as guest to Breeders all over America. Generous Praise given for past work.



[Written for Pacific Rural Press.]

With due respect to other meetings of horsemen held during the first week of the Exposition's Livestock Show, the annual meeting and banquet of the California Draft Horse Breeders' Ass'n was beyond doubt of most importance to California farmers and breeders.

At the business meeting held on the Exposition grounds in the afternoon of October 1 the attendance was smaller than had been hoped for; but those present showed a keen enough interest in the welfare of the association to make up for those who were not present.

Purebred Auctions Recommended. —At this meeting a decision was reached to perpetuate the annual purebred sales of drafters, which were started last winter with the sale held at Davis. It was the sense of the meeting that such sales would do more toward the advancement of the draft horse than any other single thing, affording as it does an outlet for the small breeders' surplus animals and providing an opportunity for the buyer to purchase direct from the breeder without seller, as has been the rule for so long a time in this State. He emphasized the fact that buyers at last year's sale had been well satisfied and gave as his belief that this was one of the best reasons why another sale should be held the coming season; for with the growth of this sort of confidence the seller will most surely be of a satisfied kind in the future. One member strongly urged the continuance of these sales on the ground that they made for more efficiency in horse breeding, lessening the cost of stallions to the farmer, increasing the number of breeders, and allowing them a greater margin of profit. There is no longer any doubt but this factor of over-valuation in stallions is discouraging many a farmer in horse breeding, the interest and depreciation in stallions being so heavy as to materially reduce their earning power; and in many instances actually cause a big financial gap in breeding operations.

Colt Shows Favored. — Progress in the promotion of the county colt shows this fall was reported, this

FARCEUR, 7332.
Grand champion Belgian stallion, Panama-Pacific Exposition. Bred 65 mares, season of 1915. Foaled 1910.

needless expense.

This action shows the commendable spirit that has been characteristic of this organization since its inception, namely: that of putting the horse business of the State upon a more sound and permanent basis.

The continuance of these sales was given an added impetus by officers and members who sacrificed on horses sold at the first auction sale, but who have so much confidence in the ultimate good these sales can accomplish that they stand ready, if the need arises, to assume further losses till such time as the movement is generally recognized for its real worth to the State.

As we wrote in these columns concerning the first sale, it was worthy of praise from the fact that it had instilled confidence in the buyers' minds concerning future sales that might be held under the Association's auspices. This point was clearly brought out by Prof. Gordon H. True of the University of California when he stated that it was better to have a satisfied buyer and a dissatisfied seller than to have a dissatisfied buyer and a satisfied work having been previously mentioned in these columns.

The following officers were elected for the ensuing year: Henry Wheatley, president; A. H. Smith, vice-president; E. W. Westgate, secretary-treasurer; Dan McCormick, Gordon H. True and Prof. Jenkins, directors.

Outside Breeders Speak at Banquet.—After disposing of the business at hand the meeting was adjourned to reconvene at a downtown hotel where an excellent banquet was held in connection with practical speeches given by several of the most prominent draft horse breeders in the United States, who were in attendance at the Exposition show.

Without exception the speakers were high in their praise of the work of the California association in promoting the county colt show, explaining that this factor is stimulating the breeding and feeding of purebred draft horses in the Eastern States more than any other single thing.

John Truman of Bushnell, Illinois, related the accomplishments of the

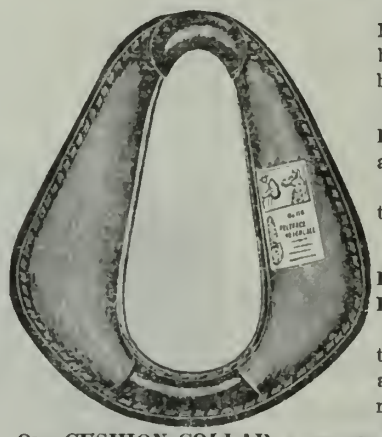
Breeders, Importers and Exporters of Percherons, Belgians, Clydesdale, Shires, Coach and Hackneys.

We have the largest exhibit of Horses at the Panama-Pacific Exposition Horse Show of any breeder or importer in the United States.



55 Head---all Ages---all Classes

Visitors cordially invited.
Barn 2, P. P. I. E., San Francisco.

We have at all times the largest stock of horses and can sell more Genuine Horse for the money.

If you need a good stallion in your locality, let us know.

BEWARE OF POORLY MADE HORSE COLLARS

More shoulders are being ruined by poorly-constructed collars than by the work the animals are doing.

W. DAVIS & SONS' FELTFACE COLLARS are guaranteed to prevent sore shoulders.

Look for the felt at the edge of the stitching.

Made to sell as follows:

FELTFACE, medium draft, $5.00
FELTFACE, heavy draft... 6.00

If your dealer does not have them, we will tell you where they are to be had, or send direct if no dealer is within reach.

Our CUSHION COLLAR, a canvas and leather Boston Team Collar, is now to be had for $3.00.

county colt shows held at his home where 600 head are shown each year and the attendance ranges from 10,000 to 20,000 people. This colt show has been established but a few years, yet it is largely through its influence that several small breeders have come into national prominence, one of the prize winning mares at the Exposition show having come from the farm of a breeder near by.

Wayne Dinsmore, secretary of the Percheron Society of America, also spoke in glowing terms of the value of a colt show to a community, stating that their educational value could not be equaled.

Mr. Dinsmore pointed to the necessity of breeders learning to feed, as well as to breed; for in his opinion the call upon American breeders will not only be national but international in the course of the next decade, and this trade will demand well developed horses which can only be obtained by judicious breeding and feeding.

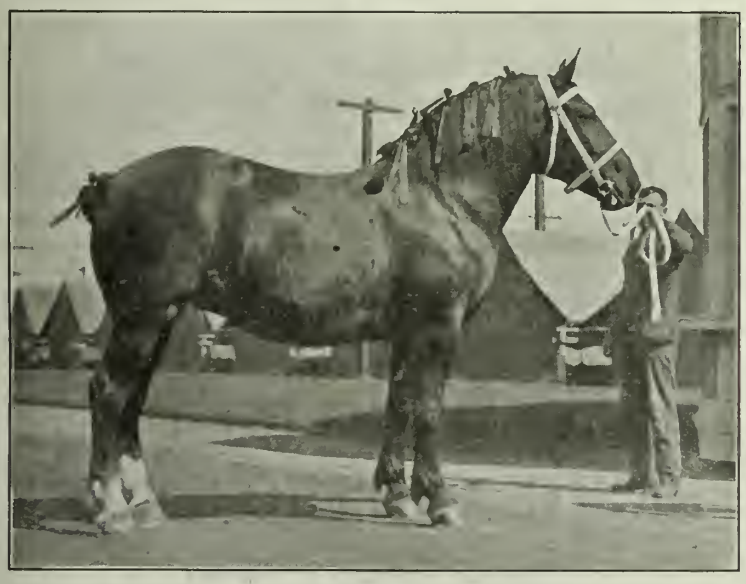
Samuel Bell, president of the American Belgian Horse Ass'n, talked on Draft Horse Breeding, stating that from his limited knowledge of California, our climate here is ideal for the development of lots of size, quality, and clean legs, the all-essential factors in heavy horse breeding.

Horse Prices Increasing. — Mr. Bell commented on the change that has resulted in America in draft horse breeding since the starting of the present European war, saying that prices for American bred animals have advanced almost half since a year ago last August. A gratifying thing, according to the speaker, is that breeders' record associations show that American breeders are keeping their mares in foal better than ever before and are developing and showing more young animals than ever before.

Unless a mare is good enough to reproduce her kind she should not be purchased for foundation purposes. This, thinks Mr. Bell, is easier to accomplish now than ever before because of the fact that there are more breeders who have gone through the preliminary work of selection and the new breeder gets the benefit of that work. It is necessary to have a good foundation for the additional reason that stallion buyers have been educated up to higher standards than they formerly demanded, and as a result of more experience are more critical.

Mr. Bell thinks that too many breeders keep their best mares in too high flesh. He believes a brood mare, whether she be a prize winner or not, should be worked, not too hard, but sufficient to give her the requisite amount of muscle. A breeder should know for a certainty that each mare is in foal. She should be tried regularly till she will no longer take the stallion. This will make a big increase in the number of foals annually.

Sell Colts at Three Years.—Pure-bred colts should be good enough to sell as three-year-olds, as most buyers prefer to develop the stallion according to their own views. This cannot be acocmplished when the breeder keeps the stallion till he is five or six years old.



The horse breeding business has been abused in the past, according to Mr. Bell, and crooked work has caused people generally to distrust horse sellers. This will be overcome as small breeders become more common, for they will conduct the business the same as all other breeding enterprises are conducted, cultivating confidence and valuing a good reputation above all else.

Speaking of the horse and his relation to agriculture, Dean C. F. Curtiss, of the Iowa State College of Agriculture, drew a convincing conclusion of the need for more horse power on the American farms from the last census figures of Iowa population and agricultural production.

While the census showed a decrease in farm population in that State, it also showed material increase in farm production, it being rated as the only billion dollar state in the Union. This increase was directly attributable to the increase in horse power on Iowa farms according to Mr. Curtiss, that State being noted for its number and quality of horses.

A one horse power farmer can only produce a sufficient amount of foodstuffs to take care of himself, while the six or eight horse power farmer is the one that the nation depends upon for its living. For that reason Mr. Curtiss believes there is an absolute need for additional horse power on the farms of this country.

Like Mr. Bell, he believes that California should be a breeding State second to none. He pointed

to our past leadership in the development of racing horses and gave our feed and climate credit for a great deal of such achievements, saying that he had visited the farms where some of our fastest horses were bred and raised and that he could see no reason why heavy drafters of equal quality could not be bred there.

Heavy horse breeding will not be carried on so extensively by large breeders in the future as by smaller ones, thinks Mr. Curtiss, because good heavy horses require care, good feed, and a moderate amount of work, which the small breeder is in the best position to give. In California as in Europe the best horses will come from breeders with eight or ten brood mares. This condition is already assuming importance in Iowa, where the State breeders successfully compete in all classes with the importers and outnumber them eight to one.

Each speaker of the evening dwelt at length on the good work that can be accomplished by the California Draft Horse Breeders' Ass'n and advised every breeder and stallion owner to get behind the association both morally and financially.

Notes from the Breeders. — You want sound bone rather than big bone in horses' legs according to A. G. Soderburg, Clydesdale breeder of Osco, Ill.

Purebred Percheron mares and a stallion are worked like common horses on the farm of H. G. Learned of Stockton.

Beginners in purebred horses ought to buy a mare or two at first, of the breed of the best purebred stallion in the neighborhood, acording to O. H. Brandt, Clydesdale breeder, of Shellville, Sonoma county. There is too much risk for a small farmer to buy a stallion.

Poor farmers breed to scrub stallions to save a $10 fee, though a gelding colt from a purebred stallion is worth $50 more than the one from a scrub.

Belgians stand long railway journeys and are ready for work on arrival, according to a Belgian breeder.

There were $88.66 in the treasury of the Cal. Draft Horse Breeders' Ass'n Sept. 1 as reported by Secretary J. I. Thompson of University Farm.

Iowa is said to import and breed 44 per cent of all the Belgian purebreds in U. S.

Ohio, Indiana, Illinois, and Iowa are the leading draft horse States according to Pres't Samuel Bell of the Belgian Importers and Breeders' Ass'n. Iowa and Indiana are breeding more Belgians than any other breed.

What California needs, according to Wm. Crownover, of Hudson, Iowa, owner of the grand champion Belgian stallion at the Exposition, and Henry Lefebure of Fairfax, Iowa, owner of the reserve senior champion Belgian stallion, is for a bunch of farmers to organize themselves, appoint a committee to visit purebred breeders, select a fancy stallion of $1000 to $18000 for the bunch, and all the purebred mares the individuals want to buy, saving half of the cost and getting the animals from reliable dealers whose establishments back their guarantees. This reinforces the stand repeatedly taken by Henry Wheatley, Shire breeder of Napa.

In Belgium a large percentage of the purebred horses were, before the war, bred by farmers who worked 10 acres with one mare. If she failed to get with foal, they counted half their year's profits lost.

Two purebred mares could work 40 acres in California, according to H. Lefebure, and have two purebred colts clear profit. He says that mares should be worked not unreasonably, until the foal is dropped. Fat condition is desirable if the weather is not too hot and if the flesh is hardened by exercise.

America will ship thousands of drafters to Europe after the war, according to Samuel Bell of Wooster, Ohio. He says geldings are selling at $600 in England now. He saw 5000 in Chicago a few days ago ready to go to war.

When the war is over the Belgian government will be after the Exposition grand champion Belgian stallion and will pay $50,000 for him, according to Wm. Crownover of Hudson, Ia.

A stallion of good constitution and fair flesh can breed two mares a day through the season without damage, according to a well known breeder who expects to increase the number of mares bred from his best stallion by using the artificial capsule system.

An inch of meat over the ribs indicates good sire breeding conditions in a stallion if that meat has been put on in connection with plenty of exercise in a pasture.

Soft hoofs which flatten out on city streets are a matter of breeding rather than raising such horses on lowlands according to a breeder who points to the fens and lowlands on which the Shire and Belgian breeds have been developed.

Dunchurch Baronet, by Wm. Crownover; Neuadd Hillside, by Jack London.

Stallions 3 years and under 4: Royal Patch, shown by Truman's Pioneer Stud Farm; Blackhawk Barn King, by Easton and Ward; Nailstone Boxer, by A. C. Ruby; Wrydeland's Surprise III, by Truman's Pioneer Stud Farm; Witchford Albert, by Easton and Ward.

Stallions 2 years and under 3: Royal Friar, shown by Truman's Pioneer Stud Farm; Royal Moors, by Truman's Pioneer Stud Farm; Columbia Model, by A. C. Ruby; Eureka Menestrel, by Truman's Pioneer Stud Farm; Sylvia King, by A. G. Soderberg.

Stallions 1 year and under 2: Forage Premier, shown by Truman's Pioneer Stud Farm; George B., by A. C. Ruby; Blackhawk Gay Lad, by Easton and Ward; Serven's Hengist, by Truman's Pioneer Stud Farm; Blackhawk Minstrel, by Easton and Ward.

Stallion Foals: Salvador Conqueror, shown by Henry Wheatley; Blackhawk Mystery, by Easton and Ward; Blackhawk Ring O Bells, by Easton and Ward; Blackhawk Rising Star, by Easton and Ward; Salvador Banker, by Henry Wheatley.

Mares 4 years old and over: Beeby Judy, shown by Truman's Pioneer Stud Farm; Flowford Daisy, by Easton and Ward; Norman by Sweet Briar, by Truman's Pioneer Stud Farm; Wallington Sunbeam, by A. G. Soderberg; Queen Diamond, by Easton and Ward.

Mares 3 years and under 4: Eastern Manners, shown by Truman's Pioneer Stud Farm; Eureka Diamond, by Truman's Pioneer Stud Farm; Blackhawk Blossom, by Easton and Ward.

Mares 2 years and under 3: Hawton Bounce, shown by Easton and Ward; Blackhawk Beauty, shown by Easton and Ward; Salvador Queen, shown by Henry Wheatley; Wrdyeland's Queenie, by Truman's Pioneer Stud Farm; Salvador Champion Princess, by Henry Wheatley.

Mares 1 year and under 2: Salvador Headlight, shown by Henry Wheatley; Blackhawk Chessie, by Easton and Ward; Osco Lady, by A. G. Soderberg.

Filly Foals: Wallington Princess, shown by A. G. Soderberg; Victoria Gem, by Bridgford Co.; Blackhawk Delphine, Easton and Ward.

BELGIANS.

Following are the awards in this division in the order named;

Stallion 4 years and over: Farceur, shown by Wm. Crownover; Jules Remi, by H. Lefebure and Sons; Monarile de Heurne, by C. W. Bowers; Clarion, by Lefebure and Sons.

Stallion 3 years and under 4: Marquis, shown by Lefebure and Sons; Imperial, by A. C. Ruby.

Stallions 2 years and under 3: Bethel, shown by Wm. Crownover; Remi de Fosteau, by Lefebure and Sons; Jules Remi II, Lefebure and Sons.

Stallions 1 year and under 2: Stevenat, shown by C. W. Bowers; Harold, by A. C. Ruby; Jules Remi, by Lefebure and Sons; Villa, by A. C. Ruby.

Mares 4 years and over: Anna du Balcan, shown by Lefebure and Sons; Civette, by Wm. Crownover; Paula de Lens, by Lefebure and Sons; Abbisse, by James Edson; Belle, by A. C. Ruby.

Mares 3 years and under 4: Anette, shown by Lefebure and Sons; Juno, by A. C. Ruby; Anette, by Lefebure and Sons; Dyle, by A. C. Ruby.

Mares 2 years and under 3: Radieuse, shown by Lefebure and Sons; Juliet, by A. C. Ruby; Mariette, by A. C. Ruby.

Mares 1 year and under 2: Lista, shown by Wm. Crownover; Salome, by Wm. Crownover; Dinette, by Crownover; Rosette by Wm. Crownover; Radieuse, by Lefebure.

Filly Foals: Paramount Lola, shown by Wm. Crownover; Nonette, by Lefebure and Sons.

Get of one sire: Get of Farceur, shown by Wm. Crownover; Get of Marquis de Pouly by Lefebure and Sons; Get of Farceur, by Wm. Crownover; Get of Fortin, by A. C. Ruby; Get of Jules Remi, by Lefebure and Sons.

Produce of dam: 1st and 3rd, Wm. Crownover; 2nd, Lefebure and Sons.

Stallion and three mares: 1st, Wm. Crownover; 2nd and 3rd, Lefebure and Sons; 4th, A. C. Ruby.

Stallion and 3 mares, 2 years old or over, bred by exhibitor: 1st, Wm. Crownover; 2nd, 3rd and 4th, Lefebure and Sons.

Five stallions owned by exhibitor: 1st, Lefebure and Sons; 2nd, A. C. Ruby.

Three mares any age owned by exhibitor: Ist, Lefebure and Sons; 2nd, Wm. Crownover; 3rd, A. C. Ruby.

Senior Champion Stallion: Farceur, shown by Crownover.

Reserve Senior Champion: Jules Remi, shown by Lefebure.

Junior Champion Stallion: Bethel, shown by Crownover.

Reserve Junior Champion: Stevenot, shown by Bowers.

Grand Champion Stallion: Farceur.

Senior Champion Mare: Anna du Balcan, shown by Lefebure.

Reserve Senior Champion: Paula de Lens, shown by Lefebure.

Junior Champion Mare: Lista, shown by Crownover.

Reserve Junior Champion: Salome, shown by Crownover.

Grand Champion Mare: Anna du Balcan.

Reserve Grand Champion: Lista.

CLYDESDALES.

The following awards were made in the Clydesdale division by J. W. Wheaton, in the order named, the groups and championships not having been decided at this writing:

Stallions 4 years and over: Charter Oak, shown by Jas. Van Etta, General Davis, by South Bros.; Come Again, by A. G. Soderberg; Butterfield, by A. G. Soderberg; Massasoit, by A. G. Soderberg.

Stallions 3 years and under 4: Enterprise Pride, shown by South Bros.; Scottish Mint, Bobbie Burns, by A. G. Soderberg; Baron Montague, by Kansas State Agricultural College; Famous, by John Painter.

Stallions 2 years and under 3: Hope's Pride, shown by A. G. Soderberg; King's Emblem, by Jas. Van Etta; William Woodmac, by A. G. Soderberg.

Stallions 1 year and under 2: Baron's Prince, shown by A. G. Soderberg; Alworthy Baron, by Jas. Van Etta; King's Baron, by Jas. Van Etta; Buster, by John Painter.

Stallion Foals: Merbra, shown by O. H. Brandt; Sir Lovat, by O. H. Brandt.

Mares 4 years and over: Lady Caliph, shown by Jas. Van Etta; Winsome Princess, by A. G. Soderberg; Marjorie, by Jas. Van Etta; Jean Morrison, by O. H. Brandt; Lady Marcus, by O. H. Brandt.

Mares 3 years and under 4: Lady Stewart, shown by W. V. Hixson; Osco Beauty, by A. G. Soderberg; Mona, by John Painter; Madge, by John Painter.

Mares 2 years and under 3: Osco Darling, shown by A. G. Soderberg; King Norman's Beauty, by South Bros.; Lovely Pass, by A. G. Soderberg; Honora, by Jas. Van Etta.

Mares 1 year and under 2: Jasamine, shown by A. G. Soderberg; The Queen, by Jas. Van Etta; Colantha, by A. G. Soderberg; Trilby, by C. W. Bowers.

Filly Foals: Enterprise Queen, shown by South Bros.

San Diego	0	0	.11	72	56

THE WEEK

This issue of the Paeific Rural Press is largely moved by horse power. We have so many agrieultural uses to serve, in the widely diversified farm industries of this all-embraeing State, that we find it neeessary, now and again, to emphasize eaeh by hitehing our publieation-eart to it, and go rushing forth into the public eye by the inherent motive power of it. This may bring us out some day impelled by the "hog-motor," but that will be quite in harmony with our purposes, for the hog is now one of the great motive powers in the development of California agrieulture—and Guilford is its prophet. But of that at another time: we are now differently drawn and will not attempt to harness the pig.

Our pages elearly show how absorbing of public interest the horse eontinues to be. We say "eontinues to be" beeause it must be admitted that in the public mind, at least, the horse has been put upon the defensive against other self-moving organisms, and eurrent public thought is apt to eonsider that this is something new and possibly disastrous to the noble animal. Wiser people know, of eourse, that the horse was born into the history of civilization, fighting for his right to rule among motive-animals. In this raee for the right of superlative serviee to mankind, the horse has, in the eourse of his history, distaneed the ox, the ass, the eamel, the elephant, the dog, the deer, and all other animals which have essayed to be "beasts of burden." Some of these are stronger than he, some fleeter, some hardier, but none has long stood again him for the prize of widest usefulness and joy to mankind. The world has, in effeet, deelared: away with your menagerie, and has eried out with Riehard: "My kingdom for a horse." And the outeome of it is that in 1912 the world had 101,346,520 horses and 8,215,564 mules in its serviee, while all other draft animals eombined did not relatively number enough to be eounted, from a world point of view.

Always Attacked, but Never Beaten.

And it is not alone over all his fellow-possessors of red blood that the horse has prevailed. His plaee in the heart of man has been menaeed by all kinds of eontrivanees of wind, steel and steam. In all sueh aehievements of inventors for transportation of men and eommodities, timorous horsemen have feared disaster to their equine industries, but sueh is the adaptability and availability of the horse to the work and the pleasures of mankind, that eaeh shift in the methods and ideals of draft and transportation has but increased the demand for horse-labor and the wealth whieh man has invested and ereated in the horse. The reeord of the United States in these lines is signifieant:

	Horses. Number	Value.	Mules. Number	Value
1880	11,202,000	$ 613,297,000	1,730,000	$105,948,000
1890	14,214,000	978,517,000	2,331,000	182,394,000
1900	18,267,020	1,510,890,000	2,404,000	334,681,000
1913	20,567,000	2,278,222,000	4,386,000	545,245,000

Thus it appears that, roughly speaking, horses have doubled in numbers and tripled in value during the last 35 years, and mules have done better than that. And this third of a century ineludes the most sensational increases in railway building; ineludes also the whole period, praetically, of velocipedes, trolley ears, automobiles and motor trueks. In faet, if you look into statisties more elosely, you will find out that sinee 1867, and probably mueh longer, horses and mules have never taken a single step backward, but have gone forward, year by year, to the doubling and tripling eited above. What, then, is the matter with the horse? He is always on the defensive and yet always wins his way! World-paeifiers should drop the dove; the horse is the great exemplar. He is never aggressive and yet always vietor.

Evolution of Self-Movers.

No doubt the designers and manufaeturers of automobiles are humanly disposed to aeeept worship for what the general publie is apt to eonsider originality in their ereations. One who looks more deeply into things ean elearly see that the whole raee of motor-ears, from eyele to rubber-neek, is patterned after the horse, and the furniture with whieh generations of men have equipped him. Shamelessly they have appropriated all that has ever been made in the line of vehieles, from the shambling, solid-wheel eart of the Assyrian, whieh nearly shook the gilding off the ark of the eovenant, to the ear of Juggernaut of the Hindus, whieh had a erushing eapaeity even greater than that of a modern sight-seeing outfit. And not eontent with stealing everything that was ever made by man for motor-animals, they have vainly tried to rival the horse himself in his wonderful adaptation of forms to the uses he has had to meet. The raeing ear is but a eoarse imitation of the raeing horse; the mighty motor-trueks, with its weight and broad wheels for ground-purehase, is a elumsy reproduetion of the skillful building of the draft horse—while the latest in trueks, the independent motor in eaeh wheel, is nothing more than the horse has had in all his feet from the beginning. In all matters of style, ornament and eost, the motor-ear designers have stolen lines from the horse and been beaten by him. None of their varnish equals the gloss of the roadster; none of their airiness of body approaehes the praneing of the saddle-horse, while the very best of their rut-bouneing is not a mark to the sublime uplift of the bueking broneho! As auto-mobiles, they fall far short of the horse, for he ean move himself to the grazing whieh gives him new power, while the motor-ear is dead as Adam when its tank is empty. Therefore, we say that stealing and turning the war-munitions of the horse against him has availed nothing in his suppression. Every time those interested in meehanieal auto-mobiles have made a drive against the horse, the world has ealled for more horses.

Lessons of the Conflict.

There are, of eourse, a few things whieh produeers of horses should be learning from their enemies who seek world-empire for their substitutes for horse power. Fortunately, the horse has been bred for generations for speeial purposes, and there is now available a vast treasury of prepoteney toward speeifie forms, temperaments and aetion whieh eonstitute adaptation and efficieney in the horse for the various needs and desires of men. In the manufaeture of automobiles there is eeaseless effort to eontrive models whieh shall be truer to needs, desires and faneies of purehasers and there is wonderful appreeiation among them of the suitability of designs and materials toward these ends. On the other hand, too many who are growing horses on farms are eontent with anything whieh has four feet on the ground and two ears in the air. If they manage also to get two feet in the air, high as the ears are, they are apt to congratulate themselves for enelosing a lot of spirit in the animal! The greatest handieap the horse has had to earry, all through his warfare against substitutes, has been the stupidity of man. Culling out from the teams brutes, too viеious for any human use, to serve as dams for more brutes of added viеiousness; aeeepting as sires mongrel males whose usefulness eonsists only in the power of proereation, and even that a eurse to its offspring; negleet of proper nourishment, kindly eare and training, man's most influential arts in the ennobling of domestie animals for his uses; the praetiee of immoral, jockeying deeeptions in horse-trading, whieh should be one of the highest, purest phases of agrieultural eommeree—all these are still too widely praetieed and they prove, beyond all question, that the worst enemies of the horse are, as it were, those of his own household. And yet the horse goes steadily, rapidly forward in the world's business and is now, owing to the reduetion of stoek for world's warring, at the beginning of a period of large demand and higher priees, probably, than ever before in the world's history.

What of This for California?

Very mueh, every way. California is, by growth-favoring elimate for animal and its forage produet, the plaee whenee the best horses should be sought. This has been demonstrated beyond peradventure during the last half eentury. The experiences and aehievements of the pioneers afford a foundation for world-repute in horse quality and aehievement whieh is of inestimable value in establishing present enterprises—whether they be small, such as a bunch of good eolts on a mixed farm, or whether they be large, using mueh land and eapital for fine strings of seleeted sires and dams, whose progeny shall bring in hundreds of thousands in a few years. In all sueh undertakings, be they large or small, the California air-temperatures, the soils and their

plant production, constitute an unrivaled endowment. Whenever such natural advantages are matched by human intelligence and effort to breed the best of whatever type is chosen, California will be the Mecca to which blood-and-achievement-seeking pilgrims will come from all nations. But it is a business in which money must be put to take out money. Every man who enters the business ambitiously and well, must pay his way as he can. He must reject scrub-service; he must pay what it is worth to get a share of the pure-breeding which generations of close and far-seeing men have established. Later, perhaps, if he begins in a small way, he will have a pure-bred band of his own and then he will really be in the royal game which has swelled the hearts of men for ages. When he demonstrates success with the choice agencies he is handling, he should be financed from rural credit sources at rates which will warrant him in using enough capital to work rapidly and effectively. If he has capital of his own, so much the better. This horse production will be big business in California if it is handled wisely and conservatively on the basis of the exceptional natural advantages. But remember, of course, the lesson from the motor-builders to build only that which is good for some particular thing and to use the very best materials for that purpose. No wise auto-builder would try to build a limousine for trucking nor would he use scrub steel or rubber. By the same sign, the future of California horse building depends upon having a clear idea of the form and quality of the animal to be produced and using the pure-bred of whatever type he chooses to multiply. If he has this advantage at the start he can go faster and farther in California than in any other place on earth, because though California conditions may be closely matched elsewhere there is no such place on the highway along which world development is now moving.

Improving Frosty Places.

After all we may have been wrong in our remark last week that Uncle Sam probably could not improve his bad eastern climates by taking expert climatologists from California to work in these worse places. Upon longer reflection we are disposed to conclude that something may really be done in that line. For, since our last issue, we have received a publication by Prof. Alexander McAdie of Harvard University upon which the author has inscribed this delightful sentiment: "With pleasant memories of the days when we labored together on the frost problem in that wonderful western land and that glorious climate of California." A man who can write that can never be faithless to his first geographical love. If he should live a thousand years to do good work on the Atlantic side, he would not forget his score of years of joy in the climate of California, which he understood so thoroughly and characterized so well, and whose little sins he did so much to successfully correct by his frost studies and inventions. The Harvard publication, which Prof. McAdie sends us, is entitled: "Temperature Inversions in Relation to Frosts" and is rather a high-brow undertaking—as it has to be to act well its part as a Harvard output. It will of course stand clearly as an important contribution to meteoro-physics to all who take their medicine that way. To us it is a very satisfactory demonstration that frost is not alone due to cold air that rolls in down a slope, or blows in horizontally, or to loss by radiation from the earth's surface by which heat climbs out of the area, but another and perhaps the determining factor is inversion, by which the atmosphere has a way of turning upside down under certain conditions—thus taking away from us the warm lower side and slapping down on us the cold upper side, for which aviators put on their overcoats. Of this inversion Prof. McAdie demonstrates two things: first, that it is controlled by the frost-finding devices which are so successful in California; second, that the air gives signs of its disposition to loop the loop and can therefore be caught at it beforehand, and be not only predicted but prevented. When he was preparing his treatise, Prof. McAdie did not know of our proposition to improve eastern climates by selecting meteorologists trained in California to take a whack at them or he might have added another chapter, which we trust he will consider later. Having established this principle of inversion we suggest that he proceed to apply it to the bad eastern climates by recommending that they be turned upside down to see if there is not some better side to them. In California of course we could not afford to try the experiment, but it can just as well as not be done at the east, where they have nothing to lose.

Queries and Replies.

Querists must give name and address

Treatment of Vine Stakes.

To the Editor: Will you name some preservative for stakes for a vineyard that is non-injurious to the vine? Also, will you give the relative value of cedar, versus redwood, for vineyard stakes?—W. M. H., Fowler.

Common experience indicates that redwood has no equal in durability for fence posts or vine stakes. But other available wood, even that which is very subject to decay, may be rendered quite durable by filling the pores of the wood with bluestone solution. Take vats or barrels or any other deep receptacle and partly fill with bluestone solution, at the rate of 10 lbs. of bluestone to 25 gallons of water. Stand the stakes in this and allow them to remain 24 hours. If the stakes are to be made from wood to be cut near-by, peel and point them and put them in the bluestone water at once. The solution is more rapidly taken into the tissue if it is not allowed to dry before treatment.

Sap-suckers, Borers and Coal Tar.

To the Editor: Some of my walnut trees have holes on the trunk made by birds and I am told the birds peck these small holes through the bark to get borers out of the trees and that the borers can be kept off the trees by digging the dirt away from them, two or three inches deep, and putting coal tar or asphaltum on the trunk about two feet high. Is that correct? Wouldn't coal tar kill the tree if a belt two feet wide was put on next the ground? Would the same remedy work on young apricot trees?—C. N. H., Arroyo Grande.

So far as we know, it has not yet been demonstrated why a certain woodpecker, called a "sap-sucker," digs those peculiar pits in the bark of fruit trees. We do not believe they are made to reach borers, for they are too shallow to get to them. Some have claimed that the bird likes the inner bark; others, that he digs traps for insects which like the sap and that he goes back after them. You can probably drop the idea that they have any connection with borers which injure fruit trees. As for coal tar on fruit trees, it has been used with some success against the root borer of the peach—being spread on the rough bark just below and above the ground surface. Some injury was also done to fruit trees by coal tar, and recently asphaltum Grade D has been freely used and reported harmless at least to old bark. But this treatment for peach root borer has no bearing on the borer question which you have in mind. The peach root borer is not widely found in the state. The flat-headed borer is the one generally found in stem and larger branches of fruit trees of which the bark has been bruised or sunburned. To escape this insect do not use coal tar, asphaltum or any other black substance, but use whitewash which reflects heat and prevents sun-burn. This is good for any kind of a tree.

"Rose Rust" on Raspberry.

To the Editor: I am sending raspberry leaves, and wish to know if there is anything that we can do for our vines. This rust, or whatever it is, first made its appearance in the spring during the long rainy season, growing worse and worse. None of the first crop berries were first class, and many were very small and tasted badly—just seemed to dry up, although they had lots of water. The second crop berries are very nice now, but the vines are affected, and some of the later berries do not look right.—M. G., Santa Clara.

The yellow coating on the under sides of the leaves is recognized by the University fungologists as "rose rust" and not the common "raspberry rust," but the practical aspect of its attack is about the same. It is too late to do anything now except to cut out old canes, and gather up all old leaves and other rubbish likely to carry over spores, and burn it. Do this as soon as you have gathered the late fruit and spray the new growth which you keep for next year with Bordeaux mixture. This ought to greatly reduce the carry-over of the fungus. As soon as growth starts in the spring, and before blooming, spray again with Bordeaux mixture, to head off the early start of the rust and mildew also—for this may also be concerned in the destruction of your first crop.

Beans in Upper San Joaquin.

To the Editor: What kind of beans do best in the upper San Joaquin (vicinity of Visalia and Tulare)? What time do they plant? How many irrigations, how much, and when? Do you think the "horse beans" would make a winter growth or would the frosts kill them? —C. T. P., Alameda.

The beans chiefly grown now are pink and black eye, both of which have to be planted after frosts are over on the particular piece of land in question. The latest frost reported at the two places you name is April 11, but probably later on adjacent lower lands. Probably May 1 would do on low lands. Whether irrigation is used at all or not depends on the kind of land and how it has been handled. Horse beans will stand some frost, but may get too much.

Makes Lime Sulphur at Home.

[Written for Pacific Rural Press.]

Home-made lime-sulphur is used on the J. B. Cory ranch of San Joaquin county because they use so much it is cheapest to make it themselves. It is preferred to either oil or Bordeaux sprays because it does the work of both with one application, though the oil sprays are necessary at regular intervals of a few years because lime-sulphur hardens the bark.

J. H. Davis, the foreman in charge of the ranch, says they used to use 40 pounds of sulphur, 80 pounds of the best lime obtainable, and 10 pounds of salt for a "load" of 250 gallons of spray. They now use 60 pounds of sulphur since this is the fungicidal element and might as well be made plenty strong. It is noteworthy that after cooking the mixture, there is a sediment which if left in the kettle gets hard; and Mr. Davis says that it hurts the quality of the lime-sulphur spray to hold it very long after preparation, because it is not concentrated enough in their outfit.

The lime sells at $2.00 per barrel, but Mr. Cory buys it by the carload at $1.50 per barrel of 200 pounds net weight. Mr. Davis says it is not necessary to use the best sulphur for the spray, that the cheaper brand will do just as well; but the best lime is necesary because there is plenty of finely ground rock, even in the best, to make more or less trouble by clogging the nozzles. The salt is added simply to make the spray stock, though Mr. Davis says lime-sulphur has done its work if it stays on 24 hours.

Simple Equipment.—The outfit consists of 3 or 4 iron kettles set on brick foundations so that fires may be built under them if desired. Nearby is a high, wooden framework supporting three or four wooden troughs in which the lime is slaked and mixed with the salt. All of the sulphur is put into the kettles which contain hot water and is stirred five minutes, then half of the lime is added and it boils up at once. If too obstreperous, they throw on a little cold water. The mixture is allowed to cook until it is pretty dark color, then the slaked lime and salt from above is added. The lime and lime-sulphur are run through four different screens before they enter the spray machine tank, to filter out whatever small particles may be present.

YELLOW MELILOT IN ORANGE ORCHARD.

To the Editor: The articles on winter cover crop lately published in the "Press" have been of interest to me because the experience related in them checks exactly with my own.

Last September I sowed the yellow-flowering melilotus in my Valencia grove and also among my walnut trees. I sowed 12 lbs. per acre and irrigated immediately. The clover got a good start and grew continuously through the winter so that in early May I had a stand that was so thick and so high that it proved a problem to get it under ground. However, the difficulty encountered in plowing it under has proven small when compared to the benefit derived.

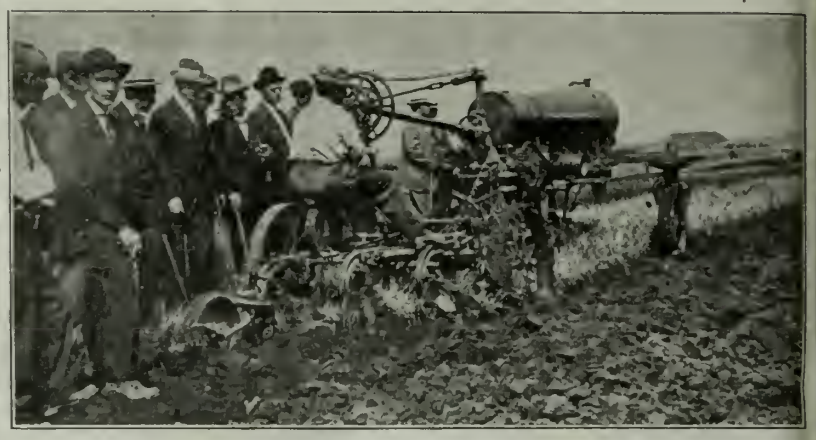
I found the results to be that my grove required less water during the summer on account of the lessened evaporation due to moisture-holding properties of the decaying stems and roots; better condition of the trees due to a more uniform supply of moisture and additional nourishment; a heavier and more sturdy new growth and a better texture of skin on the new crop.

This may seem to be "spreading it on a bit thick" but my deductions are not merely outbursts of enthusiasm. The credit I have given the clover is verified by the condition of my trees which have never before shown such a marked improvement in a single season. I have never before sowed a crop of clover, and the results are due entirely to the cover crop, for this has not been an exceptionally good growing year for citrus trees.

My previous experience with cover crops proved a disappointment because I tried vetch on a soil that would not support that class of plants. The melilotus clover found an abundance of nourishment under identical conditions—which further recommends it, especially where the top soil is light or of poor quality. —Correspondence.

ACTIVE SCIONS IN WALNUT GRAFTING.

To the Editor: Last year we grafted some of our black walnut trees, 4 years old, to "Eureka," in April, but only a few are growing on the graft. A neighbor of ours, who grafted some at the same time, with grafting wood which he just cut from the Eureka walnut tree, then in sap, claims to have better success than we did, having the grafting wood previously cut and preserved. Can you give us some pointers as to which is the best method of getting good results?—M. & M., Stockton.



[So far as we know the prevailing practice is to cut dormant scions and keep them cool and damp until the leaves start on the stock—being careful not to let the scions get too wet during the keeping. Who has had success with scions cut during the sap flow?—Editors.]

WHICH TREES PAY?

Assistant Farm Adviser Dougherty of Ventura county has lined up about 350 walnut trees on which the growers will keep records. Mr. Dougherty takes notes on the size and vigor of the tree, the type and quality of the nuts, the methods of culture, and the relative amount of blighted nuts. The growers weigh the nuts as picked up and record the weight on a card attached to the trunk of each tree. The object of this work is to show that some trees in the orchard are "boarders," that some barely pay expenses, and that others are profitable and worthy of propagation. The citrus-growers who are practicing tree-record work in the county have already begun to work-over some trees, and it is hoped that the result of this walnut-record work will show the desirability of the walnut growers doing likewise.

On Sept. 30 the Arbuckle Almond Growers' Exchange shipped a carload of almonds to Portland, Ore.

CANNING PIMIENTOS.

To the Editor: Please advise me through your valuable paper how to can pimientos. We have more on the vines than we are able to sell fresh.—Subscriber, Porterville.

[Answered by Prof. W. V. Cruess, University of California.]

We have had no experience in canning pimientos. I will give you, however, an extract from Dr. Bitting's bulletin on canning and trust that this will aid you in canning the pimientos.

"The whole chili is peeled and the Mexican method consists in first roasting the peppers. Mr. Ortega devised special apparatus for doing this work so that the operation is not only continuous but the chilis are kept in motion so that burning will not take place. As soon as the chilis are cool, the skin and stem are squeezed off by hand, a part of the seeds also coming away with the stem. The fleshy portion is then washed and placed in the can and a small quantity of salt or brine is added.

"The chili is also peeled by immersion in lye, but thus far the method has not been very successful. Still another way of peeling is by immersion in hot oil, the commercial method having been originated by Mr. John Bonhoff, of Los Angeles, about 1907, though it is described in a cook book of earlier date. Ground chilis are also packed. These are stemmed and then run through a grinder.

"In the factory the handling of the chili is done by Mexicans as the pungent principle is too strong for the ordinary unaccustomed American hand. When the whole peppers are used, they are folded upon themselves in the cans so as to come out whole or in large pieces. The cans are well exhausted and given a process of from 12 to 18 minutes at 212 degrees F.

The pimiento is the "sweet pepper" and should be so designated rather than by the foreign name. It is large and pear shaped, from 3 to 4 inches long, 2 to 2½ inches across at the base, and is more or less ridged; the flesh is thick and has very little pungency. For the most part, these are canned when ripe or well colored. They are peeled in the same maner as the chili, but the seeds are removed. Care is taken to fold the pepper neatly so that it may be cut across and make long strips for garnish. Salt brine and sometimes a little cottonseed oil is added. They are given the same proceses as the chili."

RICE GROWING IN STANISLAUS.

To the Editor: A great deal has been written and talked about rice culture in California, and the satisfactory results obtained in the northern part of the State seem to be beyond dispute. The San Joaquin Valley, too, seems to come in for its share of advertising through local tests varying in extent from a few acres to as high as 600 acres in the Wasco district, and I believe that certain localities in the San Joaquin Valley will prove most satisfactory, providing they solve the question of water supply. The cost of pumping water, in many instances, seems to prohibit profitable rice culture.

The object of this letter is to call your attention to a test which is being conducted under my supervision in the Modesto Irrigation District near Claustown, where we have taken a 20-acre tract, representing four distinct types of soil ranging from a sandy loam to a typical hard pan, overlaid with two to four inches of soil, for the purpose of demonstrating the possibilities of rice growing in that area, which comprises from twenty-five to thirty thousand acres of a similar type of land in the Modesto District. I was fortunate in getting a conscientious and industrious foreman to conduct this experiment, and I am frank to state that I do not believe that there is another rice plot, outside of the United States Government Experimental station at Biggs, that can compare with it from the standpoint of efficiency and care in growing a rice crop under most adverse conditions. We did not start with the work until the middle of April, on a tract of land that showed variations of from six inches to four feet in topography, within a distance of less than one-quarter of a mile and where it became necessary to contour the land on a 3-10 of a foot fall, in order to make the submersion of rice during the last stage of its growth fairly successful. At the time of this writing we have a very good crop growing and the variety of soil excellently demonstrates the respective possibility of yield. The object lesson is most impressive, and one finds in the same check yields of probably five bags to the acre on two inches of soil over the hard pan, and as high as 50 bags to the acre adjoining these spots, where the soil is several feet deep and carries some humus. I think that the Modeto test plot is one of the most interesting rice experiments in the State of California today.

W. K. Winterhalter.
San Francisco.

KILLING ENGLISH SPARROWS.

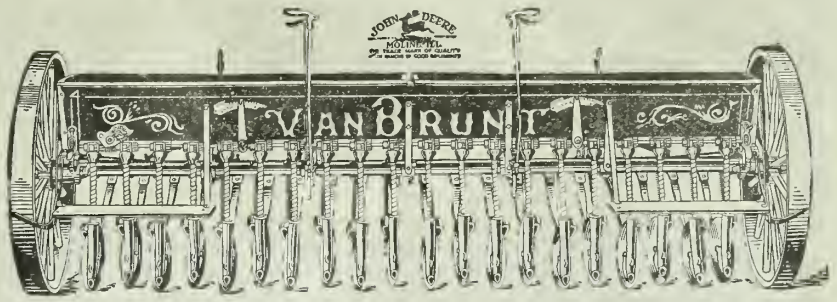
To the Editor: Will you give some advice about getting rid of English sparrows which have established themselves in places where their nests cannot be easily reached? —Reader, Fresno.

[Answer by H. C. Bryant, Economic Ornithologist, University of California.]

I would suggest that you procure from the U. S. Department of Agriculture, Farmers' Bulletin No. 493 entitled "The English Sparrow as a Pest." This bulletin discusses all of the available methods for the destruction of the English sparrow, including methods of poisoning. However, California conditions are so different from Eastern conditions that it is useless to attempt to trap the birds. Extensive experiments have been carried on here at the University in an endeavor to exterminate the English sparrow on the campus. The same sort of traps used in the East proved ineffectual, since an abundance of food is always at hand, the ground never being covered with snow. Systematic shooting, using a 22 and 32 rifle and cartridges loaded with dust shot has proved the most successful. Systematic destruction of nests during the breeding season also aids in diminishing the numbers. A combination of this method with well-directed poisoning will probably prove most effectual in your vicinity.

THOSE RAMPANT PEAR TREES.

To the Editor: R. W. Schmitz of Martinez can bring his rampant growing pear trees (See Rural Press of September 18) into bearing only by establishing the proper proportions between root and top. Undoubtedly they have a subterranean source of bountiful nourishment, and seeking to retard top growth will only result in more wood and then some.



It is just as logical to seek to destroy the roots to retard growth as to shock the entire tree by off-season pruning. The tree is seeking to attain the growth which its root system warrants by throwing out excessive top. I venture to say the lateral and pendant growth is small.

Mr. Schmitz's remedy is to guide his trees and allow them to attain their full growth which is obtained by carefully thinning vertical limbs so as to let in air and light, but not too much sun in his locality. I would say take out one-half of vertical growth, preferably the heaviest; shorten laterals, one-half, and pendants two-thirds. If verticals are over four feet, cut at that point. This will leave a top in proportion to the root system. Doubtless he will have many suckers next spring, which should be rubbed off by May or before they harden. If his verticals throw out a growth of over two feet next year, thin one-half, leaving weakest and do not cut back short of three feet. The top should then be enough in excess to settle down to fruiting.

Of course, he may be put to the expense of longer ladders, but once his verticals fruit they will come out and down to meet him part way, and it is safe to say the size and quality of the fruit will be well worth going after and I prophesy if he follows this plan he will wish all his trees were as "rambunctious."

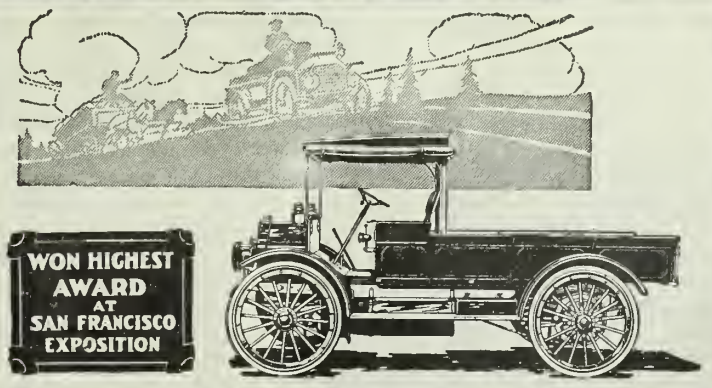
The ground on this particular patch should only be cultivated enough to keep up appearances for a year or two. **Frank Owen.**
Napa.

[That's rational.—Editors.]

Van Brunt Single Disc Drills

The drills that plant any small seed from alfalfa to bearded oats exactly where it will bring the best results—at the bottom of furrows of uniform depth. All the grain is up and ready for harvest at the same time.

No seed wasted, all the field sown. Van Brunt Drills have an adjustable gate force feed which compels an even, continuous flow of seed from each seed cup without bunching or cracking the seed. It cannot choke up. And the seed beats the dirt into the furrow because of the closed forward delivery.



Individually adjustable pressure springs, direct gear drive, extra large and stiff hopper, high grade steel disc blades and disc bearings that are guaranteed are additional features that make the Van Brunt the desirable drill.

Grass seeder attachment can be furnished for any Van Brunt Drill.

There's a Reason

why a man you know—your John Deere dealer—is handling this drill. He knows it is made right. Ask him about it, and write us for free circular describing the "Van Brunt." Mention that you read about it in **The Rural Press.**

International Motor Trucks

TIME is such an important factor in the marketing of fruit and vegetables, that any reasonable device for saving time receives earnest consideration. Perhaps the principal reason why **International** Motor Trucks are so popular among fruit and vegetable growers is because they save so much time on the road.

Around the larger cities truck farmers buy **International** Motor Trucks because their produce is on the road from one to three hours less time and is, therefore, delivered in such good condition that it commands the best prices.

Add to this advantage the ability to see customers first, which an **International** Motor Truck gives, and add again the saving of time on the return trip, and you have three good business-getting, money-making reasons for buying an **International** Motor Truck.

There are also other good reasons which every fruit and vegetable grower should know and which it costs nothing to find out. Drop us a line and we'll send you complete information about our three motor truck models, "M" for 1,000-lb. loads, "E" for 1,500-lb. loads, and "F," the new **International** 2,000-lb. truck.

California Garden Flowers $1.50 Postpaid Pacific Rural Press

California Citrus and Tropical Fruits.

Planters sometimes think nurserymen tell them fairy stories, but when the nurserymen talk to each other they certainly do cut out the frills. Therefore read this:

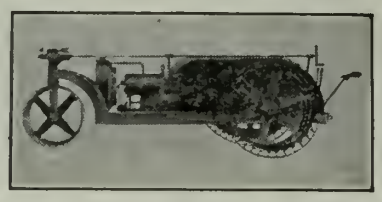
[Written for Pacific Rural Press.]

At the recent meeting of the California Association of Nurserymen the committee on citrus and tropical fruits, E. O. Popenoe, W. R. Wood and R. M. Teague, submitted the following:

The citrus industry, because of a series of unparalleled disasters extending over a period of two years (the freeze, the tariff and the war), has remained in an unsatisfactory condition. Nursery stock has been in dull demand at low prices. New plantings have largely been of lemons. One feature of improvement has been the opening up of an important new field for grape fruit in the Imperial Valley. This locality seems destined to grow a superior quality of grapefruit, in a fairly rapidly increasing quantity.

The check to citrus plantings on account of the generally low prices of fruit will lead, as it has in the past under similar circumstances, to an improved condition in the nursery stock trade within the next two or three years. Many of the smaller growers will cease operations altogether, and the larger nurserymen will temporarily shorten in the amount of new stock grown until a sharper demand leads to increased prices, and then for several years following the trade is likely to be satisfactory.

On the other hand, a feeling of increased interest has been realized by the growers of avocado trees. This valuable fruit, one of the finest foods known, is becoming somewhat better understood. The increasing number of trees coming into bearing in various parts of the state has given an added keenness to the subject, and those who have felt the need of a new horticultural development to relieve the citrus situation have given thought and investigation to the matter of avocado growing. As a result, while only a limited amount of nursery stock of this character has been grown, the amount available—at least of the best varieties—has been sold at good prices. The new orchard plantings are all small, none of them over 30 acres in extent, the average being perhaps 5 acres, but it is to be remarked that they are being made by growers of intelligence and conservatism. The belief of those best qualified to judge is that this fruit will at a day not remotely distant be planted largely in Southern California and on the slopes or in protected places in the San Joaquin and Sacramento Valleys



The matter of varieties is occupying the attention of growers and planters of the avocado tree. Among the trees fruiting in California several have displayed very satisfactory qualities. Those that have been considered the best are the Taft, grown near Orange, the Sharpless near Tustin, and the Blakeman at Hollywood. These are all the thick-skinned, large fruited kinds. Among the thin-skinned, small fruited varieties, the Northrop, Chappelow, Ganter and Harman seem to hold about equal place, with two new aspirants for favor, the Val del Flor and Knowles entering the lists. These types are hardier than the large fruited, thick-skinned varieties, but are by many believed not to be so suitable for commercial growing.

These varieties will be added to and subtracted from in the future. The standard varieties of 25 years hence may not now be known, but some of the varieties named are so good that commercial plantings of them will undoubtedly always be satisfactory and profitable. Because of much variation in form, size, color and texture, the number of avocado varieties will be greater, perhaps, than the number of citrus varieties.

In a paper read at the recent Fruit Growers' convention at Stanford University, David L. Crawford, professor of botany of Pomona College, criticised avocado growers for the high prices charged for trees. The fruits will remain high priced until more of them are grown, because naturally whatever a grower can get for his product he will take; and the avocado fruit is so highly esteemed that those who can afford it will buy, even at the high prices prevailing, if it cannot be had for less. Prices will only become lower as the fruit becomes more abundant; when it will bring its value as a food. At such prices it will always be a profitable fruit to grow. As to the cost of nursery trees, it may be said that avocado trees are difficult to propagate, and will never be low priced. The difficulties and work connected with budding it and the high percentage of failures will of necessity always make of it a higher priced tree than citrus trees have been. Dealings should be had with reliable, responsible, well established and successful firms. Such nurserymen are selling budded avocado trees of the best varieties only, and at as reasonable a price as the conditions warrant and permit.

It is believed by your committee that a limited but good field may be developed for certain of the minor sub-tropicals,—as, for instance, the lemon guava, which makes a surpassingly good jelly; the feijoa, which may be preserved or made into a jam of great delicacy; the passion fruit which grows here as well as it does in Australia and is there considered a delicacy of merit, being used in various forms; and if the fruits mentioned could be had in sufficient quantities to enable some preserving and canning establishment to offer them to the public, there is every reason to believe the industries would become gradually established and a reasonable amount of the nursery stock called for.

Taken as a whole, the interests represented by your committee have an outlook of quietness for the immediate future, with thereafter, we believe,—when general business conditions are again normal,—of a reasonable and steady increase in volume and price.

ALFALFA SEED

Our success in the Alfalfa seed game has astonished the most skeptical. We were advised that clean, reliable seed could not be furnished in quantity. We found that it could be, if the dealers would go to the expense of inspecting the seed fields before they were harvested. We do this thing and therefore know what we are serving is right. If it is not right then we are to blame and are going to make it right.

We have seed for sale in quantities from 1-lb. to car lots. It is the 1915 crop—the best to be had at any price, anywhere. We have no bargains to offer you, but if you are interested to the extent that you want good seed at honest prices, we are on the job to the finish. For prices, samples, etc., wire or write,

Caution!

Genuine J. H. Hale peach trees can be obtained **only** from Wm. P. Stark Nurseries, Stark City, Mo. Look for trade-marked wooden tag with Mr. Hale's personal signature as below.

Peach J. H. Hale Stark City Mo

Send for Catalog—Read the Whole Story

On July 22, 1915, Mr. Hale packed an ordinary apple barrel full of J. H. Hale peaches in his Fort Valley, Ga. orchards and shipped them to Stark City, Mo. by express. After traveling 1,000 miles, without ice, without ventilation, in the heat of summer, they arrived as firm as when they left the orchard—only two bruised peaches in the lot. A record no other peach has ever equalled. Read full facts in catalog. Mailed Free.

An Amazing Test—J. H. Hale Peaches Shipped in a Barrel!

A Peach So Solid and Firm It Won't "Squash Down"—Yet Fine, Juicy Flesh—Luscious Flavor—Immense Size—Highest Prices for Fresh Fruit—Ideal Canner

Wonderful Keeper

The J. H. Hale is the peach that annihilates distance. Ship it thousands of miles—it keeps for days—the dealer has time to sell without waste. This means more sales, bigger profits. And its size, coloring, quality and flavor bring **double** ordinary peach prices on the market. Hon. Parker Earle, of Pasadena, kept J. H. Hale peaches 12 days after they had traveled 4,000 miles in the temperature of an express car. They have been sent by Parcel Post from Connecticut to California, back to Connecticut and then to Missouri, and arrived in marketable condition.

For Canning

Sold fresh, the J. H. Hale always tops the market. Yet its heavy, dense, sweet flesh, coupled with its large size, make it the superb commercial peach. For canning it gives a clear, brilliant syrup, holds its round shape, doesn't rag out, and retains the delicious natural flavor. You have **all** the most desirable features in the J. H. Hale. That is why it is proving the greatest money-maker ever introduced in peaches.

What California Growers Say

"Harvested my crop of J. H. Hales. They exceed your ad. in quality and color."—**P. Jordan, Los Angeles Co.** "The J. H. Hale is king of the peach world. Our trees were loaded. We picked as many as 300 peaches off some trees. Fine flavor, many so large I couldn't get them in a jar with a 3¾ inch opening."—**F. G. Baker, Los Angeles Co.** "The J. H. Hale are just as you represented."—**Charles Torrance, Humboldt Co.** "When my J. H. Hales were ripe they were a beautiful sight, large, fine, well colored, fine flavor."—**J. E. Redden, Los Angeles Co.** "All that is claimed for them, firm as a cling, but much better; finer flavor than Crawfords."—**L. L. Cronk, San Bernardino Co.** "A flavor our California peaches do not bave."—**Bensel Smythe, Publisher "Western Empire."**

$1420 Per Acre

From one measured acre, Mr. Hale picked 748 bushels of J. H. Hale peaches, over 95% of the fruit being merchantable, selling f. o. b. farm for $2.00 to $2.50 per bushel—a return of $1420. In carload shipments, the J. H. Hale peaches **netted him $380 MORE per car** than Elbertas. Why waste time with uncertain profit-producers when you can get a money-maker like this?

Reserve Your Trees Now

This year our increased volume enables us to quote considerably lower prices on J. H. Hale trees. This together with tremendous interest aroused by its performance in every peach section of the country points to an overwhelming demand. Get your order in early. Write for catalog today. Don't wait until our J. H. Hale trees are all gone.

Another Great Peach—"The Early Rose"

The highest quality in early peaches. Rich, rosy red, wonderfully flavored, and with a peachy fragrance that sold the Southern grown Early Rose in New York for $3.00 to $3.50 per crate. More profit than any other peach of its season. Fully described in catalog.

Genuine Delicious Apple—Growers Prices

The national dessert apple, delightfully crisp, aromatic flesh, with an alluring flavor, rightly termed "Delicious." The prime favorite on Pacific Coast. Genuine Delicious apple trees, William P. Stark grown, at lowest direct-from-nursery prices.

Hon. Parker Earle of Pasadena and J. H. Hale Peach Tree

With his associates, the Redlands Heights Ranch Co., Mr. Earle has planted 15,000 J. H. Hale trees near Redlands. He says: "The beauty of the J. H. Hale is, after it has developed sugar and quality it will hold that quality twice as long as any other peach I know. It would go to European markets from California if packed right."

Send for New Free Book—Save ⅓ to ½

We save you money on your tree purchases because you do business direct with the nursery. No agents, no canvassers. Our catalog is our only representative. Gives complete J. H. Hale story, all about Early Rose Peach, Delicious apple—also lists all best apple, peach, pear, plum, cherry, grape, bush-fruits, strawberries, roses, ornamentals, etc. Prices in plain figures. Easy to order from. Our trees pass most rigid inspection laws. Safe arrival guaranteed. Write or use coupon today.

50 BUSHELS OF INDIAN CORN PER ACRE.

The increase of live stock in California will require an increase of certain kinds of feed—already there is being grown plenty of alfalfa and grain hay, but more grain to fatten and harden hogs and cattle is needed. A good deal of experimenting has been done with dry land sorghums and headed corn which adds much to the feeds, but the efforts being made to grow more Indian corn promise more than anything else in this line.

In the Sacramento as well as in the San Joaquin low lands many varieties of corn are being experimented with and some notable success secured, notably at the Vina ranch in Butte county, by Thos. Jacobs in Tulare and M. Bassett of Kings county.

Recently we had the chance of investigating a successful 600 acre experiment in corn growing on the delta in the northwest portion of San Joaquin county. The Brack tract ranch, consisting of 4400 acres under a levee of the Mokelumne river, is owned by a syndicate, of which John Cook of San Francisco and Peter Cook of Rio Vista are the moving spirits. This land has been used for years to raise barley, potatoes and beans and is very rich. The soil is made up of peat, covered with several inches of silt.

Mr. John Happe, the superintendent of the ranch, is not an experienced corn grower, but he knows how to farm, and his first effort at corn growing resulted in a yield which he estimates at 30 to 35 sacks shelled per acre, which we feel sure will produce at least 50 bushels per acre. The seed used was a yellow and white dent variety; the corn was planted from the middle of May to the first week in July and matured in 90 days.

The ground was plowed, disked harrowed and seeded. After the corn came up it was hoed once and cultivated four times. As the stalks came in tassel the field was irrigated once that the pollen would be abundant. The stalks now average from 9 to 10 feet high, three to the hill, 36x40 inches apart. As a silo crop it would easily make twelve ton to the acre. Mr. Happe says the labor cost to date was $8 per acre and he estimates the cost of husking and hauling will be about $2 per acre addtional. This means that the corn produced will cost 20 cents per bushel and worth at least 60c. Not a bad crop as a commercial proposition, and vastly more valuable to the owners if they had plenty of stock to feed it to, also a few silos to save part of the crop for that purpose.

The owners of the ranch are now figuring on going heavily into stock raising and feeding. Already they have gathered together over 300 head, besides some hogs and sheep, silos are being investigated with the idea of saving some of the feed now practically lost.

With the right kind of seed and one irrigation the soil on the delta lands will produce corn equal to the corn belt of the central States. If only a small part of the river bottom lands of the great interior valleys were planted to corn, California would soon take rank not only as a corn producer but would turn off such quantities of fat steers and hogs that we would no longer have to import meat, but be able to produce at a price that will allow packers of the Coast to enter into competition with the world.

A better seed corn is needed and we have confidence that some way will be found to secure it.

CLOVER FOR HARD ORCHARD SOIL.

[Written for Pacific Rural Press.]

Alfalfa in many orchards of Corning proved highly desirable, and not only of no injury to the trees and crops, but of distinct benefit, were irrigated thoroughly at not more than 10-day intervals.

This led an olive grower owning a young 6-acre orchard on land "barleyed to death and set too close with trees" to hire F. P. Stratton to level and check the orchard last August for the purpose of sowing alfalfa. But Mr. Stratton wanted to sow sweet clover, for he says it penetrates the soil much quicker and loosens it up for irrigation.

"I have seen sweet clover roots penetrate 18 inches deep the first season, while alfalfa takes the first year to get started."

Sweet clover has as long a growing season as alfalfa and is a persistent self-feeder, yet after two years' growth it dies down and is not nearly so much trouble as alfalfa to kill out if you want to. Anyhow, where you want alfalfa on soil that has run together or has formed a plow-pan, it is better to use sweet clover to prepare the soil and inoculate it for alfalfa.

It makes very satisfactory hog feed for some of Mr. Stratton's friends; and cows do not bloat on green sweet clover pasture, though they must learn to like it.

BI-SULPHID FOR BEAN WEEVILS.

To the Editor: The following experiment with carbon bisulphid was performed in the south where weevils are far more destructive than here. After hatching from eggs deposited on the young growing plant, the worms entered the green pods. The infested peas were stored in barrels as soon as shelled and plugged air tight after the bisulphid had been poured in with them. On examination, a few weeks afterward we found that the weevils had continued to multiply destroying most of the peas. None of them had died from the fumes. The cold climate of the northern states saves that section from the inroads of this pest. Winters where the above experiment was performed are slightly colder than in California, which would seem to indicate that conditions are not unfavorable here.—G. C. A., San Francisco.

[The bisulphid in this experiment was not good or not enough was used. There is no doubt of the killing power of the vapor when used aright. It has been very successfully used on a very large scale in eastern granaries and elevators. Still heat up to 150 degrees Fahr. as prescribed by Mr. Parker of Ventura in the Rural Press of September 25 may be the most available method.—Editors.]

F. A. Donner of Oakdale has been experimenting with Persian melon growing for seed for a San Francisco firm. His efforts have met with such success that next season he expects to grow the melons (which are a rare delicacy in that line) on a commercial scale.

You Don't Have to Jump Off A Skyscraper

to prove the law of gravitation—neither do you have to cross the oeean or rely upon your imagination to find out what Radium will do for your orchard or crops. We have a free illustrated book, showing and deseribing definite results obtained from using Radium ore.

Scientists deseribe the effeets of Radium upon vegetation as similar to the action of the ultra-violet rays of the sun, and as applied to growing things is the most important diseovery of the eentury.

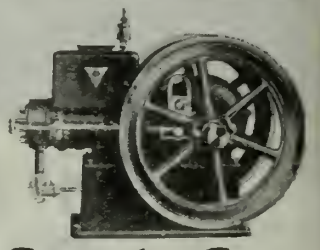
FOR THOSE WHO WANT
Reliable Power and Service

Price is a secondary consideration in buying a farm engine. What you want to know is "HOW LONG WILL IT LAST?" and "CAN I DEPEND ON IT?"

When you Buy an **Alpha Engine** You get a reliable power unit that will give you long and satisfactory service.

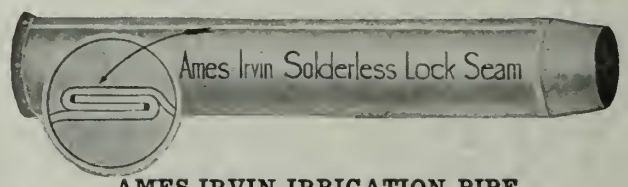


Gasoline-Kerosene or Distillate.

There are more drop-forged and case-hardened parts on the Alpha engine than any other. Semi-steel cylinders and piston accurately ground to size. This means sustained power and an engine accurate in adjustment and therefore as economical after five years' use as when new.

The Alpha trade mark on an engine is a warranty of long and satisfactory service.

THE VIKING ROTARY PUMP will reduce your cost of irrigation. High efficiency. Self-priming. Requires no foot valve or priming pump.



All sizes from 5 to 1600 G. P. M.

Relations of Farmers and Bankers.

Mr. Anderson, who writes below at our request, gives important facts and suggestions drawn from his long experience both as a farmer and a banker.

[Written for Pacific Rural Press by Alden Anderson, Sacramento.]

The farmer enjoys credit from banks as anyone else would, except that if there is an advantage in favor of any one class it would be in favor of the farmer who kept, for at least a portion of the year, a fair bank account and who needed assistance only for what is properly called "crop moving time."

The up-to-date banker in an agricultural community would much prefer to see the money he loans applied to the active development of property and bringing forth of crops that will redound to the benefit, not only of the producer thereof, but to the whole community.

In such districts in California there is no dearth of opportunity for loaning money safely at good rates of interest. In other words the demand for money for legitimate purposes thus far has always equalled and sometimes exceeded the supply. Hence most bankers endeavor to loan their money out in such a way as to be most beneficial to the bank, either in developing new business or that will bring reciprocal relations that will assist in building up their business.

There are unfortunately some farmers that seem to think that bankers connive and scheme to take advantage of borrowers' necessities in the hopes of ultimately securing property pledged as security for money loaned. Such should never be the case on the part of any banker, and never to my knowledge has such action been taken nor has money been loaned with such a consummation expected or desired.

In other words the banks are loaning money and make their profit on the interest they receive. A piece of property taken by a bank immediately depreciates in value for several reasons unnecessary to go into here and the income, for the bank from that loan, stops. Therefore, instead of the amount of money invested in the property bringing in the usual return of interest it is idle and of no benefit to the institution. No matter what may have been the disposition or desire of bankers in former days in that respect it does not prevail now, and the farmer in need of credit, whether short time or for stated periods, should be entirely frank with his banker and endeavor to show that he is worthy of credit and that he is using the money thus secured for good purposes.

Farmers are more negligent in the keeping up of their interest payments than most borrowers and this works to their disadvantage in borrowing. Under the banking laws nowadays, if a note is delinquent in interest it is soon classed as bad paper, no matter how reliable the security back of it, and after a certain period it will have to be written off from the assets of the bank. That does not mean that the bank could not enforce collection, but that they cannot carry it in the active assets of the bank; if they had too many of them they could not continue paying dividends until such items were collected.

Thus it will be seen that the non-payment of interest, if indulged in to any considerable extent by patrons, would throw the whole scheme of the bank's conduct out of alignment. It will also be seen that it is necessary for anyone having an obligation with a bank to meet their interest on its due dates promptly and they should not plan to borrow money, or to agree on a certain due date unless they will be prepared and able to pay the interest or note promptly when due. The thrifty farmer who meets his obligations promptly and does enough business with the bank at some portion of the year to make his account worth while is regarded as the very best of clients and their accounts are solicited and esteemed. No banker, if he is worthy of being called the name, will refuse credit to a farmer for the purpose of handling and moving his crops to market when they are ready even if they have to use their own credit to obtain the money.

Bankers do not solicit the use of their name as reference for anyone, but allow people to refer to them by permission and no one should refer to their banker unless they feel sure that their acquaintance with the bank has been of such a nature as to receive a prompt and unequivocal endorsement of the banker inquired of. In other words an equivocal or non-committal reply would do harm, provided the man inquired of was all right and the banker was not sufficiently qualified to answer capably and intelligently the question propounded.

In other words, a moral obligation goes with the O. K. of a man's character and financial position by a banker, and unless a man feels sufficiently sure of his standing to get a favorable declaration he should not give his banker as reference.

In regard to money for farmers' needs, people do not here differentiate enough between current needs and necessities such as money to harvest and market crops, and long term investments for the purpose of developing property. In the Sacramento Valley, where there is such a broad expanse of territory, and less of accumulated surplus, there is not at the present time as much available money for long-time investment purposes as could be profitably used, whereas short time necessities can well be taken care of. These are matters that will be adjusted and alleviated by one method and another more and more as time goes on and the farmer will find that those who are prosperous and thrifty, who have the capacity to produce and the disposition to be frank with their bankers, and who endeavor for at least a portion of the year to be of reciprocal advantage to the banker, will always have their needs well, economically, and efficiently taken care of.

Meetings under the auspices of the newly organized California Ripe Olive Association will be held in the near future at Riverside, Hemet, Elsinore, Perris, and other olive-growing districts of southern California.

The organization of the Oregon Guernsey Club was completed at the Iregon State Fair at Salem on Oct. 2. J. W. Cook was elected secretary of the association.

Alpha Combination Power Sprayer

CONSTANT HIGH PRESSURE is easily maintained with the **ALPHA AUTOMATIC PRESSURE CONTROLLER**

When desired pressure is reached the pump automatically ceases operation. The engine idles. Again resuming operation when pressure drops below point at which it is set.
Does away with need of relief valves, diaphrams, etc., which are soon put out of commission by the corrosive action of the spray material.
Just what you are looking for.

Mechanical Power on the Farm.

[Written for Pacific Rural Press.]

FLY-WEEL NEEDED TWO BEARINGS.

The No. 16 Dow double-acting pump run by a 7½ h. p. electric motor was anything but satisfactory to Dr. Robert E. Pierce of Tulare county until the pump house burned down. It was loose and pounded like a noisy rattle-trap in spite of all adjustments and fixing. But after the pump house burned down, the bearings were all rebabblted and the fly-wheel axle extended to a new bearing on a concrete pedestal, so that it now rests on both sides, lnstead of only one as before. This gives it greater steadiness and the pull of the belt from the motor does not rack the axle and wear out the bearings as before.

Since the pump cylinder is 100 feet down, the great weight of water lifted and the light weight of the fly-wheel made it hard to keep the pump going. When the extra bearing was put ln, a heavier fly-wheel, 3½ feet in diameter, was also installed to overcome this.

By an ingenious device, one rod to the cylinder descends inside the other, which is hollow, while the other is rising. The down stroke is swift, so that the upstroke always starts before the upstroke of the other rod is completed.

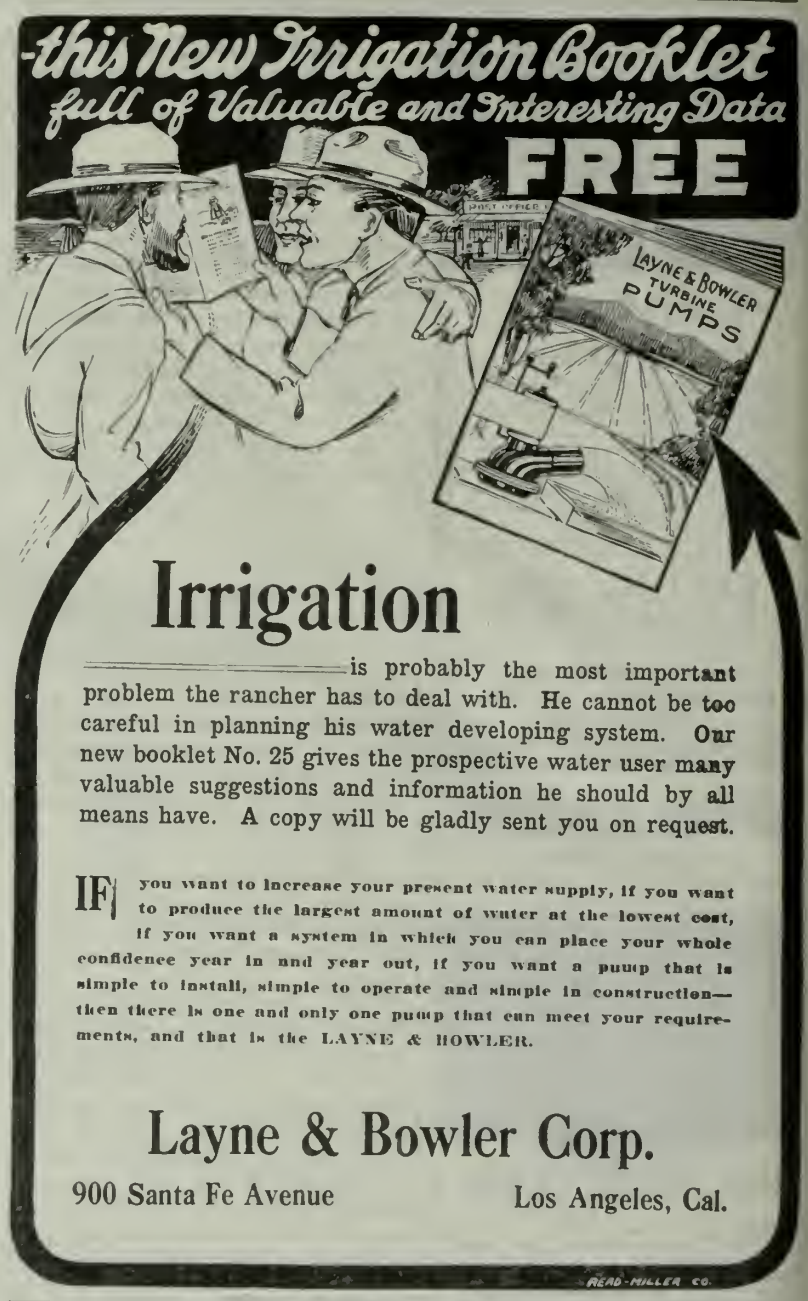
The outfit irrigates 30 acres of large orange trees with about 15 miner's inches of water distributed through several underground cement pipe lines. It runs from the well into two cement stand pipes in the yard where it overflows in attractive fountains before going on its more useful task.

PUMP PERMITS ORCHARD ALFALFA.

Alfalfa in an orchard is a dangerous thing for the trees unless plenty of water is available for frequent irrigations exactly when desired. Two or three days' delay in an alfalfa covered orchard means serious setback to both. But many orchardists around Corning are finding it a wonderful aid in getting enough water for the trees to soak into the soil, which used to run together on account of previous exhaustion of humus by grain farming. Ditch irrigation is not available, and could not be depended on anyway, to furnish water at just the critical time an orchard in alfalfa might need it seriously at a time of hot winds. Motor or engine driven pumps are thus necessary. F. H. Brubaker is one who has had 10 years' success letting alfalfa cultivate his orchard because water is available for irrigation every week in summer, and almost as often earlier in the season. One well has a 2 h.p. electric motor while the other has a 3 h.p. motor connected to a centrifugal pump at the surface. Since the water level goes down sometimes, he expects to put the pump down into the pit to reduce suction distance because it requires less power to force than to suck water a given distance.

WHEN THE FARMER BUYS A MOTOR.

One of the auto-agents has had an awakening on the subject of sales to farmers and is credited with these remarks:



"When the farmer buys a motor car he has 'to be shown.' He doesn't take anything on say so. And he particularly searches for the hidden quality. The average city man is very strong for looks and design, but only in rare cases is he possessed of much knowledge of mechanics and then, too, he is schooled in the proposition that even if something goes wrong with his car it is only a step to a garage.

"But the countryman adopts an entirely different attitude when he buys a car. He is usually motor wise. He has been operating his farm machinery by gasoline engine and is familiar with the principle and operation of motors. He has before him at all times the thought that he must have a car that will 'take him there and back.' In other words, he will not take chances on a car that may strand him ten miles from home and three or four from help.

"He is a close reader of motor car advertising literature. In most cases when he plans buying a car he has been giving the subject thought for a year or so and reading up on it. He keeps the salesman on his toes with his questions and he demands absolute frankness."

NEEDS TRANSFORMER NEAR MOTOR.

Fresh, clean water is supplied for the large dairy on the Meadowbrook Stock Farm of Merced county by means of a 2-inch centrifugal pump direct-connected to a 4 h. p. motor set on top of the ground. It now supplies a small tank on a low tower, but will be moved to a well close to the silo to fill a 20,000-gallon tank on top of it. There will then be a 70 or 80 foot lift. The motor was recently tried at the silo well, but couldn't do the work because so much farther down from the transformer. The young man in charge of the machinery on the place thinks it will work all right when the transformer is located closer, especially since the pipe will be vertical, eliminating most of the friction.

Irrigation

is probably the most important problem the rancher has to deal with. He cannot be too careful in planning his water developing system. Our new booklet No. 25 gives the prospective water user many valuable suggestions and information he should by all means have. A copy will be gladly sent you on request.

IF you want to increase your present water supply, if you want to produce the largest amount of water at the lowest cost, if you want a system in which you can place your whole confidence year in and year out, if you want a pump that is simple to install, simple to operate and simple in construction—then there is one and only one pump that can meet your requirements, and that is the LAYNE & BOWLER.

SAN FRANCISCO - SAN DIEGO

These pumps represent the highest development in water machinery. Write for booklets. Luitwieler Pump. Eng. Co., 713 N. Main, Los Angeles.

A great deal of water is used here to flush out the cement-floored milking barn every day, clean utensils for city milk trade, and water the large dairy, besides about 500 hogs.

CO-OPERATIVE MACHINE OWNING.

Co-operation in marketing and buying is not the end of co-operation. Where machinery is too expensive for one man to buy, or would not be used enough on one place to pay interest on the investment, co-operation in owning is an advantage to all concerned and permits the use of much labor saving machinery that would not otherwise be available.

This is what A. L. Stephenson of Tehama county and two associates have done on a silage cutter. Mr. Stephenson has no silo, but believes in chopped alfalfa; so he can use the machine when the others do not want it. But if all three grew corn for silage, the chances are that it would be planted and matured, naturally at different times—anyhow, it wouldn't be hard to make arrangements of that sort.

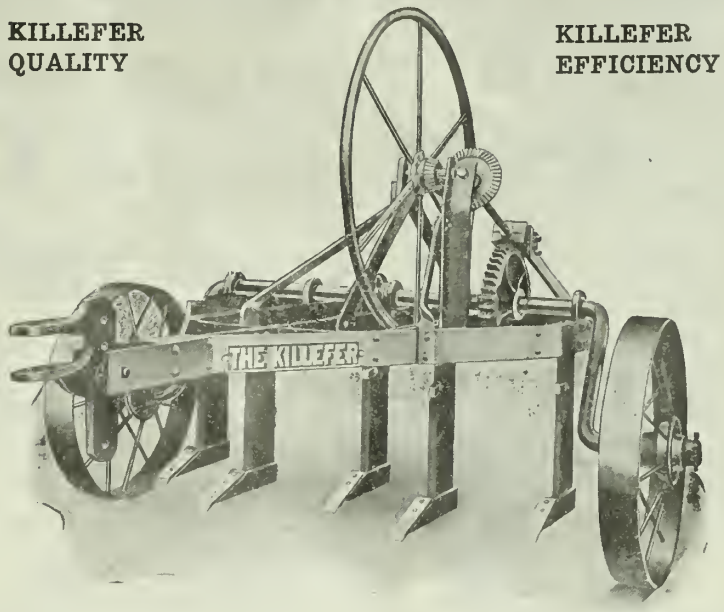
With a rented 6 h. p. International gas engine set on a sled, their cutter chops and blows into the barn about ten tons of hay per day.

GETTING A SILAGE CUTTER.

In hoisting water into a tank or out of a well a vertical pipe is most economical, allowing gravity to carry it horizontally to the desired point, on account of friction against the pipe, which greatly increased in horizontal pipes. This is considerably more important in blowing silage or chopped hay to any height. A blower is more satisfactory than a carrier on account of ease in handling the entire control of chopped feed regardless of wind. In deciding the size of silage cutter to buy, it is well to remember that there is only a short period in which corn is at its best for silage. A cutter large enough to keep the largest available crew cutting and hauling during the period of proper condition of the corn is most economical. In selecting an engine, one horse-power will be required, usually, per inch length of the cutting knife.

OLD CAR CULTIVATES FORTY-FIVE ACRES.

If you have an out-of-date automobile and an orchard which requires four horses to be fed and cared for, you might convert the car into a tractor, as H. E. Redmond of Tulare county has done. It was a 1910 Buick runabout, 18 h. p. engine. He shortened the axles and propellor shaft, put tractor wheels on behind, reinforced the frame, put on a distillate burner, and undertook the care of a 45-acre orange orchard.



"I harrowed eight acres both ways this morning in five hours and a quarter," said he, "and watched the irrigation at the same time. I drove three times down each row of trees, which are 24 feet apart, with two sections of a spike-tooth harrow. Five gallons of engine distillate and a quart of oil run it on any kind of work for six hours."

As the autumn season comes on the people settle down to the serious work of the winter—attending picture shows.

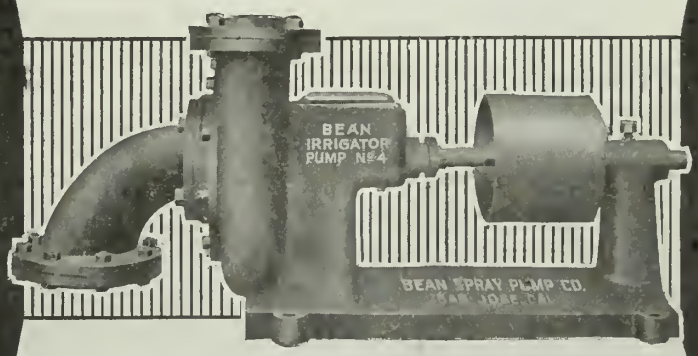
FIVE STANDARD SUB-SOIL PLOW

KILLEFER QUALITY

KILLEFER EFFICIENCY

Subsoiling is generally conceded to be of great benefit to the soil in any country, but more especially in our Western States, where the ground is never frozen, but is packed from year to year, making it very hard and allowing a large percentage of the natural rainfall to run off, that would be absorbed if the ground was broken up to receive it.

The use of these tools in preparing ground for raising grain has proven a thorough success and the value of their use on ground for Alfalfa and other crops cannot be questioned.



The above tool is built in sizes of Three to Seven Standards, and will work to a depth of twenty-four inches, thoroughly breaking up the ground and putting it in the best possible condition to hold the moisture for the crop following.

The Killefer Manufacturing Co.
2209-21 Santa Fe Ave., Los Angeles, Cal.

Get All the Water

Lack of water is not always the fault of the well—it is often the fault of the pump. No matter how good a well you have, if your pump is not right, if air leaks in around the shaft or if you have to tighten up the stuffing box till there's excessive friction, or if for any other reason your pump does not do efficient work—you cannot get the quantity of water your well should yield.

BEAN CENTRIFUGAL PUMPS
are built to get **ALL** the water.

The water-sealed stuffing-box prevents leakage of air and practically eliminates friction at this point. The automatic water-balance prevents end-thrust and does away with a lot more friction. And in many other ways Bean Centrifugal Pumps are built for downright efficient service.

General Agricultural Review.

CITRUS AND SEMI-TROPICAL.

The California Ahuacate Association will hold its first genral meeting at the Hotel Alexandria, Los Angeles, Oct. 23.

Lady bugs have been brought in great numbers to Yuba county to fight the mealy bug which is infesting the orange trees there.

The second annual meeting of the Tulare County Growers' Protective Association was held at Lindsay on Oct. 2. By unanimous vote it was decided to continue the organization and also to maintain the Government maturity standard of shipping frult.

A suggestion was recently received from the Pure Food Bureau at Washington by the Butte county orange growers who are fighting the 8 to 1 standard of maturity, embodying the idea of shipping Butte county fruit labeled as follows: "Tart Oranges. Do Not Conform to the Government Standard." The suggestion was rejected by the growers on the grounds that the label was unfair and not in accord with the facts.

OLIVES AND NUTS.

The various olive pickling plants of Butte county are now buslly engaged preparing for the season's run.

The harvesting of English walnuts is being carried on in Ventura county and the prospects are very promising.

On Sept. 28 the season's first car of California walnuts were shipped from Saticoy; there were 17 tons in the shipment destined for Chicago.

R. A. Powell, manager of the Porterville cannery, is credited with the statement that the olive crop of Tulare, especially the Manzanillas, will be early this year.

Ranchers in the Knights Ferry section of Stanislaus county report notable yields in almonds from trees which have been practically uncared for since their planting 20 years ago.

Olive culture on a commercial scale bids fair to become one of the most important phases of activity in the East Highlands section of San Bernardino county, judging from the acreages being planted there.

The directors of the California Walnut Growers' Association at a meeting held at Los Angeles on Sept. 30, announced the following prices for the 1915 crop of walnuts: No. 1 soft shells, $13.60 per cwt.; No. 2 soft shells, $10.60 per cwt.; budded walnuts, $17 per cwt.

GRAPES AND SMALL FRUITS.

Shipments of Tokays from Lodi totalled 1100 cars up to Sept. 28.

Due to the success following the first "California Grape Week," it was decided to make the event a permanent one.

The last crop of grapes is being harvested on the Vina Ranch in Tehama county; the vines on 1800 acres will be torn up and alfalfa planted in their stead and dairying on a large scale will supplant wine making.

DECIDUOUS FRUITS.

The Beaumont apple picking and packing season is now at its height.

The Tulare county prune season is nearing its close; the crop has been large and prices unusually good.

Prune harvesting in Kings county is nearly over, and it is estimated that the yield will amount to about 5000 tons.

A consular report states that the apple crop in the Ontario Province, Canada, will be short and rather poor in quality.

On Oct. 4 a meeting was held at Watsonville to attempt the reorganization of the Pajaro Valley Orchardists' Association.

Gregory Bros.' nursery of Napa county state that they have 4,000,000 Myrobolan seedlings on hand. One million plants have already been sold.

Commencing Sept. 27, the Sebastopol Apple Growers have been paying $10 per ton for canning apples not smaller than 2¼ inches in diameter.

Eighteen prunes weighing one pound were grown by R. E. Burton of Vacaville on a six-year-old seedling tree which originated from a French prune seed.

Sonoma county apple growers are being urged by the packers to allow the fruit to remain on the trees until well colored; the crop of late varieties from that section is short, but the price outlook is considered good.

The California Growers' Association which was organized last spring by the growers of Tulare county is growing rapidly and the prospect is that it will control eight canneries next season, according to a statement made by Manager Campbell.

Articles of incorporation were recently filed by the Hemet-San Jacinto Valley Growers' Association, and directors for the first year were elected as follows: D. W. Amos, John T. Blair, M. B. Rideout, John Hodges, E. W. Schmidt, J. R. Wilson, Walter A. Carr, J. S. Thompson, John A. Anderson, W. N. Corwin, and John A. Nelson. A cooperative cannery to be located at Hemet will shortly be opened by the Association.

GRAIN AND FIELD CROPS.

Tomato shipping has commenced at Fullerton.

Eugene Rutherford is planning to plant 1000 acres of his land near Gridley to rice next season.

It is stated that California produced 2,775,000 sacks (80 pounds each) of dry edible beans last year.

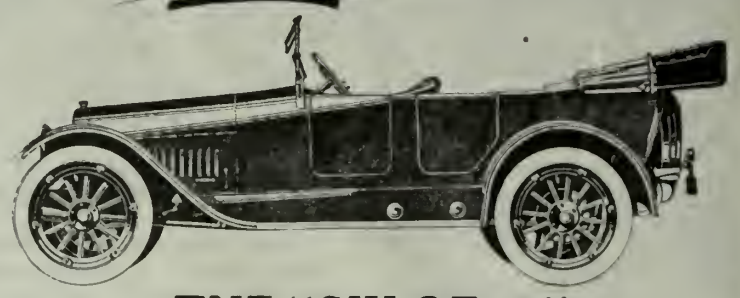
The 200-acre rice field planted by T. S. Hyde seven miles northwest of Dixon is reported to be one of the best in the State.

On account of the success of this season's planting, it is expected that over 9000 acres will be planted to rice in Yolo county next spring.

Experiments with rice on 500 acres of alkali fields in Tulare county are proving a success, according to a report received from there.

The Agnews State Hospital will now purchase its supply of vegetables from the surplus grown at the University Farm at Davis.

It is reported that Sutter county will have a banner crop of beans this year in spite of red spider and other pests which have infested the fields.



The 1915 Turlock melon season was brought to a successful close last week, the growers having marketed an enormous crop at good prices.

A movement has been started to hold a State-wide Rice Growers' Convention at the Panama-Pacific

Exposition this fall, and it is meeting with favor.

C. W. Blevins of Williams, Colusa county, is credited with the statement that the experimental planting made of cotton on his ranch is proving successful.

Twenty carloads of onions left last week for the East on the first special train to carry that product exclusively from Sacramento county to eastern points.

The canning of sweet potatoes commenced on Sept. 29 at the Atwater plant of the Sunlit Fruit Company; over 4000 cases have been contracted from the growers.

The Humboldt County Farm Bureau has decided to purchase its supply of alfalfa seed for the coming season from the V. A. Peterson Alfalfa Seed Company of Arbuckle.

Rice was planted experimentally on 300 acres in Kings county this season to such success that the growers feel confident that Kings county will become one of the State's large rice-producing centers.

Ranchers in the Pomona Valley of Los Angeles county have just harvested their first crop of blackeye beans to be grown on an extensive scale; this season's success will lead to an increased acreage next season.

MISCELLANEOUS.

The first meeting of the Stanislaus County Farm Bureau was held at Modesto on Sept. 25, and officers for the coming year were elected.

The Maxwell Nurseries of Napa have about 350,000 trees in their nurseries for their customers this year.

A tract of 20,000 acres of the original Chowchilla ranch at Chowchilla, Madera county, will shortly be cut up into small farms for settlement.

Two hundred and fifty boy members of high school agricultural clubs will be guests of the State for two days at the University Farm at Davis the latter part of this month.

FALL PEACH SPRAYING.

[Written for Pacific Rural Press.]

A heavy spraying with Bordeaux for peach blight was given to Sam Cloughs seven and eight year old peach trees last fall directly after the pruners were out of the way in November. A gallon of spray was applied per tree under 225 pounds' pressure. The trees were thoroughly soaked so that the spray would run down to the roots. Mr. Clough says he has found Bordeaux mixture six or seven inches deep in the ground six months after it was applied, and he likes it for its purification of the soil. Lime sulphur spray just before buds open in the spring after a fall spraying would kill curl-leaf, any remaining blight, and peach-worm larvae.

TOO MANY CRICKETS.

To the Editor: Early this spring we built a new bungalow. Within possibly a month we began to be annoyed with crickets, which have increased until they are a positive nuisance. We are very particular not to leave food crumbs, sugar, etc., around and all garbage is removed promptly from the kitchen and burned. We are subscribers to your very valuable paper which we regard as almost indispensable. Can you recommend a way to conquer crickets?—G. S. H., Oakdale.

[The cricket on the hearth may be a poetic affair but too many crickets are a burden. Prof. Woodworth advises us that he would use grasshopper poison on them. This is the formula for use on a small scale: Bran, 1 pint; white arsenic, ½ teaspoonful; molasses, 2 tablespoonsful; water, ½ pint. Mix arsenic and bran dry. Stir molasses and water together and then mix into bran, making a moist paste. This may be put around on pieces of shingles out of the way of kids and kittens. If it dries to soon it may be re-moistened with water.—Editors.]

WE MUST HAVE NAMES.

Readers who ask questions must send correct names and addresses if they expect to receive any attention. We do not need to print names but we must have them. Sometimes readers try to play us and go to the waste-basket. For instance: O. B. Server might have had good stuff sent him if he had not been so smart.

The harvesting of a large crop of beans is well under way in the San Fernando Valley. The product is being handled by the Van Nuys-Owensmouth-Marian Growers' and Canning Association, which has recently installed a bean cleaner of sufficient capacity to handle the crop of many thousands of acres of land.

Plowing

THE YUBA Ball Tread Tractor is an efficient and economical aid to the farmer, not only in plowing, but in every operation where motive power is needed. ¶ The Yuba gets on the land first. If the soil is soft, the Ball Tread prevents it from miring. If it is heavy stiff adobe the Yuba is able to handle a sub-soiler working in the hard-pan, plowing deeper and better.

¶ The Yuba works twenty-four hours—no rest—no stop—compact, yet powerful and sturdy, and no skilled mechanic is needed to operate it at its maximum efficiency.

¶ If you are interested in making money—working not only on your own farm, but on your neighbor's—when your plowing, cultivating and harvesting are done, fill in the coupon and send it to

California's Opportunity for Dairymen.

[Written for Pacific Rural Press.]

KEEPING GOOD CREAM GOOD.

It has been pointed out that better butter prices would come with a better grade of butter, and that a better grade of butter will come from work done on the dairy where butter-fat is produced.

When we recently asked several of the State's largest butter manufacturers and distributers what was the fundamental cause of poor cream in California, we were repeatedly told that one man summed it up in a sentence when he said: "Setting the cream can under the separator spout and letting it set there."

As a matter of fact, he did not literally mean just that, but he wished to impress on our mind that the practice of pouring warm cream from one separation into the can containing cool cream from previous milkings was one of the chief causes for cream which is commonly called "rotten" on account of its being in such an advanced stage of fermentation it cannot be used for table consumption and cannot with the most improved methods be made into good butter.

The practice as outlined works out like this: the cream coming from the separator soon after being milked has a temperature of 90 to 95 degrees Fahr. This is poured into a can retaining most of the animal heat, which aids in bacterial growth. This growth gradually lessens as the cream cools till the next milking, when the next batch of warm cream is poured into the can. This heats up the bacteria again in the previously cooled cream, and adds materially to the number already hatched. The longer such cream is kept and the more batches that are added the worse the quality of the cream becomes and the more difficult it becomes for the butter-maker to handle, and the less it is worth when it reaches the market in the finished product.

Such a condition is undoubtedly responsible for the poor relative score of our butter during most of the year, and now that we must export an ever-increasing amount of butter annually will have a controlling influence on butter prices. It is therefore poor business foresight on the part of dairymen to continue such practice, especially in view of the fact that with an investment of $10 to $15 every dairyman can do his share toward the improvement which is so badly needed.

This can be most easily accomplished by the purchase of a cream cooler and aerater over which all cream is aired and cooled after separating and before being poured into the cream can.

There are various makes and types of these coolers, the most satisfactory ones being those which are so constructed as to be easily cleaned and that will cool the milk to as near the temperature of well water as possible.

Experiments in the interior valleys show that running cream direct from the separator to the cream can over which such a cooler cools the cream from around 95 degrees Fahr. to within four or five degrees of the temperature of the water which is never higher than 70 degrees, and very often less. By lowering the temperature 25 degrees and thoroughly aerating it in this manner, cream will keep sweet 24 hours in the hottest weather we have, thus placing it in the creamery by those having a daily collecting system in perfect condition. Naturally the cooler the water and the weather the longer it is possible to keep the cream sweet.

Except for the small initial investment there is no added expense or labor except the washing of the cooler after use, which is of minor importance.

PRACTICAL AS INTERESTING

After buying two copies of our new "California Hog Book," Mr. Whitten of Los Angeles sends us the following statement of what he thinks about the book:

"I have just finished reading your 'California Hog Book' and find it what I have been wanting for years—just as I have found the other books published by you. I have a library which embraces over 300 volumes on agricultural and livestock subjects. I have tried to have it include every book of any account along these lines; but while most of the volumes are good enough to read over once, and several are excellent for eastern farmers, I find that the best of them have very little of real practical value to Californians. Our conditions are so different out here that each subject requires special treatment, and this Mr. Gullford has certainly given the swine industry.

"The book is just as practical as it is interesting. There is a rule for guidance in every case; a remedy for practically every trouble that can occur. There are actual working plans, illustrated and explained so clearly that a person can put them into instant operation, and profit by their money-making value. I wish that a copy of this book could be placed in the hands of every hog raiser on the Pacific Coast."

PROLIFIC YORKSHIRE SOWS.

To the Editor: In your issue of September 18th, under article headed, Breed from Prolific Hogs, you quote a letter of Mr. R. J. Ross, Modesto, giving the number of pigs farrowed by his Duroc sow, West Hope. For the benefit of your readers we beg to give you the record of our large Yorkshire sow, Nema Eighth.

This sow was farrowed October 30, 1913, and was one of a litter of sixteen pigs. On September 8, 1914, she farrowed twelve pigs, raised ten. On March 14, 1915, she farrowed fourteen pigs, raised twelve. On September 15, 1915, she farrowed seventeen pigs and is raising twelve.

The mother of this sow, owned by an Iowa breeder, farrowed fifty pigs in her last three litters, twenty in her last litter.

Two sows of the litter of September 8, 1914, farrowed a few days ago, one a litter of ten, the other a litter of nine.

Yorkshire sows will raise regularly two strong litters of pigs per year without retarding the growth of the sow. The best results, however, might be secured by breeding so that the sow would not farrow her first litter until about fifteen months of age. **Riverina Farms.**

Modesto, Cal.

F. M. Pangburn of Sulsun writes us that he has a gum tree on his place that measures above ground 6 feet, 5 inches in circumference; also a sunflower that measures 20 inches in diameter, and a sunflower stalk that measures above ground 13 inches in circumference.

More and Better Hogs in California.

Pigs' growth depends on sows' feed. Sows make better mothers, have more pigs, and develop them faster when well prepared for the strain of suckling by fattening feeds before farrowing, sloppy feed at farrowing, and slop with succulence while suckling.

[Written for Pacific Rural Press.]

If sows on the right kind of feed can't furnish plenty of milk for litters of 7 to 10 pigs, according to their age, two alternatives are open to their owner: replace them with sows that can, or get out of the business whipped. Our stories of successful hog men are of those who raise large litters and keep them growing from the start—the measure of success usually being in proportion to their ability in this line. Some sows can suckle large litters satisfactorily and stay in good condition. Others get thin on the same feed. The first kind is the one to keep, but many people have the other and make money with them. The best sows cannot do their pigs justice without proper feed. It is the reasonable consensus of successful breeders that the sow should be strengthened to the full extent while still carrying her pigs, with balanced rations that will lay up a fair amount of fat for her sustenance during the strain of suckling. S. F. Williams of Chico says that she should have plenty of grain before farrowing, but the grain should be reduced at that time even at the cost of a few pounds of flesh. He says that grain right after farrowing heats up the sow too much, dries up her milk, and stunts the pigs. H. Ward of Chowchilla lost five out of a litter of twelve because he fed the gilt all the barley she wanted the day after farrowing. She had a touch of milk fever. Two other gilts which farrowed a little later raised eight each. They had no trouble because they were fed melons and a slop of ground barley the first four or five days till the milk was well started. He builds up the sows while carrying pigs so they won't get too thin while suckling.

Extra meat on her back as a reserve to draw from when suckling is the policy of G. A. Smith of Corcoran, who has had a beautiful bunch of 75 brood sows running on 20 acres alfalfa and 60 acres grain stubble, with plenty of shade and running water, since June 1. He feeds plenty of barley previous to farrowing and reduces this to a little ground barley in skim milk slop just before the pigs come. Mr. Tweed of Willows wants the sows to strengthen up on alfalfa meal and light graining till near farrowing, when more ground barley is fed in a slop of alfalfa meal and water. He also believes in alfalfa pasture.

Avoids Constipation and Fever.—Many a lost pig, and even many a lost mother, is due to constipation, to which a pregnant animal of any kind is peculiarly liable. J. K. Fraser watches his sows closely during the last month of gestation. If the bowels are closed the pigs are squeezed and there is likely to be a tearing of the sow. He feeds them a thin slop of equal parts shorts and barley, mixed with milk. A little oil cake or cottonseed is fed sparingly; too much induces scours, which weakens the sow. The first 24 hours after farrowing the sow receives nothing but water. This keeps the fever down and is given as soon as farrowing is finished. He lays most of other people's troubles with sows at farrowing to feeding them too soon. After 24 hours a light slop of milk and bran furnishes nourishment and cleans the bowels. In two or three days the sow gets three feeds a day of bran, shorts and mids, with a little oil meal in milk. Lacking milk, water is used and tankage is added. When the pigs can run about they are turned with their mother into alfalfa pasture.

Food for sows while suckling must be regulated, according to C. C. Stewart of Orland, by the way the pigs are doing, not by the way the sow looks. She should be in good condition before farrowing.

Besides alfalfa pasture she gets a gallon three times a day, at the start, of two parts alfalfa meal and one part shorts mixed to a thick slop with skim milk. This is increased to three gallons per day at weaning time on account of the growth of the pigs.

A sloppy, succulent feed furnishes the sows most milk, and milk is what the pigs must have in order to earn profits. E. C. Rand of Santa Rosa notes that the pigs take all the milk there is in the sow, no matter how much other feed.

Pumpkins, melons, and a little spineless cactus are used by Elmer Lamb of Ceres in addition to slop made of two parts shorts, one part tankage, two parts soaked barley, and water. He uses the tankage in place of milk, which is not available.

MUTTON SHEEP FOR SMALL FARMS.

[Written for Pacific Rural Press.]

Sheep prefer morning glories to grass, and kill it in two seasons, according to Henry Springer, who has a small farm near Visalia. They eat stuff the other stock won't eat, including all kinds of known weeds, and they clean up Jimson weeds as high as they can reach. Mr. Springer keeps just a few on his little place to supply his own meat. He began with one ewe and now has four, with three lambs. They eat hay with the cows, graze with the calves, and keep weeds down.

DUST HURTS HOGS.

Dust is one of the worst things in raising California hogs, according to S. F. Williams of Chico. Pigs breathe their lungs full of dirt rooting around, or running in herds, or lying down with their noses in the dust. It pays well to run them on green pasture or wooden floors, or hard dirt, frequently swept off, as Charles Goodman of Williams does.

SHEEP LAWN MOWERS.

On the Huntley ranch near Visalia is a beautiful tree-shaded yard planted to Bermuda grass; but often the Huntleys are away for weeks at a time, and when they come back the grass is beyond all lawn mowers.

When they came home early last September the grass was "so tall we could scarcely wade through it." They put their eight two-year ewes and six or seven young sheep onto the lawn and in a few weeks had it down to respectable height.

FOR SALE Jersey Bulls Bull Calves

from cows on yearly test-making, good-sired by our herd bulls **KING'S VALET (imported), VALET'S KING OF L, BORELLO'S GOLDEN LADDIE, GRACE'S FOX OF VENEDERA, and NORMA'S GERTIE SON OF L,** backed by production and winnings in the show rings.

They are of **FINANCIAL KING, GOLDEN LAD, GOLDEN FERN'S LAD, MARIGOLD and ST. LAMBERT** blood, the kind that improve type, cream production and persistency. One cow gave 49.5 lbs. fat in 11th month; her daughter gave average test of 8.38%; another gave 79.9 lbs. fat in one month, 238.9 lbs. fat in 134 days. A 2-year old gave 50.6 lbs. fat in one month—all under dairy conditions.

We have bulls from such cows, with correct type.

Dairyman's Opportunity

For $50, a yearling bull by **VALET'S KING OF L,** out of a good cow. $25 for bull calves under 30 days old. Tabulations, but no Registrations at this price.

Come and see them, send for catalogue, or write us your needs, and we will give you satisfaction and profit.

N. H. LOCKE CO., Lockeford, Cal.

Sunnyside Herd

31 head of females from this famous herd will be sold at the

Breeder's Consignment Sale at Hanford, October 14th and 15th

Some A. R. O. Cows and some choice bred heifers bred to my herd bulls, **Arcady Pontiac Wayne Hengeveld,** who has 13 A. R. O. daughters, and **Judge Hengeveld De Kol 6th,** my junior herd sire.

NO BETTER BRED SIRES IN THE STATE.

Shropshire and Merino Sheep

ATTENTION, SHEEPMEN.

My purebred, range-raised yearling Shropshire and Merino rams are now out of the mountains and ready for inspection at my place.

Shropshires sired by rams imported by me from England in 1911.

A "Porter" Planned Barn

PORTER EQUIPMENT MAKES A BARN modern and up to date—one that takee care of the largest number of cows and other stock. A barn planned the Porter way saves labor, time and feed, and makes money for the farmer or dlaryman every day in the year. It pays big profit on the investment.

The Porter steel stalls, cows stanchions, litter carriers, barn door hangers, hay carriers and other fixtures are acknowledged leaders everywhere

Write and tell us the size of barn you want and the number of cows to arrange for, and we will send print with information promptly.

THE PORTER BARN PLAN SERVICE. is free whether you expect to build now or later. Send for catalog of Perfect Barn Equipment.

DAIRYING.

S. H. Fountain of Dixon likes a cow from a Guernsey, Holstein, or Durham cross, for a milk cow.

Hewitt & Hewitt of Hardwick will move to Dixon after the Breeders' Consignment Sale of Holsteins at Hanford, Oct. 14.

C. E. Shelton of Vacaville reports that Ayrshire bulls bred to ordinary cows produce good, strong, promising heifers.

Jay Bryant, formerly of Santa Rosa, recently purchased 160 acres of land at Alturas, Modoc county, on which he will establish a modern dairy plant.

County Veterinarian Dr. Geo. S. Rey has been visiting the herds in the southern part of Tulare county, condemning those that have tuberculosis.

C. E. Wertz of Ferndale recently purchased the 80-acre ranch near Turlock belonging to Arthur Elliott of Modesto and Mrs. M. McConnell of Oakland.

The Chico Development Committee will present a loving cup to the member of the Gridley Cow Testing Association who owns the cow producing the largest amount of butterfat during the year.

Niles P. Searls, Farm Adviser of Yolo county, reports that on Sept. 24 was held the first annual meeting of the Sacramento-Yolo Cow Testing Association. There are 950 cows under monthly test in the Association.

The Golden State Dairy Farms of Dixon, of which H. M. Whitacre is manager, are shipping into Oakland 800 gallons of milk daily. A 200-foot feeding shed to shelter the stock in the wet winter weather is now under construction.

The Gridley Cow Testing Association held its annual meeting recently and elected the following officers for the coming year: President, N. A. Neilsen, Gridley; vice-president, John Guill, Jr., Chico; secretary and treasurer, S. F. Bonner, Gridley.

Toplin Bros. of St. Helena report that their Holstein bull took the blue ribbon in the 3-year-old class at the Vintage Fair held at St. Helena the early part of September. The same bull is also the father of five pair of twins born on the ranch this year.

Manager Agee of Balfour, Guthrie Company's ranch at Napa reports that they have sold to the State of California four Holstein bulls and one Holstein heifer. Their herd is headed by Rag Apple Imperial, son of Rag Apple Korndyke who recently sold for $50,000.

Charley Tomigni of Kellogg is one of the few breeders of the milking strain of Shorthorns in the State. He now has 20 head of cows and heifers registered. This number will be increased until the entire cow population on his 4000-acre Sonoma county ranch is stocked.

The N. H. Locke Co. of Lockeford report the sale to Mary A. Deterding, Carmichael Colony, Sacramento, of Valet Adelaide's Imp. of L., grandson of Imp King's Valet and Imp Derry Circassian. They also state that they will show a herd at the Panam-Pacific Exposition.

A 3-year-old daughter of Colantha Sir Pontiac Aaggie has just made over 25 pounds butter in 7 days and out of a dam with a record of only 17 pounds butter in 7 days. Seventeen daughters of this great young sire out of cows with records of 30, 29.90, 24.45, and 22.50 are offered in the Hanford sale of Holsteins on Oct. 14.

Guy H. Miller of Modesto reports the following work done by two Jersey heifers, two years old: Gazelle of Venadera 275315, recently finished an official year's test, giving 6241 pounds milk, 405 pounds butter, averaging 85 per cent fat. Astrea of Venadera 293696, finished an official yearly test this month, giving 6267 pounds milk, 435 pounds butter, and averaging 85 per cent fat.

CATTLE AND SHEEP.

According to McDonnell Bros. of Kellogg, a good rain would be a great benefit to their stock range.

J. R. Bloom of Dixon reports the demand for registered Shropshire bucks as extremely good.

S. J. and H. G. Vincent of Porterville recently shipped 64 head of beef cattle to Los Angeles.

"The only trouble with raising registered Hampshire sheep, is to produce them fast enough," says

HINMAN
THE UNIVERSAL MILKER

THESE TWO HINMAN MILKERS
$135.00
Including Complete Equipment. And by attaching a ½ H. P. Electric Motor or a 1 H. P. engine, you can milk at the rate of 15 TO 18 COWS PER HOUR, and keep a record of each cow's milk.
Any time you want to reduce the milking time, add another unit at a cost of $50.
A Hinman Feature
The Hinman is the only machine that absolutely breaks the vacuum after each draft of milk, giving the same release as hand-milking.
May we mail you our free book, "Making Money with the Hinman Milker"?

The Reason The Result

LARROWE'S DRIED BEET PULP
is clean, wholesome, appetizing and aids digestion;
will produce more milk at less cost than any other feed.

"—at no time did we ever handle any feed that gave better satisfaction or met with such general favor as Larrowe's Dried Beet Pulp, and we are very glad for having pushed it as hard as we have.
(Signed)
Oregon Commission Co.
Oregon City, Ore."

Your Cows Need This
rich, succulent feed, in order to do their best
Dealers everywhere are selling it rapidly, because it "delivers the goods." It makes no difference what ration you may be using—you can add Larrowe's Dried Beet Pulp to it and get better results. This has been proven by large and small feeders everywhere. As it costs almost nothing to make the test, we suggest that you go to your feed dealer today and order a 100-lb. sack (either plain or with molasses) and try it on one cow whose milk record you know. The results will surprise you.
Write For a Copy of Our Booklet—"Profitable Feeding"
containing valuable information on feeds and feeding. Sent free to any address upon request.

LAST CALL FOR SILOS
FOR THIS SEASON'S USE
We will ship you a Remco Redwood Stave Silo, best Silo made—in 4 days—so you can silo this Fall's corn crop. Every day counts now. If you have feed that you will turn into silage accept this last call and get your Remco. If you don't you lose a whole season's benefits.
You use Tanks and Pipe all year round. Let us quote your prices on our Remco Redwood Tanks in all sizes and our Remco Redwood Stave Pipe in all diameters, 2 inches to 12 feet.
Tell us your requirements and we will quote you prices. Our factory is equipped for special orders as well as standard requirements.
If you come to San Francisco for any purpose, come also to see us.
Redwood Manufacturers Co.
1613 Hobart Bldg., San Francisco, Cal.

Kaupke Bros. of Woodland. The demand is increasing in proportion to the rising price of lamb chops.

J. W. Marshall of Dixon is moving from his old stand to what is known as the Stormer ranch. He will continue in the registered sheep business. At present he has 140 registered Shropshires.

The Diamond G. Ranch of Esparto has at the head of its purebred Hereford herd a bull bred by Senator Splawn of Yakima, Wash., Donald Hope, son of Beau Donald 31st and Bright Hope, champion age cow at Lewis & Clark Exposition, Portland, Ore.

The Potter Huffman Land Company of Alturas, Modoc county, have purchased from the Lewis Pierce stock ranch of Suisun, two carloads of 86 head of extra good seven and eight months old grade Shorthorn bull calves.

HORSES AND SWINE.

S. S. Southworth of Napa recently shipped to Robert Towe of Phoenix, Ariz., a nine-months-old boar.

M. P. Williams & Son of Dixon, Duroc-Jersey breeders, sold a boar to Hans Rohmer of Dixon a few days ago.

Boudier & Son of Napa sold to G. A. Handshel and G. L. Winfrey, both of Napa, a sow pig and bred gilt respectively.

Dr. H. Hordorn of Chico recently purchased for the allied armies of Europe, 300 mules and 58 horses in Lake county, Ore.

The Oak Knoll farm north of Napa have what is said to be the largest herd of O I C hogs in the State; they are also getting a small start in Ayrshires.

J. W. Marshall reports that the public sale held on his ranch near Dixon Sept. 25 was a success; prices were higher than he had anticipated.

John W. Parker of Napa reports that practically all his sales of registered Berkshires have been made to local ranchers. This speaks well for Napa county.

F. M. Darby of St. Helena expects to keep a breeding herd of 10 Duroc sows. Sales, he states, have been good, most of the stock going to parties nearby.

U. S. Wood of Pomona has been commissioned by agents of the British Government to purchase 5000 horses in southern California counties for war purposes.

J. Muller of Woodland has just bought two Berkshire sows from Hiram Bullard, also of Woodland.

A great deal of interest is being taken in Napa county in blooded stock, says Homer Hewins of St. Helena. Ranchers are contracting future boar pigs from his registered Berkshire sows at good prices.

Elmo Montgomery of Davis bought the highest priced Poland-China sow at the recent J. W. Marshall sale near Dixon. This sow originally came from the University Farm at Davis.

Dean Curtiss of the Iowa State Agricultural College selected for and shipped to Homer Hewins of St. Helena a very fine young Berkshire sow. This makes the fourth registered Berkshire delivered to the ranch from the East. Arrangements

HEREFORD BULLS—H. H. Gable, Diamond G. Ranch, Esparto, Cal.

SWINE.

I HAVE SOME EXTRA GOOD BOARS about one year old, now ready for service. These boars are the Big Type; strictly high class and fit to head any herd anywhere. They are large and have splendid length, depth and thickness. I also have some March pigs that are among the very choicest young boars that I have ever owned. Visitors say they are the best they ever saw anywhere. I also have some of the best weanling boars that it has ever been my pleasure to see. They have the size, the bams, the shoulders, the strong backs, the length and depth of body, with plenty of smoothness and mellowness—in fact, they have two good ends and a good middle. All the above-mentioned young boars are sired by my great herd boar Iowa Wonder, who is a son of A Wonder, the greatest Poland China boar living or dead. Their dams are all strictly first class, either directly from the "corn belt," or from sires and dams from the "corn belt." On account of extra demand I have had for this stock, I have no females for sale at present. Yours for the big type, Geo. A. Smith, Corcoran, Cal.

BILLIKEN HERD of pedigreed O. I. C. Swine; weaned pigs of both sexes for immediate shipment; pairs and trios mated, not akin. All from big type stock of extra heavy bone. Immunized against hog cholera, crated and shipped free. Write for descriptive circular and price list. C. B. Cunningham, Mills, Sacramento County, California.

BLUE RIBBON HERD DUROC-JERSEY HOGS—Bred Gilts a specialty. 15 bred now. 20 ready to breed. Sires and dams win all olue ribbons 1912, 1913, 1914 State fairs. 15 first, 13 seconds, 6 thirds, 7 fourths, 1 fifth. Will show 1915. For prices, write John P. Daggs, Modesto, Cal.

O. I. C. SWINE—Poor health is the reason for this offer. Will sell my herd of pure-bred O. I. C. Swine at prices that will turn them quick. Pigs two to eight months old, either sex. Write me for special prices. Every hog registered. G. H. Dubois, Box 13, San Martin, Cal.

BLUE-RIBBON HERD DUROC-JERSEY HOGS—Bred Gilts a specialty. 15 bred now. 20 ready to breed. Sires and dams win all blue ribbons 1912, 1913, 1914 State fairs. 15 first, 13 seconds, 6 thirds, 7 fourths, 1 fifth. Will show 1915. For prices, write John P. Daggs, Modesto, Cal.

BERKSHIRES—Headed by Roadmaster 2nd, junior champion Iowa State Fair. My females were winners at Iowa, Wisconsin and Minnesota State Fairs. Farm at San Mateo. Address W. M. Caruthers, 218 Hearst Bldg., San Francisco.

ROSE CREST BERKSHIRES of Masterpiece and Rival's Champion Best breeding. A choice lot of Fall and Spring boars; also a few sows and gilts. F. L. Hall, Perris, Cal.

ROSS' DUROCS—90 little fellows, farrowed since first of September. Will book orders for November delivery. Foundation stock from Daggs and Johnson herds. R. J. Ross, Boute B, Modesto.

LARGE YORKSHIRES—Gilts open or bred to our imported boar, winner at 1915 Canadian National and Ottawa shows. Choice Fall and Spring boars. Biverina Farm, Box 74, Route 2, Modesto, Cal.

RANCHO RUBINS DUROCS.—Winners of Gold Medals at State Fair, 1814. Also Sweepstakes on sow. Four first and four seconds at Fresno, 1915. March and April boars and gilts for sale. Elmer Lamb, Ceres, Cal.

LARGE HAMPSHIRE BOAR for sale. Cannot use him longer on my sows. Will sell cheap. Papers with bim. Also brood sows and young pigs. J. Barnhart, B. 2, Box 68, Turlock, Cal.

ANYONE WISHING TO START a herd of registered Berkshires, write to Alexander and Kellogg, Suisun, Cal. Our herd is of the best breeding and cholera immune.

Veterinary Queries and Replies.

(Answered by Dr. H. B. Wintringham, Petaluma, Cal.)

GARGET.

To the Editor: I have a young Jersey cow that has been milking about six months. About one month ago, she began giving bloody milk from one teat. Now another teat gives bloody also. I am feeding alfalfa hay alone. She is due to freshen Feb. 10, 1916.—G. R. A., Modesto.

[This is garget. Treatments for this condition are given in past numbers of the Press. Give potassium iodide in two-drachm doses three times a day for a week, then skip a week and give the same dose another week.]

SPAVIN.

To the Editor: I have a mare that has a swollen joint and is lame in the hind leg. She has never had it before and seems to be worse when she starts. Can you tell me cause and cure?—A subscriber, Gilroy.

[This is spavin. Have a competent veterinarian fire and blister the joint.]

RABBITS' EYES INFLAMED.

To the Editor: My rabbits' eyes seem to swell and they have fever about the head; but they eat up to the time they die, and die in awful pain. Coop dry and off the ground; feed rolled barley and dry alfalfa hay. After checking it, in about two or three months it appears again. They do not seem to have a cold, eyes do not run or nose; their eyes are the only symptoms.—F. L. L., Fillmore.

[This is an infection of the eyes, which evidently causes inflammation of the brain. Thoroughly disinfect your pens weekly. Use boric acid in the eyes.]

PIGS' LUNGS INFLAMED.

To the Editor: I have several pigs about five months old. Two of the number are troubled with breathing; there seems to be something wrong with their nose, especially troublesome while they eat. While they eat, they do not grow or do well. Can you tell me what ails them, what to do, for them, and if it be contagious?—Subscriber, Smith, Nev.

[This is chronic inflammation of the lungs. It will be best to dispose of them as they never will be thrifty. This trouble is prevented by careful attention to sanitation and hygiene.]

ERYSIPELAS IN HOGS.

To the Editor: We have lost over $300.00 worth of hogs in the last few weeks from what some veterinaries call "cholera," some call it "erysipelas," some "pneumonia." What does your veterinary say about the symptoms of "erysipelas" in hogs?—W. B. P., Oakdale.

[Erysipelas in hogs takes three forms. (1) Urticaria, the mildest form. After 1-2 days there is a general disturbance of health. There are sharp circumscribed swellings on various parts of the body dark red or violet in color. The center may become pale, but the borders retain their bright color. The temperature may rise up to 109 F. There is dullness, loss of appetite, thirst, constipation, inflamed eyes, and at times paralysis and nausea. The eruptions usually disappear after two to three days and the animal recovers. (2) Erysipelas Septicemia, the most frequent form. Sudden cessation of normal condition. Lie exhausted and do not resent handling. There is loss of appetite and vomiting. Temperature rises up to 108 F. and remains constant. Eyelids swollen and discharging. At first constipation then diarrhoea mixed with blood. Reddening of the skin rarely appears earlier than the second day. Exceptionally death results at the end of the first day or then only after 8-9 days. (3) Chronic Erysipelas. Appears that the acute form. At first there is an apparent improvement, but later the symptoms manifest themselves again and death usually results.

HORSE'S TEETH BAD.

To the Editor: I have a mare which refuses to eat hay of any kind. I have tried her on grain hay, also alfalfa, but she will only eat a little of the fine leaves or chaff. She seems to chew it in small pieces and leave it in the manger. She will eat barley, and does not show any symptoms of any kind with the exception that the saliva flows from her mouth nearly all the time and she has no life at all. She is falling off in flesh rapidly in spite of all I can do for her. She is doing very little work. Her kidneys and bowels seem to act in normal condition; I find nothing wrong with them. Wil you kindly tell me what I can do for her?—J. M. K., Campbell.

[There is something wrong with this animal's teeth. Have her mouth examined by a competent veterinarian.]

NO APPETITE FOR COW PEAS

To the Editor: This spring I planted some cow peas called "New Era" and advertised to be a good forage crop. The vines grew well and matured a heavy crop of beans but my stock won't eat them. Hogs and cattle have been running on barley and barley stubble and passing these cow peas every day from the time they were quite young until now when the pods are ripe, and have never touched either vine or pod. Is this a wrong variety or do stock have to become accustomed by starving them to it or mixing with other feed, etc.? I have always read that cow peas were fine forage for hogs and was disappointed that they did not eat them readily as I wanted a leguminous forage to use in rotation with barley. Can you suggest a variety which cows and hogs will eat or some other crop which will serve the same purpose? — Subscriber, King City.

[The trouble is in the hogs: not in the peas, for the New Era, like other varieties, has a good record for stock feeding. Your stock is of the stand-pat party; try sprinkling a little bran and see if the aroma of it will not give them more progressive demeanor. Cow peas are successfully grazed both green and dry and the manure and roots are just what you need to make more barley later.—Editors.]

Four two-year-old daughters of King Mead of Riverside, raised and developed on the A. W. Morris & Sons' ranch at Woodland, have just recently completed some splendid year's work. Aralia De Kol Mead made 696.49 pounds of fat from 16669 pounds milk; Riverside Seely Girl 2nd made 600.88 pounds fat from 14115.8 pounds of milk; Molly De Kol Mead made 456.54 pounds fat from 16454.5 pounds of milk; and Aralia Mead De Kol made 515.54 pounds fat from 1174.29 pounds milk.

CALIFORNIA
HOG BOOK
Valuable to Farmers.
"W. S. Guilford of Orland is the author of 'California Hog Book,' which has the merit of being adapted to conditions in this State. The author is a practical farmer, who realizes the possibilities of the swine industry. The book is replete with valuable information for the hog raiser, given in every-day language, avoiding technical terms used by writers of similar works. Those who know Mr. Guilford have unlimited confidence in the book. The 'California Hog Book' is from the Pacific Rural Press, San Francisco, and promises to become one of the most popular stock books written for the California farmer."—Sacramento Union.

Second Consignment Sale.

Editor Pacific Rural Press: There has been a great deal of attention aroused in California over the second consignment sale to be held at Hanford Oct. 14 and 15. There will be a complete dispersion of the splendid herd of C. C. Lester of Gilroy, consisting of about 65 head, and the rest of the consignors have assured me that they are offering the very best animals out of their herd. There will be 25 A. R. O. cows with records up as high as 29.90 lbs. of butter in seven days, 30 daughters of A. R. O. cows, many of whom have records of from 22.50 lbs. to over 30 lbs., and there will be fifteen daughters of the best son of Colantha Johanna Lad, the great sire of milk producers, and more other high record cows and magnificent individuals than have ever been offered at any sale before in the West with the exception of the combination sale held at Sacramento.

I believe this Hanford sale will mark a new standard for consignment sales that will be hard to approach in the future. The first breeders' consignment sale at Hanford last year averaged $397 per head for 97 animals, which was by far the highest average of any of the numerous sales of purebred cattle held in the United States last fall. This year, however, there will be almost twice as many head sold and many times the number of high record cows.

Where else could a breeder go out and buy such magnificent individuals or high record and well bred cows? He can not import any stock from the East for months owing to the foot and mouth disease. Never before has such an opportunity been offered California buyers and it is up to them to take advantage of their chance to secure foundation stock for their herd with many 30 lb. possibilities. Because of the tightness in the money markets these breeders have been compelled to part with stock that they would not have sold before at any price and they have been forced to sell their best. The cream literally of seven of the leading herds in the West will be offered for sale to the highest bidders. — **J. W. McAlister, Jr.**

Contenta Creamcup 2nd.—An A. R. O. cow consigned by C. C. Lester.

SPECIFIC POINTS ON ALFALFA HAY.

To the Editor: A few years ago I was in the same quandary about making alfalfa hay as R. A. C. of Haywards, in your issue of September 18, and you gave me about the same sort of a bluff. Let me answer his questions:

Alfalfa should be raked into small windrows as soon as wilted. At this time of the year that will be 3 to 5 hours of bright sunlight behind the mower, depending on how heavy is the cutting. Along the coast where the air is damp, alfalfa takes still longer to wilt while in the Imperial Valley they use big windrows and follow 2 hours behind the mower—not even excepting the noon hour. If the hay is cut and raked in lands of about one-half day's work the windrows will be ready to bunch soon as raked. Small bunches of one forkful will be found most satisfactory, as handled this way the leaves will all be saved and the hay is more quickly moved. During the springtime it will be found that 24 hours behind the mower is close enough for the rake.

If stacked when almost but not quite dry,—that is the fork seems just a trifle sticky in the center of the cock,—it will be found when baled 3 weeks later, you have gained in weight, the sweat has retained the nice green color and stock likes it better than unstacked hay,—but don't stack too wet. C. A. B.

Fillmore.

[All right; take the pot. When you call our bluff that way it will always go.—Editors.]

Letting the lambs clean up the weeds and the lower leaves in the corn field is being practiced by Jas. Mee of St. Helena, with good results. He runs them in the corn field over two months before they bother the ears.

Farm Poultry for Profit.

[Written for Pacific Rural Press by Mrs. Susan Swaysgood.]

FATTENING POULTRY FOR THANKSGIVING.

Last week we talked of fattening chickens, and now by the time this paper gets to press it will be time to think about the turks for Thanksgiving.

It takes at least one month to give them that finish that makes all the difference between just "turkey" and a good, rich, fine flavored turkey that one remembers for several years.

Yards and Houses.—The first thing is to fix up some outside yard or corral for them, giving them as much room as is consistent with the idea in view, which is to reduce the muscle and convert it into soft meat, adding as much more to it in weight as is possible. Fix the perches as high as possible, for the higher they can perch the better they will do. The place is a little strange to them and they feel safer to be high up.

It is best to just put in birds as near one size and age as possible, they not only do better, but when you market them they bring a better price.

Feeds and Feeding.— The first day after you get them in the fence feed nothing at all except water, and it won't hurt if they fast two days; they will then be hungry enough to eat what you give them and eat it up with a relish. There is quite an art in learning just how much to feed without stalling the appetite. Change of food is one thing that helps to keep up the interest. At first they will not care for cooked feed, but after trying it a time or two you will have them waiting for it, provided you have not overfed them the meal before.

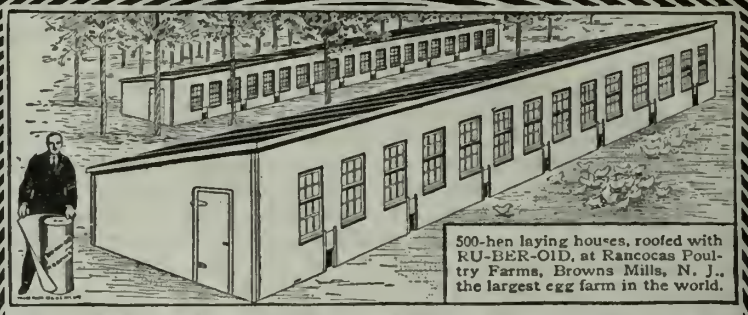
A kettle of potatoes boiled to a mush with plenty of water, then ground corn added until it is so thick you can't stir with a stick; mix in a big spoonful of salt, and set it aside to cool, and your turks will make a fine breakfast of it. At noon feed a soft moist mash mixed with sour milk if it can be had, corn meal, low-grade flour or middlings, and ground oats or bran. If you have not one thing, feed another, as there is no fast rule; the idea is to feed that which gives best results for money expended, if you have to buy everything. But if you have some one thing of your own produce, that's the thing to feed under the circumstances. Add a little salt to all feed, just enough to flavor as it adds a relish to the feed. For the night meal there is not anything better than corn; it lasts longer and keeps out cold better than small grain or soft feed. There are thousands of turkeys fed on corn alone, but we have not got very cheap corn here, and for my part I would prefer feeding a part soft feed to all corn, no matter how cheap it was.

During the last part of the feeding, say ten days before selling, half an ounce of tallow a day may be added to the boiled potatoes and ground corn feed. What is meant is half an ounce of tallow a day for each full-grown turkey that is being fattened. The time should be well gauged before commencing, because if kept up too long the appetite fails and the birds begin to lose.

Ducks and Geese may be fattened the same way, and in these cases any kind of vegetables are relished; ducks especially like boiled vegetables, and with this less corn is needed. Generally speaking, ducks can be fed without any special effort, because they are naturally big eaters. The one thing to remember in feeding or fattening ducks is that they are carnivorous; therefore, they must have animal food with the mash. Also keep in mind that in fattening ducks and geese they must be served with water at meals, but at no other time. Giving lots of water prevents them putting on fat and makes the flesh soft and insipid.

It is strange how hard it is to make people understand that these little things count in the accomplishing of their object. Many people feed ducks well, as they suppose; that is, they give them plenty of food, but they do not give any animal food, which is the one item that makes the other feed count in the growth and well-being of the ducks.

In feeding ducks beef-scrap you need not be afraid of liver trouble or any of the things that attack chickens through a too free use of meat; they appear to be almost impregnable in that line, and the more meat they get the quicker they grow and the better they fatten and make more weight. So even though beef-scrap is from 3 to 3½ cents a pound, it pays to feed to ducks because of the fact that they can utilize it to such good advantage.



* * *

Value of Room.—Geese are more vegetarian, but they must have either insect life or meat in some form to do well.

All authorities agree on one point concerning the value of penning up poultry, turkeys, ducks and geese that are to be fattened for table purposes. It is now conceded by all that in the close confinement of the coop fattening, if the period is over three to four weeks, the general health suffers, the birds lose their appetites and begin to fall off. Hence they must be sold while at their best to make the process a paying investment.

But if the turk, chicken, duck or goose is confined to a limited space, like a yard or corral, where they can get a little mild exercise, the general health is better, you can keep the appetite up better, and they put on flesh faster because of these conditions. So it is better to fix up some yard where plenty of fresh air can reach them and then feed a variety to suit.

At the Maine Experiment Station it was found that penned chickens made gains as great or greater than those obtained by similar methods in Europe, while those with a little liberty made still greater gains and appeared in every way as inviting. These two sets of experiments accord with my own experience, and as they are more in accord with nature I prefer the one that gives the birds a chance to stretch their legs and flap their wings without bruising them against the boards of a pen. Next week I will have some-

500-hen laying houses, roofed with RU-BER-OID, at Rancocas Poultry Farms, Browns Mills, N. J., the largest egg farm in the world.

For Roofing Your Poultry Houses

You cannot afford to experiment with cheap roofings. Keep your fowls warm and dry. They will pay you better when protected with

Pronounced "RU" as in RUBY

RU-BER-OID ROOFING

COSTS MORE - WEARS LONGER

"We used RU-BER-OID Roofing at Rancocas Poultry Farms," writes Reese V. Hicks, General Manager, "because we knew that it had given many years of continuous service without repairs. Roofing that we put on ten years ago is still practically as good as new. It keeps our 15,000 White Leghorns warm in winter and cool in summer and helps us to secure more than one million eggs annually."

RU-BER-OID is *permanently* waterproofed and will not crack, run, warp or leak. It is the *original* smooth-surfaced ready-to-lay roofing, uniform in quality for 23 years.

Colored RU-BER-OID (Ka-lor-oid), made in beautiful permanent Tile Red and Copper Green, possesses all the enduring qualities of gray RU-BER-OID.

Look for the RU-BER-OID Man (shown above) on every roll of the genuine. RU-BER-OID has been widely counterfeited. The U. S. Appellate Court has enjoined imitators from using the word "Rubberoid or any similar name as the trade name or brand" of their roofing.

thing to say on the manner of marketing and getting the best prices for the fattened birds.

* * *

Swiss Chard.—In the last issue somebody asked the value of Swiss chard—that is, the food value. It is not quite as high in protein as alfalfa, but it is richer in saccharine matter, having more sugar in it. Some years ago an enterprising Petaluman advertised it as something new, because he had, by cultivation and fertilization, got a big acreage from it. He sold the directions, and about four ounces of seed for a dollar. Of course, some of those who bought cried "faker." I bought, and was perfectly satisfied that the directions alone were worth the dollar, if I used them; if I said "Too much trouble!" and failed to use them, why, they were not worth five cents. The only blame I could see was in advertising something new that was as old as the hills; the man should have come out and said he would tell poultrymen how to grow several tons of this valuable green feed where before they could only grow a few stalks. It requires good cultivation, fertilizer and water.

Utility Stock at the Exposition.

[Written for Pacific Rural Press by Geo. H. Croley, Pres. Federated Poultry Assn. of California.]

LAST CALL.

In former issues we have endeavored to impress on the utility poultry keepers of California the importance of entering at least one pen of their best fowls in the utility class at the Panama-Pacific Exposition poultry show. In order to make it possible for everyone to enter in this division the entrance fee was placed at fifty cents per fowl regardless of the number—there is no limit to the number of birds any exhibitor may enter—which is much less than the cost of feeding, cooping, and handling, which is paid by the Exposition. This is a trifling expense compared to the valuable knowledge to be gained and which, in many cases, will mean thousands of dollars of added profits in the years to come.

The utility division will be judged by Walter Hogan, who will issue a score card for each bird. In order to help out those who have been undecided the Superintendent of Poultry has issued the following:

The Last Call. — Remember that the entries for the Panama-Pacific Poultry Show close on Friday, October 15. If you haven't time to write for entry blanks, phone or wire the variety, the sex and the number of each, and we will gladly reserve space for your birds. It is not at all necessary to select the individual birds until the date of shipment. For example, if you have two cockerels and you are in doubt as to which to enter, select a new band and enter a cockerel under that number. Then when you are ready to ship, place that band on the cockerel, and your cockerel's number will correspond with our books and with your original entry. It is absolutely necessary for you to send the name of your variety, and give the sex and band number of each at the time of entry, but you can hold these bands and place them on your birds at time of shipment. Be sure to keep a copy of your entry blank and get the correct band numbers on the right birds. If you haven't an entry blank send in an entry on your own letter heads. Give your name and address, the variety, the sex and the band numbers to correspond. A blank will be filled out for you and shipping tags sent. Birds will be received and cooped for exhibition on November 14th and 17th. The exhibition period and time occupied in judging and reshipping the birds will be from November 18th to 28th.

J. P. Burroughs of Dixon is shipping 500 gallons of milk to Oakland daily.

POULTRY NOTES.

At a recent mass meeting of the poultrymen of the Magnolia District the producers organized for mutual protection against thieves.

The sum of $250 has been raised by the Poultrymen's Association of Petaluma to be offered as a reward for the arrest of poultry thieves. This is to be combined with the $250 offered by the Sonoma County Poultrymen's Federation.

A publicity campaign urging the observance of egg day in California will be begun at an early date.

A scourge of round worms has developed among the fowls in the Petaluma district. Dr. Beach of the University Farm has been called on to devise some means for exterminating the pests.

Plans for the annual Modesto Poultry Show to be held at the Auditorium the first week of December, are reaching completion. In addition to the regular classes of exhibition birds the association has provided for a utility division in which the fowls will be judged by the Hogan system. A department devoted to the display of eggs will be a prominent feature of the show.

CRIPPLED CHICKENS.

To the Editor: What is your opinion sowing smutty wheat for seed; and is there any way of cleaning it? [We would not sow it, but it may be safe if well bluestoned before sowing.] Also, why should chicks hatched in incubator be crippled in the knee joint, often the bone is sticking through the flesh, while the ones hatched under hens seldom are?—Mrs. W. D. C., Laton.

[Answered by Geo. H. Croley.]

[The most common cause of the crippled condition of newly hatched chicks is overheating of the incubator during the hatching period. If this crippled condition develops in the brooder shortly after hatching, instead of in the incubator, it is due to overheated condition of the brooder floor. If the chicks are two or three weeks old before the trouble occurs it is due to lack of bone-making material in the food.]

A PROLIFIC TURKEY.

To the Editor: Who has a turkey that can beat this one? I think it is safe to say I have the champion turkey layer of the State.

The bird is mostly of the Mammoth Bronze breed and commenced laying at the age of seven months. From Dec. 30, 1914, to July 20 of this year she had laid a total of 165 eggs. She continued laying till molting time and has never set. The bird was hatched April 29, 1914, and at the age of eight months weighed 13½ lbs.

Undoubtedly some may think there is an exaggeration about the number of eggs laid, but such is not the case as a record is kept of all the birds. R. L. Isaac.

Oroville.

CALIFORNIA POULTRY SHOWS.

San Francisco, Nov. 18-28. International Poultry Show in connection with the Panama-Pacific Exposition; entries close Oct. 15; D. O. Lively, sec'y.; T. E. Quisenberry, superintendent.

Four to five months' old pullets, $18 per dozen. Selected Cockerels and Cock Birds, $5 each and up.

The Home Circle.

Conducted by Rena Shattuck.

SONG OF THE SPARROW.

I'm only a little sparrow,
A bird of low degree;
My life is of little value,
But the dear Lord cares for me.

He gives me a coat of feathers,
It is very plain, I know,
Without a speck of crimson,
For it was not made for show.

But it keeps me warm in winter,
And it shields me from the rain;
Were it bordered with gold and purple,
Perhaps it would make me vain.

I have no barn or storehouse,
I neither sow nor reap;
God gives me a sparrow's portion,
And never a seed to keep.

I just fold my wings at nightfall,
Wherever I happen to be,
For the Father is always watching—
No harm can happen me.

I am only a little sparrow,
A bird of low degree,
But I know that the Father loves me,
Dost thou know His love for thee?

LEGEND OF THE FLOWERS.

The Fuschia.

The mid-summer fairies were in high glee, for the winter had given place to spring, and that delightful season had passed leaving them the long, beautiful summer months to frolic in. Gaily they danced over the velvety grass, their tiny feet hardly touching the smooth sward, while the younger ones played games. They stole the Foxgloves and held boxing matches, challenged each other with the Sword-ferns, all in playful combat. They chased the Wandering Jew so that in his flight he grew into the path where there was great danger of stepping on him. They stole the Bachelor's-button, and they rang the Canterbury Bells and the Blue Bells, and waved the Flags until they were tired. They did worse than that—they stole the Lady-slipper away from Black-eyed Susan, made the Bride Rose nod to the Giant of Battle, while the Papa Gantier Rose shook with indignation at her unmaidenly conduct. They even had their fun with the Baby Roses, making the Wiid Dog Fennel scare them with his antics. The Mourning Bride shook her head sadly, but they hid behind the Touch-me-not and the Maid-of the-Mist. They laughed as they sipped all the dew from the Honeysuckle and wondered what the big brown velvety bees would do next day when for their morning supply of honey. This was all wrong, and Jack-in-the-Pulpit preached a sermon to them and told them it was not only a sin but a shame. After awhile they tired of this and sought some new way to amuse themselves.

"I have an idea," said a bright little Fairy, who seemed to be a leader.

"What is it?" chorused the rest.

"Run that big, ugly-looking spider out of his house and take his web. Some of you Fairies get to work and make chains of it, others go out and bring in some glow-worms and we'll fasten the web-chains on to them and hang them on the trees for lanterns. Fly now, but don't hurt them for we'll turn them loose before the morning breaks."

"If you don't, they will always be prisoners, for if Aurora, the Goddess of the Morning, catches us here we can never return to our own dear Fairyland, and the little glow-worms must always be lanterns," said a spry Fairy.

"Make haste, then," she replied, as she sat down on a toadstool and waited for them.

There was a great fluttering of wings as they flew to do her bidding.

"Fine!" said the Fairy, as the little glow-worm lanterns swayed in the trees from their silken chains. Now, let us do something else. 'Lots of fun in it,' as I have heard those earth children say."

"What is it?"

"Catch some fireflies and we'll hitch them to Magnolias and have chariot races."

"You're so clever," said a tiny Fairy, fanning herself with a palm-leaf. "I've flown so fast, and some of those glow-worms made such a fuss, one of them refused to shine one bit and I just let him drop on a Johnny-jump-up. My, how Johnny jumped!"

We've got the Fire-flies and the Magnolias for chariots; now what shall we do?" said the Fairies, as they held the fire-flies prisoners by their wings.

"Get the Love-tangle-vine and harness them to the Magnolias. You must have six fire-flies to each chariot. Take some of that fine ribbon-grass and splice together for reins."

"All ready," said the Fairies, as they held the fire-flies emiting flashes of light, and who seemed to rather enjoy the novelty of making steeds of themselves for the Fairies' enjoyment.

"Jump into the chariots, all of you that can; the rest of you will have to take your turn another night. I will take this team of big, brilliant fellows, and you must all follow me. Steer clear of the Dusty Miller, or you might get your wings covered with dust."

Round and round they circled, now close to the ground, then over the highest tree-tops. They waked some of the birds from their slumbers in the trees and they twittered and grumbled as they got further back in the leaves. An owl turned his great eyes upon them and cried, "Whoo! Whoo!"

"Fairies," cried the leader.

"Fairies, indeed! I'm the only one privileged to stay awake all night. I've eaten many birds and mice, and I'd crunch the bones of those fairies if they had any."

"Haste, haste, the dawn is breaking,
Haste, haste, the God of morn is waking"—

Came warning from Fairyland, and all the rest of the Fairies flew within the portals. The Morning Glories turned their little trumpets and gave also a silvery warning. The Fairies jumped from one chariot, and with the Sword-fern cut the harness of the Love-tangle-vine, releasing the fire-flies, then they flew toward the Elf-land where all the Elves and Fairies were awaiting them.

"One more race among the tree-tops 'round that tall elm," said the leader, but once was not enough; round and round they went. One last call rang out like a silver lute:

"Haste, haste, the dawn is breaking,
Haste, haste, the God of Morn is waking."

And as they turned the fire-flies and flew toward the portals of Fairyland, Aurora, the Goddess of Morn, awoke and threw her first bars of crimson across the sky. The portals were closed forever to them, and they heard the faint voices of their companions as they cried:

"Too late, too late, you cannot enter now!"

Then came the voice of their Queen, who cried in grief:

"Save yourselves from destruction; jump up and hang on that green bush and I'll turn you into a flower."

And they did so, and in a minute from every branch dangled a Fairy. They still have their small red feet, and white or purple dresses, with little red overskirts, red bodice, and tiny green caps. Today they are called Fuschias, but the Fairies would tell you they were little Fiaries who failed to obey, so now they must always be flowers and hang by their heads to a green bush.

—Polly Larkin.

GARDEN LORE.

"Flowers are the sweetest things God ever made and forgot to put a soul into."

By planting your stocks or gilly-flowers, as they are commonly known, in October you will have flowers for December. A leading florist is my authority for the above information. He stated that many folks failed to get good results in stocks on account of planting them too late.

The leaves of the trees will be falling soon and the neat housekeeper may object to the litter, but don't destroy them; sweep them into a corner and cover lightly with earth to keep them from blowing away. There is nothing much better for your plants than a good leaf loam.

For your window garden begonias and ferns come first. How rich with their glossy leaves and dainty blossoms the begonias are, and how restful the lacey green ferns! Still a window filled with coleus of which there are many varieties, are a constant joy, with their beautiful variegated leaves. To get the best results you should never allow them to flower. Pick off the buds.

The amaranth, a native of East India, is a new house plant, vieing for favor with the coleus, as it, too, relies upon its variegated foliage to win the attraction of the flower lover; but it is not so graceful, having stiff, glossy leaves.

FASHION TALK.

Short jackets are on the wane.

African brown is one of the new and beautiful shades for the fall season.

Black velveteen is favored more for the fall coats than velvet or plush. Many of them are trimmed with narrow bands of fur and have high, close-fitting collars.

Sheath gowns are out completely, but a clever little lady who would rather be out of the world than out of fashion turned her discarded gown upside down, inserted pleated panels in the sides, and appeared in a quite up-to-date costume.

The fad for bead necklaces amounts to almost a craze with many. One lady, who is a walking fashion-plate, has a bead necklace for every costume. She takes two fine needles with long threads, knotting the two ends together; each needle takes up a bead, then the needles are brought through a third bead, then two and then one again, etc., stringing at intervals a beautiful ornamental bead.

THE PATHWAY OF A JOYOUS LIFE.

What is happiness? What conduces to the joyous state of mind? For joy is but the supreme inflorescence of happiness.

The first muse is health, says Emerson, and even health is largely dependent upon peace of mind. It is not, perhaps, far out of the way, then, to see in peace of mind the very initial condition of happiness. And peace of mind depends solely, I should say, on the consciousness of having met each obligation of our lives, financial, social, spiritual, as adequately as lay within our power. That is not the superstructure; that is the foundation. Then what follows? First, there follows freedom of spirit. One is no longer in mental chains, as he is when held by the dead weight of things undone; he is set free, and freedom of spirit alone is exhilaration. Secondly, this sense of entire release is followed by a great inflow of power. The reward, so to speak, of achievement is the power to undertake another and a still greater one.—Lilian Whiting in August Nautilus.

HOUSEHOLD HINTS.

Every mother can lighten her household burdens by impressing upon the children from their very babyhood up that there is a place for everything. They can be taught to be orderly and helpful just as well as to leave their playthings scattered over the floor, and their books, hats and coats thrown down wherever they happen to stop on their return from school for mother to pick up. Mother needs many a lift along the road, little lads and lassies, and it will lighten her work tremendously if you will help cheerfully and willingly in keeping things orderly without her having to remind you of it.

In France, instead of using starch on table napkins after they are washed and dried and ready to be ironed, they are dipped in boiling water and partially wrung out between cloths. They are then rapidly ironed with as hot a flatiron as possible without burning them, and become beautifully stiff and glossy.

To remove ink stains from cloth or other absorbent substances, dissolve four ounces of citric acid in two quarts of water that has been previously boiled and cooled. Then add six to eight ounces of a strong, strained solution of borax.

It will save all sorts of trouble and cause the dove of peace to hover over your house if a tablet is hung in a handy place in the kitchen and every time you discover an article is out or getting low, jot it down. There won't be that hurrying and scurrying round to find out what things are needed the next time some one is going to town. All you have to do is to consult your tablet.

SCHOOL NOTES.

It should be the aim of every teacher to inspire a love of flowers and growing plants in the children They can be interested and will take a real pride in beautifying the school grounds with flowers and vines as well as the window gardens. One of our country teachers with an eye for the beautiful converted the barren yard of the school into a wilderness of flowers; the vines ran rampant over the fences; there was a wealth of roses, carnations, etc., beside the hanging baskets and window plants. A restful picture to the passer-by! During the long vacation the scholars, of their own accord, took turns caring for the plants.

Grade school boys of the Lincoln school, La Crosse, Wis., are getting the most practical kind of manual training work this fall. They are remodeling and equipping the new manual training rooms at the school, as part of their course in manual arts. Incidentally the boys are saving the Board of Education's fund about $300, which without their work would be expended in the construction. A room at the school has been dismantled, the floor lowered about two feet by excavation, and stringers put down. The boys are now at work laying a new hardwood floor for the room. When that is completed a partition built dividing the room, and the walls whitewashed, the boys are to make the benches and other equipment, turning out that part of the work at the high school shops.

CULINARY SUGGESTIONS.

Salads were first made in Holland and Belgium.

A quick salad is made of a slice of firm chilled tomato, one slice of canned pineapple topped with a ball of Roquefort cheese, and a tablespoonful of mayonnaise or boiled dressing.

When baking fish, if you will lay a couple of slices of bacon in the pan under the fish it will never stick to the pan and will enhance the flavor of the fish.

A salmon loaf is just about as easy and tempting an emergency dish as you can find. Take one can of red salmon, removing all the bones and skin. Mix it with cracker crumbs, a tablespoonful of melted butter, chopped parsley, and a lightly beaten egg, cover with fresh or condensed milk and bake from fifteen to twenty minutes. Serve with slices of lemon.

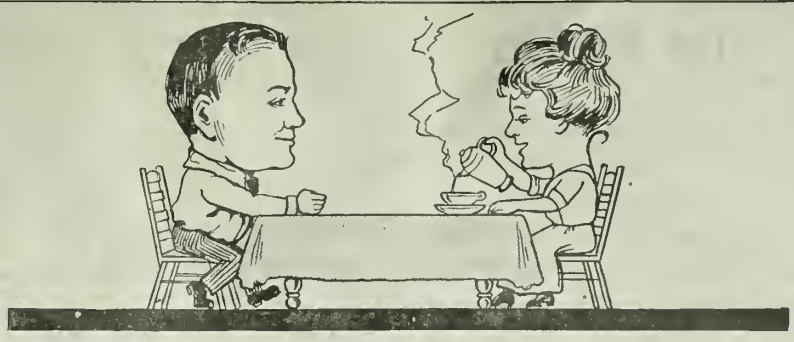
Sliced tomatoes served in crisp lettuce leaves with thin slices of crisp bacon laid round it makes another quick and appetizing dish.

Coffee Icing.—Melt two cupfuls of sugar and boil until it forms a string from the spoon. Stand the saucepan in a dish of cold water until the sugar begins to form on the sides, and then work in a cupful of strong coffee, pressing it against the sides of the saucepan with a spoon. When the mass granulates, it is ready to use as icing.

Coffee Cake.—Cream half a cupful of butter with two cupfuls of sugar. Add half a teaspoonful of cloves, and a saltspoonful each of mace and cinnamon, with a cupful of molasses. Beat for five minutes, and add the creamy yolks of three eggs and a cupful of strong coffee. Then alternately add five cupfuls of sifted flour and the whites of three eggs, beaten stiff, a teaspoonful of saleratus dissolved in hot water. Lastly stir in a quarter of a pound of shredded citron, and half a pound each of raisins and currants. This will make two loaves. It should be kept covered after it is baked, as it loses flavor if left uncovered.

Bacon Griddle Cakes.—Three cups of flour, 3 level teaspoonfuls of baking powder, 1 teaspoonful of salt sifted together. Add slowly enough sweet milk to make a batter of the proper consistency and beat in two eggs. For each pancake frizzle 4 or 5 pieces of bacon about an inch square on the griddle and when partly cooked pour over them enough of the batter to make a cake about 5 inches across. Serve with maple or any other good syrup and plenty of butter. They are also good with brown sugar syrup.

SWATTED.



Museum Manager: "Where's the human fly?"

Attendant: "Can't perform today. His wife's been swatting him."—Baltimore American.

ATTENTION, CHICKEN FANCIERS.

Would you figure a chicken's birthday from the day the egg is laid or from the day on which it is hatched?

Young man, select a business in which the styles change every year.

The Drink that keeps
STRONG MEN STRONG

Ghirardelli's Ground Chocolate is an inimitable blend of finest cocoa and pure sugar.

Scientists who have made exhaustive analyses of all sorts of food products say that cocoa products are self-sufficient as a nutriment, possessing all properties needed not only for sustaining life but also to repair bodily waste. Cocoa contains a larger percentage of nutriment than even the egg.

Drink a cup of Ghirardelli's Ground Chocolate daily. It's easily and quickly made. It's delicious. It makes the strong stronger.

BIRD OR WOMAN?

For Sale—A human talking parrot for sale cheap. Mrs. Emma Hessler. —From the Globe, Arizona, Record.

BRIGHT THINGS.

"Lend me your ears," read Marjorie from the good book. "That's the foolishest thing I ever read. Whoever heard of any one lending their ear?"

"Are you a Christian?" asked the evangelist.

"I have always been a Christian."

"Ah, I see—converted in your childhood."

"No; my mother married a man by the name of Christian."

A woman who had been presented with some Belgian hares telephoned her mistress: "I can't work for you any longer, for I have been given seven belching hares, and they have to be fed three times a day."

"You claim to be an artist. Why don't you paint a rabbit on the top of your friend's bald head and some one might take it for a hare," said the jealous suitor.

"Did you read that mad dog story in the paper?"

"No; but I heard it was very snappy."

It is better to have loved and lost than to pay alimony.

Big business men are paid for telling lies—kids are licked for it.

BARLEY.

Export business is not especially active, but there is some inquiry, and the market remains steady, with buyers and sellers generally apart in their views.

Shipping, ctl.	$1.25 @1.30
Choice Feed, ctl.	1.17½ @1.22½

OATS.

Local prices show no quotable change, though the tone of the market continues strong. Red oats for seed are in active demand, and white are also moving well.

Black, ctl.	$1.85@2.00
Red Feed	1.25@1.30
Red Seed	1.50@1.75
White	1.30@1.40

CORN.

Corn receives little attention here at present. Eastern grades are lower, with heavy offerings at primary markets; and with limited demand the sorghum grains have dropped sharply.

Eastern Yellow, ctl.	$1.60@1.65
Milo Maize	1.35@1.45
Kaffir	1.45@1.55

BEANS.

The bean market is still very unsettled and irregular, and every handler has his own ideas about values, though it is expected that conditions will settle down in a few weeks with larger offerings of new stock. Bayos and blackeyes stand about as before, the latter being rather easy, with a heavy crop. Cranberry beans are a little higher. Horse beans are uncertain, as a great amount of the stock is wormy and cannot be shipped, and the amount of sound stock available is unknown. While the California crop of whites is heavy, Michigan has only half a crop, and the market is very firm at an advance. Limas are quoted higher, but are weak and plentiful, and an early reaction is expected.

(On wharf, San Francisco.)

Bayos, per ctl	$4.10@4.20
Blackeyes	2.75@2.90
Cranberry Beans	4.10@4.20
Horse Beans	2.25@3.00
Small Whites	4.25@4.50
Large Whites	4.20@4.40
Pink	3.25@3.50
Limas	4.50@4.60
Red Kidney	5.25@5.50
Mexican Reds	4.50@4.75

SEEDS.

The seed list has been changed completely, to be more in line with the current needs of growers. The movement is gradually gathering a headway, but is not yet very active.

(Wholesale prices, San Francisco.)

Alfalfa, per lb.	17 @18 c
Alba	30 c
Melilotus, Indica	6 c
Bur Clover	11 c
Oregon Vetch	4¼ @ 4½c
Soy Beans	6 c
Canada Peas	5½ @ 6 c
Sudan Grass	40 c

HAY.

Values show no further change, but the tendency is strongly upward, to meet the storage expenses that will soon have to be added to the price of hay in the field, as current arrivals are light. Practically all the crop is under cover. Choice and fancy hay is quite scarce and eagerly sought; the latter, in light bales, sells up to $16 per ton without difficulty. Dealers appear very bullish, and report an unusually strong consuming demand through the state. Little alfalfa is arriving, and most of it poor; good hay sells readily at top figure.

No. 1 Wheat	$12.00@14.00
do No. 2	8.50@11.00
Tame Oats	9.00@13.50
Wild Oats	7.00@10.00
Alfalfa	10.00@13.00
Stock Hay	6.00@ 7.00
Straw, per bale	.25@ .40

FEEDSTUFFS.

Bran and middlings are quoted a little lower, but there is no change of consequence otherwise. Rolled barley and oats are fairly firm.

(Wholesale prices per ton, carload lots, San Francisco.)

Beet Pulp, per ton	$20.00@21.00
Alfalfa Meal, ton	16.00@19.00
Alfalfa Molasses Meal per ton	19.00@20.00
Bran, per ton	26.00@27.00
Oilcake Meal	38.00@39.00
Cocoanut Cake or Meal	23.00@25.00
Cracked Corn	41.00@42.00
Middlings	32.00@33.00
Rolled Barley	25.50@26.50
Rolled Oats	29.00@31.00

VEGETABLES.

Offerings in several lines have been lighter for the last few days, resulting in a slight stiffening in the general range of values. String and lima beans have been marked up a little, with very little of desirable quality offered. The top figure on bell peppers has been raised, and tomatoes are doing somewhat better, though offerings are still quite plentiful. Summer squash, also, is offered in large quantities. Cucumbers and okra have been marked up sharply; while eggplant is easy, and celery is lower. Green corn is higher, and finds a fairly good demand, though there is little fancy stock on hand.

(Wholesale Prices, San Francisco.)

String Beans	1½@ 3 c
Lima Beans	2 @ 2½c
Peppers, bell, box	40 @65 c
Tomatoes, lug	35 @55 c
Cucumbers, lug	35 @65 c
Summer Squash, lug	25 @40 c
Green Corn, sack	1.25@1.75
Okra, lug	35 @65 c
Eggplant, lug	30 @50 c
Celery, doz	10 @20 c

POTATOES AND ONIONS.

Sweets are down again, with additional arrivals. Salinas potatoes are steadily held, though Deltas are lower. Onions have advanced sharply; curtailment of export demand has been against them, but a large quantity have gone east. Garlic also is higher.

Salinas Burbanks	$1.25@1.60
Delta Burbanks	75 @90 c
Sweet Potatoes, ctl.	1.25@1.35
Onions ctl.,	75 @85 c
Garlic, per lb., new	8 @10 c

POULTRY.

Business is keeping up in good shape, but arrivals are too heavy to permit any distinct firmness in the market; in fact, roosters are rather easy. Values, however, show no quotable change.

Turkeys, old, lb	17 @19 c
do, young	23 @25 c
Broilers, 15 lbs to doz and less, lb	26 @27 c
do, over 15 lbs to doz	22 @24 c

DECIDUOUS FRUITS.

Prices in a good many lines have been marked up this week, as arrivals are diminishing. This is noted in the berry department, both strawberries and blackberries being higher. Prunes and figs are no longer obtainable at last week's inside figure, and Bartlett pears are firm at a sharp advance, with stock about cleaned up. Gravenstein and Alexander apples are cleaned up, while Bellflowers and Newtowns are doing fairly well. Quinces are cheaper. Few peaches are appearing, and attractive stock is higher. Casabas have advanced sharply, and cantaloupes from the river district are doing better. Seedless grapes are scarce and high, as growers are drying everything possible. Other descriptions are coming in fairly well in lugs, but bring good prices on the average.

(Sales in S. F. Market.)

DRIED FRUITS.

Dried fruits, in common with most Pacific Coast food products, have moved slowly so far this season. This is ascribed to various causes; by some to a misapprehension that prices will be lower, by others to lack of cash to carry the stock. However, it is quite evident that the season's requirements have by no means been covered, as shown by new inquiries coming in; and for this reason, with no unwieldy stock here in most lines, a better movement at advancing prices is anticipated. The prune situation in particular is unusual. The local top price has been marked up a little, and Santa Clara growers are holding for much higher prices, and to some extent realizing their expectations; while plenty of stock is reported in other districts at the inside figure. This condition is perhaps due to the extreme shortage of the 30-40 size, which packers have realized for some time and growers are now beginning to appreciate. Anyone having a good proportion of that size in his crop should be justified in demanding a premium. On the other hand, extreme small sizes, over 100's, are also scarce, and but little cheaper than the medium counts. Peaches are still quiet, but a factor not generally realized is the proportion of the crop allowed to go to waste; and a gradually increasing movement, with no decline and perhaps a slight advance, is expected. Apricots are well out of growers' hands; and the apple crop in many districts of the country is light, causing a stiffening of evaporated apples.

CITRUS FRUITS.

Shipments of citrus fruits to the east from California are going out at the rate of about 30 cars of valencias and 17 of lemons daily. The eastern auctions are still paying fair prices for the fruit, in spite of foreign competion. It is estimated that there were in California 1200 cars of valencia oranges on Oct. 1st. At the New York auction Monday, Oct. 4th, valencias averaged from $2.95 to $7 per box. Lemons brought from $3 to $3.30. At Chicago the same day the auctions averaged from $5.75 to $6 for valencias and $2.75 to $3.75 for lemons.

There is little new to report in the local market. The demand for oranges is limited, but arrivals also are very light and values are well maintained. Grapefruit and lemons stands as before, with occasional sales of strictly fancy stock at a slight advance.

(Wholesale prices, San Francisco.)

Oranges, Valencias, bx	$3.75@4.75

NUTS.

The feature of most interest is the announcement of prices by the Walnut Growers' Association, as quoted below. The figures, which are considerably below those of last year in line with the large quantity and only fair quality of the crop, appear to be satisfactory to the trade, though it is too early to tell much about the movement. The Almond Exchange would seem to be well justified in naming comparatively low prices, as even at these figures the trade has been in no hurry to buy. There has been a very substantial movement, but it is still evident that many buyers are holding to a hand-to-mouth policy, apparently owing to tightness of money. Shipments are going out rapidly, and it is too early to tell what proportion of the yield has been disposed of.

HORSES.

The local market continues to drag, with little interest on the part of buyers, and no great amount of desirable stock coming in. Another large lot of miscellaneous stock from a local stable was dumped on the market this week. Business is said to be much more active at Los Angeles and in the country, where there is a good steady demand for good horses of all weights; and values have been marked up again. The market, in fact, is in a rather uncertain position; it is undoubtedly feeling the effect of the continued drain of export buying, and better horses are needed to take the place of those shipped out. A stiffer market is expected, but it is too early to tell how far such a tendency will go.

SPECIAL DECIDUOUS MARKET REPORT.

By J. L. Nagle.

San Francisco, Oct. 4, 1915.

During the past week shipments of Tokays have continued heavy and although some districts are rapidly cleaning up, others seem to continue to contribute with weather conditions remaining favorable, Tokay shipments should continue for the next three weeks. The quality of grapes from all districts continues good, otherwise the markets would unquestionably be more seriously affected. We look for a decided improvement in conditions in about a week or ten days, provided shipments are lighter, principally because the peach shipments from the Eastern states will be cleaned up in about ten days, and the report from Almeria, Spain, indicates that the shipments of foregin grapes will not be as heavy to America as was at first anticipated, though the market is about $1.50 higher per barrel than at this time last year.

Practically all the Bartlett Pear shipments have been cleaned up. Pears that are now being shipped East are from the Santa Clara Valley and Monterey districts.

The following prices have ruled for the week:

New York.—Bartlett Pears, averaged $2.47; Malaga Grapes, 95c.; Tokay, $1.05.

Boston.—Tokay Grapes, averaged $1.07; Malaga, $1.25.

Chicago.—Malaga Grapes, averaged 98c.; Thompson Seedless, $1.; Tokay, 95c.; Bartlett Pears, $3.40.

Total shipments to date 11,894¼. Total shipments same date, 1914, 12,429¼.

GROWERS SHOULD HOLD PRUNES.

The growers' committee met Saturday Oct. 2, and made the following report:

Packers are actively engaged in picking up what prunes they can at prices ranging from 3¾ for small fruit up to from 4 to 4½ for larger sizes. These figures are lower than your committee, in view of all the fact of the case, considers the grower entitled to, and the committee is gratified to hear that those of the growers who have held their fruit thus far are increasingly inclined to hold for a higher basis.

We knew that orders on a large scale are coming in at the present time from countries which hitherto have not been our customers in addition to fresh orders from neutral European countries, while the eastern markets in the United States have yet to lay in their supply for the season. In view of the heavy sales already made by the packers, on which they must make deliveries, and the new orders now coming in and still to come, it is simply up to those of the growers who are holding their fruit to insist on receiving the basis for which they are holding.

We once more call the attention of the growers to the apricot situation this season. Before the fruit was ready for sale we were assured that 6 to 6½ was as much as they possibly could be sold for, yet the bulk of the 'cots sold for better prices than that, and they now range from 8½ to 9½c per pound. There is no reason why packers' statements as to prunes are any more accurate than as to apricots, and there is no conceivable reason why prunes shall not follow the same course. It is now a well-known fact that the crop is far short of our early estimates and that the sizes are not running as large as was expected.

We urge growers who are in need of money for running expenses to see their banker and explain their needs to them and we are confident they will find ready assistance.

J. H. BONE, Chairman.
H. O. H. SHELLEY, Secretary.

San Francisco, Calif.,
October 1st, 1915.

The California Almond Growers' Exchange advanced to members on 1915 almonds, between September 13th and 30th, $170,385.12—the bulk going out in 11 days' time.

CALIFORNIA ALMOND GROWERS' EXCHANGE.
311 California Street, San Francisco.

Publisher's Dep't.

This enlarged issue of the Rural Press is necessary to carry the account of the draft horse contest and show now on at the P. P. I. E., also to give space to the announcements of horse breeders. We believe the reading matter as well as advertisements will be valuable to most of our readers.

The "California Hog Book" has found a place for itself, if the criticisms we are receiving are any criterion. Here is what N. M. Gordon of the Swine World of Chicago writes us: "It is a splendid work and I feel sure that it will fill a long felt want and do much good for the hog industry in the western country. It will be of particular interest to the eastern breeders and agricultural colleges, because such information has never been compiled before to my knowledge."

"California Garden-Flowers," by E. J. Wickson; published by the Pacific Rural Press, San Francisco, Cal. This work is the result of the author's many years of experience and research in the hortlcultral field. The extent of the material includes a wide range, but the subject is so handled that from the point of expense and scientific study, the context is within reach of all. The author's chief object is to promote a love of flowers and interest in their growing, as a beautiful environment of every home, and which most people can secure.—Western Journal of Education.

Our lady readers will notice that the Home Circle department in this issue is in new hands. We trust that the new addition to our staff will be given a cordial reception and that women from all over California will make the same use of this department as their husbands do of other parts of the paper. If you have questions to ask pertaining to your household work do not hesitate to write to our "Home Circle" editor.

WITH THE LIVE STOCK MEN.

(Continued from page 359.)

are being made to keep 12 registered brood sows.

E. C. Curtiss of Napa bought a Duroc sow from the Unlversity Farm at Davis a little over a year ago; and counting the pigs retained on the ranch for breeding purposes, together with those sold, this one sow has netted him a gross sum of $1000.

On Sept. 27 D. M. Swim of Vacaville drove up to Davis in his Ford and loaded into a specially made crate, California Price, a registered Poland-China boar bred and ralsed by the University, who weighed 218 pounds at 6⅔ months.

$585 Buys This Combination Farm Tractor and Portable Engine

(F.O.B. Minneapolis, Minn.)

A Bull Tractor running a centrifugal pump in the Sacramento Valley

A Lady Bull Tractor operator in Los Angeles County

The BIG BULL is an all-purpose tractor, built to do all traction work on the farm. The Big Bull's price not only puts this proven money-maker and money-saver within YOUR reach, but actually makes horses TOO EXPENSIVE TO BUY OR KEEP. Think what the BIG BULL will do on your farm. It does the work of several horses and men. Does it faster, better, much cheaper. BIG BULL does all your plowing, discing, seeding. Runs manure spreaders, draws heavily loaded wagons, pulls hay loaders, mowers, binders. Runs corn shellers, feed grinders, small shredders, threshers, and ensilage cutters. BIG BULL is not only a powerful, economical tractor, but a PORTABLE ENGINE as well. Fifty-five hundred now used. BIG BULL is making money for farmers in every section of the United States. Never before was a farm machine so universally welcomed. YOU have undoubtedly always wanted a hard-working, labor-saving traction engine on your farm. Now's your chance to get one—at a price that breaks all records.

BIG BULL is entirely out of the experimental class. It has thoroughly demonstrated what it can do, working in all kinds of soil for the past two years. It can be conveniently and effectively used for SUMMER FALLOWING.

"BIG BULL"

Produces 20 Horsepower at the Belt, 7 Horsepower at Drawbar

The bull wheel runs IN THE FURROW, yet does not pack the soil. Grousers four inches long on the bull wheel make it a deep-tilling sub-soiler. Hard sub-soil, even hardpan, is easily penetrated, loosened up and made ready for irrigation. Patented leveling device on BIG BULL makes it easily possible to adjust the tractor to side hills or deep furrows. Other features exclusive with BIG BULL are its direct drive with only four gears; steer wheel which runs in the furrow in direct line with bull wheel makes BIG BULL positively and automatically self-steering. Just remove two bolts and BIG BULL'S engine is in plain sight, every part easily and quickly accessible.

BIG BULL is not a "ONE USE" piece of machinery. It is a COMBINATION machine, used on a farm as a traction engine and a portable engine. No team is required to drag BIG BULL into position. It follows your guiding hand from one job to another, and saves you time, work and MONEY ON EVERY ONE OF THEM.

You need this valuable book. Send for it TODAY. Learn what BIG BULL can do for you. Remember that BIG BULL'S price, $585, makes it an actual WASTE of money for you to continue working horses. BIG BULL works one-third faster than your best team and costs you NOTHING when not in use. BIG BULL is the best investment you can make. It immediately puts you in the class with the big successful farmers and ranchers who wouldn't think of operating their farms without a traction engine. They know it's the ONLY real economical way. So will YOU know it after you have worked BIG BULL on your place for two hours. Get our free tractor book NOW.

We have a few "Little Bull" Tractors left at $495. Five Horsepower at the Drawbar, 12 Horsepower at Pulley Belt. There won't be any more after our present stock is exhausted.

Note the photo below, showing a Big Bull pulling a J.I.Case 2-14 inch bottom "Enicar" Power Lift Plow, Harrow and Sub-soiler, plowing seven inches deep and sub-soiling twelve inches deep in hard, dry ground in the Willamette Valley.

THE PACIFIC RURAL PRESS

SAN FRANCISCO OCTOBER 16, 1915. LOS ANGELES

California State Library 7-1-1

Alfalfa and Water Saved the Orchard.

Alfalfa, continuously grown, loosened this man's orchard soil so it could be irrigated; increased the fruit and tree growth, did the cultivation, and has furnished crops that paid the expense of irrigation by pumping. Plenty of water is absolutely necessary.

[Written for Pacific Rural Press.]

TEN years ago, F. H. Brubaker's orchard soil persistently packed together airtight and watertight in spite of him. It had been cropped to grain since the early days. He would plow and cultivate; then when he irrigated, whether with a slow stream or a fast one, soaking a long time or short, the water would not go below the plowed dirt; pretty soon it would cement that together. Part of the soil was adobe, part silt, some loam, sand, and gravel in streaks, as deposited in the old river bed near Corning. Eight feet down was permanently water-bearing gravel. The trees weren't giving much satisfaction.

He decided to let alfalfa cultivate his orchard and open it up to the water. The alfalfa roots would loosen the soil all the way down, without injuring the tree roots. Five acres were sowed, right up to the trees. That five acres was disked up last winter for the first time. It had yielded four or five crops a year, which paid for the pump irrigation; and had cultivated the soil into such a condition that water soaks down easily three feet, and probably down to water level. The trees responded delightedly with more growth and heavier crops, as soon as the alfalfa got well started, and ever since. The prunes and apricots made new trees; the peaches in that block were in worse condition and never fully recovered.

When he disked the five acres under last winter, he sowed barley to plow up, and will sow alfalfa again.

CLOUDY SOIL LACKING HUMUS.

Orchard Soil, which would not take water nor raise a good crop of fruit, has been made porous by several years' continued use of alfalfa. This eliminates cultivation, but requires more water. The alfalfa pays for the water.

Entire Orchard Sowed.—During the past ten years, the rest of the 17-acre orchard of apricots, prunes, peaches, and olives has been sown to alfalfa, and will continue so. The last block of peaches planted was 165 trees, set out in January last, where 8-year alfalfa had been plowed up. Barley and alfalfa were seeded between the young trees and in August a couple of pails of peaches were picked.

Frequent Irrigation Absolutely Necessary.—"I never saw the equal of alfalfa and plenty of water to make trees grow and bear," says Mr. Brubaker. "I usually irrigate every week in hot weather and see that every tree gets its share. Water must stand two to four inches deep all over the checks. Irrigations must not be over 10 days apart in summer or 14 days in spring." North winds sometimes sap out the moisture from trees and alfalfa very suddenly in that country—hence it is necessary to have water handy. He remarks that if a tree wilts, it checks the new growth. If such growth is a foot long, 10 days may be required to get it started again. A few such checks may lose a season's advantage and stunt the tree. It is the same with the alfalfa—if its new growth is checked, there will be only half a crop at that cutting. It must always have plenty of moisture, but never drown out.

Complicates Fruit Picking.—Handling the alfalfa at fruit harvest is somewhat of a problem. Under the peaches, it is often necessary to wallow down a lot of growth. But the fruit is large enough not to be lost. Under the prunes, alfalfa must be cut close just when the fruit begins to drop. The stubble does not hurt prunes, but makes some extra work picking. The main part of the crop, however, is knocked off onto blankets spread under the trees. This facilitates picking anyway.

In cutting the alfalfa, the rounds are made so that the sickle bar always runs next to the trees, so the horses do not brush the branches. Alfalfa is not sowed close up to young trees, but is allowed to grow up to them at about three years old, when their roots have started well, and when the trees are big enough to avoid in mowing. Usually the alfalfa is cut in early morning and raked into bunches after noon. Even then it is sometimes burned into "sticks" by the north wind.

Sowing the Cover Crop.—One dry winter, alfalfa sown in January resulted in the finest kind of a stand; but May is a good time and April is all right. The ground must be moist so alfalfa will be four or five inches high before irrigation is needed. The land is graded and irrigated, then plowed and worked up fine, in the fall or winter, and allowed to settle firm into a fine seedbed. When ready to sow alfalfa, the surface is loosened with a harrow and the seed sown. In irrigating the place now, the water soaks in so fast that a large stream is necessary to avoid waterlogging the near trees and alfalfa before the far ones are wet. This would wash seed and soil badly if applied before the alfalfa is well established. The pioneering of this rancher has resulted in a large number of Corning ranchers adopting the same system to loosen and fertilize their soil. Some of the wiser ones are getting stock to eat the alfalfa and save additional fertility.

PACIFIC RURAL PRESS

Issued Every Week at 525 Market Street
SAN FRANCISCO

LOS ANGELES OFFICE, 239 So. Los Angeles St.

ENTERED AT S. F. POSTOFFICE AS SECOND-CLASS MAIL MATTER

Address all communications and make checks or money orders payable to
PACIFIC RURAL PRESS, - SAN FRANCISCO

ONE DOLLAR PER YEAR IN ADVANCE

Advertising rates made known on application.
Copy for change of advertisements must be in office on Monday preceding date of issue. New advertising copy must reach the office by Wednesday a. m. to insure insertion that week.

California Weather Record.

The following rainfall and temperature record is furnished the PACIFIC RURAL PRESS by the United States Department of Agricultural Weather Bureau, at San Francisco, for the week ending at 5 p. m., October 12, 1915.

STATIONS	Rainfall Data: Past Week	Rainfall Data: Seasonal To Date	Rainfall Data: Normal To Date	Temperature Data: Max'm	Temperature Data: Min'm
Eureka	0	.37	2.31	62	40
Red Bluff	0	0	1.32	90	48
Sacramento	0	.01	.69	90	48
San Francisco	0	.01	.63	72	48
San Jose	0	.04	.65	80	38
Fresno	0	0	.56	92	50
Independence	0	.10	.54	84	38
San Luis Obispo	0	.01	.73	80	46
Los Angeles	0	0	.22	84	52
San Diego	0	0	.22	70	54

THE WEEK

The days are fine. The Panama-Pacific Exposition is rolling in something like eighty thousand admissions a day. It has passed the twelve million mark, and bids fair to go to sixteen millions before December 4. The San Diego Exposition is doing nobly also, and we have yet to see a single person who is not glad that he made the trip to salute the southern beauty. California has surely done well to flash out these two triumphs of civilization upon the dark cloud of European barbarism. The western hemisphere is the light of the world.

The days are fine. The Santa Clara prophet has not been able to squeeze a drop out of the quadrature of Jupiter. As said before, we do not give a whoop that he has not. All that we care for is a prophet who gives us water when we need it. Fortunately, the Oregon prophet, who does not know a quadrature from a quadrillion, comes through on the right line. His name is Rehart, and here is his prophecy:

"According to my method of forecasting the weather, the spring and summer up to July 15th indicated a dry year. Ever since, though, indications point to a wet year. Specifically, the character of the season for 1915-16 for the Pacific Coast should be a dry fall, with only light precipitation until about the month of December, when the winter storms begin and continue late, with numerous heavy storms and precipitation considerably above the normal for the season."

The propheey is fine. Just a light precipitation during the fall: enough for land-working and early planting and seeding as required—and then plenty of rain, continued late to fill the heads and keep the pasturage green. Evidently we are in for a good year. California agriculture is wide awake and is daily revealing new phases of development. A good crop year will furnish just the setting which is most desirable for the various forms of activity which are now advancing into the view of the world as characteristically Californian.

What to Do for Rural Credit.

Readers are asking us "what to do about rural credit." The question has direct reference no doubt to the duty of voting upon rural credit—item No. 5 on the ballot for the election of October 26. There are many other considerations involved in the question, but the only duty which is immediately impending is to vote "yes" on item No. 5. The first thing to do about rural credit is to get it. In this respect all questions as to how rural credit should be arranged for and used are like the recipes for cooking and serving a duck: it is proverbial that the first thing to do is to get the duck. We have no sympathy with the views of a few old gentlemen who seem to think that they have something in their noddles which is just as good as divine foresight, and in the exercise of it feel called upon to warn people against the whole outfit of rural credit. They have posted themselves around the marsh and are firing their howitzers, with the idea of searing away the duck, so that shallow-minded, hungry people shall not be choked by the bones of it. Some of their proclamations are amusing, we must admit, but they have no more relation to rural credit than a tire-puncture on a country road has to do with duck-shooting. Take this, as an instance: "If the farmer can borrow money on mortgage at 3 per cent, could he not invest in foreign securities at 6 per cent, and would not that eventuate in reducing capital in this state?" The answer to all such "arguments" is that they are not even "facts." Every scheme of rural credit in the world, so far as we know, makes it impossible to invest the money in anything whatever except the farm work, agencies, or improvements which are specified in the application for it. How is this made impossible? By watching by government or association representatives. It is fixed so tight that even a dull borrower can not be beaten in a horse trade. He cannot even get the money to buy an animal until the beast has passed qualified inspection and pronounced sound and worth the money. Every other proposed expenditure is similarly specified and safeguarded. Therefore these timorous old gentlemen, who have perhaps done some plunging in their day, should be assured that rural credit does not mean money for gambling or sharking. There is absolutely no reason to fear that farmers' thrift will be reduced by free borrowing, because there will be no free borrowing. Money can only be had for specific acts of production, and only in such amount as the quality of the man and of the land justify—and both are most diligently looked into. And experience has shown, almost everywhere except in the United States, that money thus loaned is practically never lost—at least, had not been lost until the present wretched war began to knock the bottom out of everything in countries which wisely promoted production had made the most prosperous in the world.

Playing with Fire.

While we are perfectly sure that the foregoing is a warranted statement and contains the germ of movement and enterprise which are safe and sure to assist experienced and qualified farmers to get, on reasonable terms, the capital which they need to secure the materials and improvements which are essential to rational and economic production, we may frankly admit that we do not like the company we seem to be in, in favoring the adoption of the rural credit amendment. We read this in a San Francisco daily journal:

The Advertising Association yesterday undertook a campaign to secure the passage of a State bond issue of $250,000,000, this fund to be available for rural credits to assist worthy farmers to buy and improve land in this State. We must not be afraid of big figures. It will take all of $250,000,000, and perhaps more, to finance adequately this movement for the number and kind of people we want.

Furthermore, these credits, as proved by the experience of other countries, are perfectly safe. There is little risk in advancing money to a successful farmer to the extent of ten times the cash capital he has to invest, letting him refund in small payments extending over a long period of years."

Financially speaking, this is stealing "the livery of the court of heaven to serve the devil in." The first paragraph presents a proposition which no rational being would vote for. It is a wild, untried and alarming financial scheme—not because its dimensions might not be ultimately realized through cautious evolutionary development, but because such a plunge as that would give the State financial heart-failure, if it should ever be approved by the people, which it probably can never be. If the Advertising Association should desire to kill the rural credit amendment (which we assume it does not) it could not undertake a more fatal propaganda.

Why the Livery Is a Misfit.

The second paragraph above includes the mis-applied livery. Taken by itself the second paragraph is a true statement, but there is little warrant in experience to make the second paragraph support the first. No State nor country has ever plunged into rural credit that way. Every State or country has proceeded rationally and slowly, learning by experience and gaining public confidence and support. Governments have cautiously used public funds. and have authorized guaranteed bond offerings for private investment, in amounts relatively small as compared with that for which the Advertising Association proposes to secure State credit—with no local experience to all. Of course it may be argued that the British government has now expended more than half a billion dollars in making landless people in Ireland owners of lands, but that movement began fifty years ago, in a small way, and the present liberal act, based upon thirty years' experience, is now twelve years old. It was a good evolutionary process. New Zealand and Australia are rightly advanced as sources from which we have much to learn in this business, but their systems have been several years in development and we doubt if they have expended a tenth as much as called for in California by the Advertising Association. It may be argued that we can safely combine all the wisdom which these countries have learned, and all the money which they have succeeded in placing, in one great development uplift for California. That seems to be the view of the Advertising Association. We dissent. Such a proposition has power to destroy, not to build up. And the very first thing it will destroy will be the chance to do anything rational. If the people of California really believe that such a scheme is back of the rural credit amendment they

will kill it dead as a mackerel at the election of October 26th—and they ought to.

What Will the Amendment Really Do?

It seems to us very important that all who desire to see California farming financed reasonably and economically, and with the latest safety devices which a world's experience has demonstrated to be effective, should satisfy themselves and their friends that the proposed amendment to the constitution does not admit the wild-cats which we have been condemning. There was nothing of this kind proposed to the last Legislature. The legislation for which it was seen to be necessary to amend the constitution was sane and perfectly safeguarded. It is necessary that the State should safely guarantee it—just as all other governments have done, without losses and with great advantage to producers, as decades of experience have demonstrated. The constitution of California prohibits the State from using its credit for its own development, through the desire to give its producing citizens a fair deal and protection against speculative and capitalistic exactions. It is an unreasonable prohibition, and to understand how it came into the constitution one must remember that the constitution was made at a time when prohibitions were popular, and a number of them, which have wrought hardship to agriculture, were enforced because the farmers of that day had not voting strength to annul them. It became then, from the very day of its adoption, a document which needed amendment—as its subsequent history has amply proven. It should also be fully understood that the present amendment does not create any system of rural credit: it simply opens the way for the citizens of the State, through their constituted representatives in the legislative and executive departments, to create such a system as they see fit and to pledge State participation therein, as a world's experience has found to be necessary. What shall be the features of such a system, to best meet the needs of Californians, is left to be determined, in a leisurely and deliberative way, in the course of subsequent legislation, and this amendment simply and only leaves Californians free to devise and adopt such a system as they approve. It should also be carefully noted that the amendment does not remove the general prohibition against the State lending its credit; it simply lifts the bar from the one subject of rural credit provisions. If any other interest desires freedom from the constitutional prohibition, it must seek it in the same way and show similar beneficence.

The Question of Special Privilege.

Some of the nice old gentlemen, with whose views we have no sympathy, as stated above, seem to be badly scared lest the farmers get something which other people do not have. We are not fraid, because it has always seemed to be the other way around; still the objection should be briefly noted. One of these patriarchs, perhaps the nicest old Californian we know—present company always excepted—has recently written this: "If the actual farmer, or would-be farmer, is to have money loaned to him below market value, why should not the merchant, the miner, and the mechanic all enjoy the same privilege?"

This conscientious old party often stands up so straight that he leans backwards, and that is just what he is doing in the sentence we have quoted. The fact is that the merchant and manufacturer, who have security anything like as good as the responsible farmer has, can borrow money for one-half to two-thirds of the interest the farmer has to pay—and that is one of the best reasons why the State should try to even things up by setting a proper estimate on the value of agricultural security and responsibility. The farmer does not demand that he should have money below market value; he contends that market value to him shall be the same as to other people who have as good security. At present there is no market value; there is one price to the handler and speculator; there is another price, much greater, to the producer. There is no market value; there is a varying schedule of rates according to the prejudice of the lender. The farmer is not contending to get special privilege; he is fighting to do away with special privilege, which is against him. If the miner is in the same sinking condition, let him climb into the boat also. Vote for the amendment!

Queries and Replies.

Querists must give name and address

Eucalyptus Citriodora.

To the Editor: I wish that you would kindly let me know what Eucalyptus trees you think would do the best up here, as I wish to plant out a few for shade. Do you know anything about the citriodora? It is a large tree with spreading limbs; trunk and limbs are white. There are a great many in the valley about Sacramento, but it may be too cold up here for them.—E. W. G., Ukiah.

The citriodora, from its performance so far, would hardly be called a large tree, for a eucalypt. The best record we have is 60 feet at twelve years old—but it is counted large in Australia, where it has attained great stature with great age. We doubt if you have seen very large ones near Sacramento; the largest are in Southern California in nearly frostless places. Citriodora is presumably too tender to serve your purpose. The species which is among the most hardy and which has the characters which you describe is viminalis. This one is quite common in Central California. It is a large, branching, handsome tree, but counted inferior for fuel purposes.

Rather Scant Fertilization.

To the Editor: I have been wondering whether a six-foot strip of alfalfa in the center of the rows one way would furnish sufficient fertilizer in an apricot orchard. I would let it grow continuously and if it died in any place, plant it over again. We have no water in August and September, but plenty in the spring.—J. W. C., Hemet.

Alfalfa does not add all forms of plant food to the soil. Some substances it takes from the soil; and though its growth processes may render them more easily available to other plants, the most it can do in that line does not actually add more of these substances to the soil. If then the alfalfa is grown as a crop and sold away from the land in the form of hay, the supply of these substances is constantly being reduced by growing alfalfa in this way. But alfalfa and other legumes do add nitrogen by their ability to take it from the air through the action of bacteria on their roots. For this reason you cannot count upon alfalfa as restoring to the soil all the plant food which the apricot tree takes from it in its wood growth and fruit crop. All except nitrogen must be made good by other means of fertilization. If alfalfa is grown without cutting, or is cut and the cuttings allowed to remain and decay, the plant will, theoretically, not take anything off the land, but, at the same time, it adds nothing but nitrogen to it. If the soil is naturally richly supplied with all other plant foods, then the addition of nitrogen, by alfalfa growing or otherwise, is a rational proceeding. If only a small addition is needed to the natural supply of nitrogen, then a narrow strip of alfalfa may be enough, but this is probably not often the case.

A more important consideration for you is whether you have soil-moisture enough to grow the strip, supply the waste by evaporation and meet the needs of the trees. If you have no water in the autumn, the probability is that the alfalfa will rob the trees during that period, weaken the next year's fruit buds and perhaps cause die-back of branches if not the death of the trees in extreme cases. Rational enrichment of the soil consists in growing a legume when there is naturally more water in the soil than the tree can use, or when the soil can be kept adequately moist by irrigation. Therefore a winter-growing legume, and not alfalfa, is indicated in your case. However, there is a farther consideration. If you can grow enough alfalfa hay on that strip to spread as a mulch over all the rest of the ground between the trees and thus substitute a mulch for summer cultivation, you may save enough moisture by checking evaporation to more than compensate for that which the alfalfa uses in its growth. Thus your strip proposition brings you up against the latest problem in the summer handling of California fruit lands. This problem is now awaiting demonstration.

Grape "Coulure."

To the Editor: I am sending you a sample of grapes from my vineyard. What is the matter with them? What remedy should I employ? I had a promise of 100 tons from 20 acres, but there will be less than one-third that. The vines are vigorous and free from mildew. All vineyards in this valley are in like condition.—L. W., Watsonville.

It is "coulure" or failure to develop perfect berries and it is believed to be due to conditions interfering with pollination of the bloom. It has been unusually bad this year. In the case of Muscats there are reports that late pruning has assisted pollination in some way and that late pruned vines have borne better clusters than early pruned. Otherwise no treatment has been suggested except the use of sulphur to prevent early mildew attacks. But coulure is not conditioned upon mildew.

Black Aphis of Cherry.

To the Editor: I send leaves taken from cherry trees in my orchard in Mountain View. There are about ten to twelve trees affected. Kindly let me know what can be done with the trees.—V. S., San Francisco.

The leaves have been turned into a mass of corruption by the black aphis of the cherry. To kill all you can of the eggs, which will be deposited on the twigs this fall, spray during the winter with lime, sulphur, or miscible oil sprays—hitting all the twigs and spurs. Watch the trees closely as the leaves appear and as soon as you see the lice, spray with tobacco extract (40%), 1 lb. to 70 gallons of water, and repeat as the pests continue to appear. Success depends largely upon striking early in the season and striking often.

Asiatic Roots for California Pears.

To get a good foundation for a pear tree is one of the most important matters in our commercial fruit growing, and a careful effort to get at the truth of this measure should be considered by all pear growers.

At the last Fruit Growers' Convention A. L. Wisker of Grass Valley presented a paper outlining his inquiry as to the standing of Japanese seedling roots in blight resistance. We present below what seem to us the most salient points of his contribution to knowledge of this subject:

When a single grower suffers a loss of $25,000 from pear blight in one season, argument is unnecessary to show that the situation is serious—particularly in view of the fact that California' pear industry, according to the last census, produced more money than that of any other state in the Union (viz., $1,660,963) notwithstanding the fact that her nearest rival—New York—had 50 per cent more bearing trees and in total number had just twice as many as California. Michigan is close behind this state in number of bearing trees and in total number, but the value of her crop was less than one-third the value of ours. Collectively these states produce nearly half the pears of the entire nation. Assuredly these figures warrant the assertion that if it pays to fight pear-blight in any part of the country it will pay double well to do so here, where the industry is more profitable than in either of the other states where production approaches that of California.

What May be Expected.—The absolute eradication of pear-blight cannot be hoped for, but blight-control is a reasonable and practical expectation. Splendid work is now being done by scientific and practical investigators in the study of both preventive and remedial measures. The first named appear to be of greatest promise and much research work is in progress to discover and to breed varieties of high quality which shall be strongly blight-resistant in root, in trunk, and in branch. It is along this line that eventual deliverance from blight will be found but some years must elapse before horticulture can reap the benefit of the work now in hand. In the meantime blight problems will continue to arise, and it is the purpose of this paper to particularly deal with our present knowledge of blight-resistant roots, since the elimination of blight in the underground parts of trees must ever remain the first—and most important—step toward pear-blight control.

Probably 80 per cent of all pear trees grown in the United States are either budded or grafted on seedlings of pyrus communis, the wild pear of Europe, commonly called by nurserymen the French pear. This is the ideal root for the nurseryman, since it has perfect affinity for all the commercial varieties, is satisfactory to "work," and if propagation is done by budding a high percentage of buds "take" if the work is properly done.

However, from the standpoint of the orchardist it has three serious faults—it root-suckers profusely from plow injuries, is subject to great injury from the root aphis, and is particularly susceptible to the bacteria of pear blight — more so, in fact, than any other root used in pear propagation.

The Dwarfing Roots.—It is known that the pear can be grown on seedlings of the hawthorn and the mountain ash, yet very few have been thus propagated and little is known of the behavior of such trees.

The pear may also be grown on apple roots. In such cases the root is somewhat blight-resistant but the tree is short-lived and apparently no advantage is to be found in this direction. No satisfactory pear orchards have been produced on the apple, although top-worked trees sometimes bear well for a few years. At Colfax, in this state, such a tree has borne extra fine fruit for the past five years and is still thrifty.

The affinity of some varieties of pears for the quince is well known, and orchards of the dwarf trees thus produced are of commercial importance in some parts of the country. In the production of such trees the pear is budded on rooted quince cuttings. This root is considerably more blight-resistant than the French pear, and is probably the best root to use in rich soil that is excessively moist. While dwarf pears are not in general favor in California, it is quite probable that under certain conditions they are much to be preferred to standard trees. Many varieties must be double-worked when grown on quince—thus increasing cost of trees—but the fact that dwarf pears bear young and yield heavily, with an improvement in quality and shape for certain varieties (together with a measurable degree of blight-resistance) entitles the quince root to more consideration than it has yet received in California.

Asiatic Pear Roots.—Rooted cuttings of the European-Asiatic hybrid pears, such as Kieffer, LeConte, Garber, and Smith, have been used to a limited extent but results have been generally negative. Kieffer is most promising of those named. LeConte cuttings were advocated several years since by a few California horticulturists. Personally I have little confidence in rooted cuttings of these hybrids, but think there is a most hopeful field for experiment in testing rooted cuttings of certain varieties of European blood that have shown practically complete immunity to blight.

The root that in the present state of our knowledge appears to present the greatest combination of advantages of any of the roots having blight-resistant qualities is the Japan pear, pyrus sinensis, the wild pear of Asia. Some nurserymen untruthfully refer to this root as "blight-proof"; it is not, but it is strongly blight-resistant. There is no blight-proof root thus far known to horticulture.

What is Known of the Japanese Root.—The use of this root extends over a relatively short period and it is a matter of regret that we have no authoritative literature bearing upon the subject in a broad way, and no knowledge of any scientific observations extending over a period sufficient to warrant our arriving at wholly definite conclusions. Because no such analytical study of the subject is available I have been compelled to weigh the opinions of numerous observers, both scientific and practical, and to interpret them in the light of my own personal experience, which in itself is too limited to allow me to reach positive convictions. On most points the views of the various scientific observers harmonize and the following seem to be generally accepted as facts:

1. The Japan seedling is of vigorous habit, frequently making more thrifty growth than the French.

2. Japan seedlings in the nursery are much less subject to fungus leaf-blight than French.

3. Japan roots have but little tendency to sucker. French roots sucker readily from plow injury, and blight-infection of such suckers speedily reaches the main roots of the tree.

4. The pear-root aphis—the most serious insect enemy of the tree when grown on French roots—does comparatively little injury to the Japan root.

5. While Japan seedlings vary in their resistance to blight, as do the French, and show different degrees of resistance in different parts of the country, their average resistance is much greater than any other root now in use. and is believed to afford relative immunity to root-blight in Pacific Coast orchards grown on Japan roots. Their blight-resistant quality is less pronounced in the New England states. Their behavior in the South, Southeast, and South west has been as satisfactory as on the Pacific Coast.

6. The Japan root will make vigorous growth with less soil moisture than the French. It is not only adapted to the drier soils, but is strongly resistant to their worst insect pest—the root louse—which in some localities is more to be feared than blight. This root is better adapted to dry, warm climates than the French, but its behavior in extremely severe northern climates is yet to be learned.

Japan roots do not dwarf the growth.

Affinity of Japan Root.—It is generally believed that the affinity between the Japan root and some of the European varieties is less pronounced than that of the French, and some nurserymen claim that not so high a percentage of buds will "take" on the Japan stock, thus making the tree more expensive to propagate. One Washington nurseryman discarded the root for this reason, having no other criticism. It will take several years of experimental work to conclusively determine these points. In our nursery at Grass Valley we have only worked Anjou, Bartlett, Comice and Forelle on Japan stocks, but our stand was satisfactory when the work was carefully done. In our work with the varieties mentioned it seems that Anjou has not "taken" quite as readily as the others, but that may be due to some other cause not determined. Where the bud "takes" at all we find the union to be perfect and in every sense satisfactory.

Oregon nurserymen use Japan roots very largely and this stock is also in favor in Washington. It has been used for 28 years by a nurseryman of Richmond, Virginia, and other prominent nurserymen have found the root satisfactory.

The Japan root probably has one serious disadvantage—under conditions of excessive soil saturation it may be injured by root rot. If pear orchards of blight-resistant roots are desired in such soils it may be best to grow dwarf pears on quince roots. If more complete acquaintance with the Japan root should prove that it has serious faults, the next step in the direction of blight-resistant roots will be the propagation of trees on rooted cuttings of certain varieties of pyrus communis blood that have shown wonderful immunity to blight. It will probably take ten years of experiment to bring about this substitution, but the orchardist of the present may feel positive assurance that the day of blight resistant roots is now at hand and may at least safeguard his orchard to this extent.

THE level of prices paid producers of the United States for the principal crops decreased about 4.6 per cent during August; in the last seven years the price level increased about 1.7 per cent during August. On September 1 the index figure of prices was about 6.2 per cent lower than a year ago, 2.8 per cent lower than two years ago, and 3.1 per cent lower than the average of the last seven years on September 1.

The prices of meat animals—hogs, cattle, sheep, and chickens—to producers of the United States decreased 1.4 per cent from July 15 to August 15. On August 15 the index figure of prices for these meat animals was about 11.7 per cent lower than a year ago, 6.5 per cent lower than two years ago, and 0.7 per cent lower than the average of the last five years on August 15.—Leon M. Estabrook, Chief of Bureau of Crop Statistics, U. S. Dept. of Agr.

ROOTS FOR ENGLISH WALNUTS.

To the Editor: Referring to your recent answer to a query about relative bearing of seedling and grafted walnuts, I would state that if you will visit the California Nursery Co. at Niles you will see growing both grafted and seedling walnut trees thirty years old. The grafted trees are on English or Persian root and also some trees on California black walnut root twenty years old. The only difference I ever noticed was that the nuts on the seedling trees would vary in size and crop from one year to another more than the grafted trees would. They have the Franquette, Mayette, Mayette Rouge and a large collection of other varieties.—J. P. Moniz, Edenvale.

[The statement is interesting, but the question was for an acreage of each kind.—Editors.]

Shot-Hole on Peach, Apricot and Almond.

A timely warning that shot-hole fungus which did more injury than usual in 1915 should be fought by early and continued spraying.

To the Editor: I have an almond rchard and it is infested with shot-ole fungus badly. Please give me est remedy for getting rid of it as has hurt the crop a good deal this ar. My neighbors say they will have spray as soon as the leaves drop do any good. Please advise me hat to do.—E. D. B., Chico.

Answered by Prof. R. E. Smith, University of California.]

The letter of your correspondent efers to a condition which is very ommon and of considerable impor-nce in the State just now.

Last spring we had a very unusual utbreak of shot-hole fungus upon lmost all of our various stone ruits on account of the favorable onditions for the fungus produced y late rains. As a consequence each, apricot, almond, and in some laces other stone fruit trees are ull of this fungus, and there is very reason to expect another abun-ant outbreak next year unless roper treatment is carried out to lean up the trees during the com-g winter.

First Spraying. — We recommend hat trees of the three kinds men-oned be thoroughly sprayed with inter strength lime sulphur solu-on during the period from Novem-er first to December fifteenth. his work should be done if possible fter most of the leaves have fallen nd after all pruning has been done, ut it should not for any reason be ut off after December fifteenth, for the spraying is done later than hat the chances are that very little ood will be accomplished. In doing his spraying the main object should to coat all the smaller branches d twigs very thoroughly rather han to simply paint the trunks and rge limbs with the solution. The hole tree should be sprayed, but is upon the smaller growth that he fungus winters over and com-ences its attack again next year, d so a special effort should be ade to spray all the twigs and all branches very thoroughly. In calities near the Coast where runes, plums and cherries were ore or less affected with shot-hole rouble during the past season, we ecommend the same treatment. In act, we believe that this spraying will be found profitable upon any nd all kinds of stone fruits every-where in the State.

Second Spraying.—Just as the uds commence to open next spring he trees should be given another praying, using at this time either he lime sulphur or Bordeaux mix-ure, of the strength of five pounds f quick lime, four pounds of blue-tone, to fifty gallons of water.

Third Spraying.—Experience last ear when shot-hole troubles were he worst that they have ever been n the State, showed that two good prayings according to the schedule bove given controlled these dis-ases with almost absolute success. here were many cases, however, where the work was not thoroughly arried out or where an unusual mount of rain fell after the second praying, when shot-hole fungus be-ame more or less abundant upon he foliage and even upon the fruit f peaches, almonds and apricots. With the apricot this occurred to some extent even where good spraying appeared to have been practiced, on account either of abnormal weather conditions or the occurrence of shot-hole caused by something different from the usual fungi. With the possibility of catching these unusual developments, we recommend to those who wish the best possible results a third spraying next spring just after the fruit is well set, using Bordeaux mixture composed of three pounds of quick lime, two pounds of blue-stone and fifty gallons of water. Especially if we have rain following the blossoming period, it is believed that such a spraying will do much good in limiting the amount of spotting and decay of apricots and the development of shot-hole on the fruit of peaches, which occurred so abundantly during the past season.

STARTING JUNIPERS AND ACACIAS.

An Italian propagator, I. Baldrati, at Eritrea, has obtained good results from the following methods devised by him:

Juniper Seeds. — The berries, gathered at a suitable stage of ripeness, are dried in the sun for about ten days; they are then placed in water for four or five days and occasionally stirred; a good fermentation is thus obtained; the fermenting mass is then well worked up until the seeds are freed and cleaned. They are then rinsed in water that has been warmed in the sun and immediately sown in beds. If the sowing is done at the beginning of the rainy season the seeds germinate uniformly within four to six weeks.

Acacia Seeds.—The seeds of all the best acacias germinate with difficulty and not uniformly; hence the importance of methods for facilitating the process and rendering it uniform.

With small parcels of seeds, the writer has obtained excellent results by steeping them for twelve hours in water, then enclosing them in moist woollen bags placed in glass-stoppered bottles exposed to the sun. In about ten days, 98 per cent of the seeds germinate; the seeds are taken out and sown as fast as the radicles appear.

When dealing with large quantities of seed, they are placed in vessels with boiling water and covered with sacks and kept in enclosed spaces so as to delay cooling. After two to four days they are sown in moist ground. It is necessary to sow at the time of the regular rains or to water copiously. With this method the writer has successfully sown: A. cyanophylla, A. pycnacantha, A. decurrens, A. farnesiana, A. longifolia, A. cultriformis, A. cyclops and others; with some other species, such as A abyssinica, this method gave negative results.

Bulbs and Lemons in Santa Cruz.

[Written for Pacific Rural Press.]

Bulb-growing in this county, while not at all new, has of late come into greater prominence and is destined to achieve notable proportions. On a small scale quite a number of persons have raised bulbs, in variety, for the market in past years, and this county has won the well-deserved reputation of being exceptionally adapted to bulb culture. If the writer is not mistaken, this locality may be the best for this purpose in the whole country and possibly we may share the world-wide reputation of Holland.

For several years, quite a trade in bulbs with the outside has been established in Santa Cruz city. But, in the past years, the business was conducted in hot houses or circumscribed grounds, which have given way to field culture, which now covers a large area and is annually increasing. A large trade in cut flowers was also built up, paper-white narcissus being, among the other flowers, sent far away in quantity. Today the business of general bulb culture is on a better footing than ever, and the outlook is that it is but in its infancy.

Under contract a large area is now devoted to raising bulbs of different varieties—Callas, white, yellow and black; fresias, in large numbers; gladiolus and others. Having tried this culture on a small scale, quite a number are enlarging their "plantations" and new recruits are, this year, taking courage from the success of their forerunners. Another season and there will be a great enlargement of the business, without the least doubt. Recently a number of persons engaged in the business, small growers and large, have effected an organization, co-operative in its nature.

Lemon Growing.—We are also at the beginning of another industry which will eventually enlarge, apparently, within a decade. From time to time, ever since the first settlers came to Santa Cruz, lemon trees, singly, were set out as ornaments in home gardens. Two years ago a surprising showing of the product of these trees was made at the Chamber of Commerce here. Finer lemons, both as regards appearance and quality would, with difficulty be found. Stimulated by the showing quite a large number of persons set out, in the aggregate, one or two thousand lemon trees, increased last spring by a larger number. One orchard has between two hundred and three hundred trees. The lemons grown here, near the coast, are of superior quality, developing a fine acid in goodly quantity. The finest limes the writer ever saw or tasted have grown within the limits of the city of Santa Cruz, and pomelos of attractive beauty and flavor are borne on trees in the Pajaro valley. It is doubtful if large orchards, compared with those in the southern part of the State will ever be set out, but the business of lemon production will evidently attain large proportions.

Santa Cruz. A. W. Robinson.

A recent commerce report states that the present crop of pears and apples in Amsterdam, Netherlands, are the largest in years.

Kill Morning Glory

NOXIOUS WEEDS AND INJURIOUS INSECTS.

Almonds in Northwestern Persia.

To the Editor: I have received a letter from Mr. Wm. B. Lake of Calneve, Cal., asking that I procure for you information about almond culture in Tabriz, Persla, which is considerably above sea level ln a mountain valley. My brother has accordingly prepared a statement on this subject. This brother ls at the present livlng in this place, being unable to return to Persla on account of the war between the Turks and the Russians.—Harry W. Wilson, Indiana, Pa.

Mr. Wilson's Statement.

I have lived in Tabriz, the capital of Azerbaijan, for about thirty years. I write simply from casual observation, not having made any special investigation.

The quantity of almonds raised in this region is large and is a considerable item in export trade, especially to Russia. They are also used freely by the people. The fuel for Tabriz, a city of 200,000 people, ls largely old almond and apricot trees. The orchards are very extensive all around the basis of Lake Urumia.

The region is mountainous. To the north is Mount Ararat, 17,000 feet high, to the east Savalan, 14,000 feet, and in the midst Sahend 12,000 feet. Lake Urumia, 125 miles long, lies in the centre. The plains and valleys surrounding lt are from 4200 to 5000 feet above sea level. The latitude is 37 to 39 degrees north.

Tabrlz, 4400 feet high, has a temperature running from 103 in summer to 15 below zero Fahr. in winter. A winter rarely passes without having some nights show 2, 5 and 10 below zero. Snow is frequent and in good quantity. Natural ice of requisite thickness is stored up for summer use. The trees suffer no harm from the freezing. Spring and autumn have rain in sufficient quantity. The summers are dry, with only an occasional shower. The days are hot and the nlghts cool, a strong wind blowing refreshingly almost every night.

The trees are raised from the seed: i. e., the nuts planted in rows in the garden, and set out when one, two or three years old. Some are grafted and some are not. Care is taken to plant in a sandy soil those started in a sandy soil, and similarly for a clayey soil. They thrlve in both kinds of soll. The trees blossom from the 20th of March till the 20th of April, depending on the season and slturation. The fruit ripens about the first week of September. The blossoms sometimes suffer from a frost or a great freeze, but most years there are good crops. I should say that the trees are exceedingly hardy and productive. I have never heard of any attention belng requlred on account of sexual quality. Crops of alfalfa and wheat are raised between the trees. I would say that the trees llve and bear till they are fifty years old at least, attaining a height of thirty feet and a girth measure of two and a half feet.

Cultivation consists in digging around the trunk in the spring, and pruning, generally in the spring. The trees are irrigated about once a month, from April to September, and it is thought best to glve the ground a thorough soaking in the latter part of winter. Three or four irrigations are enough to keep the trees alive and bearing.

The nuts are of different kinds, some hard shells, both blter and sweet; some soft shells, smaller in size. The quality seems good but I can make no comparison between them and the American almonds. They grow side by side in that climate with walnuts, pistachios, peaches, pears, grapes, mulberries, etc.

I am now in America. If special and technical information is desired, I recommend that the Department of State be requested to ask the Consul, Mr. Gordon Paddock of Tabriz, to make a report and to send seeds or young trees if possible. Once the department procured from Persia a quantity of the different varieties of the grape vlnes.—S. G. Wilson, Indiana, Pa.

[As our subscriber, Mr. Lake, llves in Lassen county, which consists largely of plains and valleys considerably above sea level, we presume he has thought of securing hardy almonds from an elevated reglon ln Persia, and the sketch whlch he has drawn out from Mr. Wilson ls lntersting. The varieties they grow may be harder than ours, but lt must be remembered that the common almond tree is perhaps as hardy as the peach against freezing which comes while the tree is dormant, but is rendered unprofitable by much lighter frosts which come after blooming. This is the reason why the tree fails to bear in Callfornia mountain valleys where late spring, and even summer frosts may be encountered.—Editors.]

IRRIGATION DISTRICT ORGANIZATION.

To the Editor: We are thinklng about organizing an irrigation district under California laws in one of the coast valleys of Central California. Will you name a few districts now in operation from which suggestions can be drawn, or glve other help toward details of organization?—Reader, San Francisco.

[Answered by Frank Adams, Irrigation Manager U. S. Dept. Agr., Berkeley.]

The principal irrigation districts now operating in this state, with their addresses, are as follows:

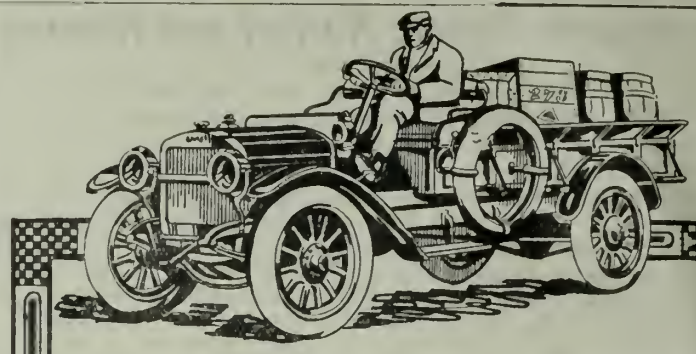
Oakdale Irrigation District, Oakdale.

South San Joaquln Irrigation Dlstrict, Manteca.

Modesto Irrigation Distrlct, Modesto.

Turlock Irrigatlon District, Turlock.

Alta Irrigation District, Dinuba.



Tulare Irrigation District, Tulare.

San Ysidro Irrigation Distrlct, San Ysidro.

I might add that in none of these cases are conditions very simllar to those ln a coast valley, bnt I see no reason why the irrigatlon dlstrlct act of the State would not be entirely applicable to your conditions.

It is rather difficult to glve you any definite advice without first golng carefully over your proposed project, which is not possible for me to do at this time. However, lf you care to write me in about six weeks hence, I shall be glad either to come down myself or to arrange, if possible, for someone else to go over your project. I mlght say that it is expected that a rather full report on Callfornia irrigation dlstricts prepared in this office wlll soon be published by the State Department of Engineering at Sacramento.

Almond hulls fed exclusively was proven to be poor food for stock at the Unlversity Farm at Davls.

Nineteen months' service without a nickel expense for repairs

Owner's story of what his

G. M. C. TRUCK

has done

San Francisco, Cal., Sept. 11, 1915.

DON LEE—G. M. C. TRUCKS,
San Francisco, California.

Gentlemen:—

I take this opportunity of informing you that I have been using one of your 2-ton G. M. C. Trucks for the past nineteen months. During that time the truck has never been off the job a day and has never, at any time, failed to respond.

It will interest you to know that during that time the truck has not cost us 5 cents for repairs and we have never yet ground the valves.

We would be pleased to have you refer intending purchasers to us as we just enjoy boosting the G. M. C. Truck.

Yours respectfully,

HENRY BARNER.

California Fruits and How to Grow Them

EDWARD J. WICKSON.

Seventh Edition, Extended and Revised.

Contains over 500 pages of text with many illustrations. Goes thoroughly into every phase of that immense industry, California Fruit Growing.

In the preliminary chapters, the important subjects of Climate and Soils are handled in a masterly manner, with the necessary modifications called for by the immense latitude, the topography of the Country and the different regions with their relation to coast, valley and mountain.

The book then goes into the subject of Fruit-Growing from the nursery, on through budding and grafting, preparation for planting; planting, pruning the trees and thinning fruit; cultivation, fertilization and irrigation right along to picking, canning and preserving, with chapters on injurious insects, tree diseases and the protection of the trees therefrom. Every fruit and nut which can be grown commercially in California or countries possessing a similar climate, has received the attention which the forty years' experience of the author makes of incomparable value to the fruit grower.

ALFALFA SEED

Our success in the Alfalfa seed game has astonished the most skeptical. We were advised that clean, reliable seed could not be furnished in quantity. We found that it could be, if the dealers would go to the expense of inspecting the seed fields before they were harvested. We do this thing and therefore know what we are serving is right. If it is not right then we are to blame and are going to make it right.

We have seed for sale in quantities from 1-lb. to car lots. It is the 1915 crop—the best to be had at any price, anywhere. We have no bargains to offer you, but if you are interested to the extent that you want good seed at honest prices, we are on the job to the finish. For prices, samples, etc., wire or write,

TRAPPING SEED TICKS.

To the Editor: My chickens have those black chicken ticks that bury their heads into the flesh. Will you tell me a remedy?—R. T. M., Richgrove.

[Send to the Dept. of Agri., Washington, D. C., for Circular 170. The tick of which you speak is one of the most difficult pests to destroy, and will live through conditions that would be fatal to almost any other species of insect. Spraying the house both inside and outside is recommended, repeating six to ten times with an interval of three days between each spraying. The following sprays may be used: Whitewash containing carbolic acid; distillate mixed with carbolic acid or creosote; crude petroleum; boiling water; strong kerosene emulsion, etc. Before spraying the house, the fowls should be moved and placed in boxes or coops where the seed ticks can drop off as they become gorged, which occurs in about eight or ten days. Coops arranged with a wire net bottom through which the ticks can fall into a pan containing kerosese or strong spray material would trap most of them as they drop from the fowls. After two weeks in these temporary quarters, it is usually safe to return the fowls to their original quarters.—Editors.]

A HEARING ON RURAL CREDITS.

In Sacramento on September 29, farmers, fruit-growers, bankers and business men, testifying before the Rural Credits Commission at its opening session, favored some form of rural credits for the farmer, all alike agreeing that the present colonization schemes practiced in this State are not all that is desired.

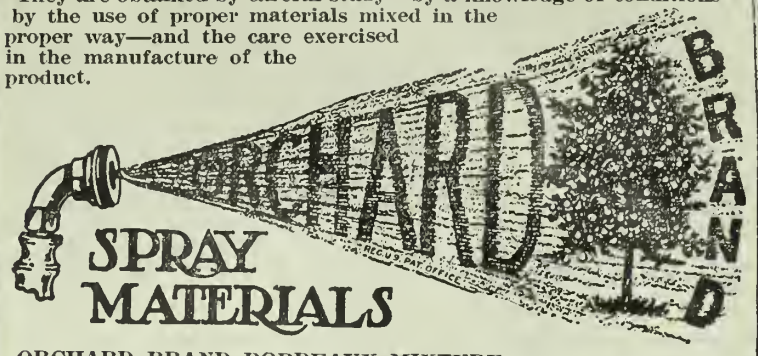
L. M. Florin, a grape-grower of Florin, told of the failure of ranchers buying land on time and competing with the Japanese. George W. Peltier of the California National Bank thought that with the proper safeguarding of credits the banks can handle the rural credits necessary without any other machinery.

S. Glen Andrus of the Sacramento Chamber of Commerce declared that a marketing system is a primal need as all farm products are now in the hands of a food trust and $6,000,000,000 is lost annually in this country between the farm and the kitchen, to say nothing of the loss because of crops that cannot be marketed profitably.

PAPER FOR PEACH DRYING.

To the Editor: Last summer I ran across an article in your paper on paper for peach drying. I got up against it this season for trays and with the paper I succeeded in saving a ten-acre crop. I found out the heavy soft paper of a brown color was better to handle than the lighter grades. The sun did not affect the fiber in the heavy paper but almost scorched the lighter grades so that they easily broke to pieces. I. W. Cook.

Hemet.



BLACK-EYE BEAN FIBER.

To the Editor: I have heard that the fibre of blackeye bean straw is used in making rope and twine, and that there is a demand for it, if baled for shipment.—H. R. R., West Butte.

[We do not know a thing about it. Can any one answer?]

RESULTS are FACTS

They are obtained by careful study—by a knowledge of conditions—by the use of proper materials mixed in the proper way—and the care exercised in the manufacture of the product.

ORCHARD BRAND BORDEAUX MIXTURE is economical; it produces results. The chemical exactness of this preparation gives the greatest efficiency. Labor, doubtful combinations, mixing and storage tanks make "Home-made" mixture an extra item of cost, rather than a saving.

ORCHARD BRAND BORDEAUX MIXTURE is especially effective in the fall of the year for the control of peach blight, and shot-hole fungus disease on peach, almond and stone fruit trees.

ORCHARD BRAND Lime Sulphur Solution, Crude Oil Emulsion and Miscible Oils are specially prepared for Dormant Spraying to kill scale insects and aphis eggs.

Our information bureau is at your disposal, free of charge. When writing state quantity and kind of material desired, or the age, number, and kind of trees and the pest you wish to control.

NEW WEIGHT OF LUG BOXES.

The introduction of regulations enforcing the net weight of lug boxes when they are in use delivering fruit and farm products from the orchards and fields to the canneries, has resulted in the saving of thousands of tons of fruit and farm products to the growers, according to a statement made by Charles G. Johnson, State superintendent of weights and measures.

The packing of Emperors has just started in the San Joaquin Valley. These grapes are the latest to be shipped from that section; about 500 to 600 cars are expected to be shipped, 50 per cent of which it is anticipated will be packed in sawdust.

THE amount of water power already developed in California is equivalent to 9,000,000 workers, or two workers for each inhabitant of the State.. The 120,000,000 of mechanical horse-power of the United States is equivalent to the work of 1,200,000,000 strong men. In other words, although we have only 100,000,000 actual population, we have the equivalent of twice the combined working population of China and India.

"The available arable lands in California have been estimated at 20,000,000 acres, fully half of which must be irrigated by water power. This will require only 1,000,000 horse-power additional development. The 300,000 average horse-power now being supplied in California is making a profit for the consumers of more than $50 per horse-power, or $15,000,000 a year. The cost of power to the consumers has been reduced in California to about one-half the cost twenty years ago. Further than this, the capital investment saved to the consumers through the economy of motors rather than engine plants has been placed at $30,000,000."—F. G. Baum, at the International Engineering Congress in San Francisco.

Mechanical Power on the Farm.

[Written for Pacific Rural Press.]

SIMPLE DEEP WELL PLUNGER PUMPS.

It costs $6.50 per acre per year to lift water 80 or 90 feet for irrigation of a 20-acre orange orchard near Lindsay, operated by F. Simpson. The 3 h.p. electric motor uses only 2.6 h.p. on the average to run the double belted 5-inch plunger pump which delivers about 10 miner's inches. By running a slow stream via concrete underground pipes into four furrows for each of 10 rows all at once, enough water soaks into the ground to maintain the "best young orchard in the country." It takes three weeks to irrigate this way, but the trees surely have responded, on an unfertilized soil grained for many years.

A 4 h.p. Witte gasoline engine is used on the home orchard belonging to Mr. Simpson. He has an unusual lever device for pumping with a 5-inch plunger pump to lift the water about 90 feet. He thinks a 1½ h.p. engine would lift about 8 miner's inches. A similar one put in for his brother nine years ago is still working. The lever is a 3x12, 20 feet long, the center of which is pivoted 9 feet above ground by a piece of gaspipe through a vertical 8x8 timber. On one end of the lever are several sacks of sand as a counter weight. From the other end hangs a 2½x3 plunger rod of wood down to tbe cylinder. Eighteen inches toward the center from this end, a 4x4 six feet long is hung by iron straps and a gaspipe. This is connected to the running gear.

In order to get extra power and slower motion, a belt runs from the small belt wheel of the engine to a big wheel in the running gear several feet away. The shaft of the latter wheel carries a small cog wheel which runs one large enough so one revolution of the latter raises and lowers the plunger once, connection with the 4x4 hanging from the 3x12 being made by a bolt through the rim of the large cog wheel.

Both the engine and the running gear are set on concrete bases to insure continuous alignment and to reduce vibration. The pivot post also is set in a concrete pedestal.

The brother's outfit is somewhat similar, but run by a 2 h.p. electric motor, less power being required on account of a double belt arrangement. The motor runs 1200 revolutions per minute. Its belt wheel, about 3½ inches in diameter, runs a belt 3½ inches wide 12 feet to a wheel about 3½ feet in diameter. The latter wbeel is on a shaft resting on a concrete base and carrying anotber wheel about 9 inches in diameter and 9 inches wide. From this, a 9 inch belt runs back beyond tbe motor to a big wbeel on a concrete pedestal. This wheel is of a size which reduces the speed from the motor's 1200 r.p.m. to about 15 r.p.m. Its shaft turns an iron eccentric arm 20 inches long, 2 inches thick, and tapered from four to six inches wide. The end of this contains the axle of a vertical arm whicb works the lever. This vertical arm has four holes near its lower end, about 4 inches center to center, which fit over the axle and may be changed to alter the length of the plunger stroke.

PUMP PERMITS FALL IRRIGATION.

Now that the rush work in fruit is over it is time to plan labor saving systems for next year. When a labor saving system also saves irrigation water that has to be pumped, it may soon repay wbatever large initial cost is necessary.

Two men irrigate a peach orchard sloping several feet in 10 rows using 750 gallons per minute for W. T. Dice of Fresno county. An 8 h.p. engine which Mr. Dice claims develops 12 h.p. runs a 5-inch centrifugal pump with a 6-inch suction and an 8-inch outlet. Since it is only 15 feet to water and the pump is five feet down, a big stream is thrown into the concrete standpipe nearby. Tbe water rises through a pipe within the large one and overflows to run through underground concrete pipes to tbe alfalfa one way and the vineyard the other.

When the orchard is to be irrigated, the engine is slowed down by use of a throttle placed in the carbureter tube by Mr. Dice. This reduces the force of water so that a cap can be screwed onto the inner pipe. Then the engine is opened up again and the water forced into a 12-foot standpipe whence it gravitates to the standpipe at the top of the hill 10 rows away. Half of the water is turned out of this upper standpipe to run the length of five acres each way. This water is watched especially by the men while the intermediate standpipes are opened to run water slowly into the other rows. Use of cement pipe requires that they be set in solid ground so they won't settle.

Since the well is only 37 feet deep, a great deal of sand is thrown

Extensive water development is now taking place throughout the West. Wise ranchers are giving the question of irrigation serious study, for they realize that Fall is really the ideal time to install their new pumping plant. Ranchers, irrigators and prospective water users will find that our new irrigation booklet No. 25 gives many valuable pointers. It also describes in detail the construction of the world-famous **Layne & Bowler Pump.** Write today for a copy.

If you have any kind of pumping problem to solve, consult our free advisory department. This service places you under no obligation to us. "Let the world's largest water developers solve your pumping problems."

READ-MILLER CO.

For Water Deep Under The Ground

Jackson Deep Well Turbine Pumps give continuous and efficient service. They do not get out of order as they have no valves or plunger rods. Very little care or attention needed as they are oiled from the surface. Are much lower in cost than other types of deep well pumps when the expense of dug pits, cribbing and timbering is reckoned. They raise water from the very bottom of the well, thus eliminating heavy vacuums and delivering all the water the well yields. They develop slow wells and increase their flow.

Like all Jackson Made Pumps These Deep Well Turbine Pumps Are the Very Best Pumps Made for the Purpose—They are Dividend Earners, Not Expense Makers

Whatever your water problems may be our Expert Pumping Engineers will help you out free of charge—write

I sell direct to the consumer Trays, Box Shook. You will save not less than 10 per cent by trading with me. Doors, Windows, Mouldings. 35 yrs. in this business

F. WILSON, STOCKTON, CAL.

Horse Sense IN Belt Buying

When you are asked to put your good money into a belt, you should be in position to know just what service you are going to get from that belt. You should know how to test it—How to find out how it is made—How it is put together—How it will stand the strain in actual use—How good the guarantee is.

We want to send you a folder that gives an infallable test for rubber belting and tells you how to apply tbat test. Witb tbis folder we will send a sample of

Every foot of Test Special is backed by an unqualified guarantee—and that guarantee is backed by a manufacturing firm that for nearly three-quarters of a century has had the enviable reputation of making nothing but the best and of making good wherever their product did not give entire satisfaction.

up at the start. The engine is cooled with water from the pump, so the circulation includes a barrel in which the sand settles before running to the engine.

This pumping and irrigation system was unexpectedly valuable last fall when the trees along the road were suffering from considerable defoliation by red spider. As soon as the crop was dried early in September, Mr. Dice gave them a thorough irrigation to help strengthen the buds for next year.

PUMP DRAINAGE VIA DITCHES.

A lot of alfalfa was drowned out last winter in fields which might have been saved. The expense of drainage ditches or even tiling, with a pump to throw the water to the other side of a levee if necessary, would be a good investment if it saves the stand of alfalfa. The drainage ditches need cost but little if the irrigation ditches be deepened sufficiently, and perhaps shallow furrows plowed at intervals to direct the surface water into them. In most cases, the smallest kind of an engine and pump placed just above water-level in the drainage reservoir would be enough to force the water sufficiently high to get rid of it.

Where tiling are used in alfalfa, they are likely to clog with the roots, and in this case it has been found desirable to keep a space six or eight feet wide over each line of tile, clear of alfalfa, sowing shallow-rooted forage crops or root crops. Such strips take the place of open ditches, produce paying crops, and do not prevent free access of teams direct to any part of the field.

Combination irrigation-drainage ditches may be seen in many parts of California, and more are being installed where they may make the difference between a good crop and one not worth cutting.

NEEDS FEED GRINDER.

To the Editor: I am feeding soaked whole barley at present to my hogs. Rolling either wheat or barley costs $2.50 per ton besides a haul of two miles and back. What are the relative values of wheat at $1.50 and barley at $1.60 per hundred, and what is the best way to feed it?—R. E. S., Bishop.

[Neither is good feed alone, and neither is economical when fed whole. Many of them pass through undigested. When rolled, the nutriment is more available to the gastric juices, but many breeders prefer the grain ground. To avoid the long haul and the cost of grinding, you might set up a feed grinder such as was described in the issues of Aug. 28 and Sept. 25. Experiments at agricultural colleges seem to indicate that wheat and barley are of equal value for fattening if fed with something else for variety and bulk. As the ground barley gets more or less pasty when chewed, alfalfa meal, chopped alfalfa or other fine roughage would help, besides balancing the ration with its protein.—Editors.]

PORTABLE FEED GRINDER.

A little 4 h.p. Samson engine on runners is carried all about the Meadowbrook Stock Farm of Merced county, for various purposes. One of its uses is to grind barley with an International type B 6-inch feed grinder.

In order to keep the engine and grinder stiff, they are mounted on two runners of 4x6 timber 18 feet long. Five cross pieces of 4x6 feet long stiffen the runners and four 4x6s 14 feet long rest on top of this. The engine is bolted to two of the top timbers on one side of the big sled; the grinder is on a 2-inch platform directly over the other runner at the other end. The belt thus runs lengthwise of the center.

The engine is also used on a concrete mixer.

General Agricultural Review.

CITRUS AND SEMI-TROPICAL.

A. W. Shamel of Exeter recently sold his 20-acre orange grove at that place to Mrs. Velma Harman.

Extensive additions will be made on the packing plant of the Mutual Orange Distributors at Porterville.

A large shipment of oranges was made last week from the Bates Orchard in Palermo to the Australian and New Zealand trade.

A movement has been started in Fresno to hold a Citrus Fair in place of the land show which has been formerly held there.

The Strathmore Citrus Association recently held its annual meeting and elected the following directors: A. W. Swain, J. P. Firth, Chas. Lighthall, H. F. Elliott, and P. Henry.

The Exchange Associations of Tulare county met on Oct. 9 and voted to continue the 8 to 1 maturity test, and also to enter the Tulare County Citrus Growers' Protective Association.

G. Harold Powell, manager of the California Fruit Growers' Exchange, is touring the East in an effort to have the federal ruling of eight to one for oranges repealed and a standard of seven to one substituted.

The Butte County Citrus Association, in preparation for the coming harvest of oranges, has set forth a set of rules governing the picking of the fruit, which require that the pickers wear gloves and handle the fruit carefully.

F. W. Mason of the Stewart Fruit Company at Oroville estimates this season's orange crop in that district at 75 per cent of last year's crop. The fruit is running to good sizes, and so far the number of split oranges is very light.

A recent commerce report states that a marked increase in the demand for Hawaiian-grown bananas along the Pacific Coast and as far east as Chicago has awakened a new industry in which the growers in the islands are reaping a substantial profit.

Congressman W. H. Kent is expected to be in Oroville shortly to confer with the Butte county orange growers in regard to the 8 to 1 orange test. He has advised the growers to send a grower thoroughly conversant with the facts to Washington to present their case, and this suggestion is meeting with approval.

DECIDUOUS FRUITS.

A fire completely destroyed the cannery belonging to the Chico Canners' Association at Chico on Oct. 3.

It is estimated that about $1,000,000 will be distributed amongst the prune growers in the Healdsburg district this year.

Out of the Chicago Park, Nevada county, section this year there were shipped 7,963 boxes of pears and 2,380 crates of plums.

A campaign against the red spider which threatens to destroy the Santa Clara Valley prune crop, is now being conducted under the personal supervision of H. H. Taylor, assistant professor of pomology of the University of California.

An effort is being made by the California Growers' Association, with headquarters at Tulare, to induce the Butte county growers to organize as a branch of their association and establish a cannery at Chico.

GRAPES AND SMALL FRUITS.

It is reported that $18 a ton is being paid for wine grapes at Napa.

Shipments of wine grapes in the Roseville district so far total 56 cars; growers estimate that the season's shipments will amount to about 200 cars.

Deliveries to the California Associated Raisin Company average a thousand tons of raisins a day at the present time; most of them are being shipped east.

A report states that Healdsburg wine grape growers are receiving $15 a ton for their grapes. In some instances the cost of hauling to the winery is also paid.

Collector of Internal Revenue J. J. Scott, after making investigations of conditions in the San Joaquin valley, reports that it is his belief that the wine industry of California is practically paralyzed.

The U. S. Dept. Agr. in its experimental vineyards throughout California is now testing over 1300 varieties of grapes; and of this number more than 500 varieties will have been exhibited at the Panama-Pacific Exposition.

Investigations on the part of the Department of Apriculture show that the United States imports annually from 40,000 to 50,000 million pounds of currants, almost entirely from Greece, which can be grown in the grape districts of California.

OLIVES AND NUTS.

Almond boosters of Esparto are furthering the plan of a State observance of "Almond Day."

John W. Konning of Durham realized $7000 from his 20-acre almond orchard of nine-year old trees this season.

The Porterville Cannery will put up another pack of ripe olives this year under their lahels—"Tulare County" and "Foothill."

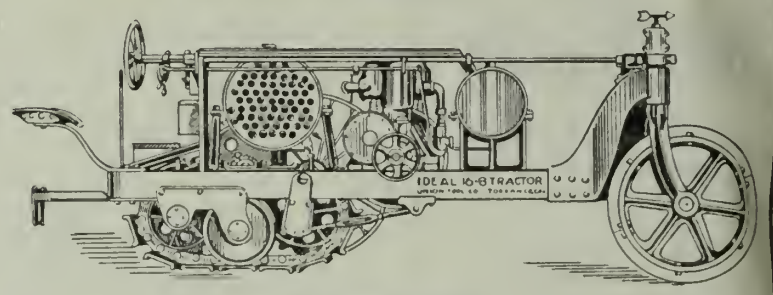
The Hemet-San Jacinto Growers' Association is making arrangements to take care of a good share of the local olive crop this season.

A western Yolo county farmer estimates the Capay Valley almond crop this season at 625 tons, or a valuation of about $165,000.

It is stated that the olive pack put up by the Ehmann Olive Company of Butte county will be about the same size this year as last.

S. E. Herman of Sacramento recently purchased 20 acres south of Palermo from L. W. Pray; he plans to put the entire acreage in olives.

John Risse of Los Molinos has disposed of his 1915 almond crop on a basis of 14½ cents per pound for paper shells and 10 cents a pound for hard shells.



The Bangor section of Butte county holds the distinction of growing the first olives to ripen this season; they are on the Footmont Ranch belonging to E. K. Wood of San Francisco.

E. R. Lake, horticulture and nut expert of the U. S. Dept. of Agri., reports after an inspection of conditions there, that Sutter county can grow the pecan nut to good advantage. In 1913, 1,800,000 pounds of pecans were imported into this country, so there should be a good field for the product here.

ANNOUNCING THE NEW

IDEAL TRACTOR

MADE BY THE

UNION TOOL CO.

After three years of experimenting the Union Tool Company announces its Ideal Tractor ready for the market. This company has not hurried a cheaply-constructed machine onto the market to meet the demand. For three years experimenting of the most extensive character has been carried on.

"Build the best tractor possible, one most suited to the western country," was the order to our engineers.

The money expended in this preliminary work has been tremendous, but the result has justified all that has been done.

The quality of goods manufactured by this two and a half-million dollar company is well known. This new tractor is worthy of the Union Tool Company label. It is the last word in the practical farm and orchard tractor.

And the price, most unusual for such a high grade article,

Made from the right crude

The Jury of Awards at both San Francisco and San Diego Expositions found an oil made from California asphalt-base crude, highest in lubricating efficiency. That oil was Zerolene. The fact, too, that such unbiased authorities as a U. S. Naval Engineer, engineers of the Packard and Ford Motor Companies, and others, have also gone on record in favor of oils made from asphalt-base crude—in accord with the decision of the Exposition juries—proves that Zerolene is made of the *right* crude, and made *right*.

GRAIN AND FIELD CROPS.

Gridley will hold a Rice Exposition from Oct. 26 to Oct. 31.

A. H. Abel of Arbuckle has just planted a 20-acre tract to 19,000 cactus plants.

Wheat will be the principal crop sown on 1100 acres of the Tapscott ranch near Corning.

L. D. Macey of Chico has just finished threshing 100 acres of broom corn on his ranch near Vina.

Lima bean growers of Goleta have perfected a selling agency to co-operatively market their 1915 crop.

California leads the States in cotton condition and in production per acre, according to the U. S. Dept. of Agri.

Alfalfa seed threshing is being done in the Poplar section of Tulare county; the crop is said to be a good one.

The corn crop in Potter Valley, Mendocino county, now being harvested, is reported to be above the average yield.

One hundred and fifty acres of the Phelan ranch near Chico will probably be planted to asparagus to be grown for the canneries.

Lester McGowan of Watsonville has been announced the winner of the potato-growing contest held by the Watsonville High School Agricultural Club.

E. L. Adams, director of the U. S. Experiment Station north of Biggs, has begun threshing a number of early varieties of rice which he has succeeded in propagating at the Station during recent years.

The Turlock Merchants' and Growers' Inc., having successfully handled the marketing of melons for the growers, are now preparing to enter into contracts for the marketing of Egyptian corn and beans.

The highest prices ever realized for California cantaloupes in September were obtained on the "Mission Bell" brand from Turlock on the New York market last week; $5.00 a crate was paid for standards.

The Bureau of Crop Estimates at Washington, D. C., makes the following estimates for the whole United States: all wheat, 1,002,029 bu; corn, 3,026,159 bu; oats, 1,517,478 bu; and barley, 236,682 bu.

W. W. Mackie of the University of California, in company with F. F. Lyons, Farm Adviser of San Joaquin county, recently visited the rice-growing sections of San Joaquin county, and reports that most of the tracts will give excellent results.

MISCELLANEOUS.

A fruit Fair is to be held at Paradise, Butte county, on Oct. 16.

The Annual Antelope Valley Fair opened on Oct. 8 at Lancaster, with good agricultural exhibits.

Marshall Diggs or Yuba county has sold 1481 acres in the Hallwood tract near Marysville to Judge Chas. Bryant of Indiana; and 1500 acres to another eastern capitalist.

The great flow of mud which enveloped the ranches in Hat Creek Valley has proven a benefit to the crops, according to reports based on the harvest that is just over.

The Valley Vista Farm of St. Helena is establishing a herd of Berkshires on their poultry ranch. New individual houses and pens have been built and several choice sows purchased.

At a recent meeting of the Executive Board of the Watsonville Apple Distributors, the idea of reorganization of the Pajaro Valley Orchardists' association was dismissed; and all efforts will be concentrated on the securing of a Farm Adviser for Santa Cruz county.

Prof. Gilbertson of the U. S. Dept. of Agri. in his recent visit to Humboldt county took up the matter of the appointment in Humboldt county of a trained woman to awaken interest in home economics, home decoration, sanitation, and other vital topics in the country districts. There are four women doing like work in the United States under government appointment.

UNIVERSITY JOTTINGS.

An olive paste has recently been invented at the University, made from olives too small or otherwise inappropriate for pickling. This new discovery will afford olive growers an opportunity to make a profit from a new by-product.

W. R. Ralston of Los Angeles, recent graduate of the College of Agriculture, has suggested a remedy for "bench root" in citrus nursery stock.

W. V. Cruess, assistant professor of zymology, has devised methods to producing clear and delicious jellies from oranges and lemons, thus developing a valuable citrus by-product.

H. S. Fawcett, associate professor of plant pathology at Riverside, has found on native willow trees cankers similar to those found on walnut trees. This has led to the conclusion that it is from the willow that this disease reaches the walnut groves.

Prof. J. Eliot Coit has found that the fat content of the avocado can be tested with a Babcock tester in the same manner as the dairyman tests his cows. Prof. Coit has proposed that an Avocado Tree Testing Association be formed.

Bartlett Pear

On Blight-Resistant Roots

There never was a more favorable time for Pear planting, but be sure your trees are planted on Japanese Roots. We have given this root a through test for over five years, and discarded all others in its favor.

All our trees are propagated from trees selected for their bearing qualities and grown in the granite soil in the foothills of the Sierra Nevadas, assuring a fibrous root system second to none in California.

ALFALFA will produce about three times as many feed units per acre as corn and several times more than the cereals or grasses. This statement seems extravagant for the reason that custom has established that food products be measured by the bushel or pound, and thus we are likely to value them in proportion to their bulk. This is very misleading. A feed is valuable only in proportion to the amount and kind of food ingredients there are in it. For practical purposes all food ingredients may be classified into ash, protein, and carbohydrate compounds, and food values should be measured by digestible ash, protein and carbohydrate units contained and their effect upon the animal system. Protein bodies in the feed are used in making blood and muscle, and thus are of value in building up large frames in young growing animals, while carbohydrate bodies furnish energy and produce fat.

To be more exact, when the number of feed units produced on one acre of corn, wheat, oats, or timothy meadow is compared with alfalfa, it is found that one acre of alfalfa, producing a hay yield of four tons, will bring to the farmer as much digestible carbohydrates as is present in 79.3 bushels of corn, 80 bushels of wheat, 180.7 bushels of oats, or 3.7 tons of timothy hay. In the production of digestible protein this acre of alfalfa will equal 4.8 acres of 40 bushel corn, 8 acres of 20 bushel wheat, 10 acres of 30 bushel oats, or 133 acres of timothy meadow producing one and one-quarter tons to the acre. A crop which will put into the farmer's hands so much fat and muscle forming material is worthy of efforts far more strenuous than are now being put forth to secure it.—University of Missouri, Extension Circular Co.

More and Better Hogs in California.

[Written for Pacific Rural Press.]

CARE OF PIGS AT FARROWING.

It is reported that 25 per cent of pigs that are born are lost by being stepped on, laid on, furnished insufficient milk, grown runty, etc. They are often laid on because sows are too fat and lazy to move when the little pigs squeal; because they crowd the pigs against the sides of the shed; because pigs get tangled in deep bedding; because the sows are excited, nervous, and eat the pigs, or step on them; because some pigs lack development on account of an unbalanced ration or constipation of the sow before farrowing; because some have long, sharp teeth when born, which irritate the sow so that she doesn't permit them to suck enough; the teat dries up and the pigs never do develop.

The novel idea of a farrowing crate helps Elmer Lamb, of Ceres, to save the pigs from nervous or lazy sows. It is built like a shipping crate about 2x5½ feet and three feet high with the back end movable and a cross piece on top so the sow cannot stand up and turn around. The open space at the sides above the floor is high enough so the pigs can get to her to suck, but will be pushed out of danger if the sow lies down against them.

The sows are accustomed to the crate by shutting them in an hour about a week before farrowing. Gradually the time in the crate is lengthened until they are left in all night. Mr. Lamb watches when the sow begins to make her bed and shuts her in the crate for farrowing.

He aims to be with all sows when farrowing; puts the pigs in a box; breaks off the sharp "wolf teeth." There should be as many teats as pigs, but the front ones are usually the best supplied with milk; any runts in the bunch are "found among the hind titters nine times out of ten." When the sow is through farrowing, he puts the best sow pigs on the front teats because there is better sale for sows. Each pig soon learns to use its own teat. For the first day or two, Mr. Lamb puts them on the right ones every three hours; gets up in the night to do it. After a day or two, he leaves them with the sow all the time if she is careful; otherwise, he takes them away except when they suck, until they are old enough to take care of themselves. After a few days if any are not doing well, he teaches them to drink cow's milk two or three times a day.

Unless the sharp teeth are broken off at the gums, usually with a pair of pinchers, S. F. Williams, of Chico, has observed that the teat dries up and the pig becomes runty. Pigs sometimes come with their tongues all chewed up. There is no hurry about putting the pigs to the sow for the first suckling.

Englefelt & Stewart of Orland say that they must be with the sows when farrowing because some do not break the skin they come in and die from inability to breathe. They wipe them clean and dry with cloths; clean out their mouths, and the handling helps them to get air.

First Care Most Important.—"The making of a pig is in the first three days of his life," says J. K. Fraser of Denair, who dries off every pig with a cloth as it is dropped and lays it in a warm box. He puts the pigs to their mothers every two hours for the first two or three days. One bunch which he fed for show pigs he taught to drink milk at two weeks old. He would catch them, stick their noses into the milk, they would lick their chops, and soon be drinking.

"That's how I gave this bunch a start."

E. C. Rand of Santa Rosa has seven cement-floored farrowing pens in one house and spends many nights with the sows at farrowing time, especially the young ones. He keeps a string of electric lights going so that if he should not be with them, the sows can see the pigs and are not so likely to lie on them in the dark.

Keeps Gentle Sows.—Henry Webb of Madera county uses lots of alfalfa hay for bedding, but says they don't get tangled up or laid on. This is probably because his sows are very gentle, which is one of the leading reasons why some sows raise a larger percentage than others. He says to be careful not to break the navel cord until the mouth is wiped out so the pig can get its wind. As long as they are fast by the cord, they can stay on the ground in the sheath a long time, but are likely to choke if the cord is broken before the sheath is.

California's Opportunity for Dairymen.

[Written for Pacific Rural Press.]

A DAIRYMAN WHO LEARNED TOO LATE.

Being hind-sighted instead of fore-sighted is characteristic of most men, and so it is with many dairymen at this time.

A story is told by a milk and butter distributor and manufacturer of the Bay District of a dairyman from whom he purchased whole milk a couple of years ago when milk for city trade was hard to secure.

One day a city inspector sampled some of the dairyman's milk and found it bad. Then he visited the dairy and found sanitary conditions very poor, so bad in fact that he recommended many improvements and then notified the city dealer that the milk from that dairy could not be sold unless improvements were made at once.

The dealer visited the dairyman and told him he must fix up or he couldn't buy his milk. "All right," replied the dairyman, "you don't have to take it. One of your competitors will."

The outcome of it was that a competitor did take it for a month, but he also was unable to handle it on account of its poor quality. Finally the dairyman began to sell butterfat to the creamery, but as he ran a large herd he found at the end of the first year that he had lost $1600 by a change from milk to butterfat.

Realizing at last his error he spent $2000 for a new milking barn and other improvements, having when completed a sanitary dairy in every respect.

He then visited the dealer who had previously handled his milk, told his story and asked for a renewal of business relations between the two. "But, my dear sir," replied the dealer, "you are too late. I have already contracted for my year's supply, and while I would like very much to handle your milk now, I am loaded to the guards for this year. If you will come around when this year's contracts are expiring I will be pleased to make a contract with you, for I am sure you must be producing a superior grade of milk."

Each dealer visited told him the same story: "he was too late"; and he is again selling butterfat this year at another $1600 loss, making in all a loss of $3200 and also having spent $2000 for equipment just as he was advised to do in the first place.

Before the above experience occurred milk was scarce and the dairymen could be independent. Now the tables have been turned and there is more milk available than can be consumed and the haphazard dairyman is forced to sell butterfat while the far-sighted dairyman with modern and sanitary equipment reaps the harvest.

"That," states the dealer, "is exactly the thing that will happen some of these days to the butterfat dairyman who persists in selling poor cream. As long as there was no surplus butter in the State every creameryman was forced by competition to take whatever was offered. But the time is nearly here when the creamery man will not be able to market his poor butter and when that happens the dairyman who is not fixed for superior quality cream will be hit and hit hard. It is a shame that we cannot make the dairyman understand that by a very small investment, very much smaller than the whole milk dairyman experienced, he is in a position to lock the stable before the horse is stolen. By cooling their cream, skimming it thicker and by more prompt delivery to the creamery the dairyman can save the industry from a financial loss which will be staggering in its extent."

Mesquite Beans for Stock Feeding.

[Written for Pacific Rural Press.]

To the Editor: We have in our valley a great amount of mesquite, and the ranchers have, for a long time, used the beans to fatten hogs. Some claim they make better pork than corn does. My cows also like them very much, and many of the Indians make meal from them for their own diet.

I would like to grind some up with milo maize or barley and would thank you very much if you would, through the columns of the Press, give me the nutritive value of mesquite beans, so I could proportionate them into a balanced ration for fattening hogs, and for cows in connection with alfalfa.—N. B. S., Thermal, Cal.

[Answered by Prof. F. W. Woll, University Farm, Davis, Calif.]

The Mesquite is a small shrub or tree, 20 to 40 ft. high, that grows commonly in the southwestern arid region of our country and also in South America. It belongs to the legume family. The pods make good feed for all kinds of farm animals and are also eaten by natives and travelers. They are considered equal to barley, by some authorities, for fattening horses, cattle, sheep and hogs, but this is probably giving them a too high value. According to Director Forbes of the Arizona Station, who made a special study of the products and uses of the Mesquite tree some 20 years ago, the entire beans (pods and seeds) are of slightly lower value than wheat bran and contain more protein but less fats and carbohydrates than shelled corn. The average analyses of pods and seeds given by him, in per cent of water-free substances, are shown below:

Composition of Mesquite Pods and Seeds.

	Pods	Seeds
Ash	5.3	3.5
Fiber	32.5	6.6
Protein	6.2	37.3
Ether Extract	1.5	6.1
Nitrogen-free Extract (starch, pectin, etc.)	54.5	46.5
	100.0	100.0

The seeds which make up toward per cent of the weight of the ans are high in protein and fat d low in fiber, like all leguminous eds; being very hard and rather all-sized they would pass through e animals largely undigested un- s previously ground, as the cor- pondent proposes to do. Since e mesquite beans must be classed with high-protein feeds like alfalfa, it is important to supplement them with feeds like barley, milo, dried beet pulp, etc., in feeding dairy cows, and with barley, milo or other cereal grains for fattening hogs, the beans making up not over one-half of the grain ration in either case when alfalfa hay is fed for roughage.

Mutton Sheep for Small Farms.

[Written for Pacific Rural Press.]

SHEEP HUSBANDRY ON ALFALFA.

Sheep are commanding an ever- ireasing amount of respect from e alfalfa grower, and it is well at they should, for few if any m animals require less care than eep when raised on well-fenced sture.

How far the alfalfa grower should with sheep is a point that only ore varied experience can decide, t certain it is, from the experi- ce of C. E. Schmeiser of Solano unty, that an acre of alfalfa will rnish excellent feed for a large mber of sheep most of the year. Mr. Schmeiser has two small flocks sheep, one of 180 head which l be used for breeding purposes, l another of 175 head, which he rchased last spring when thin to b fattened on a part of his alfalfa rch.

A field of 15 acres of irrigated alfa was set aside for the market k and since that time the 175 d have been kept there continu- ly. A division fence was put up, iding the field into two seven and half-acre plots. This allows the igation of one field while the ep are in the other one. As soon a good growth is secured after igation, the flock is transferred o the new growth and in this y is provided with a continual ply of excellent pasture.

No Bloating.—The most common ection to this method of grazing been the loss by bloat. On this re, Mr. Schmeiser has very de- ed views, and his experience is st encouraging.

Before turning his flocks from bble or other grazing land onto alfalfa pasture, Mr. Schmeiser keps them in a corral over night a part of the next day, where y are fed all of the hay they will e. By afternoon, they are well fed and then they are turned into e alfalfa pasture. It is the prac- e to keep them there continually, ing at ease; and in this way not erloading themselves with the en feed at any one time. In ing for the flock this year, not e was lost by bloat, and it is at- uted entirely to the above rea- s.

This experience shows that during growing season an acre of al- falfa will furnish fed for nearly 12 head of mature sheep, and from the condition of the sheep in September, it appears that even cross-bred animals can be profitably fattened, for while this flock was very thin when put on the alfalfa, it looked to be in fine condition at the time of our visit.

The success of this year's feeding has decided Mr. Schmeiser to raise sheep instead of hogs, crossing Shropshire bucks on the cross-bred ewes, and breeding for October lambing. This will allow him to reach the winter lamb market without encountering wet weather for lambing.

PUREBREDS SELL HIGH AT SACRAMENTO.

[Written for Pacific Rural Press.]

That California has a place as a breeding State was conclusively shown at Sacramento last week. The Morris and McAlister Sale held at the Fair Grounds on Wednesday and Thursday was one of the three largest ever held in America and by far the largest ever on this Coast. On Thursday, the last day of the sale, over 100 head passed under the auctioneer's hammer at an average price of over $500. The total receipts of the sale were in the neighborhood of $80,000, of which about $48,000 went to A. W. Morris & Sons of Woodland and the balance to J. W. McAlister & Sons of Chino.

The sale was a success in other ways than putting goodly sums of money in the pockets of the consignors. It established good prices for Holsteins and it placed good stock in good hands for the good of the dairying and breeding industry.

Some time ago our Editor scolded our millionaire land barons for not making better use of their land and advised them to buy high-priced bulls to make their land more valuable. His advice seems to have been well taken, as millionaires, bankers, and big land owners bid in a good percentage of the stock sold. This means that there are being built up a number of herds that will eventually rival the famous herds of the two consignors.

However, not all was sold to bankers and millionaires. Many fine animals went individually at good prices to dairymen and small breeders scattered all over the State, indicating that the dairymen are determined to build up their herds by the use of good sires or that they intend gradually to go into the purebred game.

The reputation of the consignors and systematic and extensive advertising of the sale brought buyers from a wide area; from Arizona to Washington and even as far away as the Hawaiian Islands. There was absolutely no evidence of financial

BOOK OF BARN PLANS FREE

If You Intend to Build a New Barn or Remodel an Old One You Should Have This Book

Louden Barn Plans is not a catalog of barn equipment. It is a complete and valuable book of reference and instruction on barn construction.

The 96 pages of **Louden Barn Plans** are full of dollar-saving information. It contains 51 representative designs for cow barns, horse barns, combination and general purpose barns, as well as many other designs for hog barns, pens, hay sheds, chicken houses, etc

In addition to the barn plans shown in the book, there are 32 pages devoted to general construction problems, such as concrete work, laying floors, roof construction, ventilation, etc.

When Writing for This Book Please State When You Expect to Build, and How Many Cows and Horses You Want to House

We have designs for nearly 4,000 barns, and our architects will give your letter personal attention if we learn your exact requirements.

Louden Barn Equipment

Louden equipment makes possible a clean, sanitary barn with a minimum of expense. When cows are transferred from dark, dirty barns to Louden barns the milk flow often increases from 15 to 25 per cent, and the labor of caring for the herd is reduced from one-third to one-half. Louden equipment is just as great economy for the man with a half dozen head of stock as for the man with hundreds of animals. The percentage of labor saved is the same.

The Louden Line of Sanitary Steel Equipment Includes:

Litter Carriers, Feed Carriers, Milk Can Carriers, Harness Carriers, Hay Carriers, Feed Trucks, Cow Stalls, Horse Stalls, Mangers, Manger Divisons, Feed Racks, Hay Loft Equipment, Cow Pens, Calf Pens, Bull Pens, Hog Pens, Sheep Pens, Water Basins, Bird Proof Barn Door Hangers, Power Hoists and Other Barn Specialties

GRANDSONS OF TILLY ALCARTRA

At Prices within Reach of Every Breeder and Dairyman.

A Grandson of Tilly Alcartra.

We have several splendid grandsons of this now famous cow which we can deliver to you at prices which will suit the pocketbooks of every dairyman wishing to improve the quality of his herd, whether it be a grade or pure-bred herd. These bulls are sired by our herd bull, Prince Alcartra Korndyke and out of A. R. O. cows, and are the only living grandsons of a cow having a record of over 30,000 pounds of milk in a year. Such an opportunity for increasing production has never been offered **DAIRYMEN AND BREEDERS** in California, price and quality considered. Buy one of these bulls and solve your low production problem. Write

DAIRYING.

The State Hospital at Napa is filling for the first time their new concrete silos. In one they have just put corn; in the other, alfalfa.

Oct. 21 and 22 will be Guernsey Days at the Panama-Pacific Exposition, with a meeting of Guernsey breeders to be held the evening of Oct. 22.

According to a consular report, the dairy industry in New Zealand has become an important factor in the prosperity of that country; and the future seems bright.

The report of the Gridley Cow Testing Association for the month ending Sept. 30 shows that five cows produced better than 50 pounds butterfat in thirty days.

B. D. Mason of Willits considers that clover grown in Mendocino county is a better dairy feed than alfalfa. His clover produced about one-third more hay per acre than the alfalfa.

Walter H. Dupee of the Edgemoor Farm, Santee, San Diego county, has a view herd at the Panama-Pacific Exposition of 22 head of Guernseys, headed by Imp. Itchen May King 25174.

The two 50-ton Tulsa silos erected on the Red Bud Ranch near Cloverdale have proved very satisfactory. The silage is now being fed and only a very small amount of the outer edge was moldy.

A Pacific Rural Press representative visited Sunnybrook Ranch of Willits a few days ago and found the proprietor preparing to whitewash the inside of his cow barn. Nothing is too good for his registered Holsteins.

A complete new set of dairy buildings is being erected by Dr. Wallace of Eureka on his ranch one mile west of Ukiah. The plans are to keep 40 milk cows. Sanitary milk will be produced for delivery in Ukiah.

Twenty-four cubes of butter were entered in the September Educational Butter Scoring Contest of the University of California, held Sept. 27 at San Francisco. The average score was 91.27. The fifth entry will be scored in connection with the California Creamery Operator's Association Convention, at San Francisco, Oct. 28, 29, and 30.

Three grade Jersey cows, owned by A. J. and Nellie A. Morey of Orland, produced as follows during September: Gertrude, four years old, produced 51.56 pounds fat; Fern Lassey, three years old, 42.56 pounds fat; Little Browney, three years old, 41.13 pounds fat. This is profitable dairying, based on knowing what each cow is doing. It pays with grades.

D. S. Shattuck, foreman on the Revada Ranch north of Napa, states that the reinforced concrete silo (size, 25X60) built two years ago was filled with corn ensilage this year, and that the action of the acid on the concrete, which softened it, together with the tremendous pressure, caused the walls to crack. This allowed the juice, which is one of the best parts of the silage, to escape by the hundreds of gallons.

The Holstein-Friesian Association's prize list for the whole United States shows that A. W. Morris & Sons of Woodland had in the aged class 17 cows out of the 62 highest; in the senior four-year class, three out of the 25 highest. In this class DeKol Valley Mead 2nd headed the list with 809.37 pounds of fat from 20,326.4 pounds milk. In the three-year class, seven cows among the 34 highest. In the two-year class, eight out of the 26 highest were from the Morris herd.

CATTLE AND SHEEP.

Edson & Foulke, of Gazelle, recently drove 1045 head of cattle from Oregon to fatten for market.

Gorham King, of Red Bluff, purchased 1700 ewes from Anton Nunes, of Jelleys, to place on one of his ranches.

G. W. Haigh of Sonoma recently sold 25 head of beef steers to the California Market of San Francisco, at $80 a head.

Mrs. M. F. Martin, of Little Shasta Valley, recently shipped 2000 head of lambs to a San Francisco meat company.

J. E. Mitchell, of Williams, recently received a shipment of 1000 head of cattle from Siskiyou county to pasture on land he has leased.

Coyotes are getting so thick in Mendocino Co. that a great many of the sheep men are selling their flocks and replacing them with cattle.

Cattle losses are reported to be heavy in the Siskiyou Mountains, and a government or State expert will be asked to investigate the cause.

O. T. McKendree, a sheep man of Klamath Falls, Ore., has contracted for feeding 8000 head of lambs in the Klamath basin during the winter.

A. J. Henry, of Tehama county, recently purchased 400 head of cattle from Harry Andrews of that county, to stock his 1100-acre ranch.

Miller & Lux have purchased between 5,000 and 6,000 head of cattle this year in the Klamath Falls section of Oregon, valued at approximately $200,000.

According to E. D. Applegate, one of the large sheep owners of Klamath county, Ore., the present year has been the best for the sheep man in the history of that section.

A recent commerce report shows that of the live cattle exported from Canada during the year ending March 31, 1915, 183,652 head went to the United States and 2,251 to other countries.

Dogs are reported to be playing havoc with the sheep in Yolo county. Kaupke Bros. of Woodland, have twice had dogs visit their purebred Hampshire flock, and over $1000 worth of sheep were killed.

The Spreckels Sugar Co., of Spreckels, recently received a second trainload of 18 cars of cattle from Chico to fatten on beet tops and pulp, with the intention of reshipping them to market in six or seven months.

Keeping small bands of sheep as a side line is proving quite popular among the ranchers of Napa county. They find that they save lots of labor in keeping the foul weeds in check, besides proving a profitable addition to the finances of the ranch.

The quarantine on sheep scabies in California was lifted on Oct. 15. The following counties are still un-

FOR SALE Jersey Bulls Bull Calves

from cows on yearly test-making good-sired by our herd bulls KING'S VALET (Imported), VALET'S KING OF L, BORELLO'S GOLDEN LADDIE, GRACE'S FOX OF VENEDERA, and NORMA'S GERTIE SON OF L, backed by production and winnings in the show rings.

They are of FINANCIAL KING, GOLDEN LAD, GOLDEN FERN'S LAD, MARIGOLD and ST. LAMBERT blood, the kind that improve type, cream production and persistency. One cow gave 49.5 lbs. fat in 11th month; her daughter gave average test of 8.38%; another gave 79.9 lbs. fat in one month, 238.9 lbs. fat in 134 days. A 2-year old gave 50.6 lbs. fat in one month—all under dairy conditions.

We have bulls from such cows, with correct type.

Dairyman's Opportunity

For $50, a yearling bull by VALET'S KING OF L, out of a good cow. $25 for bull calves under 30 days old. Tabulations, but no Registrations at this price.

Come and see them, send for catalogue, or write us your needs, and we will give you satisfaction and profit.

HORSES AND SWINE.

A representative of France recently purchased 400 horses from W. W. Brown, of Fife, Ore., for approximately $24,000.

The Dunham-McLaughlin Co., of Oakland, reports the sale of the three-year old stallion Monsieur to the D. McGrath Estate, Oxnard; the price stated was $3300.

At the request of the Colusa County Swine Breeders' Association, the supervisors passed an ordinance establishing a quarantine against the spread of hog cholera.

N. Reynolds, of Geyserville, states that when he feeds a hog he likes to see it grow. For that reason he is raising purebred O. I. C. hogs. His original stock came from Albany, Oregon.

Frank Nissen, of Esparto, is winner of the hog contest of the Esparto Agricultural Club Contest; his pig weighed 40 pounds when he purchased it, and 450 pounds at the end of the contest.

Duroc-Jersey swine seem to be taking the lead in Napa Valley. W. W. Everett of St. Helena has lately gone into the breeding business. For his herd sire he has secured of W. N. Shanks, the well-known Duroc breeder of Worthington, Minn., Riverbend High Model, son of High Model, blue ribbon winner at several of the largest eastern state fairs, and Lady Top Notcher 6th, Shank's $1000 sow. The sum of $3200 was refused for High Model.

A new, modern, round hog house, containing compartments for 17 hogs, has lately been completed on the Jack London ranch near Glen Ellen. Each compartment has a feed runway built of concrete on the inside of the circle and an exercise yard on the outside. A round granary and feed mixing room is located on the hub. The entire structure is made of concrete and rock, thus making the building perfectly sanitary. A very choice lot of Durocs and Chester Whites are being bred.

MISCELLANEOUS.

The Romer Vista Ranch south of Ukiah is using registered Angora goats to clean their land of brush and are doing a good job.

Dr. Stetson, president of the Farm Bureau of Napa county, reports that plans are being made to hold a livestock and agricultural fair at Napa next year.

A test made on the University Farm at Davis with 3 Toggenburg goats and five dairy cows, shows that the goat eats only 90 per cent as much to produce a pound of milk as does the cow.

The Standard Stock Farm, formerly of Ukiah, has leased for a period of five years the dairy department to John Hemmings, who has 25 years' experience in that line of business. There are 100 cows and 3500 hens on the ranch.

Governor Capper of Kansas has protested against Governor Johnson's action in quarantining Kansas livestock, thus excluding their exhibits at the Exposition. The protest states that there is no foot and mouth disease in Kansas, and requests that a veterinarian be sent from here to prove the fact.

COLT LAME; ANKLES SWOLLEN.

To the Editor: My three-year colt just broken to drive to a cart rests on one foot, then the other, and the ankles are slightly swollen. Had him shod lately. Rests during school hours. Eats well, is quiet, but a good trotter. Neighbors say he is "calking."—E. A. D., Turlock.

[This horse is green yet and has not learned to carry his feet properly, with the result that he is interfering. A good blacksmith should be able to remedy the trouble by proper shoeing, though it may take several shoeings to break him of the trouble.]

LIVESTOCK DIRECTORY.

SWINE.

BIG TYPE POLAND CHINAS—I have an extra good lot of strictly high-class young boars from three months to one year old that are fit to head any herd anywhere. Visitors say they are the best they ever saw. They have the large size, the good hams and shoulders, the strong, wide, arched backs, great length and depth of body, plenty of smoothness, mellowness and quality—in fact, they have two good ends and a good middle; are good lookers and money-makers. Their dams are either from Illinois, Iowa, or Missouri, or are from dams whose sire or dam are from these States. These boars are sired by **Iowa Wonder,** who will weigh over 1000 pounds in show condition. He is a son of **A WONDER,** the greatest Poland China boar living or dead. These young boars carry the stamp of their sire and will sire pigs that will please you. Satisfaction guaranteed in every particular. I am overstocked. I have boars galore. Will sell them at extremely low bargain prices. No females for sale at present. The book on THE HOG SUPREME—THE POLAND CHINA will be sent to you free for the asking. Yours for the BIG TYPE—the kind that grow faster and larger and have more and better pigs. GEO. A. SMITH, CORCORAN, CAL.

BILLIKEN HERD of pedigreed O. I. C. Swine; weaned pigs of both sexes for immediate shipment; pairs and trios mated, not akin. All from big type stock of extra heavy bone. Immunized against hog cholera, crated and shipped free. Write for descriptive circular and price list. C. B. Cunningham, Mills, Sacramento County, California.

O. I. C. SWINE—Poor health is the reason for this offer. Will sell my herd of pure-bred O. I. C. Swine at prices that will turn them quick. Pigs two to eight months old either sex. Write me for special prices. Every hog registered. G. H. Dubois, Box 13, San Martin, Cal.

BLUE-RIBBON HERD DUROC-JERSEY HOGS—Bred Gilts a specialty. 15 bred now. 20 ready to breed. Sires and dams win all blue ribbons 1912, 1913, 1914 **State fairs.** 15 first, 13 seconds, 6 thirds, 7 fourths, 1 fifth. Will show 1915. For prices, write John P. Daggs, Modesto, Cal.

ROSE CREST BERKSHIRES of Masterpiece and Rival's Champion Best breeding. A choice lot of Fall and Spring boars; also a few sows and gilts. F. L. Hall, Perris, Cal.

ROSS' DUROCS—90 little fellows, farrowed since first of September. Will book orders for November delivery. Foundation stock from Daggs and Johnson herds. R. J. Ross, Route B, Modesto.

RED ROCK RANCH, Glen Ellen, Cal.—Breeders of high-class Duroc Jersey hogs Our specialty registered pigs at weaning time. A registered mature boar for sale.

LARGE YORKSHIRES—Gilts open or bred to our imported boar, winner at 1915 Canadian National and Ottawa shows. Choice Fall and Spring boars. Riverina Farm, Box 74, Route 2, Modesto, Cal.

LARGE HAMPSHIRE BOAR for sale. Cannot use him longer on my sows. Will sell cheap. Papers with him. Also brood sows and young pigs. J. Barnhart, R. 2, Box 68, Turlock, Cal.

ANYONE WISHING TO START a herd of registered Berkshires, write to Alexander and Kellogg, Suisun, Cal. Our herd is of the best breeding and cholera immune.

REGISTERED BERKSHIRE SWINE—All ages, for sale. Grapewild Farm, Mayhews, Sacramento, Cal. A. R. Humphrey Prop., P. O. Box P.

REGISTERED PUREBRED BERKSHIRE PIGS—(Weanlings) both sexes. Reasonable prices. Write for full information. J. E. Hall, Sebastopol, Cal.

BLATCHFORD'S PIG MEAL weans easily and safely; no trouble; no milk. Write for free folder, "The Safety Route from Pighood to Porkage." Coulson Co., Petaluma.

DEL DAYO FARM—(Old Haggin Bottom Ranch)—Breeders of Registered Berkshires, both sexes for sale. P. O. Box, 1140 Sacramento, Cal.

POLAND-CHINAS — 200 head. Fine individuals, weanlings to eight months. Satisfaction or money refunded. Geo. V. Reckman, Lodi.

REGISTERED DUROC-JERSEYS from choice Eastern sows. Two Fall boars and a fine lot of Spring pigs. S. S. Southworth, Napa, Cal.

POLAND CHINAS — Young stock; either sex. Write for pedigree. Beasonable prices. Edwd. A. Hall, Watsonville, Cal.

REGISTERED BERKSHIRES—Boar pigs, $10 each. Also aged boar, son of Double Premier. Extra fine. G. G. Wenger, Route 5, Modesto.

REGISTERED BERKSHIRES—Six choice bred gilts. Weanling boar pigs. $10 each. Sow pigs, $12. J. M. Romberger, Modesto.

REGISTERED DUROC-JERSEY BOARS. Farrowed in May. Walter H. Northey, Delano, Cal.

BERKSHIRES—Headed by Roadmaster 2nd, junior champion Iowa State Fair. My females were winners at Iowa, Wisconsin and Minnesota State Fairs. Farm at San Mateo. Address W. M. Caruthers, 218 Hearst Bldg., San Francisco.

PLAINFIELD STOCK FARM—Registered Berkshires and Durocs. Young stock for sale, both sexes. H. M. Bullard, Woodland, Cal.

A FEW PURE-BRED Duroc Boars sired by Col. Keene of University Farm, Davis. Registered Eastern stock, N. P. Williams, Dixon, Cal.

REGISTERED DUROC-JERSEYS—Blue-ribbon stock, 8 gilts and one boar 9 months old. $20 each. H. E. Tong, Route 2, Modesto.

GLENVIEW POLAND-CHINAS—Baby pigs from best families for sale. From $15 up. Chas. R. Hanna, R. 3, Riverside, Cal.

REGISTERED BERKSHIRES—Bred sows, service boars and young stock. Alta Mesa Ranch, Route 18, Box 177, Los Altos, Cal.

Veterinary Queries and Replies.

[Answered by Dr. H. B. Wintringham, Petaluma, Cal.]

PAIN AND FREQUENT URINATION.

To the Editor: A very fine work horse seems to have a great deal of kidney trouble. If he is put on any kind of heavy work or has the least change in food he seems to have colic spells. Also while working he will urinate 10 to 12 times, a small amount at a time, during a day. Then he will spread his hind quarters and stand that way for some time. He is kept in corral with other stock with very best first cutting alfalfa hay to eat. Last week he almost died, apaprently with colic. He was up and down and groaning with pain. We gave him Watkins' Colic Remedy at the time. When he had this last bad spell we had given the stock one feed of barley hay.—J. G. O., Mocalno.

[This is a case of too much alfalfa. Some horses cannot stand it. It will take him some time to get over the trouble. Give him one quart of raw linseed oil and follow with one ounce of saltpeter daily for one week. Change his feed and do not feed alfalfa hay again except in very small quantities.

GILT DOESN'T BREED.

To the Editor: Kindly tell me if there is any way of having a sow come in heat. Have one nearly a year old and as yet has not come in heat.—F. M. B., Hanford.

[Cut down the ration to reduce this sow in flesh. If she does not come in after a month give her 1-12 grain Yohimbin three times a day for one week.]

COW SCOURS, AND OTHERS COUGH.

To the Editor: Will you kindly send me a recipe for the cure of scours in a five-year-old cow? She had been on green alfalfa before we got her, and we have been feeding her alfalfa hay. About ten days ago we drenched her with ½ lb. of Epsom salts and followed it with a pint of linseed oil about 12 hours later. We have also been feeding her about 2 quarts of rolled barley twice a day, but nothing stops the scours. We cannot get any grain hay in this neighborhood. She is giving two to three gallons milk a day. We have three other cows, all Holstein, that we brought from Los Angeles. Shortly after arrival they began to cough in a shrill, wheezy tone, and have been doing it for several weeks. They all seem to be in good health otherwise. Can the trouble be bronchitis, caused by dry climate, or alkali dust in the air?—S. I. M., Rio Bravo.

[Get some 30-grain Sulpho-Carbolate tablets and give six three times day, gradually reducing this amount as the condition improves. Have the other cows tested for tuberculosis before trying to treat for cough.]

SHEEP LEGS STIFF.

To the Editor: We have about 300 head of sheep here running on alfalfa. Had them here about six months, and every once in a while one of them seems to get poisoned. They don't die, but when they get down are unable to get up; all four legs are just as stiff as can be; but if we stand them up and hold them for a while they are able to walk, but stiff legged. We had a lamb that was that way for two months, then got all right. Some of the others got over it quicker. We now have a two-year-old ewe pretty bad. How does "Deadly Night Shade" affect them? Will Johnson Grass hurt them? Or do you know of any other weed or grass that will get them in that state?—Subscriber, Los Banos.

[Sheep are not susceptible to poisoning by eating deadly night shade. Johnson Grass has no poisonous effect. The trouble is no doubt due to poisoning by some plant and would suggest that you kill the next case you have and send the stomach and contents to the University for identification of the plant causing the trouble. A remedy for poisoning of this kind is 10 grains each of potassium permanganate and aluminum sulphate in solution given just as soon after the symptoms show as possible.

BOAR LOAFS ON THE JOB.

To the Editor: We have just purchased on 18-month-old boar, weighing about 250 pounds. It has every appearance of being in a good healthy condition and has an appetite that would answer for two; but when he should get right down to the main object of boardom life, he is not there. The larger sows when in heat chase him around the pen. We have tried him on the stubble and pasture, also in the pen on a ration of crushed barley and cured alfalfa. Sometimes he will go after a very small sow when it is in heat. What is best to do with such a loafer?—H. B., Santa Ynez.

[Get a tube of 20 1-12 grain tablets of Yohimbin. Give one of these three times a day until gone. Then start him off with a gentle sow of his own size. Keep him by himself while feeding the medicine. If Yohimbin does not bring him to time, nothing will, as its results are very positive.]

Sorghum and Beans: Feeding for Milk.

To the Editor: Can you tell me what relative value as a food for growing pigs and chickens has Kafir and Egyptian corn as compared with barley and Indian corn? Also the analysis of black-eyed beans? What kind of a food would they be for pigs and chickens? Would a cow's milk which tested 6 per cent butterfat also carry a corresponding increase of the other milk constituents over a cow's milk testing 4 per cent butterfat? Or in other words, will the other solids which milk contains increase in a similar ratio with that of fat as a herd is improved in the quality of their milk? Is the skim-milk from a herd of Jersey cows whose milk tests 6 per cent butterfat worth any more for feeding purposes than the skim milk from a herd of Holsteins whose test is 4 per cent? There is much difference of opinion among dairymen on this question.—W. H. F., Porterville, Cal.

[Answered by Prof. F. W. Woll, University Farm, Davis, Cal.]

There is no marked difference in the chemical composition, digestibility or the feeding value of Indian corn and the grain sorghums, but the latter are, in general, not quite so palatable to farm animals as Indian corn, very likely because of the higher oil content of the corn. Comparative feeding experiments with swine and other farm animals have shown that somewhat better results may be obtained from rations composed largely of Indian corn than from Kafir, milo and other varieties of the grain sorghums.

The following table shows the average composition of Kafir corn, Egyptian corn and cowpeas. I am unable to give the chemical composition of black-eyed beans, but it would not be likely to vary much from that of cowpeas in general.

	Moisture	Protein	Digestible Carbohydrates	Fat
Kaffir Corn	9.3	7.5	70.5	2.6
Egyptian Corn	12.6	8.0	64.3	3.0
Cow Peas	14.6	16.8	54.9	1.1

Beans and peas have a high nutritive value and are well adapted for feeding both pigs and chickens. They should, however, be mixed with other grain feeds, as they are very rich in protein and, therefore, call for supplementary starchy feeds, like cereal grains, Kafir, milo, etc., or mill feeds, to furnish the right balance between the two classes of feed components. Leguminous seeds are also undesirable as sole grain feeds because they produce pork and meat lacking in flavor.

Milk testing 6 per cent of fat will contain about 10 per cent solids not fat, while 4 per cent milk contains about 9 per cent solids. The solids not fat, therefore, increase with the percentage of fat, but not in the same ration as the fat. It is not feasible to improve the quality of the milk from a herd as much as 2 per cent, however, unless cows giving milk of a lower fat content are largely replaced by either Jerseys or Guernseys. By using a herd bull whose maternal ancestors produced milk containing a high per cent of fat for their breed, the average quality of the milk from the herd may be gradually improved, but this method takes considerable time and the change wrought will not be apt to exceed a couple of tenths of one per cent. Any improvement in the fat content secured will, however, be accompanied by an increase in the non-fatty solids as well.

The last question should be answered in the affirmative.

PUREBREDS SELL HIGH AT SACRAMENTO.

(Continued from page 379.)

stringency. The buyers were eager and the bidding was often so brisk that the auctioneers had difficulty to determine which of several simultaneous bids was entitled to recognition.

The sale was exceptionally well conducted. The large pavilion especially fitted up for the sale and donated by the State Agricultural Society provided comfortable quarters. Colonel Ben Rhoades was in good voice and trim, and he was ably assisted in the ring by T. E. Getzelman, a well-known breeder of Hamshire, Illinois.

The largest number of animals sold to one firm was 20, mostly young cows and heifers, to Rancho Santa Anita.

The J. W. Gibson Co. of Williams bought a baker's dozen, including two of the highest-priced cows sold, paying $1500 for one and $1150 for the other.

J. M. Henderson Jr., Fred W. Kiesel, and James McGilivray of Sacramento were among the largest buyers. All are building up pure-bred herds in Sacramento county.

Wm. Bishop of Chimacum, Washington, bought three fine heifers and a young bull to add to his show herd at the Exposition this year.

Among those buying high-priced bulls were: McCloud River Lumber Co., Stanford Ranch, I. G. Zumwalt, R. F. Mitchell, H. E. Cornwall, Alex Whaley, T. J. Gilkerson, and S. R. Renaud, of Phoenix, Ariz.

J. D. French, representing the Kamehameha School at Honolulu, attended the sale and bid in several cows.

R. F. Fisher of Humboldt county, a Holstein booster in a Jersey country, bought a half dozen or more fine animals to improve his herd.

The Bridgeford Co. took advantage of the sale to add to their pure-bred herd at Knightson.

Heath Bros. of Pleasanton bought 8 head; J. H. Harlan and Dr. C. M. Faris of Yolo county were both buyers at the sale.

Helm Land and Cattle Co., who are building up a Holstein herd in Fresno county, bid in a number of good animals.

MAKING A SILO PAY

is an easy matter if you have the right kind.

THE UNIVERSITY FARM at Davis, Calif., last year bought an

IDEAL GREEN FEED SILO

and tried it out in actual use beside others including a home-made one they built.

They recently **PURCHASED ANOTHER IDEAL GREEN FEED SILO,** which is the best evidence needed of their judgment of its **quality and efficiency.**

THESE TWO IDEAL GREEN FEED SILOS are used to help make a profit in their farm operations and were purchased out of their farm income.

THE MEN IN CHARGE are business men and know a good thing when they see it.

WHY NOT PROFIT by their experience and order your Ideal Green Feed Silo now?

Send for Catalog.

Manual For Hog Men

"California Hog Book," by W. S. Guilford of this county, just from the press of the publishers, will fill a long-felt want in the agricultural literature of California. The book is practical in every sense, as practical as the author, who has so successfully combined his theoretical education with practical experience here in California. The new publication is more than a treatise on the various breeds of hogs—it is an ideal manual for the hog-raiser, who will run up against the same conditions as those solved in this book. "The book deals entirely with California conditions, and takes up every branch of the hog industry. The hope of the author is that the small land owner, the ten, twenty and forty acre man, may be induced to increase.

"Glen county people are especially forunate in knowing Mr. Guilford personally, thereby knowing that the book he has written contains facts which have back of them experience and reliable information. The book is profusely illustrated with halftones and line-drawings." —Orland Register.

Farm Poultry for Profit.

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

FATTENING MARKET POULTRY.

Nobody wants to buy a scrawny, thin chicken to break their teeth on the tough muscles. Times have altogether changed in regrad to table poultry and their "fitness." The farmer who is perhaps better fitted than the real poultryman to fatten his own product, generally sells to a huckster who comes to his door, weighs the surplus cockerels or cull hens on a pair of scales that are already doctored and which he can manipulate a little more right under Mr. or Mrs. Farmer's eyes, then pays two or three cents less than he could give and still make a living.

All this is wrong, because the farmer could just as well fatten that stock and send it direct to some hotel, restaurant, or reliable commission man. The huckster who buys the fowls does not fatten them; he sells to some plant that fattens poultry on a commercial scale and puts them on the market fit to eat. To be fit, they must be tender, juicy, palatable, and nourishing. Chickens need frills to enhance their value as well as other foods do; and the more frills and better eating we can make them for the public, the more and greater will be the demand.

Now I am going to tell you in this paper how you, the farmer, can compete with these commercial fattening plants and by getting your family interested, keep the huckster's profit and the fattener's profit, extra weight included, right in the family.

While on my vacation I talked and visited with a lady who has a large squab plant. She sends her squabs direct to a large hotel in San Francisco and last month was getting 35c a pound, which price she says will rise by Christmas to 50c. Now if she was sending those squabs on the market the price would fluctuate, besides she would have to pay commission; but being an energetic woman, with a business head, she took a day or two off to hunt up her own custom. What she did any one can do.

Any farmer who has a few cows, or even one or two cows, can start a fattening plant on a small scale just for his own and perhaps a neighbor's surplus fowls. The first thing is to make a coop that will hold, say a dozen head. The front should be of stout round wire and just far enough between the wires to admit a chicken's head without sticking. Some make back and front of the coop of this wire and the ends of slats or lath, to allow ventilation. The coop must be placed out of the hot sun or sheltered from rain, but in some place where lots of fresh air can reach it. Make long troughs the length of the coop, about three inches deep and four inches wide; make them tight enough to hold liquids. These are fastened to the coops by wire hooks, to make them easy to remove and clean.

Bear in mind chickens must be in fair condition when put in these coops, as this is only a finishing process. Now, with troughs and drinking cups in place, sort out your chickens, or grade them, as you would any other produce. Cockerels of one size and about as near one weight as possible should be put together, and even then there will be a difference in the gains. The short thick-headed bird will put on flesh faster than the one with a long slim head and neck. Color of feather is not of any importance, but color of skin is very important. All white skinned birds, if well fattened, will grade as number ones because they can be what is called bleached. The bleaching is accomplished with condensed buttermilk, while ordinary feeding or fattening is done with just plain buttermilk or sour milk churned, to make it smoother. For the first twenty-four hours after putting the birds in coops give them nothing to eat at all—serve water and grit and just let them get good and hungry.

Commence to feed light after the twenty-four hours, a feed of equal parts cornmeal, shorts, and low grade flour, adding a little salt just as an appetizer. Mix the feed to a rather stiff dough with buttermilk or sour milk. Cut out the water and only give water when the weather is very hot. Then after they drink take it away. If they appear thirsty, mix feed a little thinner.

Watch for Those That Don't Eat. —After a few days of this feed change to more cornmeal and more flour, giving less shorts. If oats can be had as cheap as flour, ground oats with the hulls taken off is especially good, but the birds must have a change to keep up the appetite. It is a case of watching for the ones that fail to eat. Mix every bit of feed with the buttermilk or sour milk. The more condensed the milk is, that is, the less water you leave in it, the better and quicker your chickens will fatten. But even though you have no milk at all, you can still make big money fattening your own poultry, by feeding beef scrap and tallow instead of milk. During the last week of fattening with milk it is advisable to add melted tallow to the feed at a ratio of 6 per cent.

If the feed contains no milk the birds would stand 20 per cent of beef scrap for a short time, but too long might take them off their feed. If oatmeal could be bought as cheap as flour or cornmeal there is not a bit of doubt but that either would make much bigger gains in both flesh and fat, but they are almost out of the question at present prices. If the chickens show any signs of gas or watery crops serve charcoal for one or two meals and it will absorb all the gases.

Tallow added to the feed puts the fat on the carcass in ridges, but milk spreads it all over, so you can sult all fancies by catering to them, and believe me the day has come for the American farmer to cater to the markets.

Two weeks to one month is all that chickens will stand this intensive feeding and still keep an appetite, so this is the point to watch: When the appetite begins to flag it is time to sell.

Keep the troughs clean and sweet by daily scalding with boiling water and airing them; and never feed more than the birds will eat at one time. Failure to attend to this will clog the appetites of the best birds, then it is all over. Keeping them just a little short makes them ready

for the next meal and they cannot help putting on flesh.

DISTINGUISHING GUINEAS.

To the Editor: For the benefit of H. L. H. of Coachella, I would say I have raised guineas for several years and do not know of any way to tell the sex of the young ones until they are about three months old. Then the hens will begin to give their peculiar cry of "buck-wheat" or "polka-dot." The cocks do not give this cry. About a month later the wattles of the young birds will have developed sufficiently to indicate their sex at a glance. The wattles of the hens are rather small and point backward, parallel with their bodies. Those of the cocks are large and rounded and curl under with the flat sides forward. When approaching the cocks, they will often lower their heads to the ground and mince along on their toes. E. M. J.

Denair.

PHEASANTS AT $2 PER.

For the next year the Oregon State Fish and Game Commission will pay Eugene M. Simpson $2 for each China pheasant he will raise on the State Game Farm at Corvallis. The State furnishes the game farm, fully equipped with breeding stock and pens, etc., while Simpson will merely defray the operating expenses. Simpson is to deliver not less than 3000 nor more than 5000 pheasants during the year. In the last five years the total expenditures for the game farm have been $36,447.61. During that time the farm has produced 11,508 birds.

APPROVES RABBIT CONDITION POWDER.

To the Editor: Since reading about the condition powder used by S. F. Streaner of Hughson, in the Rural of September 18, I gave it to my rabbits and they are doing finely. Before I used it I lost several with slobbers or whatever it might be called. I wouldn't be without it. Geo. A. Turner.

Morgan Hill.

WHO WILL KILL THESE RATS?

To the Editor: Would you kindly publish in your paper the best way to rid ranch buildings of rats. I have tried rat biscuit, rough on rats, etc., but with no success.—A Subscriber, Milpitas.

[We have no especial wisdom on this subject. Who will take it up?—Editor.]

POULTRY NOTES.

The Schellville Poultry Yards, of Sonoma, are preparing for a good run of orders for baby chicks this season.

The poultry department of the Standard Stock Farm near Ukiah has been leased for five years to John Hemmings.

F. H. Rhode of Sonoma states that he has booked orders for baby chicks to almost his full capacity for February and March delivery.

H. Sammons, of Santa Rosa, says the poultry yards in that district need to be plowed up twice a year and limed to keep the ground sweet.

According to W. S. Shoemaker, of Ukiah, Indian Runner ducks are easier to raise than chickens, and he receives 5 cents a dozen more for their eggs.

A new poultry plant is under construction by E. E. Small on his ranch near Windsor, Sonoma county. The hen house will be 16X100; the brodder house, 20X40.

The G. & G. Poultry Farm, of Sonoma, has just received a shipment of four birds from the Wyckoff Grand View Farm, New York. The four birds cost $55 delivered.

The Mammoth Poultry Ranch of Napa now has a flock of 10,000 White Leghorn hens. They plan to hatch 25,000 chicks this season; most of the demand for their product is local.

With the rising egg market, more interest is being displayed among the poultry raisers of Napa county. The hatcheries report orders coming in for both winter and spring deliveries of baby chicks.

St. Helena will be represented at the Exposition Poultry Show by two breeders of Plymouth Rocks: G. E. Tobin will select birds from his flock of 400 fowls for entry in all classes, while F. P. Penn expects to get in on the prize money in the regular class.

R. R. Royal, who has a poultry plant in the Potrero district,, reports that his small flock of fall hatched fowls, now one year old, are laying eight eggs for each one produced by his spring hatched flocks. He has his incubators set to full capacity this season.

The Valley Vista Farm near St. Helena has completed a new poultry house 20 feet wide and 200 feet long; it is intended to add another house of this size, which, with the brooder and growing quarters already built, will provide accommodation for 3500 hens. The owner aims to make this one of the model poultry plants of Napa county.

The Bay Counties' Pigeon Club was organized in San Francisco on July 16. At the first meeting of this organization, Dr. Frederick D'Evelyn gave a very interesting talk on the study of domestic animals and birds, and W. E. DeLong spoke on the exhibition of pigeons and squabs at the coming show at the Panama-Pacific Exposition. H. L. Walker, 4128 24th St., San Francisco, is organizer and business agent.

MORE EGGS

Send For A Sample Of Calmade Graduated Poultry Fence

10 inches graduated in mesh from ½ inch to 1⅛ inches then 20 inches of 2¼ inch mesh, topped by 4½ inch mesh for the height of the fence.

The Fence Without a Sky Line

It is the most economical as well as the most practical of all poultry fences. It costs no more to buy than the old style poultry netting and costs much less to put up.

It is the only fence made with a bottom mesh smaller than one inch. It will turn the smallest chickens. Because of the straight line, continuous weave of "CALMADE GRADUATED" Fence, baby chicks won't hang in it, large fowls can't climb it.

"CALMADE GRADUATED" Fence will not slip at the joints nor unravel when cut. Uniform in weave and width. It unrolls flat as a board—it is easily put up and stretches without bulge, kink or bend on posts 16 feet apart. Learn all about these advantages and let your next fence be a "CALMADE GRADUATED." Write at once for free samples of wire used, free illustrated folder and name of nearest dealer.

Conducted by Rena Shattuck.

THE MODERN HIAWATHA.

He killed the noble Mudjokivis,
Of the skin he made him mittens;
Made them with the fur side inside,
Made them with the skin side outside.
He, to get the warm side inside,
Put the inside skin side outside;
He, to get the cold side outside,
Put the warm side fur side inside,
That's why he put the fur side inside,
Why he put the skin side outside.
Why he turned them inside outside.
—Anonymous.

THE LARKSPUR.

In a downy nest in the long-matted grass a family of meadow-larks broke through their tiny shells, and as each little lark appeared the mother trilled the good news to her mate, who was industriously seeking bugs and worms for his family larder. There were five little birds in all. Four were strong little fellows, anxious to try their wings, and it was not long until they learned to fly and had soared away into the great blue vault of Heaven. The last of the little family was timid, and shrank from going out into the great big world. He saw the dangers that his more courageous brothers and sisters laughed at. There were ugly scaley snakes in the grass waiting to swallow him by inches. He had seen them as he peered from the edge of the nest, and he saw one gliding away after swallowing a little green frog. Then he saw a little prison made of wire and a wild bird dashing itself against the sides as the jailer, a boy with big hands and feet, carried it away. The lark was terrified by all this and more that he had seen as he gazed from his downy home.

But the old birds got tired of keeping up the nursery, and the mother, after singing to the baby lark, telling him of the great, big, beautiful world and all that he was missing, was vexed because he was still unwilling to try his wings, and pushed him out of the nest. Down he fell into the sweet fragrant grass, fluttering his tiny wings. He liked the sensation of sailing through the air and forgot about being afraid until a little girl, going along swinging her schoolbooks by a leather strap, spied him and chased him here and there until she caught him and held him for a minute in her soft, warm hand.

He heard his mother cry out in alarm, and he fluttered out of the girl's hand and flew to a branch far above her head. He led a life of terror from now on, and one morning he could stand it no longer and, flying to a rustic fence, he trilled his tale of woe to the great, beautiful Sun—the God of Day. What a song of melody poured fourth from his tiny throat!

"Dear Sun," he cried, "help me, for I am such a little fellow in this great big world. I'm so afraid for everybody is trying to kill me. I can't escape much longer. Yesterday, a beautiful girl pointed me out as I was singing my morning anthem to thee, and said to her companion, 'Shoot that lovely lark on the fence for I want his breast and wings for my hat.' Think of that—wanting my poor little life to make her more beautiful. 'If you get him, pull his wings off and skin him while he's warm,' she said. Then the man aimed a long slim gun at me. There was a bright flash and a terrible noise, and the rail from which I was singing my hymn of praise, was splintered and broken. I flew away into the blue heavens, only to be chased by a big black hawk, who wanted to feed me to his little ones. Then I flew to earth and a big cat with wicked eyes tried to grab me. A man, who had a whole bag of dead birds, tried to shoot me to make a lark pot-pie. There are ugly-looking traps set for me, and boys with sling-shots throw stones at me and call it sport. Dear, Sun, help me, I pray thee, free me from the bondage of a bird with all the cruel traps set for it.

"The Sun winked and blinked, then hid his face behind a cloud for a minute. When he appeared again, he was radiant and replied:

"I will grant your wish. Fly to that green little hill and sink into the tall grass, then hide your head under your wing and go to sleep; when you wake you will be in a new form, for I shall create you into an attractive and lovely flower.—the Larkspur."—Polly Larkin.

HALLOWE'EN.

The Eve of All Saints or All Hallows, Oct. 31st, is almost here and there is much plotting and planning for the Hollowe'en parties. The country girls have the advantage over the city girls in some ways, for the woods, fields and gardens can yield up treasures galore for appropriate decorations. There are stacks of lucky black cats being cut out of black pasteboard, some with phosphorus eyes, so you can imagine the effect of the uncanny looking cats swaying on the ends of threads fastened to the ceiling, and making a border round the room, when the lights are turned down. All the good-looking pumpkins have been reserved to welcome the guests with their candle-lighted faces. There are all sorts of devices to foretell what the future holds. The "seven signs" is one of the most popular. A basket of rosy-cheeked apples is passed around and as the guests enjoy the fruit, appropriate stories are told. Then comes the counting of the seed. "One, I love; two, I love; three, I love, I say; four, I love with all my heart and five, I cast away. Six, he loves; seven, she loves; eight, they both love; nine, he comes; ten, he tarries; eleven, he courts, and twelve he marries." There are all kinds of fun in reading the tea-leaves and coffee grounds. It would require a page to tell all the witcheries of Hallowe'en and it is for the young folks to read the signs of the times on that occasion.

MUSIC IN THE HOME.

Gone are the days when the melodeon and the organ held sway in both town and country homes, in fact, no home was deemed complete without one. Then the piano gradually relegated the melodeon and the organ into the background. Many times not one of the family knew how to play, but the piano was a monument of success and good cheer in the eyes of the community and a handy article of furniture to help entertain company. Now comes the Victrola and graphophone, to not only delight every lover of music, but to educate them as well. It gives them the opportunity of hearing the finest composers and a class of music they had been strangers to. Furthermore they are reasonable, for they can be purchased for twenty-five dollars and up; and every modest home in the country can have one of these treasure-troves to entertain their friends, whether it be a musical or a dance, a wedding or just for their own comfort and pleasure, with a wealth of delightful music. From grand opera to the popular rag-time, from wedding marches to hymns. There has never been an age in our time when so much joy could be carried into town and hamlet, mansion and vine-clad country homes, in the waves of sweet sounds that are pent up in these instruments and at so small an expense. No home should be without one. Just try one and see what a tonic it is to jaded spirits and weary bodies.

CULINARY SUGGESTIONS.

Brillat-Savarin said, "Tell me what you eat and I will tell you what you are," placing this famous saying fourth in his list of fundamental truths, and although an irreverent youth is reported as saying "Eat shredded biscuit and turn into a soft cushion," there is something deeper than a smile in Savarin's philosophy.

Almost all vegetables — except beans—should be cooked in as little water as possible; then this water should be thickened with butter, cream and the tiniest amount of flour for the sauce.

Green tomato butter is made by slicing eight pounds of green tomatoes very thin and chopping one orange and one lemon very fine, being careful to remove the seeds. Boil together one hour, add five pounds of sugar, a small teacup of vinegar, and cook until it becomes a clear, smooth mass. Put this in jelly glasses.

HOUSEHOLD HINTS.

To Wash Sweaters.

Knitted or crocheted sweaters or scarfs can be washed to look like new. If the sweater is folded as flat as possible, placed carefully in a pillow case and run through at intervals with basting thread to keep it in position, it can be washed with the ordinary flannels. But if it is a very delicate sweater it is best to wash it separately in soap suds made by dissolving a cake of shaved white soap in enough boiling water to make a gallon, and to this adding a tablespoonful of ox-gall. Souse it up and down with the hands, but do not rub it. Squeeze out the water by patting between the hands and rinse in three waters. Then wring it, place between two dry sheets and twist lightly. Press while still hot with a warm iron.

rt powdered orris root between the olds of the ironing blanket. A delate perfume will permeate the othing.

When washing and rinsing colred materials add a tablespoonful Epson salts to each gallon of wa-r, and even the most delicate ades will neither fade nor run. erge and similar materials which ave been dyed black can be safely ashed in this way without any risk f the dye running. Oil of eucalypus sponged gently on the spot will emove grease or oil stains from delate fabrics.

To overcome the itching of hives, athe the parts affected with vinear and water and sprinkle with oda.

A drop or two of onion juice aplied to the spot where the "bee ung you" will quickly overcome the oison.

FASHION TIPS.

Prospective brides who are puzing their pretty heads in regard to eir trousseaus may find the folwing suggestive lines of some astance:

What to Wear.

Married in white,
You've chosen all right.

Married in black,
You'll wish yourself back.

Married in red,
You'd better be dead.

Married in green,
Ashamed to be seen.

Married in blue,
You'll always be true.

Married in pearl,
You'll live in a whirl.

Married in yellow,
Ashamed of the fellow.

Married in brown,
You'll live all around.

Married in pink,
Your spirits will sink.

Subterranean green is one of the w shades for the fall styles.

Checks and plaids still hold their n and are shown in many of the w fabrics.

The fad for black and white is not ning. It is always in good taste, d though it has been worn all mmer, the fall styles still continue t show its popularity. It has been ried into the home decorations as ll, and those who have adopted the f have their wall paper in black d white stripes, the border of large k roses, and their window drapes to correspond. It is certainly new departure, but I imagine one uld soon tire of it.

You can certainly have a choice in es nowadays, for there are green es and red shoes, blue shoes and ite shoes, bronze, tan and black, l gray shoes to match the demure aker-gray costume. Some of the w footwear in black patent ther are stitched in white, others re seams running from the toe —a one-piece leather shoe. Then re is the shoe laced up on the e that awakens memories of other s, for in my treasure box is a r of little white satin shoes, yel- with age, side-laced with white n ribbons, a dainty lace handkerf and a wedding veil lay be- them, and there is a faint odor avender as the box is closed upon art of a wedding outfit of fifty rs ago. "Fashion, like history, eats itself."

GARDEN LORE.

A French scientist once spent forty-five years and about $90,000 in attempting to produce a blue rose by artificial culture.

It's getting to be a highly efficient world. Yesterday the dean reported this sign on a florist's motor car: "Growers of Cut Flowers."—Detroit Free Press.

I don't know of anything that will give more real pleasure and with very little trouble than a bed of mixed nasturtiums. Plant your first seed and give them all the water they need, and they will clamber over unsightly fences and sheds, making a lovely picture with their bright, velvety flowers and green leaves. They will repay you many times over and will scatter their seeds broadcast. They are beautiful in hanging baskets. and very effective as cut flowers for the house, if you cut them with the long tendrils. They will keep fresh and thrive in water for days.

Do you care for mushrooms? A little lady, who has proved a very successful gardener, gives this hint in regard to her having mushrooms in season and out of season. She keeps her lawns enriched and every time it is newly fertilized she plants small pieces of mushroom spawn through it, with the result that there are pink, appetizing mushrooms creeping through the grass quite frequently, when they are not to be found anywhere else.

SCHOOL NOTES.

The all-year-round school is one of the late reforms in school work, and originated in Gary, Ind. The advocates of it claim that the scholars, by this system of all-year-round work, get through school from three to four years earlier than if they had taken their vacations, and are ready for their business career. Eight new buildings, especially designed for the all-year schools, are being erected in New York under the special supervision of Superintendent Wm. Wirt of Gary. They will contain gymnasiums, baths, and the latest equipment for vocational work.

The San Francisco school system is to be thoroughly overhauled. Dr. P. B. Claxton, commissioner of the United States Bureau of Education, assisted by a Citizens' Educational League composed of thirty-five representative citizens, will attend to the reconstruction work. The San Francisco Chamber of Commerce will finance the work of Dr. Claxton to the extent of $10,000. The idea is to bring about greater uniformity, to use the funds to the greatest advantage, and prevent economic waste, etc. The Collegiate Alumnae Association report on school conditions show that out of 150 of the largest cities San Francisco ranks lowest in the amount of money expended on the schools in proportion to population or property values. The changes under consideration are: the increased appropriation to provide enough teachers to reduce all classes to forty pupils, extend manual training, restore the English lecture system, make temporary shacks livable, and relieve present over-crowding, installation of up-to-date system of bookkeeping and standard system of financial record, introduction of time sheets and service record, and employment of experts to pass on school sites, buildings, plumbing, etc.

CLIPPINGS.

"An ounce of prevention is worth a pound of cure":

The girl who is inclined by nature toward stoutness must diet vigorously in order to keep her weight down and must beware and take care if she does not wish to be overtaken by the dreaded flesh.

If a girl belongs to a family of heavyweights, but is herself sufficiently slim for her size, she need not congratulate herself too soon on her sylphlike shape, but should keep on the sharp lookout for any increase in size. Once she begins to grow stouter she will be amazed to see how rapidly her weight increases.

At the first signs of hateful fat the girl should begin a vigorous campaign against the enemy before she is absolutely conquered by it.

The first and most powerful weapon to use in this warfare against flesh and diet and exercise. The diet should eliminate all sweets (cakes, candies, desserts, sodas, sugar in tea or coffee, etc); all starchy foods (rice, white bread, potatoes, beans, peas, etc.), and all fatty foods (cream, milk, chocolate, etc.). However, it is a great mistake to cut down too much on the amount of food, for it only produces weakness.

Another point about the diet is this: It is better to take three slim meals, consisting of non-fattening foods, than to eat only one meal a day, in which enough is eaten to make up for four other meals. A great many women follow this form of dieting, giving up all but one meal, but they eat enough at this one repast to make up for all their dieting.

CRUELTY TO A WIFE.

The man at the suburban breakfast table looked up from his morning paper and said to his wife:

"Seven hundred people killed yesterday in a steamboat accident."

"Indeed!"

"Latest accounts of the battle in East Galicia shows that 10,000 have been destroyed and 50,000 taken prisoners."

"Well."

"Strikers' riots threaten destruction of property all over the country. Million-dollar fire yesterday caused by bombs."

"Um!"

"Germany declares war on the United States."

"Dear me!"

"Here's your name in the sporting column, winner of second prize in yesterday's putting contest."

Snatching the paper from his hand she exclaimed:

"If that isn't like you! To keep the only important thing for the last!"—Life.

When you think of ROOFING

INSIST ON Pioneer Roofing

It is the one roofing that you can absolutely rely upon under all weather conditions. It wears longer, looks better, and costs less than others. Pioneer Roofing is made in grades and weights to suit every type of building—for new and old roofs; bungalows, barns, garages, factories, etc.

The Markets.

(Unless otherwise noted, prices quoted are f. o. b. San Francisco.)
San Francisco, Oct. 13, 1915.

WHEAT.

Values locally show no further change, but the situation in the larger markets is decidedly firm, owing to recent developments in the war, and a further advance is not unlikely. Trading here, however, is not especially active.

(Wholesale Prices, S. F.)

Cal. Club., ctl.	$1.65	@1.67½
Northern Bluestem	1.70	@1.75
Northern Club	1.65	@1.67½
Northern Red	1.55	@1.65

BARLEY.

The export movement is proceeding rather slowly, and buying of either spot or future grain has been a little quiet for the last few days. The market, however, remains steady at the former level.

Shipping, ctl.	$1.25	@1.30
Choice Feed, ctl.	1.17½	@1.22½

OATS.

Seed oats are in more demand than feed at present, and prices on recleaned stock are well maintained. Feed is in fair demand, however, with offerings sufficient for all current needs.

Black, ctl.	$1.85@2.00
Red Feed	1.25@1.30
Red Seed	1.50@1.75
White	1.30@1.40

CORN.

All grades have recovered little from last week's drop. There is no heavy trading here, but reports of crop damage in the Middle West have caused a firmer feeling at primary points.

Eastern Yellow, ctl.	$1.65@1.70
Milo Maize	1.45@1.55
Kaffir	1.55@1.65

BEANS.

The bean market seems to be reaching a little more settled basis, though there is a large acreage in the Sacramento Valley still to be harvested, and the size of the crop is still rather uncertain. On most varieties the market is very firm. Small whites are higher, and both small and large whites are in strong demand, owing to the Eastern shortage. Pinks and bayos also are quite firm, and limas appear in good shape, with a very strong demand during the last week. Blackeyes and garbanzas are weak, with hardly any demand at the moment, and a heavy crop of the former. Red kidney beans are lower.

(On wharf, San Francisco.)

Bayos, per ctl	$4.10@4.20
Blackeyes	2.75@2.90
Cranberry Beans	4.10@4.20
Horse Beans	2.25@3.00
Small Whites	4.50@4.60
Large Whites	4.20@4.40
Pink	3.25@3.50
Limas	4.50@4.60
Red Kidney	5.00@5.25
Mexican Reds	4.50@4.75

SEEDS.

There is a good deal more inquiry, both for alfalfa and the various cover crop seeds, but the heavy movement is awaiting a good rain. Values remain as last quoted.

Alfalfa, per lb.	17 @18 c
Melilotus Alba	30 c
Melilotus, Indica	6 c
Bur Clover	11 c
Oregon Vetch	4¼ @ 4½c
Soy Beans	6 c
Canada Peas	5½ @ 6 c
Sudan Grass	40 c

HAY.

Arrivals are still decreasing, indicating that the fields are now well cleaned up; and as it is necessary to draw on the warehouses for much of the current requirements, prices rule higher on practically all grades. Fancy hay in light bales brings as high as $17 or better, but is very scarce: but No. 1 wheat or oat sells readily at $15. There is still quite a lot of export business, and if sales are made on some inquiries lately received a further advance is expected. There is also a lively demand from various parts of the country. Alfalfa from the river district is scarce.

No. 1 Wheat	$12.00@15.00
do No. 2	10.00@11.50
Tame Oats	10.00@15.00
Wild Oats	8.00@10.50
Alfalfa	10.00@14.00
Stock Hay	6.00@ 8.00
Straw, per bale	.25@ .40

FEEDSTUFFS.

The only quotable change this week is on alfalfa products, which are higher in consequence of the scarcity and high price of alfalfa hay.

(Wholesale prices per ton, carload lots, San Francisco.)

Beet Pulp, per ton	$20.00@21.00
Alfalfa Meal, ton	17.00@20.00
Alfalfa Molasses Meal per ton	20.00@21.00
Bran, per ton	26.00@27.00
Oilcake Meal	38.00@39.00
Cocoanut Cake or Meal	23.00@25.00
Cracked Corn	41.00@42.00
Middlings	32.00@33.00
Rolled Barley	25.50@26.50
Rolled Oats	29.00@31.00

VEGETABLES.

The week opened with rather slow trading all around, and while there is a little more activity now, prices in several lines are lower. Tomatoes have been arriving in excessive quantities, and the accumulation has caused a sharp decline. Eggplant also is a little lower. String and lima beans are getting scarce, and have been marked up. Cucumbers and okra are doing a little better; celery is higher, with little offered so far. Artichokes are beginning to be a factor in the market, and have been added to the list.

(Wholesale Prices, San Francisco.)

String Beans	2 @3½c
Lima Beans	3 @ 3½c
Peppers, bell, box	40 @65 c
Tomatoes, lug	20 @40 c
Cucumbers, lug	40 @65 c
Summer Squash, lug	25 @40 c
Green Corn, sack	1.25@1.75
Okra, lug	40 @65 c
Eggplant, lug	25 @40 c
Celery, doz	15 @30 c
Artichokes, doz.	20 @35 c

POTATOES AND ONIONS.

Delta Burbanks are a little higher, though only occasional fancy lots will bring the top figure. Sweets show a further decline. There has been quite a heavy movement of onions East from Stockton, causing a sharp advance.

Salinas Burbanks	$1.25@1.60
Delta Burbanks	.90@1.10
Sweet Potatoes, ctl.	1.10@1.25
Onions, ctl.	.90@1.00
Garlic, per lb., new	8 @10 c

POULTRY.

Fancy young stock is geting scarce, and first-class broilers have advanced sharply. Hens and roosters, however, are coming into competition with a large amount of Eastern stock, and prices show a downward tendency.

Turkeys, old, lb	17 @19 c
do, young	23 @25 c
Broilers, 15 lbs to doz and less, lb	30 c
do, over 15 lbs to doz	22 @24 c
Fryers	18 @19 c
Hens, extra, per lb	16 c
Small Hens, per lb	13 @14 c
Smooth Young Roosters per lb	18 c

Cheese	12	12	12	12	12	12

DECIDUOUS FRUITS.

Offerings in many lines continue liberal, while the demand is easing up a little. On the whole, however, prices are keeping up fairly well. Huckleberries are coming in less freely, resulting in an advance; and strawberries are also higher, while blackberries have dropped. Some choice lots of figs do a little better, but the supply is still large, with a good deal of trashy stock. Pears show a much wider range, according to quality, only the better lots finding ready sale. Bulk peaches are cheaper, as the quality is nothing extra and supplies are ample; while attractive stock in small packages brings an advance. Apples are slightly easier, while quinces have been marked up a little. Persimmons are lower. Cantaloupes are getting a little scarce, and they, as well as watermelons are higher; and casabas, though arriving freely are quite firm. Grapes in general are rather firm, with an advance on malagas and black varieties.

(Sales in S. F. Market.)

Huckleberries, lb	5 @ 7 c
Strawberries, chest	$5.00@6.00

DRIED FRUITS.

A good deal of dried fruit of all kinds has been shipped to Europe lately, but the domestic movement is not active, some lines receiving hardly as much interest as last week. The closing of the Panama Canal has had a disturbing effect; and as buyers generally are disposed to buy for nearby requirements only, the effect has been to delay some business for shipment, while stimulating sales on the spot in Eastern markets. Apples are quite steady as last quoted, and apricots show a further advance, with all offerings in the country closely cleaned up. Reports on prunes are conflicting. Local packers scoff at talk of an advance, and regard 4c. as an extreme price, saying that there is plenty of first-class stock available from northern points at considerable lower figures; while some of the San Jose packers quote 4¼ and even 4½c. It is generally admitted that large sizes are very scarce, and will command a substantial premium. Peaches were rather firm last week, but have eased off again, and offerings of choice Muirs are reported at 3c. Pears also are slightly easier. The New York Journal of Commerce says:

"An increasing activity dominates the spot prune market and buying is being done in practically all quarters where operators find themselves unprotected against the dearth which is expected to appear with the delay of shipments via the Panama Canal.

"The limited stocks sold in the New York spot market consisted entirely, according to well posted operators, of supplies of 1914 pack which had been carried over by th packers. Under the pressure of steady demand for these restricte quanties of California prunes price were ruled by a tendency to ac vance.

"Future Santa Clara prunes ar inclined to be quiet, with practicali no trading done in any quarte There is no change in prices fro the close on Wednesday when 40s t 60s, inclusive, were offered at range which was prevailing at th 3¾c basis f. o. b. common Coas shipping points for late October c November shipment. A premium c ¼c continues to be asked by th packers on straight 40s.

"With available supplies in th New York market reported to b rapidly diminishing, all stocks o California Raisins are very strongl held by the operators yesterday.

"Apricots display a strengthening tendency both in the New York market and on the Coast. Quotations for spot stocks remain unchanged, but prices are ruled by an upward tendency which is particularly marked on the fancy grades.' 1915 crop.

CITRUS FRUITS.

The eastern auctions are still tak ing California valencia oranges a good prices, and shipments are go ing east at the rate of over 30 car of oranges and 14 cars of lemon daily. Jamaica and Porto Rico or anges are offered in the east in in creasing quantity, and Florida frui will commence moving early nex month.

The new orange crop in Tular and Butte counties is said to be tw weeks earlier than usual—som shipments already having bee made to Australia. Grapefruit ship ments from Tulare county will also be made this month.

At New York on Monday, Oct 11th, the auction averaged for va lencias from $6.45 down to $2.7 per box; for lemons the averag ranged from $3.95 to $3. At Ch cago the auctions averaged $5 t $5.75 for valencias and from $3 t $3.75 for lemons.

Oranges are coming in slowly at present, and with a light dema the market shows little feature with no change in values. Lemo and grapefruit are moving about usual at the old figures.

HORSES.

The local market has developed le better tone this week, pos-ibly on account of the first really ttractive offerings appearing in om time. A good sized lot of ortern California stock, weighing up 1800 pounds, was put up at auction, with better success than was expected; the whole lot being quickly sold out, though the prices realized for the heaviest type were nearly up to those recently quoted. Stock of medium weight finds only a light demand here, but there is considerable inquiry from the coun-try for good all-purpose horses, and it looks as if this demand would in-crease materially during the coming year.

Approximate values at San Fran-cisco, based on auction sales.)

SPECIAL DECIDUOUS MARKET REPORT.

By J. L. Nagle.

Sacramento, Oct. 11, 1915.

Due to the receipts of Tokays being slightly in excess of the demand during the past week, market conditions have been hardly better than normal, but as fully 80 per cent of the Tokay crop and 90 per cent of the Malaga shipments have been harvested, the movement of grapes will be considerably lighter from now on and the market will unquestionably respond accordingly. Favorable weather has benefited the quality of the grapes and in most cases where mildew is not apparent, berries have carried exceptionally well.

Receipts of domestic fruits in Eastern markets have fallen off considerably and on account of the grape juice factories taking a liberal supply of home-grown grapes, this, naturally, would eliminate considerable competition from California. On the whole, we consider the season to date on Grapes very satisfactory, especially as the receipts have been considerably heavier than was at first estimated.

The following prices have ruled for the week:

New York.—Bartlett Pears, averaged $2.65; Malaga Grapes, 95c.; Tokay, 98c.

Boston.—Tokay Grapes, averaged $1.03; Malaga, 98c.; Bartlett Pears, $3.25.

Chicago.—Tokay Grapes, averaged 86c.; Malaga, 87c.

Total shipments to date, 12,762 cars. Total shipments same date, 1914, 13,232¾ cars.

Publisher's Dep't.

After considerable persuasion the publisher has secured the promise from the editor of the Pacific Rural Press to write a series of articles covering certain phases of California agriculture, which we believe will be of vast importance to the State. For forty years Prof. Wickson has taken a leading part in the various changes that have occurred in fruit, stock and grain production of California. His work as editor of the Rural Press, as professor and dean of the Agricultural College of the University of California, as director of the Experimental stations, as author of several agricultural books—all have tended to give him a knowledge of and insight into conditions such as no other man could have. In writing the proposed articles, Prof. Wickson will give to the people his experience covering the past forty years of a very active participation in these lines. We believe that no series of articles has ever been published that will equal these, as no man is so well qualified by ability and experience as Prof. Wickson to write along agricultural lines. We will publish the first article next week, which will cover fruit tree planting as well as fruit marketing. Then will shortly follow others on the cattle and swine industries, grain growing, etc. We want every reader of the Rural Press to study these articles, as we believe they will prove of actual money value to every producer, as well as give him a clearer vision of the future of California and its greatest industry.

R. H. Whitten of Los Angeles, who has one of the show poultry ranches of southern California, near Glendale, writes us that, "I feel that the Pacific Rural Press should be given considerable credit for my success. In addition to your paper I used four other farm and poultry papers in California. Your paper pulled the most replies, the cost per inquiry was lowest, the proportion of sales to inquiries was greatest."

A new advertisement to our readers will be found in our columns this week. The Union Tool Company of Los Angeles is putting the Ideal tractor on the market. Read their announcement.

Dean Thos. F. Hunt of the College of Agriculture, University of California says of the California Hog Book: "It seems to me that it is a real and worthy contribution to the subject. I hope it will have a large sale."

One hundred and ninety-two new subscribers were added to our list during the past week. We want our field men to make the number in excess of 200 next week and believe they will do so.

VINA VINEYARD TO GIVE WAY TO ALFALFA.

It is telegraphed from Vina that the famous vineyard at that place goes out with a rush. During the last week of September the vineyard on the Stanford ranch is harvesting its last crop of grapes, which is estimated at 6000 tons, and is being shipped to Portland and San Francisco. Rapid work is the order of the day, as a ton of grapes is picked, hauled to the depot and loaded on the cars every four minutes. The vines on 1800 acres will be pulled up this winter and the ground seeded to alfalfa, in addition to the hundreds of acres now in that plant, which keep fifty men busy in the haying season with twenty mowers and twelve rakes.

LARGE DISCHARGE SAVES POWER.

[Written for Pacific Rural Press.]

Friction of water in the pipes must be considered in selecting pump equipment. One farmer we know, who forces water for alfalfa irrigation through several hundred feet of underground pipe direct from the pump. By using a standpipe or reservoir and lifting the water a few feet higher, he could let gravity force the water through the pipes, and reduce his engine horsepower.

The same holds true of outlet pipes from centrifugal pumps where the water is carried any distance upward or sidewise. F. L. Cook of Tehama county irrigated 18 acres of grain, alfalfa and orchard besides supplying his dairy herd and horses, by means of a 3 h.p. electric motor and a 2½ inch centrifugal pump with a large wheel. The discharge formerly was a three inch pipe. The stream would "knock a horse down across the drive." He knew it was using too much electricity. The motor was overloaded nearly a horsepower and in 16 days used 225 kilowatts—over 14 kw. per day.

A four-inch discharge was put on and the reading on Aug. 23 for 34 days previous was 264 kw.—7¾ per day. A 1000-gallon tank is filled in about five minutes.

Statement of the Ownership, management, circulation, etc., required by the Act of August 24, 1912, of Pacific Rural Press, published weekly at San Francisco, Cal., for Oct. 1, 1915.

Editor, E. J. Wickson, Berkeley, Cal.; Business Manager and Publisher, Frank Honeywell, Berkeley, Cal. Owners: (If a corporation, give its name and the names and addresses of stockholders holding 1 per cent or more of total amount of stock. Make Your Land Yield Its Full Richness

THERE'S no longer any reason for your being satisfied with the foot-deep yield of the plow. You can easily utilize that wealth of virgin plant food four or five feet below the surface.

You can get bigger, better crops; you can get bigger profits, by subsoiling your land.

Subsoiling breaks up the tight or hardpan soil and encourages long vigorous roots that quickly reach down to the fresh mineral plant food,

Subsoiling aerates the soil and fosters the helpful nitrate-producing bacteria.

Subsoiling gives perfect drainage that helps to keep crops flourishing. Progressive farmers are doing their subsoiling easily, quickly and inexpensively by means of

HERCULES DYNAMITE

In the orchard as well as the field they are profitably using this great agricultural power; all the benefits derived from subsoil blasting for crops, also apply to tree-planting.

Holes made in this manner leave the subsoil shattered and capable of storing more water than would otherwise be possible. The roots are given a more open material through which they can send down their feeders. As a result trees planted in blasted holes develop more rapidly and bear earlier than those in spade-dug holes.

But subsoiling and tree-planting are only two of the many uses for Hercules dynamite on the farm. These and other ways in which it can make your farm more productive are clearly explained in our

VALUABLE FREE BOOK

Shovels—At Wholesale Cost—Shovels

—You may go a life time before you get such an opportunity again. These shovels are in A-1 order but have been slightly smoked by means of a fire while in transit.
—Every one in perfect working condition, all styles and sizes; note the prices:

Long Handle, Round Point Shovels, per doz.	$4.85 or 50c each
Long Handle, Square Point Shovels, per doz.	$4.85 or 50c each
D Handle, Round Point Shovels, per doz.	$4.15 or 50c each
D Handle, Square Point Shovels, per doz.	$4.15 or 50c each
Long Handle Spades, per dozen	$3.75 or 40c each
D Handle Spades, per dozen	$3.75 or 40c each
Long Handle Scoops, per dozen	$3.75 or 40c each
D Handle Scoops, per dozen	$3.50 or 40c each

"Air Tight" Drum Heaters

$1.10 and $1.25

—These splendid little heaters have never been equaled for giving quick, intense heat with a very little fuel.

—Burn wood, papers or coal with equally satisfactory results. Nothing better in a stove heater. Usually sold for much more but offered by us at $1.10 and $1.25.

$15 to $18 Front Doors $10 Veneered Oak With Plate Glass

—A typical value from our Sash and Door Dept., finest quality veneered oak doors with plate glass panels at top. Secured by special purchases recently and not mentioned in our catalog. All standard sizes and styles. Write for further details.

$50 Complete Bathroom Outfit for $36.50

Consists of:

One Lavatory with Nickel Plated China Index Compression Basin Cocks, marked hot and cold, and Nickel Plated Adjustable P Trap and Rubber Stop.

One Heavy Cast Iron Porcelain Enamel Bath Tub, 5 ft. with 3-in. roll rim, including No. 4½ Nickel Plated Fuller Bath Cock, offset supply pipes, connected waste and overflow, and slip joint nuts.

One High Tank, 6-gallon, Zinc-Lined Toilet Combination, complete with valve. Finished either in Natural or Golden Oak.

We guarantee this outfit in every respect—if you are not thoroughly satisfied with it, return it and we will refund your money.

This outfit was never before sold under **$50.00** retail, and is accompanied by our liberal money-back guarantee.

Shipping weight of outfit, complete, **500 lbs.** First-class freight.

"Standard" Roofing Paper

—A splendid quality of roofing paper that most firms would sell 20 to 40 per cent higher. Each roll complete with necessary cement, nails, etc., ready to lay.

1-ply, double-sanded, per roll of 108 square feet	$1.15
2-ply, double-sanded, per roll of 108 square feet	$1.40
3-ply, double-sanded, per roll of 108 square feet	$1.65
1-ply, "King" smooth, per roll of 108 square feet	$1.25
2-ply, "King" smooth, per roll of 108 square feet	$1.50
3-ply, "King" smooth, per roll of 108 square feet	$1.75

ber we ship direct to you.

Position and Promise of Fruit Industry.

First of a series of sketches in which the Editor presents suggestions drawn from long experience, of what Californians should think and do for the advancement of California Agriculture.

[Written for Pacific Rural Press.]

AS THE planting season approaches, it is timely to think broadly of the achievements of the California fruit industries and their relation to the future of the State. Recently there has been ample and reasonable exhortation that California should do more in other lines of production, and at the present time there is very keen interest in realizing the advantages which wider diversification promises. Californians are waking up to the chances of profit in growing better animals and in using idle land for forage plants, which reach their highest value when transformed into animal products. There are also chances of profit in growing better cereals and other field products and more of them, and these should not be overlooked.

Relation of Fruit-Growing to General Agriculture.—All such activity in other products than fruits is good for the State and really essential to its full development. In the enthusiastic pushing of them, it is perhaps natural that some advocates should claim that their present popularity constitutes a warlike drive on the fruit industries, because our fruit products have reached limits and other products should displace them. This is a great misapprehension. It would be more rational to claim that the extension of our animal industries will minister directly to the extension, in product and profit, of our fruit industries. There might be some rivalry, in the use of land and capital, among the products of which California is capable, if California were not so large and so various in its conditions of soils, temperatures, moisture-supplies, etc., but, as these things are, the promotion of other lines of production does not at all involve the displacement of fruit—except as experience has shown mistakes in the placing of them. Every forward step which California can take in more completely using land for other demandable products, and in increasing population capable of producing them, the greater and more stable our distinctive fruit products will become. We do not refer to increased local consumption of fruits. That will obviously come, to certain limits, and be, to that extent, helpful, but the larger benefit will be realized in greater producing advantages for world consumption.

California's Handicaps in Fruit-Growing.—One should always remember that the market-value of a hundred millions a year for California fruit products has been achieved in spite of appalling handicaps, viz: inexperience and ignorance of conditions, for practically no Californian of the first creative generation was either to the country or to the manner born; distance from market, two or three thousand miles by rail, and twice more than a mile high in making it, with four thousand miles by sea added for most European shipments; high cost of transportation which such distances involved; wages and interest on necessary capital several times as great as in old countries, whose products were challenged in the markets; large expenditures to gain recognition for the products and protection, all the way from a scale bug to the Congress of the United States, etc., etc. From the solution of these problems, and many more like them, it is clear that California planters, from 1870 onward, entered upon a world-quest heavily handicapped.

California's Achievements in Fruit-Growing.—In a word, California's achievement is a sales-value of fruits and fruit products, estimated at a hundred million dollars—greater than that of any State or country in the world, except the wine product of France.

This achievement was attained, in spite of all handicaps, because of two unparalleled advantages: first, the superlative, natural conditions of soils and climates, which produce both northern and semi-tropical fruits with exceptional commercial characters and suitabilities; second, the insight, energy and enterprise of Californians to build an industry upon the superior natural advantages of the State and to overcome all obstacles to accomplish it.

California Weather Record.

The following rainfall and temperature record is furnished the PACIFIC RURAL PRESS by the United States Department of Agricultural Weather Bureau, at San Francisco, for the week ending at 5 p. m., October 19, 1915.

STATIONS	Rainfall Data: Past Week	Rainfall Data: Seasonal To Date	Rainfall Data: Normal To Date	Temperature Data: Max'm	Temperature Data: Min'm
Eureka	.06	.43	2.85	68	44
Red Bluff	0	0	1.67	84	50
Sacramento	0	.01	.94	84	50
San Francisco	0	.01	.96	76	50
San Jose	0	.04	.87	80	42
Fresno	0	0	.66	88	50
Independence	0	.09	.63	76	36
San Luis Obispo	0	.01	1.06	78	40
Los Angeles	0	0	.41	86	52
San Diego	0	0	.35	80	52

THE WEEK

Bawling and lowing have displaced neighing and whinneying at the Exposition, and the new music seems to be just as delightful in the ears of the countless thousands of people who are studying the magnificence of the bovine race, both in individual exhibits and in the collective manifestations on parade. Of course, the cattle show has not all the zip and dash of the horse show, nor does it rise so high in "sassiety" standards To worship lordly bulls and queenly cows men do not pinch their pants so tight, nor do ladies bespread themselves with embroidered nose-rings and three-legged stools as they do with whips, quirts and horse-shoes, but that does not mean that the genus Bos is not as fit to rule in society functions as is the genus Equus.

It is just possible that we are losing something in this country by not insisting that the bull shall be a matinee hero as well as the stallion. Not only actually but ideally, we are apt to keep one in a prison pen and the other in a cushioned apartment, thus exaggerating the brutishness of one and the lordliness of the other. Probably we are following too closely the traditions of our Anglo-Saxon lineage and too blindly worshipping the "sport of kings." Should we not broaden our view and become truer to wider human experience in the associations of men with the best of the lower animals? No doubt sweeter love songs have been stringed in Spanish bull-carts than have ever been heard in equipages drawn by champing, prancing steeds, and surely no purer joy has ever been patted by maiden upon glistening neck of favorite mare than happy milkmaid has whispered to her rose-decked kine. If you doubt it, consult the poets.

We fear society is false to the human heart when it lifts its fan as the garlanded bull comes near, in the parade, and gazes full-orbed on the no-less glorified masculinity of the all-conquering stallion. There may be some conscious affectation in this matter, and, if so, it is all the more unjust to the bovine race. It is comforting to think that it is not universal, and that there are nations which are just to the horned animal. The north-European housewife installs her herd in her front-room and freely bestows her all-cleaning affection upon her honored guests. No Arab ever housed and cared for his steed more devotedly, nor admitted him to the social life of his clan more fully than she her cow. No doubt it would make largely for the comfort and prosperity of the American people if its ideals of cattledom were builded more closely to the standards of the cow at her best than to the standards of the cow-boy. And it would help forward also all those who establish industries upon cows and their functions. We are simply pleading for justice to the bovine race, for the sake of humaneness and humanity.

Revelry for Rice.

Marysville has done a very proper and enterprising thing in calling a "rice carnival" to open in that city on Monday, October 25. Rice production is one of the most rapid and resolute drives which California has ever made toward the utilization of her resources and adaptations. It is true that rice has been dreamed about for several decades and some sporadic experimentation has been undertaken, but these are merely interesting historically; they had no connection with the quick uprise which began in the center of the Sacramento Valley. The Marysville carnival has particularly to do with the product of the five contiguous counties of Butte, Sutter, Yuba, Tehama and Colusa, although there is also rice quite largely grown in the San Joaquin Valley also. The estimated value by federal experts of the rice grown in the five counties named this year is $2,500,000. It is held that the average of production will be above last year, which was so great as to astonish experienced rice growers from other parts of the country. It is claimed that some fields may go above 100 sacks of well-matured rice to the acre.

It is certainly wise that such a quick development in one of the world's staple foods should be celebrated. It will no doubt take some time for the nations to realize that perhaps the best place in the world to grow an aquatic plant is in an arid country. It will help toward such realization to have it known that Marysville will have a display in a tent covering 40,000 square feet devoted to the rice industry alone. Miniature paddy fields, a complete irrigation system with huge pumps, threshing machine and a rice mill in operation will be among the features of the exhibition, and prizes will be awarded to competing exhibits in each of the five counties. It will surely be a historic event.

Two Kinds of Water.

Writing of rice naturally reminds us of water, and we hasten to say that, in the agricultural parlance of California, there are two kinds of it, viz.: top-water and bottom-water, and they have critical relations to each other. Top-water is usually the gentle rain which falls from heaven upon the place beneath, and sinks gradually through the soil-particles by gravity. Top-water may also be irrigation water, which may be rushed over the surface to take a similar downward course. Bottom-water is the ground-water reservoired in the lower strata of subsoil and disposed to rise by capillarity—more or less rapidly and far, according to conditions favoring such movement or otherwise. Now, either top-water or bottom-water will help a plant to grow, so long as neither too much or little of it comes into contact with the roots, but it is common experience that few plants are safe to run a profitable course unless downward water and upward water come together, each contributing to any lack there may be in the other, and both co-operating to bring the whole mass of earth, through which they are acting, to an adequately moist condition. When this occurs the thinking farmer slaps his thigh with joy, for he knows that, barring accidents in earth and air, his crop is sure.

Two Kinds of Rural Credit.

Inasmuch as we are all invited to vote next Tuesday, October 26, on what is called a rural credit amendment to the constitution of California, let us remember that there are two kinds of rural credit. One falls from the heavens of state-craft upon the people beneath; the other rises from the springs of altruism in the people, distributing prosperity among the people who create it and building up the State. To translate from the languages of the many peoples in whose experience these phenomena can be fully observed, we may say that there is a form of rural credit which is "builded down from above," and another which is "builded up from below." Of course, the United States is a nation differently constituted from many others, and we have not in this country any throne of a hangar from which a Zeppelin can be shot out to shower gold upon the people, to promote prosperity—the royal cure for popular unrest which threatens thrones—and we can not therefore build down from above as it has been done in some other countries. Can we then build down at all, and is there a metaphor bouyant enough to picture it?

Have you watched the construction of a sky-scraper? Have you seen them shoot up a few slender uprights of steel which looked like filmy streamers against the evening sky? And then, have you watched the appearance, high up in the air, of first an opaque nucleus and later still the outlines of walls, and then the progressive building downward from above of a building with scarcely visible means of support, until the stonework of the lower stories rises from below and meets the light descending sheathing and completes a structure which defies the earthquake?

It must be in some such way that we must realize the two courses of rural credit: the movement by the State towards the people and the movement of the people toward the State. And it must be with us a matter of currents and counter-currents of economics, not of politics—because we are ourselves the sovereigns, sometimes too little kindly to ourselves, and we also are the people, sometimes too blindly selfish to see the glories of a powerful, prosperous state, which is we ourselves. Still, in spite of these inconsistencies on our part as nationalists, the fiat has gone forth, from national parties, from presidents and governors, from Congress and from Legislatures in nearly all the States, that there must be rural credit in this country, by which qualified people who have land or desire to secure land shall have such capital as they deserve and can successfully use in producing operations, on such

erms and for such a rate of interest as their conditions require for success in their own living and in the living of all the people.

There is no use in blindly opposing, through prejudice or lack of understanding, such revision of constitutions and laws as are necessary to secure this consummation devoutly to be wished. This nation has never declared itself so clearly on any single question in its history as it has upon the enactment of rural credit legislation. The nation has split on slavery, on currency and coinage, on tariffs, on wars, on the very question of national life itself, but practically all the States in the Union separately and all the States together have declared that both individual and national prosperity depend upon defending food producers against the greed and extortion of money-lenders and food-traders. The State of California calls upon her citizens to give their sovereign consent that she, as the great entity which we have created for our own protection, may act for the advantage of all of us, in such ways as we shall command her to act, through the Legislature at a later date. Item No 5 on the ballot for October 26 simply provides that California shall have power to do what the California people shall require. Let the people declare that in this beneficent matter California shall be free. Vote for the Rural Credit Amendment!

A Busy 1916.

Oh, well, we have preached ourselves so tired that it is a joy to think that all we shall have to do next year will be to sit by the roadside and see all the world go by. Those great prophets of world-movements, the tour-managers and the automobile-agents, hasten to assure us that such a thing as reactions after the expositions is not to be thought of—that the expositions will prove but advertisements, which will bring to California more people next year than came this year. Perhaps, if you asked it, they would prophesy also that you could easily work off that piece of alkali-hardpan which you failed to sell to Exposition throngs, because next year people will not have so many other things to look at. However, this is the way they stack up the activity of the coming year:

"The Pacific coast, and especially California, has already been accepted as the future touring ground for the leisure touring class. The wonderful scenic attractions here especially have at last been recognized. We have received reliable information from the East that hundreds of motorists will ship their cars West this winter when the snow has filled the Eastern highways. They will remain here for the winter, and when the Lincoln highway is opened in the spring they will return home by this accepted route. It is now up to us to meet these tourists and make their visit so attractive that they will not only return, but will be instrumental in bringing others westward."

Speaking of tourist travel, it is interesting to note that there are being now freely circulated in our cities publications assuring Americans that the resorts in western and southern France and in Spain are ready for business in the old line and will give them a good time. It is the most delightful token of returning consciousness in Europe that has been shown since the war began. May there soon be broader signs of it!

Queries and Replies.

Querists must give name and address

Prunings for Fertilizers.

To the Editor: Do you know any way of saving the small brush after pruning for its natural work of fertilization? I am new in the orchard business, but it seems to me extravagance to burn the brush. If it cannot be returned to the soil, would it not be worth something for paper pulp?—S. B. C., Sunnyvale.

Various kinds of chopping machines for reducing prunings to small bits for plowing into the soil were proposed, and some were actually constructed, thirty years or so ago. Our observation is that none of them were used long, it being the conclusion that the product was not worth the $2 per day which it cost to hire men to poke the brush into the choppers. If any one has concluded differently and finds pruning-hash profitable, we shall be glad to hear of it. As for pulping, there is too much better material now going to waste in the lumbering regions to admit of a thought of putting in expensive machinery to handle prunings. So far as we know the only practicable way now is to burn the prunings in small piles or use a portable burner which scatters the ashes.

The Gooseberry: Limited.

To the Editor: Please tell me through your paper something about gooseberries. Do you think they would grow in Stanislaus county, not far from Modesto, and would there be any money in them, if they did grow?—Subscriber, Modesto.

Gooseberries will do fairly well in a garden in the interior valley if they have the shade of trees and the soil is kept evenly moist during the dry season, for they do not enjoy high dry heat. You need varieties resistant to mildew and California nurserymen do not usually offer any others. Gooseberries do best in the more moderate conditions of the bay district and enough are grown to supply the moderate demand. There is no reason to undertake gooseberries in the interior, except for local use. Californians, as a rule, have no use for ripe gooseberries, and will not take many green ones for cooking purposes.

Reinforcing Winter-Growing Corn.

To the Editor: Kindly advise me what is best to plant between corn rows for winter pasture. There will be considerable second crop corn in small heads that will be desirable to allow the stock to "hog off." We have in mind some variety of vetch, peas, rape or barley, anticipating also what would be most desirable for plowing in in the spring. You, no doubt, are familiar with winter conditions in the Coachella Valley.—J. A., Thermal.

As soon as the ground is moistened enough by rain or irrigation we should scratch in between the rows barley and vetch together, use it for winter pasture and plow in the refuse and shallow roots deeply for the following crop. This practice is based on the fact that the corn is apt to keep on growing and to forget that it is winter by the calendar.

Pruning Almonds.

To the Editor: My almonds will be three years old next February. I have never pruned them. They are nice, bushy trees. When is the proper time to prune, and would you advise me to prune? I believe they are too bushy.—P. G. M., Yuba.

They probably are too thick and have a lot of branches crossing each other or lying upon each other, and thus interfering with good foliage action. Your work would be chiefly thinning out surplus branching and cutting back to upright laterals branches which are drooping too much. You can begin this as soon as the foliage yellows and keep at it for the next two months or more.

Bell Peppers in Winter.

To the Editor: Will you tell me when and how to plant bell peppers for home use by the end of February and first part of April, as they are very high on the market at that time?—A. M. B., Fresno.

Peppers will only stand light frosts and will only hold over in nearly frostless places. This they are most apt to do in what are called the frostless belts, near the coast in Southern California, and that is the reason why the peppers are high priced at the dates you mention. If you box in a few plants with boards and cloth cover you may get fruit at these dates from holdover plants, grown the previous summer, unless you are in a very frosty place.

Almond on Peach.

To the Editor: What is your opinion about grafting almond upon seven-year-old peach trees? A good many claim they do not unite well, but blow out too easily.—Subscriber. Winters.

Old peach bark is disposed to shrink and draw back, and amputations of peach wood are very prone to decay because of this indisposition of the bark to grow over fast and well as other vigorous bark does. This leaves the graft not well supported, and it blows or falls off its perch. If you can work in new sprouts by budding or side-graft without splitting the stub and wax well over all and keep the stub waxed or painted over until the bark is well started in growing over, the graft will usually hold well.

No Rural Credit Law Yet.

To the Editor: Will you kindly let me know through your worthy paper if the new rural credit law has passed? If so, how can I communicate with the same?—Subscriber, Oroville.

No law has passed yet. You can vote on an amendment looking toward it at the election of October 26. No law can be passed in this state until the legislature meets in 1917. Congress may come through with something this winter. If anything had passed we would not be making so much racket about it—perhaps.

Reinforcing Alfalfa.

To the Editor: I have some two-year-old alfalfa that is a poor stand. Should I cultivate it and sow in or should I plow it up and re-seed it?—J. J., Livingston.

It depends upon how poor the stand is. If it is fairly good or good in spots, scratching-in seed in February, in your district, may help the bare places, since the stand is so young. A poor old stand is hard to catch in with. Probably, as a rule, when one is sure the stand is poor or worse, it is better to start over.

Rye and Vetch.

To the Editor: I want to sow grain of some kind in my bean ground, for winter pasture for hogs and cows. Which is best to sow: oats, barley, rye or vetch?—R. R. T., Turlock.

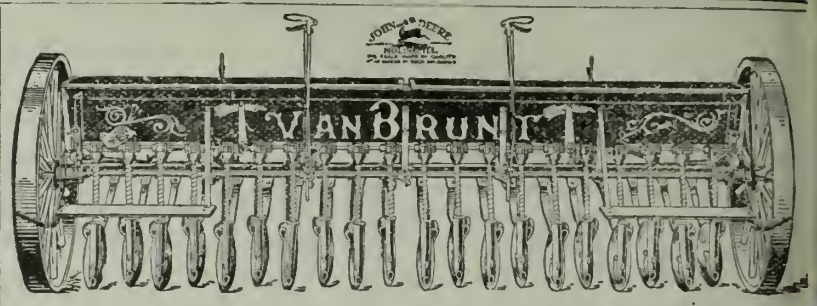
Sow rye and vetch. Rye is commended because of its disposition to make best early or mid-winter growth for green-feeding.

Position and Promise of Fruit Industry.

[Written for Pacific Rural Press.]

(Continued from page 393.)

In the course of this achievement, the following things have been done: (a) the introduction and establishment of all commercial fruits of the world, except the strictly tropical; (b) origination of methods of tillage, irrigation, pruning and training essentially new and now being recognized and introduced in all countries as "California ways"; (c) invention of methods and appliances for fruit preservation, through evaporation by sun-heat, which is largely impracticable under meteorological conditions of other producing states and countries; (d) organization of fruit preservation by canning and invention of capacious methods and machinery which are world-standards for efficiency and economy; (e) design and prevalent use of new-style packing houses, cleaning and grading machinery, stemming and seeding processes and appliances; new kinds of containers and envelopes for fresh and cured fruits; creation of labels which blink the "old masters" of pictorial art and "literature" which puts the classics to shame; (f) invention of methods and construction of establishments for pre-cooling, icing and re-icing in connection with refrigerater cars, which insure safe-conduct to fruits through thousands of miles of destroying temperatures; (g) discovery of insecticides and invention of spraying and gassing outfits which have set the pace for plant protection from pest and disease throughout the world; (h) organization of producers for reformation of the fruit trade, all the way from the tree to the consumer, standardization of fruits and regulation of distribution, systematic efforts to increase demand by advertising and employment of expert sales agencies involving the triumph of the new principle to sell the greatest amount of fruit profitably as a substitute for the old commercial ideal of selling the least fruit for the greatest price.



This enumeration of the changes wrought by horticultural manufacturing and commercial effort by California producers is not presented as complete. It is only representative and suggestive of the varied effort, investment and resolute spirit which have made fruit production and distribution the greatest and most distinctive industry of California.

Our Fruit Industries Will Continually Advance.—On theoretical grounds alone it would be possible to demonstrate conclusively that our fruit industries will continually advance. There is really only one course open to an industry which has manifested such unique superiority and acceptability of products that, in our greatest specialties, Uncle Sam has been changed from an importer to an exporter—and that course is forward. Again, a capable, well-established and progressive industry will grow as long as the world needs or desires its output—and the fact is that the world has always been more scantily supplied with fruits than with any other food-article. It has always had too little fruit to fully understand its wholesomeness and food-value. From the dawn of history until recently, fruits and fruit products have been the ambrosia upon which the god-like higher-ups have fed—except as, during a few days of the year, common people have gathered whatever their local climates have furnished, in the little garden or the wild, and counted a luxury or an appetizer. Systematically frugivorous people have only lately emerged from classification as cranks, but they are surely going some. Their speed and multiplication are directly conditioned upon the price and availability of fruit foods. It is an interesting fact that the present vigor and valor of the French and German belligerents are traceable to California prunes, and the English heart is stout in the trenches because of puddings made of California raisins. France and Spain could not supply the world with prunes and raisins as food: they were doing a good business in these fruits as luxuries, but the world has gone beyond that. And so California by making, in a full crop year, about four hundred million pounds of raisins and prunes, or perhaps six times as much as France and Spain ever combined to produce, is winning the world to a fruit diet—the ultimate result of which will be blood-cooling and enduring pacification; not because fruit will reduce the force to fight, but will make men too clear-sighted to follow tyrants into war.

Here again we come to a mine of facts which can only be indicated by sample. What has been said of the world aspect of our prunes and raisins is also true of all our preserved fruits and will also be true of our citrus and some other fresh fruits, when they get the mud out of the Panama canal and the barbarism out of Europe. One has only to visit European towns to see how scant is the fruit supply to be had for out-of-local-season use. What we have sent thus far has hardly been enough to whet the appetite of the common people for something good and within their price.

American Fruits for Americans.—Nor is it vastly otherwise on our own continent. It is true that fruit planting in other states has been large and the product is rapidly increasing, but it must be remembered that, except for apples and to a much less extent for pears, the fruits they grow have a short season—beginning late and rushing to an early close. Before their beginning and after their close, the eastern markets are practically open to us for fruits quite different from those they grow. We have simply to avoid their fleeting fullness and choose fruits and forms of fruit products to supplement their home-grown supplies. It is not to be forgotten of course, that even in the abundance of the latter we can always do some business with the greater beauty and keeping quality of the same fruits which they largely grow, if we send at such times nothing but our very best; a thing which, by the way, we should be doing all the time and may be forced to do for our own good.

But then remember this: The development of this continent is still

Van Brunt Single Disc Drills

The drills that plant any small seed from alfalfa to bearded oats exactly where it will bring the best results—at the bottom of furrows of uniform depth. All the grain is up and ready for harvest at the same time.

No seed wasted, all the field sown. Van Brunt Drills have an adjustable gate force feed which compels an even, continuous flow of seed from each seed cup without bunching or cracking the seed. It cannot choke up. And the seed beats the dirt into the furrow because of the closed forward delivery.

Individually adjustable pressure springs, direct gear drive, extra large and stiff hopper, high grade steel disc blades and disc bearings that are guaranteed are additional features that make the Van Brunt the desirable drill.

Grass seeder attachment can be furnished for any Van Brunt Drill.

There's a Reason

why a man you know—your John Deere dealer—is handling this drill. He knows it is made right. Ask him about it, and write us for free circular describing the "Van Brunt." Mention that you read about it in **The Rural Press.**

ALFALFA SEED

Our success in the Alfalfa seed game has astonished the most skeptical. We were advised that clean, reliable seed could not be furnished in quantity. We found that it could be, if the dealers would go to the expense of inspecting the seed fields before they were harvested. We do this thing and therefore know what we are serving is right. If it is not right then we are to blame and are going to make it right.

We have seed for sale in quantities from 1-lb. to car lots. It is the 1915 crop—the best to be had at any price, anywhere. We have no bargains to offer you, but if you are interested to the extent that you want good seed at honest prices, we are on the job to the finish. For prices, samples, etc., wire or write,

oceeding more rapidly toward the rth than toward the south. There em to be larger surpluses of gold, grain and of grit, toward the le than toward the gulf. Immense velopment is being achieved holly north of suitability to fruit oduction. It is really a question nether a few years hence we shall ve any of our distinctive products fresh and cured fruits for Euro- an markets. It is clearly within asonable calculation that Califor- a, even by doing her best, with ea so small as compared with the ea of the continent, can do no ore than produce the fruits, which e alone can grow, to fill the North nerican demand. Really, people o sometimes claim that we ought be growing other products instead so much fruit, have a very scant nception of our opportunities and e requirements of success. We ght to build up the live stock in- stry, the cereal industry, etc., c., not only for their own sakes t because we shall have to grow much more fruit and employ so any more men and so much more oney in doing it. California needs rounded and self-sustaining de- lopment. We need more bread to ed more men; more men to feed ore stock; more stock to feed more ees; more money to keep them all ing. It is the call of patriotism d prosperity.

The Need of More Wisdom.—But, ter all, "wisdom is the principal ing." The secret of attaining ch farther extensions of the fruit dustries as our conditions invite d our development demands, is owing more as a foundation for ing more. In spite of great hievements, which have been ted, there still exists lack of defin- e knowledge and mental conception essential cultural and commercial nditions which will determine ture accomplishments. We are t to be too complacently ignorant, o conceited, too egotistically self- liant, too "independent" in a very d industrial sense. This matter large—beyond space for argu- ent: let it be attacked by sugges- ve catechetical category.

Can you tell by sight of a tree or ne whether it has vigor best for uit bearing or whether it is ex- berant or deficient, and do you ow what to do in either case?

Can you tell by sight of a tree or ne whether it is pruned to have e right amount of bearing wood d is arranged to give the right nount of fruit the proper carrying rength and exposure for best de- lopment?

Do you understand what recent il studies are demonstrating about il texture and content of plant od, aeration and moisture, as re- ted to the thrift of the tree or ne? Do you realize that the com- on conception of the root system the tree, as merely a sponge, is rong? Do you appreciate the fact at the unseen parts of the tree ave perhaps a greater and more aried sphere of activity than the p of the tree and demand at least ual cultural consideration?

Do you know exactly why ship- ers, canners and other fruit pre- rvers will pay more for some va- eties of fruit, less for other and ill wholly reject others—all being arieties of the same kind of fruit?

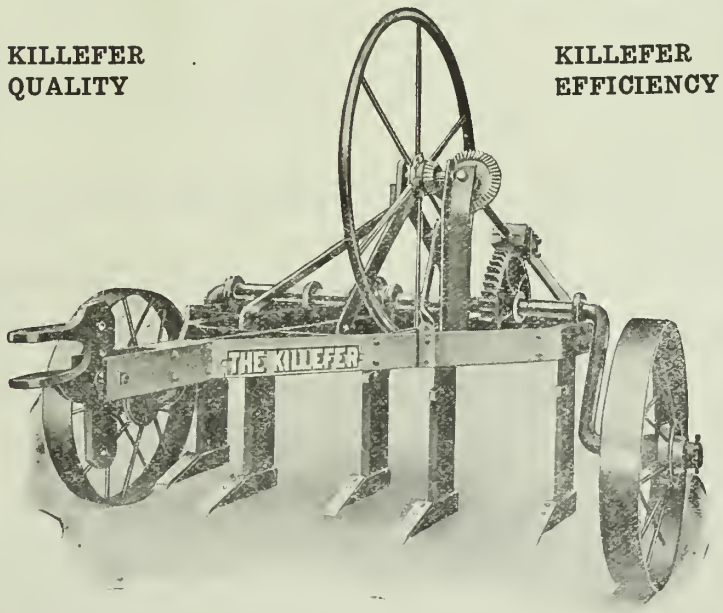
Do you realize that there are two extremely dangerous things to do in fruit planting: to blindly imitate and to blindly plunge? To put in or pull out what every one else is put- ting or pulling, is to be out of the game when the turn comes. To plunge in with some new thing which no one else is planting, with the idea of getting the start of everybody, may be a wonderful hit in supplying a tourist hotel, but it is as deadly as solitary confinement in connection with the general com- mercial demand.

If you know all these things you are entitled to receive the first de- gree in fruit-growing. Thirty-five years ago these things, and perhaps a hundred others like them, were not known. The pioneers entered of necessity upon an uncharted sea and it proved to be full of rocks and mines and submarines which scat- tered the financial remains of some of them around the horizon, but the industry came through on the wings of faith in the distinctive suitability of California. This suitability is not now a matter of faith: it has been commercially demonstrated in the eyes of the world. In future de- velopment, "wisdom is the principal thing."

Organization Is the Hand-Maiden of Wisdom.—To realize everything which we have stated or merely sug- gested, to be good and to realize everything else connected therewith or which enriched experience shall demonstrate to be good in coming years, there is one clear pathway and only one, and that lies through the medium of organization.

Every special branch of fruit pro- duction and manufacture must be organized to solidify the interest and enforce co-operative action on its special problems. All special inter- ests must be organized into a cen- tral co-operation which shall create and distribute economic advantages to all, through securing cheaper sup- plies of all kinds, cheaper transpor- tation, cheaper, wider and more di- rect distribution of products to con- sumers and to give collective assur- ance that nothing but what is good and representative of the state shall go beyond its borders. We are not undertaking to plan organizations but simply to indicate their scope. To us there appears at the moment no plan except that of representa- tive self-government of the fruit in- terests; central and auxiliary—each with its own scope and sphere of action and influence. There should be no "independents." It must be "each for all and all for each"—the true co-operative principle. This matter may arise later for separate consideration.

There must be proper organiza- tion of all state agencies created by the people to serve these indus- tries. The work of the executive horticultural department at Sacra- mento and its branches and func- tionaries at various points in the state should be differentiated from the instructional work of the Col- lege of Agriculture pursued also in various parts of the state by its rep- resentatives. The executive depart- ment should of course deal with the letter and spirit of the laws relating to fruit protection and other matters which pertain to the regulation and promotion of the fruit business as a state interest. The College of Agriculture should have a clear field in research and instruction for which it is established and outfitted and for which it has state-wide extension machinery and men.



Using single descriptive words, the executive work for fruit growing should be "business" and the Uni- versity work for the industry should be "academic." The state depart- ment should be administered by a man of experience and mastery in growing and handling fruit—an up- standing, broad-visioned, progressive fruit man (and you can take the word "progressive" in a political sense or leave it, as you see fit). The mix-up of business and academic things in the office of State Commis- sioner of Horticulture has continued long enough. The laws favor it, but that is so much the worse for the laws; they should be expurgated. So far as we now remember the state has never had an executive horticul- tural officer who owned fruit trees enough to count—except in the dis- tinguished person of Ellwood Cooper. The direct connection of all the rest of them with the fruit business has never exceeded a dime's worth at a delicatessen store, figuratively speaking.

A Crying Need.—After all else has been said, the crowning, crying need of the fruit industries and of those engaged therein is a "big business" point of view. California fruit in- dustry is not shaking down the full of a wagon-box to peddle in an ad- jacent town and yet that is the dream of many direct-trade doctors. Cali- fornia fruit growing needs self-con- sciousness as a great industry. It has already done great things, largely as forced by circumstances. It needs to do greater things by carefully planning and concerted action. Every man in it needs to have his views enlarged and his re- lations to all others more clearly re- vealed. Then all will see better the needs to be filled and the opportuni- ties to be seized; and they lie all the way from thrifty small farming to State finance. No one can reveal all this to fruit growers nor endow them with it, but they can find it and pos- sess it for themselves by resolute, cordial and self-subjugating co-op- eration.

FIVE STANDARD SUB-SOIL PLOW

KILLEFER QUALITY

KILLEFER EFFICIENCY

Subsoiling is generally conceded to be of great benefit to the soil in any country, but more especially in our Western States, where the ground is never frozen, but is packed from year to year, making it very hard and allowing a large percentage of the natural rainfall to run off, that would be absorbed if the ground was broken up to receive it.

The use of these tools in preparing ground for raising grain has proven a thorough success and the value of their use on ground for Alfalfa and other crops cannot be questioned.

The above tool is built in sizes of Three to Seven Standards, and will work to a depth of twenty-four inches, thoroughly breaking up the ground and putting it in the best possible condition to hold the moisture for the crop following.

Dynamite Before Tree Planting.

[Written for Pacific Rural Press.]

Twenty acres of navel oranges set a year ago last May and June on the place of A. G. Teashira near Lindsay are now the finest young orchard one will see in many miles of travel. The red soil had been sown to grain for an indefinite number of years with the usual result. No fertilizer or cover crop helped matters. Hardpan 1 to 6 inches thick and usually about 18 inches down underlies much of the piece. Five cultivations per season and plenty of pump irrigation are partly responsible for the even thrifty growth and beautiful color of the trees.

There is also another reason—one that may best be applied very soon now before the ground is water-soaked. Every hole was blasted with dynamite whether or not there was any hardpan. Holes were bored three feet deep with soil augers, an entire stick of 25 per cent dynamite was fused and tamped in tight with damp dirt, using a broomstick. About two rows across 10 acres were set at once, then the fuses were lit as fast as a man could walk. Water was run down the rows to settle the dirt, then the whole piece was plowed about eight inches deep, the field restaked, holes 18 inches in diameter were dug where previously blasted, balled trees were defoliated and set with the bud on the windward side, to resist the wind without breaking off. They were watered by furrows as soon as set, were not pruned until this spring when they were just touched up.

Prune Land Blasted in Autumn.—Forty-five acres of French prunes in unirrigated heavy sediment soil with adobe-like subsoil were set by W. B. Depew in Sonoma county after blasting every hole in the autumn. He says, "The ground was plowed before blasting for the trees, and the blasting should be done before the winter rains. This will insure a thorough soaking and settlement of the soil. I used one whole stick of 40 per cent dynamite to each tree and set it 3½ feet below the surface. A 1½-inch auger with the lips taken off, was used for making the holes. The cost for dynamite, fuses, and caps was 16 cents per tree; putting caps and fuses into the dynamite sticks, boring holes and shooting the charges cost 4 cents per tree, making a total cost for dynamiting of 20 cents per tree. I lost only 19 trees the first year from the 45 acres." Forty per cent dynamite would pack the soil into worse shape than ever if used while the soil is wet.

Peaches.—On a steep unirrigated red granite hillside in Placer county, C. P. Huestis cleared the land in the fall, laid it out without plowing, dynamited two feet deep with a stick of 40 per cent "powder" which loosened the soil 3½ feet deep and 5 feet in diameter as a rule. He tried 25 per cent strength here but found it not so good in this soil. Mayflower peaches and other shipping fruits were set after Christmas and in January. Foggy weather prevented their drying out until growth started. Had the dynamite shot out large undrainable basins in a hard subsoil, it would have been worse than useless. The trees would do well for a year or two and then would sicken. So it is well before blasting a whole piece to excavate one or two holes entirely to see what conditions exist.

OLD BARK FROM VINES.

Shaggy bark on old vines provides an ideal wintering place for spores of mildew and other diseases besides the insects that get shelter there from sprays. F. H. Wilson of Tulare county has his old Emperors peeled during winter so Bordeaux mixture may be sprayed on them effectively in early March as the first step in controlling mildew. An iron with one chisel end and a scraper hook on the other is used to loosen the bark. Young vines strip easily but old ones get "hide bound."

MANURE FOR MOTTLE LEAF.

That barnyard manure persistently applied cures mottle leaf of oranges is the belief of G. K. Hostetter of Lindsay. During each of the past two or three winters, a gravelly acre of mottled trees in a corner of the orchard has received several inches of manure and they now look 100 per cent improved. He notes that most if not all of the mottle leaf in that district is on streaks of sand or gravel where creeks have run in the years before. This sort of soil lacks the necessary humus and nitrogen supplied by farm manure.

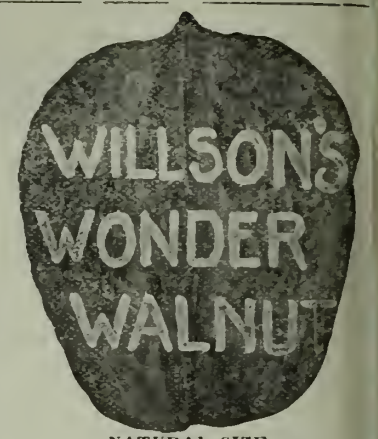
FROSTED CORN IN THE SILO.

To the Editor: I noticed a question in a recent issue re frozen corn for silage. I have put up badly frosted Indian corn (yellow dent) with good results by chopping in ½ inch lengths and turning a hose stream into the blower as much as the air blast will elevate with the corn without clogging in 10 inch blow pipe.

Dixon. Wm. Curtis Clark.

The first show of the Murray Township Center of the Alameda County Farm Bureau held at Livermore last week was successful to such a degree that the exhibition may become an annual event.

Bartlett Pear



On Blight-Resistant Roots

There never was a more favorable time for Pear planting, but be sure your trees are planted on Japanese Roots. We have given this root a through test for over five years, and discarded all others in its favor.

All our trees are propagated from trees selected for their bearing qualities and grown in the granite soil in the foothills of the Sierra Nevadas, assuring a fibrous root system second to none in California.

More About Bean Weevils.

What can you do for a pest which grows itself into a green bean and then comes out to take a shot at a dry bean after harvesting?

To the Editor: When I first wrote to you asking how to keep my garden beans from being destroyed by weevils you answered that heating the beans in an oven in which the thermometer showed from 125 to 150 degrees Fahr. It seemed to me that it would be too much trouble to bake my beans before storing and so I waited for fuller discussion of the subject. Soon after you recommended carbon bisulphid. I tried that and put the beans away. Looking at them the other day I find that the bisulphid did not kill the pests and now I have to throw the beans away. It seems to me that in parts of the State where great crops of beans are raised they must have some better way to keep them free from weevils.—Reader, Mountain View.

[We have given during the last two months about all that is known about treating beans with heat and carbon bisulphid. We have never heard that the weevil did wide injury in parts of the state where the great commercial crops are grown. It may be that we are ignorant on that point, or that there are not weevils enough present to largely injure those great crops. We are willing to learn on that subject.

It may be well to state the performance of the bean weevil as described by the entomologists. Here is one statement:

"Of the insect pests which attack the beans, none is as destructive as the bean weevil. The female adult is a small brown beetle which deposits her eggs while the beans are in the pods. She gnaws a narrow slit through that point of the pod where the two surfaces join and then pushes her long ovipositor through this slit and deposits her eggs in the interior of the pod. This is done when the pods are yet green. The eggs hatch in from seven to fifteen days and the worms feed on the tender beans. After three or four weeks, they pupate just under the skins of the beans. These pupae remain in the beans till after the crop is stored, when they emerge as beetles ready to deposit eggs for another brood. The latter brood is able to develop in dried beans. The only remedy is to treat the beans as soon as they are threshed. The most common, as well as the simplest remedy, is to place them in a baking pan and set them in a hot oven for ten minutes. This destroys the tiny larvae without injuring the beans."

Thus it appears that though the first brood of weevils grows in the green bean in the pod, the second brood develops and grows in the dry beans—therefore the beans should be gathered as soon as dry enough and immediately treated for weevils so that there may be no second brood to attack the beans after they are put in storage — as stated by Mr. Parker on page 294 of our issue of September 25. In view of what our correspondent says of bisulphid in connection with the statement of G. C. A. on page 350 of the Rural of October 9, there seems really to be doubt whether the vapor can reach the larvae or pupae under the skin of the bean when taken from the garden or field. There should be some careful experimentation on that point. There is no doubt that it would kill all insects when they are out from this shelter, also all their progeny, because a dry bean cannot close them in tightly as a growing bean does.

It strikes us that Mr. Parker is right in the recourse which he mentions in his letter in the issue of September 25, viz.: to rig a heater so that beans go into it from the thresher or cleaner and thus get their immunity heat bath before going into bins or sacks. The whole subject is of continued interest. At the south, where they are so handy with hydrocyanic fumigation, the trial of their materials and machinery on beans as soon as harvested is obviously suggested for experiment if not already worked out beyond our knowledge.—Editors.]

WHAT DO YOU EXPECT TO PLANT?

ADDRESS MAIN OFFICE 2522 TULARE ST., FRESNO, CAL.

Mechanical Power on the Farm.

[Written for Pacific Rural Press.]

PREPARE FOR RUSH PLOWING AND SEEDING.

For winter sown grain, there is a tremendous rush after the first rains, to plow and work down the soil before it gets too wet to handle. The faster this is done, the earlier the grain may be sowed and the less chance that the sowing will have to be delayed on account of wetness. Time at this stage of the game is worth several times the same amount later on. We have seen many fields sown too late, immature when moisture got scarce in the spring, kernels weazened or absent, and the work as well as the rent of the land practically lost.

Many grain farmers realize the extra money made by keeping ahead of the weather. They have tractors ready to put to work at the first opportunity, and are prepared to keep them working, night and day. Men are engaged to run the engine in two or three shifts per 24 hours, engines and implements are overhauled and oiled up before the rains begin.

Have Repair Parts Ready.—Extra parts are ordered so that no delay will occur in case of breakdowns except the time necessary to substitute parts. With $500 to $5000 invested in a tractor, the interest charge at 6 per cent equals $30 to $300, or 10 cents to $1 a day for every working day of the year. If the machine is not kept going, that is lost. One or two men on a plowing outfit cost $1.50 to $5 per day. Three shifts cost $4.50 to $15 per day. If the outfit breaks down in ever so small a piece and must be stopped until the new piece arrives from the factory or agency, interest and labor costs must go on. If labor is laid off at such idle periods new men must be obtained when work begins again. New men may be inexperienced if obtainable, while the time and expense required getting them may cost more than the wages would have amounted to. Keeping a good supply of repair parts is a most profitable kind of insurance against delay at a critical time.

SEEING NEIGHBORS' METHODS.

In an automobile that had already run 120,000 miles, a man with a crippled leg took us through the vineyards of Fresno county to see the results of various systems of pruning, cultivation, etc. We stopped here and there to look more closely at vines where large or small crops were laid out on the trays. Where picking had not begun, we could see how the fruit was set, how much had sunburned, how much had mildewed, and how much had failed to set thickly with full-sized berries. We talked with half a dozen vineyardists in half a day over a territory many miles in extent. Practically all farmers are glad to exchange ideas and to show the results of their methods. We commend this practice to all of our readers. Half a day's use of an automobile may revolutionize the methods on a profitless piece of ground, and might even pay for the car in increase of crop obtained the following year.

REDUCING TIRE EXPENSE.

[By W. D. Martin, San Francisco, in Pacific Service Magazine.]

Without exaggeration it may be stated that 75 per cent of tire repairs are made necessary by a want of a little thought, and by carelessness. Competition in the trade has been the means of making tire manufacturers use the greatest care possible in the manufacture. Each stage of the process is carefully inspected previous to proceeding further. Provided the proper care is taken of them, the number of tires not running their mileage is very small.

Hard Inflation Vital.—The most important point to be remembered is inflation. It is absolutely vital to the life of the tire to have sufficient air pressure in it to insure round-

International Motor Trucks

THERE is one advantage in using an **International** Motor Truck that fruit growers and truck farmers are likely to lose sight of. The truck, traveling faster than horses, brings about one important economy.

Twenty to forty miles of daily travel, with the necessary stops, keep the horses and driver busy all day.

With an **International** Motor Truck the driver can start later in the morning and pass every horse-drawn rig on the road. He'll be back early and can put in the best part of the afternoon at productive work on the farm. That gain is enough to make a motor truck pay.

The driver's time on the road is an expense, his time on the farm a profit. An **International** Motor Truck saves you this expense and gives you this profit.

This is only one of many reasons why every fruit grower or truck farmer should use an **International** Motor Truck. Drop us a line and we'll send you more reasons and full information. One of our three trucks—a Model "M," for 1,000-lb. loads, a Model "E," for 1,500-lb. loads, or a Model "F," for 2,000-lb. loads—will fit into the conditions of your work. A post card to us may save you many dollars of expense. Send it today.

ness under load. When not sufficiently inflated it causes violent bending at the side walls. Particularly is this the case when the tire comes in contact with any hard object on the road. This bending action causes a great strain on the fabric, and eventually the carcase breaks on both sides, above the bead. Too much cannot be said of the evil effects of soft riding, and not until drivers and garage superintendents absorb this fact will tire expense diminish.

After the fabric is so weakened blowouts quickly occur; then follow the usual growlings and imprecations on the tire-makers. It is also the chief cause of rim-cutting, causing the side wall at the point where it meets the bead to come in contact with the upper part of the rim.

Naturally a perfectly inflated tire does not expose so much of its surface to the road as a soft one, and many objects that would otherwise penetrate the tread will be deflected. No one can avoid bruises and cuts altogether, but by using a little care they can be reduced to a minimum. A hard tire will absorb the shock of a bruise. A great many of those mysterious blowouts that occur are the outcome of a bruise. Every man should carry a reliable pressure gauge. You cannot tell the amount of air in the tire by kicking it or by the look of it.

Regular Examination. — Every driver should examine his tires each night and if any surface cuts that reach through to the fabric are apparent they should be repaired without delay. To allow a tire to run when the tread is cut or chipped is disastrous. Dirt works its way between the tread and fabric, and in wet weather moisture enters, causing the fabric of the casing to rot and disintegrate. To repair a slight cut is a matter of only a few cents and is the means of saving the tire from utter ruin. The same applies to sand blisters. They should be opened at once and vulcanized, or the tread will loosen up all round.

Tires Ruined by Brakes.—More careful application of the brakes is needed. Quite a number of tires are ruined in this manner and only a very small percentage of the mileage has been obtained from them. This is a very bad form of abuse. Use the throttle more.

Taking corners at an acute angle and at high speed may be very spectacular and a fine exhibition of skillful driving, but it is exceedingly ruinous to the tires. So also is quick stopping and starting.

The mole ditcher demonstration at the Holt farm center on the islands near Stockton was a success in spite of the fact that trouble was experienced in getting enough power to pull the plow. Many of the farmers present expressed their desire to try the mole ditcher in establishing their irrigation and drainage system.

A report, prepared by the Division of Road Economics of the Office of Public Roads of this Department, gives data for each State with reference to the 1,666,984 automobiles, 44,355 motor trucks, 152.945 motor cycles, and 1,812 cars for hire, licensed in 1914, the number of operators' licenses, and the revenues. The total fines amounted to $101,364, and the gross registration revenues to $12,270,035.78.

The most independent man on earth

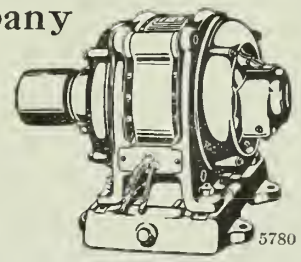
The G-E electric motor has freed the modern farmer from the shackles of drudgery and made him the most independent man on earth. He is no longer "bound to the land" by daily chores that occupy all his time to the exclusion of other interests. If YOU use

G-E ELECTRIC MOTORS FOR RANCH AND FARM

you can do your chores in a small fraction of the time they now take by hand. Costs are low, too.

For less than half the cost of an extra "hand" you can have your cows milked, your cream separated and the real work of all your other chores done electrically.

G-E motors will drive threshing machines, feed cutters, hay hoists, corn shellers, grindstones and all dairy, household or farm repair shop machinery.



G-E motors will pay for themselves many times over by saving time, labor and wages.

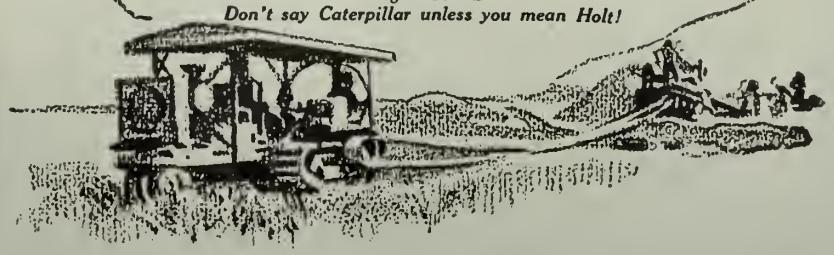
Little Stories of Success

No. 9



Mr. Fred Rollins of Chico, who bought a Caterpillar "60" in March, 1914 — and incidentally cleaned up $1700 the first month he owned it, plowing night and day for his neighbors — dropped in the other day to tell us his story of success.

Much of Mr. Rollins' work with the Caterpillar has been stationary work, and for this he says the Caterpillar has them all beat. In the rice fields, where a separator sinks in mud up to the sills, Mr. Rollins can go with the Caterpillar, and be ready to run right away without stopping to build up any foundation or blocking for the tractor. He threshed a rice crop for one neighbor, where a short time before when this same crop was harvested, the hinders had to be pulled through the fields on sleds.

Mr. Rollins is convinced that the right motto in buying a tractor is "Quality First." What's *your* problem? Write us.

General Agricultural Review.

CITRUS AND SEMI-TROPICAL.

Shippers in the Porterville section have been notified that the Federal standard of maturity, 8 to 1, will be rigidly enforced this year.

Dyer B. Holmes of New York City recently purchased 440 acres north of Indio in the Coachella Valley, which he will set out to dates.

According to the report of the Orange County Fruit Exchange, the exchange returns for the season ending Aug. 31 were $1,415,798.27.

The Placentia Orange Association of Orange county has mailed out checks to its 46 members for $81,658 for Valencias shipped during August.

The University of California has purchased 465 acres of land at Riverside for the new citrus experimental station and school of tropical agriculture.

Butte county orange packers are busily engaged preparing for the coming season; new machinery and equipment are being installed at some of the packing houses.

Florida citrus fruit growers have started a campaign for a Federal appropriation of $2,000,000 to aid in stamping out citrus canker which is causing immeasurable damage in Florida.

The University of California has just distributed 1000 date palm seedlings to Imperial Valley growers, from its stock of 2500 young trees growing at its experimental farm at Hiloland.

The College Heights Orange Growers' Association of Claremont, in their annual report, show that their organization realized the highest average of any association in the San Antonio Fruit Exchange.

Riverside shipped a couple of cars of Valencias last week and still has two or three more cars to ship. Eight cars of lemons were shipped, but it does not look as though the season's total of lemons would reach the expected 500-car mark.

E. K. Carnes, superintendent of the orange and olive groves of the Natomas Consolidated, has been chosen as the man to go to Washington in behalf of the Butte county and Fairoaks orange growers and protest against the 8 to 1 standard of maturity.

At the recent hearing of the State Commission on Rural Credits and Agricultural Finances, Kenneth McRae, an orange grower of Rialto, urged that steps be taken to centralize existing citrus fruit auctions into two great central auctions, one at New York and the other at Los Angeles, with sales on a strictly cash basis.

At the recent meeting of the Queen Colony Fruit exchange of Corona, the following officers were elected: President, Frank Scoville; vice-president, F. H. Roberts; treasurer, First National Bank; and secretary-manager, Frank Harlow, Jr. The exchange handled about 90 per cent of the fruit grown in the colony, and during the season shipped out 1437 cars.

DECIDUOUS FRUITS.

The Fourth Annual Yucaipa Apple Show will be held Nov. 4, 5, and 6 under the auspices of the Yucaipa Apple Association.

The liner Vestris sailed from New York on Oct. 17 for Brazil and Argentina, with 2000 tons of apples and pears from California and Oregon.

The Central California Canneries and the California Fruit Canners' Association of Visalia are shipping about two cars daily of canned fruit each, middle western houses being the greatest buyers.

Bartlett pears from the Chicago Park section of Nevada county broke all previous records for price received during the season just closed, as high as $4.00 a box on the Boston market having been paid.

It is expected that about 603 acres will be added to those already planted to deciduous fruits in the Beaumont section next season. The Beaumont Fruit Growers' Association, therefore, plan to enlarge their packing house in order to meet next season's demands.

GRAPES AND SMALL FRUITS.

The grape shipping season in Yuba City is about concluded; from all reports, the season has been an excellent one.

The Dinuba section of Tulare county expects to send out 200 cars of Emperor grapes packed in drums within the next two weeks.

It has been officially announced that the Associated Raisin Company, as a company, will not take any part in organizing the wine growers into a protective association, though it strongly urges the growers to take that step.

W. M. Smith of Biggs is shipping choice Tokays from his ranch; he intends to ship in all eight carloads.

To date, Oct. 18, Lodi has shipped 2100 cars of grapes East; and there is every indication that 300 or 400 more will leave if the fall rains fail to materialize.

OLIVES AND NUTS.

The Santa Barbara walnut crop is proving to be larger than anticipated.

It is expected that the olive crop of Oroville will be ready to harvest within three weeks.

The Goleta walnut house is packing 36,000 one-pound packages of fancy walnuts each day.

The Porterville cannery started on Manzanilla olives on Oct. 18; it is expected that the season's pack will amount to 150 tons.

The First Annual Convention of the Western Walnut Association will be held at the Imperial Hotel, Portland, Oregon, Nov. 3 and 4.

A consignment of 6600 olive trees and 225 orange trees has recently been received for planting on the Simomns tract at Palermo, the property of San Francisco capitalists.

The California Almond Association of Oakdale recently shipped a car of almonds weighing 57,000 pounds, the largest car of almonds ever shipped from Oakdale; its destination was the sulphuring plant at Lodi.

At a recent meeting of the Fair Oaks Fruit Company, it was decided

COVER CROP

Vetch, Burr Clover and Yellow Sweet Clover

If you intend putting in a cover crop this Fall, write to us now for prices and samples.

We always have stocks of Fancy Alfalfa and all kinds of grasses and clovers and will submit samples and prices upon request.

VALLEY SEED COMPANY

506-508 Jay Street, Sacramento, Cal.

to pool the oil olive crop this fall, and each grower who participates in the pool must accept half of his pay in stock of the company, in order to increase the capital stock of the company from $50,000 to $100,000.

GRAIN AND FIELD CROPS.

Threshing of the Sutter county bean crop is in full blast; the crop is reported to be a good one.

Alton Emery is the winner of the 1915 bean growing contest of the agricultural club of the Salinas Union High School.

Sacramento river bean growers anticipate a very prosperous season this year, as both the crop and prices offered are good.

Harvesting has commenced on the largest rice district in Sutter county, District No. 70; and a good crop is expected by the growers.

Leonard Prisk of Grass Valley won first prize in the potato growing contest of the agricultural club of the Nevada County High School.

Rice harvesting is in full swing in the Richvale section of Butte county, and the yield is expected to be from 40 to 70 sacks to the acre.

Porterville is shipping between 30 and 40 carloads of baled alfalfa hay weekly to Mexican gulf ports and from there it is transported to Europe for the allies.

H. Chas. Elder of Fowler has been announced as the winner of the Tepary bean growing contest held by the Boys' Agricultural Club of the Fowler High School.

Dr. Washington Dodge and other San Francisco capitalists are preparing 7000 acres of recently acquired land northwest of Butte City for the planting of rice next season.

It has been reported that the Alameda Sugar Company will build a factory for sugar beets at Sacramento, provided they can get enough river land owners to plant sugar beets.

The Blevins & Mallon 3200-acre project in Colusa, claimed to be the largest single field of rice in California, was transferred on Oct. 9 to the Rice Land & Product Co. of San Francisco.

It is reported from the southern section of the State, and especially from San Luis Obispo southward along the Coast, that bean growers are harvesting a little better than a normal crop.

Authorities state that this season's outlook for rice in Merced county is as good as that of other San Joaquin Valley localities, in spite of the water shortage which came at a critical stage.

The Riverside Mill Co. of Reno recently purchased 1280 acres of land in Lassen county from the Honey Lake Land and Cattle Company, which they intend to put in grain.

W. E. Premo, manager of the Porterville Alfalfa Co., states that there is a growing demand for alfalfa; recently he has had inquiries for 3000 tons from Miller & Lux and others.

Potato growers of the Coast section of Sonoma county are getting together to ask the county supervisors for an appropriation to help stamp out the tuber moth which has made its appearance in a small area of the growing section.

A recent commerce report from Leeds, England, states that owing to war conditions, difficulties have arisen in securing the supplies of canned tomatoes usually obtained from Italy; and of late large quantities of these American goods have been noticed in the Leeds grocery stores.

MISCELLANEOUS.

An irrigation district, comprising 15,000 acres of foothill citrus lands from Exeter to Strathmore, has been formed, known as the Lindsay-Strathmore Irrigation District; and it was voted to spend $1,600,000 under the terms of the Wright act.

The National Flower Show will be held in the Palace of Horticulture at the Panama-Pacific Exposition from Oct. 21 to Oct. 26.

At a recent meeting of the Colfax unit of the Placer County Farm Bureau, it was decided to purchase supplies for the members in carload lots.

Work has begun by the Fresno County Chamber of Commerce to urge the University of California to establish the experimental farm at Kearney Park.

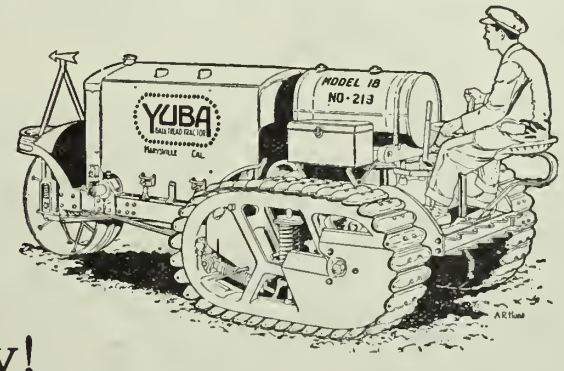
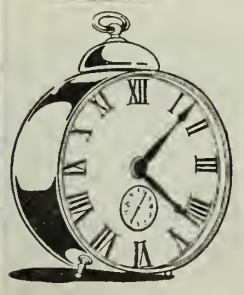
Buying a Tractor



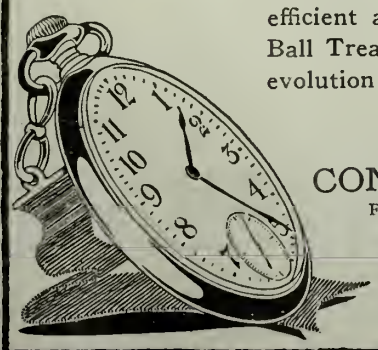
Did you ever stop to think that the development of the tractor has paralleled the development of the timepiece?



First came the sun-dial. It was cheap, but useless in rainy weather.

Then came the hour-glass. It needed constant attention to give results.

The alarm-clock was another step. It is big and cumbersome, lasts only a short time, and translates power into noise.



Now!

If you really wanted a first-class timekeeper you would buy an eighteen-jewel watch, compact and reliable. This is the kind of tractor the Yuba is. With eighteen sets of Hyatt roller bearings, instead of eighteen jewels — compact, reliable, efficient and economical, the Yuba Ball Tread is the latest step in the evolution of the tractor.

California's Opportunity for Dairymen.

[Written for Pacific Rural Press.]

THE PERSONAL ELEMENT IN CLEAN MILK.

Very often we see or hear of a dairyman who has spent several thousand dollars in expensive dairy buildings and equipment and finds that he has a "show place.' In these places every precaution is taken to provide sanitation, and the expense seems of minor importance. When we step into the barn it seems more like a rich man's home than a cow stable; and we think of the pleasure the owner will get out of such surroundings.

We quite well remember the enthusiasm which was stirred up in our first visit to such an establishment, and it was a hobby with us to tell of that dairy for months afterward to all acquaintances. Imagine then, our disappointment when on another visit we saw the following incident. We had visited the milk room first, in which was located the glass-enclosed cooler, the sanitary bottler, sterilizer, etc., and then sauntered out to the stable where milking was in progress. To safeguard against unclean milking the owner had installed milking machines and the freshly cleaned cows and white-suited attendants aroused our admiration. The concrete floor had been religiously washed before the cows were stanchioned, but by this time the floor was spotted with fresh droppings. The attendant was enjoying a conversation with another milker instead of watching his machines, apparently satisfied that the machines knew their business.

As we roamed around alone, what was our surprise to find one cow on which but three teat cups were working, the other having fallen off into a pile of fresh droppings, from whence it had done a fairly neat job of floor-cleaning, depositing its load into the pail containing the milk. We at once notified the milker and then the owner, who remarked, "That probably accounts for the kicks we've been having about our milk recently. Seems like there's always a leak somewhere, although I've spent money freely to protect against every loop-hole.

Now this man was well meaning. He took pride in his dairy, but after all he had forgotten the most essential point in pure milk production, that of individual cleanliness. His milking machine was all right and would have served its purpose well had it been handled by an operator with regard for cleanliness. His disregard, however, reduced the expensive plant to a far lower level than the neighboring dairy which lacked expensive equipment but which was handled by a naturally clean dairyman.

There is no doubt but that the modern dairy barn and equipment are here to stay because of their ability to aid the naturally clean dairyman in both sanitary and economical operation. But we should never forget that the personal element is of far greater importance than any other single factor. This applies to the butter fat dairyman in the same manner and the surplus of second quality butter is directly attributable to lack of care rather than lack of suitable buildings or equipment.

Pure Bred Horses on Small Farms.

[Written for Pacific Rural Press.]

For two years this journal has endeavored to clarify the draft horse situation in the West by keeping its readers in constant touch with the more important events looking toward improvement in horse breeding.

A large portion of this work, in fact we might almost say all of the progress which has been made during this time, has come through the efforts of the California Draft Horse Breeders' Association.

With the recent activities in draft horse circles at the Exposition there has been brought to light much of interest in this respect and at this time sufficient information has been secured to outline a program which is, we believe, entirely practicable and constructive, for California farmers to follow.

The Breeder.—Without exception the Eastern horsemen who were visitors at the Exposition emphasized the importance of our future breeding being done by the small, rather than the large breeder.

These conclusions are based on experience with all breeds in all parts of the world. Europe has furnished the best evidence of the desirability of the small breeder, the size and character of their farms demanding small studs of farm-worked animals. The quality of animals, raised in this manner, needs no comment. America's present high standards have been the outgrowth of foundations secured in foreign lands.

This continual importation of foreign-bred animals could have but one result; the distribution of many inferior animals, but also the establishment of studs as good as the best in the world.

Until the beginning of the present European war, the extent of America's horse breeding industry was not generally appreciated, but investigation shows that we have ample purebreds of all the breeds to carry on business without further importations from Europe. And what is most important, these investigations show that the large percentage of the best American-bred horses come from the breeder with less than ten brood mares.

Individual Attention and Working.—The reason for this is the same as with European breeders; namely that the desirable heavy horse is the outcome of individual attention in breeding, feeding and selection, together with judicious work on the farm. The large breeder cannot meet these requirements, because he cannot give close enough attention to the work of breeding and feeding.

From these investigations both in Europe and in that portion of this country east of the Rocky Mountains, it seems that the West should take its lesson in horse breeding. Our studs should not be large ones, but should on the contrary be established on moderate-sized farms, where the brood mares do the farm work, and where the young can be well developed on the grasses and grains grown on the farm.

Of California feeds, Eastern breeders had much to say, commenting highly on them as well as upon our climatic advantages. Of these there has never been any question of desirability by horsemen.

Sound Foundation Stock.—In establishing small studs in the above manner our Eastern advisers bear down strong on quality of foundation stock. This may seem like timeworn advice, but the fact remains nevertheless that soundness and conformation in brood mares is as essential as proper mating and development.

Quite often has the breeder disregarded unsoundness in his breeding stock to later find himself overloaded with young stock for which no market could be found.

In all branches of livestock raising, familiarity with one's work is an all-essential factor. Small stud owners have an every-day acquaintance with each animal which is not possible with a large number,

California with its brood development and naturally favorable feeds and climate certainly offers a great field for purebred horse breeding if, as Eastern States and European experience seems to show, it is a matter of small studs. The State is fast approaching the era of smaller farmers and certainly there is no place where a greater amount of horsepower per acre can be profitably utilized than under our almost continuous summer conditions. This latter factor is an all-important one, statistics showing that the greater the horse power per acre the greater the efficiency, and this is more applicable here than in other climates.

More Farm Horses Needed.—It is on the assumption that more horse power per farm is needed, that one prominent speaker at a recent meeting took his text for the proper type to breed. His contention is that breeders must work toward a type sulted to their market and not toward preconceived ideals. He thought the future of the horse is on the farm because of its need there in larger numbers, and cautioned his hearers to select and breed types suited to farm work.

Cattle and sheep are likely to bloat on clover pasture if the clover is damp from the dew or a warm rain.

Manual
For Hog Men

"California Hog Book," by W. S. Guilford of this county, just from the press of the publishers, will fill a long-felt want in the agricultural literature of California. The book is practical in every sense, as practical as the author, who has so successfully combined his theoretical education with practical experience here in California. The new publication is more than a treatise on the various breeds of hogs—it is an ideal manual for the hog-raiser, who will run up against the same conditions as those solved in this book. The book deals entirely with California conditions, and takes up every branch of the hog industry. The hope of the author is that the small land owner, the ten, twenty and forty acre man, may be induced to increase.

"Glen county people are especially forunate in knowing Mr. Guilford personally, thereby knowing that the book he has written contains facts which have back of them experience and reliable information. The book is profusely illustrated with halftones and line-drawings." —Orland Register.

Mutton Sheep on Small Farms.

[Written for Pacific Rural Press.]

CARE PAYS WITH SHEEP ON PASTURE.

Though a majority of sheep raisers do not give their flocks enough attention to get anywhere near maximum results, Z. T. Blankenship of Visalia has proved to his own satisfaction that only when sheep are given personal care, do they pay well enough to depend on for income.

He figures that his highly-bred grade lambs are worth $2 each when dropped; that it doesn't pay to lose them, nor to miss having every ewe breed every season. Grade ewes for breeding sell at $8, rams for slightly more. Last September he had already sold all the February buck lambs at $8 each; and all of those dropped later at $5 each, except the ewes from which he expected to select breeders in October, for next season. The butcher lambs dressed 30 to 50 pounds at three months, the smaller sizes being preferred. He was importuned for more, but would not let them go.

Pure Bred Sires 25 Years.—The flock of about 50 ewes yeaned 80 lambs last spring from Feb. to June. They are the result of about 25 years' breeding to purebred sires of the mutton types. The foundation was Southdown bred to Shropshire bucks. Four years ago a Hampshire buck was used, as that is a somewhat larger breed and Mr. Blankenship likes the looks of their heads better. However, the Shropshires would be crossed in again if the Hampshire blood should become too predominant. But always purebred sires are used, the crossing being to get greater constitution. He wants to raise big block lambs to sell at an early age.

Characteristic of his care in selecting sires was a case in which he paid $18 for a young buck. The breeder had quoted that price for first-class bucks; but on arrival, this one proved underdeveloped and older than its size indicated.

He said to himself, "Am I going to lose my years of good breeding, by using that runt? No." He got another ram of the same age, sacrificing good breeding time for the sake of good type.

Alfalfa, Grass, and Weeds.—Forage is supplied by 50 acres of wild grass, mostly salt grass, fifteen acres of alfalfa, a little grain stubble, and a cornfield which the sheep clean up after hogs have harvested the corn. The salt grass makes a pasture good to use when other forage is unavailable, but its dust-collecting, tarry exudation makes it least desirable. It is good to mix in with tender weeds and other forage. The alfalfa is sub-irrigated only; but it produced three cuttings of hay before June when the 80 lambs with their mothers were turned onto it. In July, 25 cattle and 7 horses were added because the sheep did not keep it down. They have been seen to leave the alfalfa to eat cottonwood and willow leaves as they fall.

The small grain field was sown late and became very weedy, especially with sunflowers. Hogs were first turned in, then sheep, and in September the field was clean while the one across the fence was gorgeous with tall sunflowers, etc. It is best to turn them onto young weeds, for they do not like old tough ones so well.

The ewes were taken from the lambs and alfalfa in July; and it was noticed that the youngest of the lambs looked peaked for a week or so, then recovered. Those selected in October for addition to the breeding flock next year were turned into the cornfield.

Lambs are docked and the bucks castrated at two or three weeks old, since at that age they scarcely know it. Unless ewes are docked it is very hard to get them with lamb, which of course is where the profit lies. When lambs are abandoned by ewes or when they do not get enough milk, they are fed from a bottle and then from a trough. They are sheared about August just to get the dirt off and prevent foxtail running into their skins. Enough wool grows afterward to protect them from cold.

All sheep are corralled at night, especially in winter, on account of coyotes, and Mr. Blankenship will not have a dog on the place.

"I wouldn't advise anybody to go into sheep," says he, "unless they know how to care for them and will give personal attention. Such people ought to have 25 or 30 ewes if they have the feed, for it's a good proposition on the small farms.

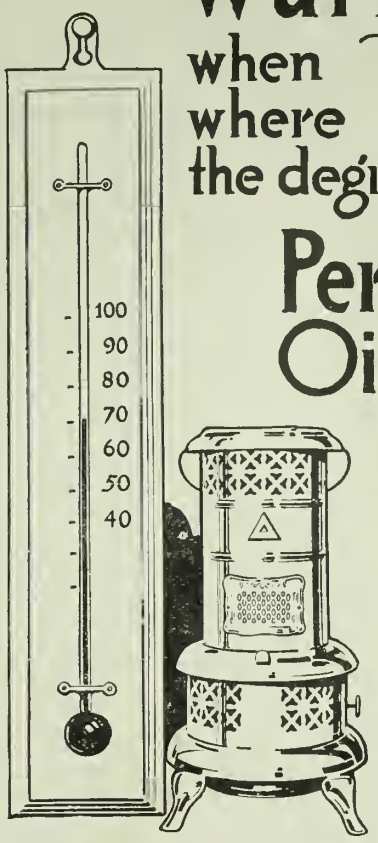
More and Better Hogs in California.

[Written for Pacific Rural Press.]

CONVENIENT CHEAP FARROWING PENS.

It is the universal verdict of those who have succeeded in making money with purebred stock that it pays better than ordinary stock, but it costs more to get started with purebreds than with scrubs. For this reason, a great many good breeders have spent most of their money on foundation stock and but comparatively little on equipment.

In handling valuable brood sows and their litters it is very wise to shelter them so that none are lost due to discomfort of the mother, or to the rigors of the weather.



One of the simplest, cheapest, and most convenient farrowing outfits we have seen is that of Englefelt & Stewart of the Orland project. There are 15 farrowing pens in one long shed-roofed house built of inch boards. Those on the sides are horizontal and as nearly tight as possible; the roof is made with plenty of pitch so that it sheds water, and before rainy weather comes the cracks will be covered with 1x3 battens.

The backside is 4 feet high and the front about 6 feet so that a man can stand up once in awhile when his back gets tired at farrowing season.

Each pen is 6x6 feet with a 2x4 railing around the walls 6 inches above the floor and several inches away from the wall to protect the pigs from being laid upon. Partitions between the pens as well as the boards on the front side are 3 feet high. An open space 2 feet high along the entire front side is protected by hanging canvas fastened to two 1x6s which complete the front side at the top.

Each farrowing pen has a yard about 6x18 feet made of woven wire two feet wide supported by 1x12s around the bottom and 1x6s around the top of each yard.

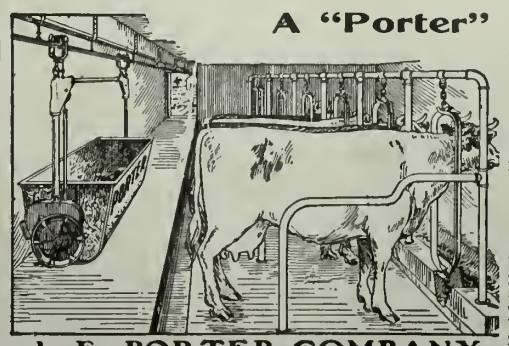
FOR SALE Jersey Bulls Bull Calves

from cows on yearly test-making good-sired by our herd bulls **KING'S VALET (imported), VALET'S KING OF L, BORELLO'S GOLDEN LADDIE, GRACE'S FOX OF VENEDERA, and NORMA'S GERTIE SON OF L,** backed by production and winnings in the show rings.

They are of **FINANCIAL KING, GOLDEN LAD, GOLDEN FERN'S LAD, MARIGOLD and ST. LAMBERT** blood, the kind that improve type, cream production and persistency. One cow gave 49.5 lbs. fat in 11th month; her daughter gave average test of 8.38%; another gave 79.9 lbs. fat in one month, 238.9 lbs. fat in 134 days. A 2-year old gave 50.6 lbs. fat in one month—all under dairy conditions.

We have bulls from such cows, with correct type.



Dairyman's Opportunity

For $50, a yearling bull by **VALET'S KING OF L,** out of a good cow. $25 for bull calves under 30 days old. Tabulations, but no Registrations at this price.

Come and see them, send for catalogue, or write us your needs, and we will give you satisfaction and profit.

N. H. LOCKE CO., Lockeford, Cal.

A "Porter" Planned Barn

PORTER EQUIPMENT MAKES A BARN modern and up to date—one that takes care of the largest number of cows and other stock. A barn planned the Porter way saves labor, time and feed, and makes money for the farmer or dairyman every day in the year. It pays big profit on the investment.

The Porter steel stalls, cows stanchion, litter carriers, barn door hangers, hay carriers, and other fixtures are acknowledged leaders everywhere.

Write and tell us the size of barn you want and the number of cows to arrange for, and we will send print with information promptly.

THE PORTER BARN PLAN SERVICE is free, whether you expect to build now or later. Send for catalog of Perfect Barn Equipment.

J. E. PORTER COMPANY
642 Fremont Street, OTTAWA, ILL.

LARROWE'S DRIED BEET PULP

IT is no longer necessary to buy high priced mill feeds for your dairy cows. A ration composed solely of ALFALFA AND LARROWE'S DRIED BEET PULP furnishes just the right proportions of protein and carbohydrates, together with sufficient bulk and an abundance of succulence. Dairy cows will do their best on this ration and yield 1 to 5 lbs. more milk per cow a day shortly after putting them on it.

A. W. Morris & Sons (breeders of the world's champion cow—Tilly Alcartra) say "Larrowe's Dried Beet Pulp increases the milk flow, strengthens and improves the physical condition of the cow."

McAllister & Son (well known and very successful Holstein-Friesian breeders) feed alfalfa and Larrowe's Dried Beet Pulp exclusively and say that they "know of no grain its equal and couldn't get along without dried beet pulp."

Thousands of feeders will tell you of the splendid results they are getting from this healthful, succulent vegetable feed. It is excellent for fattening; also for horses, hogs, sheep, etc.

LARROWE'S DRIED BEET PULP

—is clean, wholesome, appetizing; aids digestion; contains five times as much nutriment as silage, with as great or greater succulence—swelling to fully six times its original bulk when moistened. It is put up in convenient 100-lb. bags and may be had either plain or with molasses.

GO TO YOUR FEED DEALER TODAY and order a single 100 lb. sack of either the plain or molasses dried beet pulp. Ask for Larrowe's. Test it on one cow whose milk record you know—and watch results.

FREE! Our Booklet "Profitable Feeding." —containing valuable information on feeds and feeding. Should be in the hands of every dairyman. Write for a copy—to-day.

DAIRYING.

M. J. Pedrotte of San Rafael has a herd of about 20 Brown Swiss cattle.

The Danish Creamery Co. of Fresno paid out $40,284 for cream delivered during September.

Some very choice Holstein cows are being kept on the Frenquelin ranch near Sonoma City.

During the month of September the Visalia Co-operative Creamery paid the dairymen $28,700 for their product.

S. Leverini of Sonoma county has rented the Sparks ranch near Dixon, where he will conduct a dairy on a large scale.

R. T. Kee of Bodega expects to bred registered Jerseys on quite an extensive scale. He now has 15 females and 4 bulls.

Dairymen of Kings county received $150,000 for their product delivered to the creameries during the month of September.

A large number of Ayrshire bulls are being used by the dairymen of Sonoma county. They find that they are excellent rangers.

The H. D. King ranch near Petaluma has been fortunate in securing heifer calves from their purebred Ayrshire cows this season.

For the six months that J. Bloom of Olema has been using the Sharples Milking Machine on his herd of 120 cows; good results are reported.

The Point Reyes Co-operative Creamery reports the cream receipts on the increase. Close to 1000 pounds of butter is now being made daily.

The Dairymen's Co-operative Creamery and the Good Luck Creamery of Tulare, paid out a total of over $57,000 to the dairymen during September.

The T. B. Roy ranch of San Geronimo receives 5 cents a pound over San Francisco quotations for extras for all the butter they make and ship to the city.

Frankenheimer Bros. are establishing a dairy of 120 cows on their ranch near Oakdale; and expect to develop one of the show places of the San Joaquin Valley.

J. C. Damann of Lancaster recently shipped two carloads of dairy stock to the Pat Griffith place near Porterville, on which place he will shortly establish a dairy.

A. S. Holcomb, manager of the Kenwood Farm, of Kenwood, reports the sale of 60 calves and heifers to Bob Kee of Bodega. Two-thirds of these were registered Jerseys.

According to R. S. Brown of Petaluma, Ayrshire cattle are the best adapted for Sonoma and Marin counties or other localities where the pastures are very rolling or steep.

J. A. Sagouspe of Fresno recently purchased the Ozment Ranch near Porterville; he has shipped in 24 head of dairy cattle and expects soon to have quite a herd of hogs.

Twenty-seven years ago, E. H. Cheney brought the first registered Holstein bull to Bodega; six years ago he bought his first registered cow. He is getting into the game in good shape.

C. E. Wertz of Ferndale has just purchased an 80-acre ranch near Turlock from A. Elliott of Modesto and Mrs. M. McConnell of Oakland. He will devote most of the acreage to dairying.

The Bodega Cow Testing Association has just completed a year's work. The cost per cow was 85 cents. The progressive dairymen are so well satisfied that arrangements have been made to continue another year.

Quite a nice herd of registered Holsteins is being kept on the Bobbs ranch at Fallon, Marin county. At present they have 15 females; this number will be increased until all the herd is registered. A son of Ragapple Korndyke heads the herd.

The Lebaron Estate Co. of Valley Ford, Marin county, is remodeling, repairing, and building additional buildings on their 200-acre ranch. Plans are laid to make this one of the most up-to-date and best paying dairies in that section. Registered Ayrshires will be kept; ten head have already been purchased.

The registered herd of Shorthorns (milking strain) established by John Lynch, lately deceased, some 40 years ago on his ranch near Petaluma, will be retained and the business carried on by the heirs. Those who have been accustomed to secure their bulls from this ranch in the past, may do so in the future. The place will be known as the John Lynch ranch. Mr. Lynch was one of the oldest setlers in Sonoma county. Blood from this herd may be found in practically every Durham herd in the State.

CATTLE AND SHEEP.

H. G. and S. J. Vincent of Woodville, Tulare county, recently shipped two cars of cows, 64 head, to Los Angeles.

The California Cattlemen's Protective Association will meet at the Palace Hotel, San Francisco, on Saturday, Oct. 23.

W. D. Reynolds of Santa Rosa, breeder of Red Polled cattle, retains all the bulls on his ranch to improve his range stock.

Rutherford & Daniels of Plumas county recently drove 150 head of beef cattle from their ranges to the stock yards at Quincy Junction.

Alonzo Swain of Burr valley, Tehama county, recently sold 1200 head of last spring's lambs to A. H. McInnis, stock buyer of Red Bluff.

A new sheep shed, 30x100 feet, with storage room for 40 tons of baled hay, is being built on the J. M. Jaminson ranch in Bennett Valley, Sonoma county.

B. B. Hinshaw of Petaluma sold 60 bucks to the sheep trade this season. The demand was so heavy that it took almost all his spring bucks, as well as older ones.

The John Lynch Ranch of Petaluma has just recently shipped to S. P. Vernon of Lake View, Ore., two very choice three and four months old Shorthorn bull calves.

Miller & Lux recently shipped 700 head of beef cattle to their beet pulp feeding corrals in the Alisal, Monterey county; the stock remain on the pulp about 90 days, are then shipped out, and replaced by fresh cattle.

HORSES AND SWINE.

Two sows and one boar were shipped by J. E. Hall of Sebastopol to Central America.

John Beach of Santa Rosa plans to start a small herd of registered Berkshires in the near future.

Arthur Brown was the winner in the hog growing contest held by the Dixon High School Agricultural Club.

B. E. Nixon of Yountville has recently purchased a young Duroc-Jersey boar from the River Bend Farm of Napa county.

J. L. Goatley of Petaluma figures good blooded hogs pay better than poor, scrubby ones. He keeps two registered Berkshire sows.

Shirley Drever is announced as the winner of the hog raising contest held under the auspices of the Woodland High School Agricultural Club.

It pays to have well bred hogs even if you send them to the pork barrel, states R. H. Trumbull of Novato, a buyer of registered hogs, but a seller of pork.

The Kenwood Farm, near Kenwood, recently secured a very fine Berkshire sow from the Berkshire view herd at the Exposition; the price paid was $100.

On Oct. 11, C. H. Thompson of Novato shipped to F. H. Suydam of Santa Cruz county a very choice service Berkshire boar; another boar goes to the R. H. Trumbull ranch nearby.

J. E. Hall of Sebastopol is planning to move from his present small quarters to larger ones in the same county, where he will have room to increase his purebred herd of Berkshires.

The semi-annual meeting of the Merced County Swine Breeders' Association was held at Gustine on Oct. 16, at which measures to wipe out cholera on the West Side ranches were considered.

The Santa Rosa breeders will be well represented at the Panama-Pacific Exposition in November. Eaton & Hughes will show 11 head of Hampshires and H. F. Brush 24 head of Berkshires.

Chas. Gatewood & Sons of Fresno, breeders of Poland-Chinas, report the sale of a boar each to L. F. Elwood of Piedra; S. D. England of Sanger; L. C. Elmore of Cutler; and G. E. Frame of Coalinga; also two gilts to J. A. Arthur of Clovis.

T. B. Purvine of Petaluma recently received from Hanks & Bishop, New London, Iowa, two four-months-old Proud Colonel blood gilts. They will be mated to a Cherry Chief; and from the combined bloods choice litters are expected.

It is reported that the Boys' Pig Club which was organized at Patterson some time ago is meeting with success. After the organization of the club, a feeding test for one hundred days was carried on, and the results were shown in twelve pens at Patterson on Oct. 9.

R. E. Wickham, proprietor of the Red Rock ranch, Glenn Ellen, has his feeding corrals so located that 50 head of hogs can be fed in 15 minutes. The feeding floors are centrally located and all yards open into them. The feed granary is in the center so the feed does not have to be carried.

MISCELLANEOUS.

E. H. Cheney of Bodega has just finished a 40x50 storm shed to protect his stock from winter weather.

On Nov. 29 and 30 Federal and State officials and others interested will convene at Chicago to discuss the foot and mouth disease problem.

At the annual meeting of the Glenn county Farm Bureau, by-laws were adopted for a Dairy Association and a Hog Raisers' Association.

A strange disease is reported to be killing off horses and cattle in Modoc county, and John P. Iverson, State veterinarian, has gone there to investigate.

Frank Meacham of Petaluma reports that live stock sales were never better than this year. Over 500 bucks were sold; and Red Polled bulls were shipped to all sections of the State.

The Brae Brook Collie Kennels of E. C. Rand took several blue ribbons at the recent Dog Show at San Jose. Two of the dogs, Brae Brook Basil and Brae Brook Best, seven months-old pups, won in the Brace Special in which all the different breeds of the show competed.

SWINE.

BIG TYPE POLAND CHINAS—I have an extra good lot of strictly high-class young boars from three months to one year old that are fit to head any herd anywhere. Visitors say they are the best they ever saw. They have the large size, the good hams and shoulders, the strong, wide, arched backs, great length and depth of body, plenty of smoothness, mellowness and quality—in fact, they have two good ends and a good middle; are good lookers and money-makers. Their dams are either from Illinois, Iowa, or Missouri, or are from dams whose sire or dam are from these States. These boars are sired by **Iowa Wonder,** who will weigh over 1000 pounds in show condition. He is a son of **A WONDER,** the greatest Poland China boar living or dead. These young boars carry the stamp of their sire and will sire pigs that will please you. Satisfaction guaranteed in every particular. I am overstocked. I have boars galore. Will sell them at extremely low bargain prices. No females for sale at present. The book on THE HOG SUPREME—THE POLAND CHINA will be sent to you free for the asking. Yours for the BIG TYPE—the kind that grow faster and larger and have more and better pigs. GEO. A. SMITH, CORCORAN, CAL.

BILLIKEN HERD of pedigreed O. I. C. Swine; weaned pigs of both sexes for immediate shipment; pairs and trios mated, not akin. All from big type stock of extra heavy bone. Immunized against hog cholera, crated and shipped free. Write for descriptive circular and price list. C. B. Cunningham, Mills, Sacramento County, California.

O. I. C. SWINE—Poor health is the reason for this offer. Will sell my herd of pure-bred O. I. C. Swine at prices that will turn them quick. Pigs two to eight months old, either sex. Write me for special prices. Every hog registered. G. H. Duhois, Box 13, San Martin, Cal.

BLUE-RIBBON HERD DUROC-JERSEY HOGS—Bred Gilts a specialty. 15 bred now. 20 ready to breed. Sires and dams win all blue ribbons 1912, 1913, 1914 State fairs. 15 firsts, 13 seconds, 6 thirds, 7 fourths, 1 fifth. Will show 1915. For prices, write John P. Daggs, Modesto, Cal.

DUROC-JERSEYS — We are offering some very fine young boars, ready for service. Also weanlings, either sex. Immediate delivery. Our prices are always reasonable. W. H. Ginn & Son, Corcoran, Cal.

ROSE CREST BERKSHIRES of Masterpiece and Rival's Champion Best breeding. A choice lot of Fall and Spring boars; also a few sows and gilts. F. L. Hall, Perris, Cal.

POSS' DUROCS—90 little fellows, farrowed since first of September. Will book orders for November delivery. Foundation stock from Daggs and Johnson herds. R. J. Ross, Route B, Modesto.

RED ROCK RANCH, Glen Ellen, Cal.—Breeders of high-class Duroc Jersey hogs Our specialty registered pigs at weaning time. A registered mature boar for sale.

LARGE YORKSHIRES—Gilts open or bred to our imported boar, winner at 1915 Canadian National and Ottawa shows. Choice Fall and Spring boars. Riverina Farm, Box 74, Route 2, Modesto, Cal.

FIFTEEN LARGE TYPE Poland-China March boars from Eastern bred sire and dams. 200 to 240 lbs. $20 up. Chas. Gatewood & Sons, Route 3, Fresno, Cal.

REGISTERED POLAND-CHINAS—Prize-winning Nebraska stock. Large type. Young pigs for sale. Absolutely guaranteed. Hale I. Marsh, R. 4, Modesto, Cal.

ANYONE WISHING TO START a herd of registered Berkshires, write to Alexander and Kellogg, Suisun, Cal. Our herd is of the best breeding and cholera immune.

Cattle on Exhibit at Exposition.

[Written for Pacific Rural Press.]

Limited in extent by the latest quarantine proclamation which excludes cattle, hogs, and sheep from most of the States east of the Rocky Mountains, the cattle show at the Panama-Pacific Exposition, October 18th to November 1st, is sufficiently represented in all of the more important divisions to be worth while.

As this is written the judging has not been started, but the cattle are in the barns dressed for the ring in excellent show condition. It appears certain that in this matter of fitting, the present show is to set a standard for future California shows in many classes.

The dairy cattle divisions are led in numbers by the Jersey breed, there being 225 head of them on the grounds. This part of the show appears before the judging to be favored with keen competition. California breeders have turned out strong with the American type Jersey, while the Oregon and Washington breeders, who have by far the largest number of entries, are basing their all on the Island type.

California Guernsey breeders are putting up an excellent show, leading all other breeds in the number of entries from California farms. To us it appears that this show is bringing out the dairy type more than previous California shows have done.

Ayrshires stand out in a class of their own, the entries being far larger than the other breeds, considering the number of Ayrshire herds in the West. As this is the first real good chance Californians have had of viewing this breed in large numbers, the present show should do much toward advancing the breed in this State, particularly in our coast dairy sections. Their uniform and well-placed udders are freely commented on by all visitors.

While rich in show quality, the Holstein show is disappointing to lovers of that breed on account of its small numbers. With the exception of one small private herd and a few individuals shown by the University of California, this show is being made entirely by Oregon and Washington breeders; and, be it said in their favor, that they have brought animals entirely creditable to the occasion. Fear of the foot and mouth disease is said to be the reason for the small showing of California Holsteins.

The first showing of the Brown Swiss breed is being made with one small herd from the Northwest, and one herd of milking Shorthorns is on exhibit as representative of that breed. The Dutch Belted breed is represented by California breeders exclusively.

Beef Breeds.—With the beef breeds Shorthorns come first in numbers, largely from California, with one herd showing from Colorado and one from the Northwest.

Herefords come next in numbers, being largely out of State stock. Two full herds of Red Polled cattle are on the grounds, placing them in third place for numbers.

In the beef breeds California would undoubtedly be better represented had not the foot and mouth situation been so uncertain. As it is, the Eastern breeders were held out; and the quarantine proclamation was issued too late to allow some of the local breeders to participate.

SECOND CONSIGNMENT SALE A SUCCESS.

The second annual consignment sale of Holstein cattle held at Hanford last Friday and Saturday was pronounced a great success by J. W. McAllster, sales manager, who is quoted by the Hanford Journal as saying: "Prices here were as good as we secured at Sacramento, animals bringing prices commensurate with their individual worth. I am quite sure there will be another sale in Hanford next year, and there is considerable talk of two, as some of the breeders believe that Hanford is a better location for an auction than Sacramento.

"The total amount of sales were $48,350, or an average price of $300 per head for the entire collection of animals. The high price of Friday was brought by El Prado Mandel Wayne, a 10-months-old heifer calf, which was bought from C. C. Lester of Gilroy by J. P. McGillivray of Sacramento for $725.

"The second highest price paid Friday was brought by Sir Holland Gamp, the herd bull of Alex Whaley of Tulare, for which $700 was paid by the Tagus Ranch Company.

"George L. Fletcher, of southeast of Hanford, bought two bulls from C. C. Lester, Emperor Ichataaf Segis, for $170, and Emperor Spotfoot Segis, for $100.

"The crowd at the sale Saturday was not quite so large as the day before, owing to the fact that here were not so many spectators, but many buyers were present, and the bidding was lively all day, the sale being completed by 3 o'clock."

A barrel of water in the hay or grain field, and a pail to each horse at about ten o'clock on a hot day and again at about three o'clock is not only a kindness but a measure of safety for the horse.

Veterinary Queries and Replies.

[Answered by Dr. H. B. Wintringham, Petaluma, Cal.]

BLEEDS AFTER BREEDING.

To the Editor: I have a heifer which has never had a calf. She has been bred three times and each time had a bloody discharge a day or two afterward.—W. J. B., Thermal.

[This heifer probably has a growth in the genital canal. Only an examination can positively determine this. Have a competent veterinarian do this.]

PIGS SMUT-POISONED.

To the Editor: I have several young pigs that seem to lose the use of their hind quarter, seem to be weak across the back, try to get up and roll around. When they finally succeed in getting up go staggering off, and if excited roll over some more. Am feeding ground barley slop; barley has smut in it. Can that affect them? They seem to acquire the complaint at 6 to 8 weeks; have good appetites, but do not recover.—C. J. P., Hollister.

[This condition is due to poisoning from the smut on the barley. Pigs are very susceptible to forage poisoning of many kinds.]

YOHIMBIN DOSAGE.

To the Editor: In your issue of Sept. 25 you answered my query about a sow that wouldn't breed. I got the yohimbin tablets 1-12 gr. each and gave one three times per day as directed till I had given eight doses, when the sow died in convulsions. I called in a veterinarian who was working on her when she died. He says yohimbin is given to make a sow come in heat regularly; the yohimbin overexcited the organs and threw her into convulsions.—E. L., Ceres.

[If this pig died from the use of yohimbin it was due to individual idiosyncrasy as the doses accepted by E. Frohner for this drug for swine are up to 1-8 grain three times a day. Finlay Dunn also accepts the same dosage. The drug in your case was not given so much to excite sexual passion, as for its tonic effect on the genital organs.]

BONY GROWTH UNDER LIP.

To the Editor: I have a fine horse colt—will be two years old the coming spring—that has a growth inside his under lip, between lip and the gum. It is a soft, bony substance. Has been cut out twice but grows back again. Colt is in good condition and eats all right.—E. P. T., Santa Margarita.

[This is a benign cancerous growth which should stay removed if all its substance is taken out when operated on. After removal, it should be painted with tincture of iodine two or three times a day until healed.]

TEST FOR ABORTION.

To the Editor: I had my cows tested for abortion and all were OK. Two months later I fed them grape pomace and a week after that one of them aborted when 7 months along. She is now eight months along with calf. Did the seeds cause abortion?—H. B., Modesto.

[The Complement-Fixation Test is the only positive test for abortion in cattle. Other tests are most unsatisfactory. I do not think feeding grape pomace moderately induces abortion.]

PASSAGE OBSTRUCTED.

To the Editor: I have a valuable dog that is troubled with what appears to be chronic constipation. The obstruction seems to be located at the rectum. So far we have been able to relieve him. We use an enema of warm water and soap. He also manages to take it from himself.—H. S. E., Princeton.

[Give this dog 2 ozs. of castor oil. Follow this with one tablespoonful of hydrocarbon oil daily. This is a great reliever of chronic conditions of this kind.]

PERSISTENT NECK SCAB.

To the Editor: My horse has a black scab on the back of her neck. It seems to have a root. It came two or three weeks ago and I have not worked her the past week.—E. T., Greenfield.

[This is sitfast. Cut it out with a sharp knife and paint it with tincture of iodine daily until healed.]

PERSISTENT SORE ON DOE.

To the Editor: What can be done for a doe of mine? She has an open sore at the base of one ear, on the outside. It is about the size of a dollar. It commenced months ago, with a lump that stuck out about the shape of a thimble. This after a while fell off, and seemed to be healed. Only lately it has opened up, and I can't heal it. She eats as usual and seems well.—Subscriber, Sunnyvale.

[There is evidently a foreign substance in this sore which has never been removed. Examine carefully and remove any foreign material. Then paint the wound once daily with pure tincture of iodine until healed.]

Don't feed too much hay to your horse. Such feeding is an injury to the horse.

Farm Poultry for Profit.

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

MARKETING DRESSED OR ALIVE.

The farmer and small rancher is very often at a disadvantage when it comes to disposing of his surplus poultry, because of two things. He is either too far distant to ship the birds alive, at a profit, or he is at a loss to know how to prepare them for market and pack them when dressed.

If the shipment is to be made, it is always better to write to the consignee for particular instructions. If the instructions are complied with, it saves a lot of trouble and misunderstanding for all parties. All commission men like to get attractive shipments of produce; it nets better prices for the shipper and more commission for themselves. And the best commission men are always glad to give their patrons the benefit of their knowledge. Everybody should take the trouble to find one of the right class and stay with him.

For those who are too far away to ship birds alive and yet are not able to find out the needs of a market it is always safe to dry-pick all poultry, turkeys, ducks, and geese that are to be shipped any distance. Dry picking is a rather slow process, but it is absolutely the only process for birds that are to be shipped long distances or held any length of time. No market calls for fowls dressed by any of the scalding methods, no matter what distance they are shipped.

Stick Knife Into Brain.—It is always best to keep them on a twenty-four hour fast before killing; this insures an empty crop, less food in the passages, and prevents early decomposition. All markets in California want them undrawn.

All poultry should be killed by inserting a sharp-pointed knife into the mouth and by a twist of the wrist push the point into the brain at the top of the mouth. Birds killed in this way bleed freely and have no disfiguring marks on them. Wipe the mouth out after rinsing and commence to pick the bird at once. Leave a few feathers on the head, two or three primary wing feathers on turkeys and capons, but not on chickens.

Singeing with Live Coals.—To singe the hairs and little pin feathers is where the average person makes his first bad job in dressing, because he generally starts in wrong by trying to do it with a paper torch. Now, what you need is a small hot fire without blaze or smoke, just a few hot coals that are easy to get at. The fire is best where you can pass the fowl over it quickly; hold the head in one hand and the feet in the other. Have a helper to pass you the birds; and as you singe each, lay it down on a clean cloth. Quite a number of fowls can be singed over one small fire, but it must be red hot. Be careful not to break the skin.

Packing Dressed Poultry.—Wipe the body, head, feet, and legs first with a cloth, wet in hot water with baking soda or borax dissolved in it, then with a cold water cloth wrung out fairly dry. Lay on clean oat or wheat straw, or even a clean cloth until perfectly dry and cold, in some cool, clean, dark room away from flies. It will be best to pack before the carcass gets too rigid, as if you wait too long it will not be possible to place as many in a box. Have a good layer of clean straw in the bottom of the box and a clean sheet of paper. Put the head of each bird under one wing, draw up the legs over the breast, as more can be packed in the space that way. Place a clean sheet of paper between each layer of birds and see that the box is filled with something; if there are not sufficient fowls to fill make up with clean paper, put on a tight cover, nail the address of consignee, also your own address, in a conspicuous place and along with the shipment send your expectations of "good returns."

Don't forget that nearly all food products are sold, not so much according to food values, as they are to please the eye. Make your produce look attractive. If you don't, the commission agent must, and if he does it, you pay the price.

Ducks and geese should be dry-picked for shipment; but for local trade they can be made more attractive with less labor. They can be scalded and picked, then after singeing, plunge them into a pail of hot water, then into cold; this is termed "plumping." After that they may be left in cold water until the animal heat is out and then dried and sold.

Selling Alive.—When the birds are to be sold alive it is always better to put all of one kind, size, and color in each coop. These things, in themselves, don't seem much, but they all count in the price you get. Perhaps the man you consign to will never even take them from the coop, but sell them just as he receives them. Now the man that buys will pay according to the poorest specimen in the coop, as likely as not. It depends some on the condition of the market. If our stock strikes a market in competition with eastern shipments, the native stock has to look and feel very good to get a fair price. They ought not to have food for twenty-four hours before killing.

If you ship milk-fed poultry, always put on the crate in big letters "Milk fed." But it is best to look up a private market for such, even if it takes several days to do it. It pays in the long run, because while the public market likes good things, they don't like to pay good prices.

All coops must be fitted with water cans made fast to the coops. The express companies call for them; and also the limit of a coop must not exceed one hundred and fifty pounds; this includes poultry and coop. Any infringement of their rules, even if their agents pass the coops, exonerates the express company from liability.

During a recent visit to the Exposition, Assemblyman Knox Boude of Sebastopol, author of the "Imported Egg" bills passed at the last session of the State Legislature, called at this office. Mr. Boude reports a determination on the part of the poultrymen of Sonoma county to carry the question of the valldity of these bills to the court of last resort.

The old Red Bud Ranch near Cloverdale is to be sold by the heirs to settle up the estate.

Motorists! Cut Fuel Bills
Save 25% to 50% on Gasoline

by using "Gomor," the scientific lubricant. "Gomor" is poured into ordinary gasoline and thus introduced into the motor through the carburetor with the gas. At every explosion "Gomor" is sprayed on cylinder walls, pistons, valves, etc., thus positively eliminating carbon formations. It greatly lessens friction, makes gasoline vaporize quicker and motor run perfectly on very lean mixture. One quart of "Gomor" is sufficient to treat 80 gallons of gasoline. Thus, if your gas tank holds 10 gallons, add one gill (¼ pint) of "Gomor" when filling.

Positively Increases Mileage 25% to 50%

"Gomor" is a scientific lubricant, and is the invention of a well known Detroit chemist. It contains nothing injurious to motors—it is a great benefit to motors. Do not confuse "Gomor" with any of the ether, camphor or other harmful chemicals that are sometimes employed to temporarily increase speed.

"Gomor" is a high grade **lubricant** that withstands the heat generated in any gasoline motor. It keeps a thin film of oil on vital parts of the motor that are imperfectly lubricated or inaccessible to usual methods of lubrication. Thus friction is lessened and motor runs with more power. In this way, mileage per gallon of gasoline is increased 25% to 50%—a big saving you will appreciate.

Four Year Tests

"Gomor" is not an experiment. Upward of one thousand tests of "Gomor," covering a period of four years, have been made. These tests have been conducted by leading automobile engineers and have been most exacting. Many motor companies and thousands of private owners testify to the merits of "Gomor."

Saves Wear on Motor

Friction is the thief of power, and "Gomor" reduces friction to a minimum. "Gomor" saves wear and tear on motors and thereby greatly increases their life. Our exhaustive tests have proved this fact.

"Gomor" must do all we say—else we will refund your money

The Gomor Oil Company is a thoroughly responsible concern backed by a number of Detroit's leading business men. "Gomor" is widely used in the East, and is now being rapidly adopted by Western motorists.

"Gomor" sells for $1.00 sample quart can, prepaid to your address. "Gomor" really costs you nothing, because it saves its cost many times over in reduced fuel bills. Order today or send for booklet, testimonials and sworn proofs.

Does California Table Poultry Yield Profit?

[Written for the Pacific Rural Press by George H. Croley, President Federated Poultry Assn. of California.]

Is there profit to be made in utility poultry raising for market in California? This is a question we are called upon to answer almost every day. That the industry is a profitable one is proved by the number of our poultry keepers who have been successful. It is true, however, that many fail in this business, as in all others, chiefly because they are not fitted for it, undertake too much with too little resources, or meet unusual misfortune soon after starting. Approximately twenty or thirty persons each week apply for advice in regard to entering the business and fully one-third of these applicants are vigorously urged to stay out of it because their statements indicate that they have little or no chance to succeed.

There seems to be a good market for eggs in California, but "is the market for table poultry inviting?" is another frequent question. It has been demonstrated that excellent grades of poultry for table purposes can be produced at a profit in practically every part of California, and the demand for the choicest specimens is never supplied. To illustrate that there is a very good demand over local supply we present the following which is sent us by A. W. Robinson, Sec'y. Santa Cruz Poultry Ass'n, who has been investigating this matter:

Carloads of Poultry Imported.—"Every year carloads of poultry enter this State, consigned to San Francisco, Sacramento, and Los Angeles, from Kansas, Oklahoma, Nebraska, Missouri, and other eastern points. One Nebraska shipper informs the writer that he sends to California about fifty-two carloads of poultry a year, the average weight of the cars being from 17,000 to 19,000 pounds net; or about 4500 to 4700 fowls to each car. This shipper estimates that other parties in his state ship to California annually about 190 carloads of poultry.

"Another Nebraska shipper writes: 'We shipped to California last year 144 carloads of live and 12 carloads of dressed poultry, all but five of these cars being consigned to San Francisco. I think, in addition to our shipments, there were shipped from Nebraska an additional 150 carloads of live poultry and probably 10 carloads dressed poultry.'

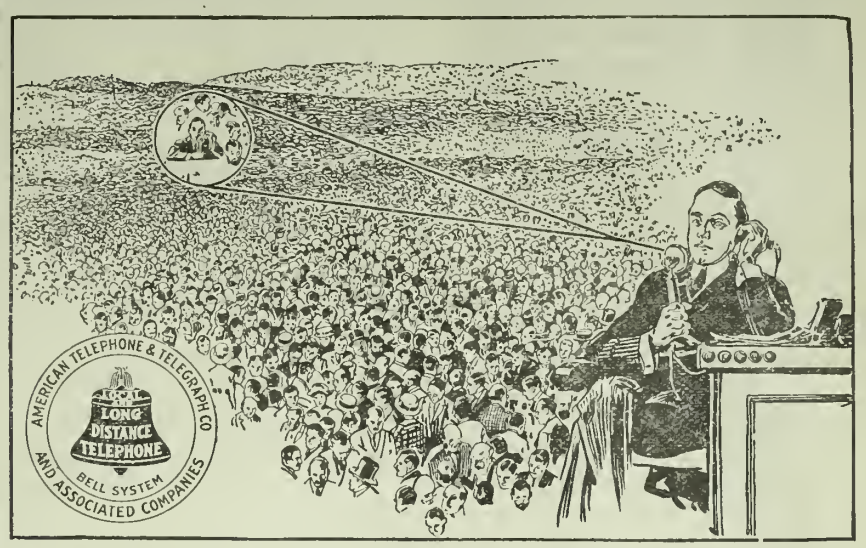
"A produce company in Enid, Oklahoma, writes Aug. 1: 'We probably ship more poultry to California than all other shippers of our State combined. Since Jan. 1 of this year, we have shipped into your state 40 carloads of live poultry, mostly to San Francisco, each car averaging about 4000 head, which means 160,000 chickens, valued at about $120,000 in the San Francisco market. The above average, if maintained through the year, will show about 60 to 65 cars for the year 1915.'

"One Missouri poultryman furnished parties in California in the summer of 1914 some ten carloads of Missouri poultry.

"Armour & Co. of Kansas City shipped two or three carloads of turkeys to California at Christmas time.

"The Stamper Co. of Moberly, Mo., writes: 'We hear a rumor that California has more turkeys this year than can be consumed at home. We wish to know if this is true. The production of both chickens and turkeys in this section is very light; in fact I think we have only half a normal crop. If you have plenty, it may be possible that shipments of poultry will be reversed this year.' "

A prime requisite to success in California consists of discovering just what the market wants—what the poultry keeper's customer is willing to pay liberally for.



Since the poultry keepers have formed co-operative associations in some parts of the State, a number of the members have received some severe shocks. A prominent officer of one co-operative marketing association recently told us how his eyes were opened. The association secretary telephoned him to come down and see the "starts"—partly incubated eggs—he was delivering. It turned out that his four-year-old hens were over fat and retaining the eggs for three or four days in the oviduct. He acknowledged that had this report been received from an egg-handling house in the city he would have classed them at once as dishonest and tricky. An active member of another community recently called and stated he had been delegated to find out why they received from two to four cents under market quotations for their eggs. He said: "I have found we are getting all our eggs are worth, but how am I to explain to my neighbors?" We advised him how to proceed, but in order to keep the cat in the bag, we cannot, for the present, state what we advised. Each poultry keeper who thinks he should receive better prices should investigate the market in order to discover whether he is delivering what his customers really want, or is simply gratifying his own imagination.

THE BEST EXHIBIT.

A series of interesting stories, with the West as a setting ground, have been appearing in Collier's Weekly. Emily Post, under the title of "By Motor to the Fair—A Trip from New York to San Francisco," enumerates her thrilling experiences and describes in a most apt manner the wonderful, awe-inspiring scenic effects of the West. In speaking of the Exposition Exhibits, it should be most gratifying to know that among all the displays from all the States of the Union and foreign countries of the world, the exhibit of a California concern should be considered one of the most interesting and attractive on the grounds. This is indeed a very high and praiseworthy compliment, the original remarks themselves bearing repetition: "To a woman the Sperry Flour exhibit is quite ingenious and, if anything, more interesting. They have a whole row of little booth kitchens to show how all the nations of the world use flour. A camper tosses flapjacks over a camp fire, a colored mammy bakes Johnny cake and corn pone, a Mexican makes enchilladas and tamales, a Swede, a Russian, a Chinaman, a Hindoo, and four or five others each make their national wafers and cakes (and give samples!). In the center at a big oven is baked homemade American bread and cake and pie of such deliciousness that everyone who passes by looks as longingly as the proverbial ragamuffin at a baker's window."

We are informed by Mr. H. L. Murphy of Perkins, Sacramento county, that he will leave shortly for Nebraska to purchase 75 head of Shorthorn cattle. Fifty head of these will be females for the founding of a new herd in this State; and the other 25 head will be bulls which Mr. Murphy expects to market the coming season.

A new dairy is being established at the Lake place in connection with the Vina Ranch at Vina, where 100 choice Holsteins are kept.

The Man in the Multitude

That the human voice may be transmitted across our continent by telephone is the marvel of this age of wonders. Yet the full significance of the achievement is not realized if it is considered strictly as a coast-to-coast connection.

The Transcontinental Line not only bridges the country from east to west, but, by having finally overcome the great barrier of distance, it has removed the last limitation of telephone communication between all the people of the nation.

This means that the voice can be sent not only from New York to San Francisco, but from *anywhere* to *anywhere*—even from *any one* to *any one*—in the United States.

Wherever you are, it is possible to reach any one of our hundred million population. You can single out from this vast throng any particular individual with whom you desire to speak.

To bring this about, the Bell System has spent years and millions, extending its lines everywhere, anticipating the ultimate triumph. It has had the foresight and the courage to unite this great country, community by community, into one telephone neighborhood.

With success achieved by the Transcontinental Line, the established Bell highways make you, wherever you are, the near neighbor of your farthest-away fellow citizen.

LIFE: A MEDITATION.

Alfred E. Piercy.

Life is not one unending vale of tears,
One long Gethsemane, one way of pain;
It hath its raptures and its inspirations,
Its mounts of wide-eyed vision and discernment,
Its solemn moments when the still small Voice
Speaks to the hushed soul in secret words of power;
Its tongues of fire descending from above,
Fraught with the power divine to speak and do.

From Calvary to Olivet we climb,
And ever rising, reach those Pisgah heights
Where we can look abroad and view God's plan,
Which, visioned thus from lofty planes, reveals
Its ever widening significance,
Embracing all the worlds in one grand sweep,
Life hath this purpose; every soul shall grow,
And in perfection God's own likeness show.

THE BLUE-BELLS.

"Us have a new baby to our house," said Baby Blue-Eyes, with a catch in her voice which sounded very much like she was on the verge of tears.

"Do you like it?" asked Peter Peters, her little playmate, at whose house babies were so plentiful as to make his home uncomfortably crowded.

"I don't like it," said Baby Blue-Eyes, winking to keep back the tears.

"Why, isn't it pretty?"

"Not pretty one bit, Peter Peters, 'sides it's a girl, an' now my Mama and Papa won't like me no more. I'm not their real little girl, they boughted me out of a orphan 'sylum, an' the angels bringed this one."

"How do you know?" asked Peter Peters.

"My Mama told the nurse. I was in my crib, an' they're going to give it to the new baby. I wasn't asleep, an' my Mama said if she'd know'd they was going to have this dear little treasure, they'd never boughted me. Nurse said I'd be good to wheel the baby, an' my Mama said, 'No, she's too little, she'll only be trouble.' Now, Peter Peters, I'm going to run away an' you mustn't tell nobody."

Peter Peters cried when he found Baby Blue-Eyes determined to leave the home where she was no longer welcome, but he promised he'd never tell, and as his family moved out of the neighborhood next day, his little playmate was soon forgotten.

When Baby Blue-Eyes' Papa came home, she ran to meet him, but he didn't pick her up and kiss her and say, "How's Papa's baby girl?" as he had always done, but instead, "Papa can't stop now. How's Mama and dear little baby sister?" And he went right on up to her Mama's room and told her to stay downstairs. He wouldn't put on the slippers she had warmed for him, and he didn't talk about anything but the new baby all during dinner time. Then he told her she was in the way and must go to bed just as soon as dinner was over, instead of crawling into his lap and listening to bear stories and all about the good fairies.

"Katy, the cook, will put you to bed in the nursery, for the baby must have your crib, and if you cry and wake the baby, Papa will bave to punish you," he said, as he closed the door on his way out.

What a funny world it is that a bran new baby can change everybody so, she thought as Katy tucked her into bed.

"They don't like bougbten babies out of 'sylums, do they, Katy?" she asked anxiously.

"Not all of them, but you are all right, Baby Blue-Eyes," replied Katy as she prepared to turn out the ligbt.

"No, they don't, an' I'm going away to live with the fairies."

"All right, good-bye, and when you see the fairies give them my love," laughed Katy as sbe went downstairs to the kitchen.

All the flowers were holding high carnival in the silvery moonligbt when suddenly the trumpet-vine sounded an alarm, and tbe flag waved its colors to warn them that there was an outsider among them. The fox-gloves stopped their boxing match, and the snap-dragon stood guard while all the flowers trembled with excitement. The Queen of the flowers—the Easter Lily, commanded silence as the little white figure with golden curls came toward them.

"Who are you?" asked the Queen.

"Just dear Baby Blue-Eyes," said the child. "I want to be a fairy flower just like you."

"She's a little flower child," whispered the Violet to the For-get-me-not.

"What brought you here?" asked the Easter Lily.

"I comed myself. Nobody loves me now, for we've got a new baby. I ain't my Papa's dear little angel child no more, an' I want to be a fairy."

The Easter Lily calle' all the flowers around her to talk tbe matter over.

"She has heard part of our secret work, which no human being has ever heard before. There is only one thing to do and that is to create her into a flower."

"Please do," pleaded Baby Blue-eyes.

"We can do nothing else," responded the Queen, and all the flowers nodded approval. "She must be a wild flower first, for she would be a crude cultivated blossom. Now what form shall she take? She cannot be a lily or a rose, or an orchid, a dahlia nor a chrysanthemum."

"She ls such a dainty little thing, make her as blue as her beautiful eyes," begged the Llly-of-tbe-Valley.

"I have no objection to her being a bell," said the Canterbury Bell.

"Good," said Queen Easter Lily. "The Rose, the Giant of Battle, will escort her to yon mossy knoll. The Daisies will proceed to weave a chain around her, and the Maid-of-the-Mist shall cast a veil of mist over her, so she cannot be seen. At the stroke of midnight when the mocking bird carols to the world that a new day is born, the veil will disappear and the new Blue Bell, or Baby Blue-Eyes, as she calls berself, will appear.

There was great rejoicing among the flowers and they swung on their stems in high glee, the Canterbury Bells ringing a welcome and the Trumpet-vine sounded the good news until he was hoarse.

Promptly at midnight, the carol of the mocking bird broke forth, the Daisies broke their chain and the veil of mist floated away leaving the mossy knoll shining in the silvery moonlight, beautiful in its wealth of dainty Blue-Bells or Baby Blue-eyes as the fairies prefer they should be called.—Polly Larkin.

SCHOOL NOTES.

The State Board of California has established at the Whittier Reform School a department of research, combining the principles of eugenics and psychology, to determine the cause of delinquency in juveniles. The work is the first of the sort undertaken by any State. Arrangements were completed by Fred C. Nelles, superintendent of the school, and the work bas started at the new hospital and receiving cottage. J. Harold Williams, a fellow in psychological research at Stanford University, and Professor Cowdery, from the eugenics record office of New York, will take charge of the study room and field and laboratory work, respectively. The eugenics records office is financed by the Carnegie Foundation and Mrs. Edward H. Harriman. During the past decade the State has spent more tban $4,000,000 on its juvenile delinquents, according to Nelles.

A camera club has been organized in the Central High School at Minneapolis. A. P. Andrews, head of the physics department, has charge of it. The members of the new club will visit the big industries of tbe city and photograph the different commercial processes. The pictures will be used in the physics laboratory lantern to illustrate the work there. The club is expected to have a membership of about 30 or 40 of the students from the physics and chemistry classes who have cameras.

A college course in motherhood soon will be offered at the University of Chicago. Every branch of the subject will be taught, from the preliminary upbuilding of the health of the mother to the care of the growing child. The course will probably be in charge of Dr. Marie Maver, head of the university's medical work, including the university household.

By going to school and being marked "present" for at least 40 days of the school year last year the 47,000 pupils in the Minneapolis public schools saved the state $170,000, according to C. G. Schultz, state superintendent of education.

HAIRPIN FAMINE.

Girls, save your hairpins!

It has been figured out that 35,000,000 girls and women in the United States use hairpins and that they lose 45,000,000, considerably more than one apiece, each day.

Now that the supply—which has been chiefly from European countries now at war—has been diminished, there'll have to be more saving or there will be a hairpin famine. Honest to goodness!

The world has made $41,000,000 worth of hairpins each year. And women of the United States have used $18,000,000 worth.

TWO NEGATIVES.

Donald, the boatman, had been taking the minister, a total abstainer, out fishing, and was asked on his return if he'd had a good day.

"Na, na," returned Donald. "Tbe mean-speerited body had nae whisky, sae I took him whaur there wls nae fish."

SATISFIED.

"I'd rather play golf than eat."

"But what does your wife say to that?"

"Oh, she doesn't care. Sbe'd rather play bridge than cook."—Detroit Free Press.

GUARD YOUR HEALTH.

There is hope for future health and happiness if you store up against the days to come reserve materials of strength, symmetry, skill and adaptability to changes as they appear. The old sand in the falling glass of Time is thus forestalled, if not turned backward.

Muscular development, neglected in youth, can be acquired in middle and advanced age as stored-up vitality to ward off calamities.

To acquire physical symmetry and to maintain it against the ravages of the future, shoulder-blade exercises, graceful dancing, squatting, kneeling, trunk bending, chest expansion, and respiratory gymnastics should be carried out a dozen times in sequence. The shoulder and girdle muscles will also, by these exercises, be equipped with new and abundant vitality.

GARDEN LORE.

Parties who have visited the San Diego Exposition state that one of the most beautiful features of its many attractions is the Wild-flower Gem. They have continued to plant seed throughout the year so there has been a wealth of beautiful wild-flowers throughout the Exposition. An Eastern visitor described it as "an exquisite gem consisting of nature's own treasures."

I have talked with two leading florists within the past week and their ideas were very different in regard to the treatment of ferns. One claimed that the best results were obtained by immersing the fern for fifteen minutes in a bucket of water. The other florist claims that the immersing process is not bad occasionally, but if persisted in for any length of time it will drown the plant. He believes in giving a little water every day, not allowing it to become dry, and sprinkling the entire plant occasionally. Another successful grower of ferns says she treats her plants to a teapoonful of castor oil at the roots about every three months, being careful not to break the new fronds. Her ferns are certainly beautiful and grow like magic.

The little boys and girls who have pets are going to have a chance to show them, for a children's pets' exhibition is to be held at the Exposition December 2 and 3, just before the great show closes. Entry blanks, for which there are no charges, may be obtained by addressing the superintendent of the children's pets' exhibition, department of livestock, in care of the Exposition.

The exhibition has been indorsed by many of the leading educators of the State. It is designed to encourage children to have pets. There will be exhibited pets of all kinds and varieties, with two legs or four, that creep, crawl, fly or swim; nor will there be a limit as to size, worth, color or pedigree — all that is required is that the animal, bird, reptile, fish or insect be a pet of some child.

In Australia the birds have no song and the flowers have no scent, though the leaves of every tree are full of odor.

FASHION TALK.

The quiet colors popular for autumn are known as "silent" colors.

Have you seen the new storm coats? They are almost transparent, glossy and of very bright colors. One of them on display recently was almost a grass green with a three-inch border of a darker green. The bright purple had a royal purple border. They are not nearly so genteel-looking and attractive as the cravanettes that have been popular for the last two seasons.

Some of the new fall hats are extremely plain, but nevertheless very becoming to most faces. The old English walking hat with slightly higher crown is one of the popular shapes. I noticed one that seemed to attract a good deal of attention among the new fall styles that was made of dark pansy purple velvet, perfectly plain and the only trimming was a band of the same with a large oval steel buckle in front and the back. Purple in all of its shades will be worn a great deal during the fall season.

Some of the short black silk gloves are showing black and white striped tops. They are very attractive when worn with a natty costume.

Wine color sounds old-fashioned, but it's the newest tint in fashion's color chart. The lovely rich purple of Bordeaux vintage are the colors you'll see oftenest in modish gowns and coat suits.

CLIPPINGS.

The following are Jefferson's ten rules and if lived up to they will aid in smoothing out the rough edges in life's journey:

Never put off until tomorrow what you can do today.

Never trouble another for what you can do yourself.

Never spend your money before you have earned it.

Never buy what you don't want because it is cheap.

Pride costs more than hunger, thirst and cold.

We seldom repent of having too little.

Nothing is troublesome that we do willingly.

How much pain the evils have cost us that have never happened.

Take things always by the smooth handle.

When angry, count ten before you speak: if very angry, count a hundred.

LOVE'S WAY.

"Of course, he hasn't any money, but Charlie says love will make a way."

"Yes, I noticed it will," said the father. "Thus far it's made away with about 28 dollars' worth of electricity."

The oldest living things in the world are the giant sequoia trees of our Pacific Coast. Naturalists have found 79 specimens more than 2,000 years old, according to their rings, three more than 3,000 years and one that was 3,150. This oldest tree was a sturdy sapling when Paris and Helen fled to Troy.

Peas found in mummy cases have been planted recently and found to grow.

ARE YOU IDENTIFIED?

Every man, woman and child should carry an identification card in case of accident. It is not safe to venture beyond the boundaries of one's own home, without carrying a card on your person, or a tag giving your name, address and phone number. A lady from the country showed me her identification tag that she had made following a terrible accident, on a previous visit to the city. She was unconscious for hours and unable to notify her family. The first thing she did after getting out of the hospital was to have a little silver tag made, and engraved with her name and address, and her card as well, with name, address and telling who to notify in case of accident, in her purse. Many persons have the aluminum tags which are inexpensive and which take the engraving well, sewed in their coats.

A GOOD PROFIT.

Uncle Tom Profitt, aged 81, and the Widow Goode, 71, were married in Monroe county. The preacher made a Goode Profitt in tying the knot. — Hopkinsville, Ky., Kentuckian.

SHE WAS A PRIZE.

"Are you familiar with Dante, Miss Kittish?" asked Mr. Tredway.

"No; but I can make pumpkin pie that fairly melts in your mouth."

"Will you marry me?" asked the young man, eagerly.—Exchange.

WHY MEN EAT MORE.

That men eat 5 or 6 per cent more than women—not because they are gluttons, but because they actually require that much more nourishment—appears as a result of an investigation made in the nutrition laboratory of the Carnegie Benedict, says the Literary Digest. The reason for the discrepancy seems to be that women have a smaller proportion of active tissue than men of the same weight, and more inactive material, such as fat. The investigation disclosed that the average woman generates only 1,355 heat units in 24 hours, as against 1,638 produced by the man, or about 2 per cent more for the latter per pound of body weight. When groups were compared, after careful selection of individuals of nearly the same height and weight, the men were found to produce about 12 per cent more heat than women.

STORY OF ALGY.

"Have you ever heard the story of Algy and the bear?" asked a boy of his father.

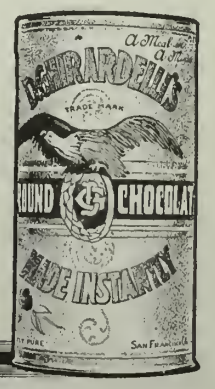
"It's very short. 'Algy met a bear; the bear was bulgy; the bulgy was Algy.'"—London News.

It is a popular error to think that the pulse may be felt only at the wrist. It may be felt in any superficial artery—for instance, at the temple, in the neck, or behind the ankle, on the inner side.

The Drink that gives **WOMEN** *Strength*

Ghirardelli's Ground Chocolate is a sustaining beverage. Women whose strength is taxed for any unusual cause will find a daily cup of Ghirardelli's just the thing to meet the drain on their bodily vigor.

Ghirardelli's Ground Chocolate in hermetically sealed cans is a blend of finest cocoa and pure sugar—delicious, strength-bestowing—an economical palate-stirring food-beverage.



Ghirardelli's is used in more homes in the West than all other brands of chocolate combined. For your protection be sure you get

Ghirardelli's
The Only
Ground Chocolate

In ½-lb., 1-lb. and 3-lb. hermetically sealed cans.
There's a double economy in buying the 3-lb. can.

Northern Club	1.65	@1.70
Northern Red	1.60	@1.65

BARLEY.

There is very little movement in shipping barley, chiefly owing to lack of transportation. Choice feed is in better demand and has been marked up five cents.

Shipping, ctl.	$1.25	@1.30
Choice Feed, ctl.	1.22½	@1.27½

OATS.

The improved demand for oats was continued this week; and several varieties are quoted higher in line with the firmer feeling in all grains.

Black, ctl.	$1.85	@2.00
Red Feed	1.30	@1.35
Red Seed	1.50	@1.75
White	1.40	@1.42½

CORN.

The corn market shows little change from last week; and not much business is being done. Owing to conditions in the eastern growing districts, eastern yellow is very firm. The figure given is for bulk grain, the sacked price being ten cents higher.

Eastern yellow, ctl.	$1.65@1.70
Milo Maize	1.45@1.55
Kaffir	1.55@1.65

BEANS.

The bean market continued its upward course this week. A number of varieties are quoted higher this week; and, with only one or two exceptions, the entire list is firm at the new figures. Small whites, which were marked up last week, are again on the rise. Large whites have gone up until the top figure approaches close to $5. Blackeyes, Bayos and cranberry beans have made smaller advances. The only item showing a drop is Mexican reds, which are at present very weak.

(On wharf, San Francisco.)

Bayos, per ctl.	$4.25@4.50
Blackeyes	2.90@3.00
Cranberry Beans	4.25@4.40
Horse Beans	2.25@3.00
Small Whites	4.75@4.85
Large Whites	4.65@4.95
Pink	3.25@3.50
Limas	4.50@4,60
Red Kidney	5.00@5.25
Mexican Reds	4.00@4.25

SEEDS.

The seed market appears to be stationary except for a few inquiries. Everything now depends on the coming of the rains; and no great amount of business will be done until the wetting of the ground.

Alfalfa, per lb.	17 @ 18	c
Melilotus Alba	30	c
Melilotus, Indica	6	c
Bur Clover	11	c
Oregon Vetch	4¼ @ 4½	c
Soy Beans	6	c
Canada Peas	5¼ @ 6	c
Sudan Grass	40	c

HAY.

The receipts of hay in the San Francisco market range slightly over 2500 tons in recent weeks; and this appears to be just about equal to the consumptive demand. Dealers report that most of the arrivals now coming in are coming out of warehouses, the present attractive prices being sufficient to induce shipments, notwithstanding the fact that storage charges have already been paid. Strictly fancy hay in light bales brought as high as $18 this week. Another government order for 3000 tons for shipment to Manila has aided in stiffening prices.

No. 1 Wheat	$12.00@15.00
do No. 2	10.00@11.50
Tame Oats	10.00@15.00
Wild Oats	8.00@10.50
Alfalfa	10.00@14.00
Stock Hay	6.00@ 8.00
Straw, per bale	.25@ .40

FEEDSTUFFS.

The general run of feedstuffs is firmer this week, though the only quotable changes are in rolled barley and rolled oats, both of which have advanced in sympathy with the firmer feeling in the whole grains.

(Wholesale prices per ton, carload lots, San Francisco.)

Beet Pulp, per ton	$20.00@21.00
Alfalfa Meal. ton	17.00@20.00
Alfalfa Molasses Meal per ton	20.00@21.00
Bran, per ton	26.00@27.00

Rolled Oats	29.50@31.00
Digester Tankage	45.00

VEGETABLES.

With the passing of the season, a number of lines are becoming scarce; and, where this is not accompanied with a decided drop in quality, the tendency is toward higher prices. Artichokes are now very scarce, and are now quoted at 50 to 75 cents a dozen. Celery has also registered a stiff advance. Summer squash is getting scarce and the best has sold as high as 50 cents, with practically none to be had for less than 40 cents. Egg plant and string beans are also higher.

(Wholesale Prices, San Francisco.)

String Beans	3 @ 4	c
Lima Beans	3 @ 3½	c
Peppers, bell, box	40 @65	c
Tomatoes, lug	20 @40	c

Celery, doz.	30 @50	c
Artichokes, doz.	50 @75	c

POTATOES AND ONIONS.

There is very little change in either the demand or the supply of potatoes. Salinas burbanks are now coming in a little more regular as to quality, and the range of prices has narrowed considerably. Advices from the San Joaquin onion district shows continued heavy shipments of onions to eastern points and into storage. Stockton prices range all the way from 75 cents to $1.15 according to reports; but the higher figure seems to be unknown here.

Salinas Burbanks	$1.40@1.55
Delta Burbanks	.90@1.10
Sweet Potatoes, ctl.	1.10@1.25
Onions, ctl.	.90@1.00
Garlic, per lb. new	.08@ .10

POULTRY.

The market has been rather slow this week; and the fluctuations have generally been downward. Fryers are in oversupply, and are weak at a low figure. Extra hens are a little stronger as are also old turkeys.

Turkeys, old, lb	18 @20	c
do, young	23 @25	c

DECIDUOUS FRUITS.

Some lines of fruits are now getting scarce; and famine prices are being paid for these where good quality can be had. In other lines where the quality is uncertain, prices are hard to fix. The demand is good for most lines. Blackberries are hard to get; and as high as $7 per chest is quoted on these. About the only Bartlett pears to be had are taken out of cold storage; and these are bringing from $2 to $2.50 per box. California peaches are now out of the market; and only Oregon peaches in small boxes are quoted. The market is overstocked with poor cantaloupes; and the price is little more than half what it was a week ago. Casabas are also lower. Grape prices are also dropping.

(Sales in S. F. Market.)

DRIED FRUITS.

San Francisco buyers of dried fruits report that the Panama Canal situation has had a bad effect on the export demand, though this has not apparently been sufficient to affect

prices. Apricots are now largely out of growers' hands, some estimates placing the stock still in the growers' hands at from 200 to 500 tons. Good Moorparks are still bringing the top figure of 9½ cents. Peaches are weaker locally, the prevailing opinion being that lack of transportation is the chief cause. There is not much activity locally in prunes; but advices from the growing districts report a firm market, with prices tending upward. Sales at San Jose are reported at 4½ cts., a higher figure than quoted here. Estimates are that from 15 to 35 per cent of the Santa Clara crop is still in the hands of the growers. Concerning the eastern outlook, the New York Journal of Commerce says:

"California spot prunes continued to maintain a very firm position; and, though there was no change made in the quotations, prices appeared inclined to move upwards and buying remained active.

"Some shipments of the 1915 pack have been received in the market and are being offered at the commonly quoted spot prices.

"Future Coast prunes appeared to be slightly weaker. Coast packers were said to be offering quantities of Santa Clara prunes for October shipment at a 3¾c bulk basis for 40s to 60s, inclusive, f. o. b. common Coast shipping points. From a quarter to a half cent premium was being demanded on stocks of straight 40s, which were in evidence at prices ranging from a 4c bulk basis to a 4¼c bulk basis f. o. b. common Coast shipping points for October shipment. Supplies of Coast prunes for November shipment were generally about one-eighth of a cent higher than the quotation being asked for October shipment. Stocks for November shipment from the Coast were being held at a 3⅝ bulk basis as the inside figure.

"Spot apricots were being held very strongly in all quarters and operators advanced prices on available stocks about one-quarter of a cent on all grades. Selling was being done only in small quantities and brokers appeared to believe that apricots would be advanced still further within a very short time.

"Offerings of Coast 1915 pack apricots for future delivery were being held by one large California packer at 8⅜c for choice, 9c for extra choice and 9½c for fancy."

CITRUS FRUITS.

The markets are paying good prices for valencia oranges as well as for lemons. Shipments of valencias are going east at the rate of nearly 40 cars daily and lemons are well cleaned up so that the season is closing in much better shape than most growers thought possible a few months ago.

On the New York auction Monday, Oct. 18th, prices for valencias averaged for sixteen cars from $5.70 down to $2 per box and lemons averaged from $3.55 down to $2.05 per box. On the same day at Chicago valencias averaged from $5.75 to $5.25 per box, and lemons brought $3.75 to $2.25. The new crop in California is coming along nicely and will be larger than anticipated in July. The 8 to 1 standard will retard some northern shipments for a few weeks.

At San Francisco old crop grapefruit is now getting scarce and is selling at higher prices. The new crop is expected to be on the market by the first of the month or soon after. Lemons are quoted at an advance.

(Wholesale prices, San Francisco.)

Oranges, Valencias, bx	$3.75@4.75
Grapefruit, seedless, bx.	3.50@4.00
Fancy	4.00@4.50
Lemons, box	2.00@3.50

NUTS.

Packers report an unusually large quantity of defective almonds as being offered on this market. Some lots have been received that run from 15 to 20 per cent gummy. Except for the off quality nuts, prices are well maintained at the old figures. A report that the French walnut crop will be largely marketed in America is causing some anxiety to get the California crop in eastern hands as soon as possible.

(Exchange prices, f. o. b. common shipping point.)

SPECIAL DECIDUOUS MARKET REPORT.

By J. L. Nagle.

Sacramento, Cal., Oct. 19, 1915.

Favorable weather and encouraging market conditions seem to have developed not only a normal crop of grapes but a larger tonnage than last season. Though it was estimated a week ago that fully 75 per cent of the Tokays and Malagas had been harvested, shipments have continued heavy ever since and while some vineyards have cleaned up, others are marketing their second crop. Despite reports to the contrary, we look for a decided falling off in shipments this week and though there is quite a tonnage rolling to the eastern markets, we look for a sharp demand for the balance of the season.

The packing of Emperors in kegs is now at its height. The crop of this variety is not as heavy as was at first predicted and consequently shipments of crate Emperors next month will be light. The quality, however, is exceptional and what few cars of kegs have reached the East have arrived in excellent condition with indication that the berries will keep for at least three months. The arrival of Almerias from Spain is by no means as heavy as at this time last season.

The following prices have ruled for the week:

New York — Bartletts averaged $2.75; Clairgeaus, $2.45; Comice, $2.35; Winter Nellis, $2.40; Tokays, $1.15; Malagas, 90c; Cornichons, $1.00.

Chicago—Tokays averaged $1.05; Malagas, 80c; Cornichons, $1.10; Bartletts, $2.65; Winter Nellis, 2.30.

Total shipments to date, 13,838 cars; total shipments same date 1914, 14,137 cars.

Publisher's Dep't.

The first of a series of articles by the editor appears in this issue of the Rural Press. It is worthy of careful perusal, not only by every fruit grower, but by stockmen, general farmers and in fact every Californian. Another article by Prof. Wickson covering the cattle and dairy industry will appear next week, on which occasion an enlarged issue will be published. Read this week's paper carefully and look for a bigger and better one next week.

Two hundred and twenty-nine new subscribers were added to our list this week. The boys are doing good work in the field and we expect them to keep up the number of gains each week during the winter. Our advertisers will get fine results this season.

James Cass of Cayucos was a subscriber to the Rural Press many years ago when the subscription price was $3 per year. We have just received a letter from him from which we extract the following: "I quit farming some years ago and dropped the Press and will be 91 years old the 24th of next month, and as I am told I am good for eight or ten years more, I concluded I had better begin farming again. So here goes."

Can he come back? He can!

Wonderful New Kerosene Light

Burns Vapor Saves Oil — Beats Electric or Gasoline

10-Days FREE TRIAL

Send No Money, We Prepay Charges

We don't ask you to pay us ***a cent*** until you have used this wonderful modern light in your own home ten days—we even prepay transportation charges. You may return it at our expense if not perfectly satisfied after putting it to every possible test for 10 nights. You can't possibly lose a cent. We want to prove to you that it makes an ordinary oil lamp look like a candle; beats electric, gasoline or acetylene. Lights and is put out like old oil lamp. Tests at 33 leading Universities and Government Bureau of Standards show that it

Burns 50 Hours on 1 Gallon

common coal oil, (kerosene) and gives more than twice as much light as the best round wick open flame lamps. No odor, smoke or noise, simple, clean, no pressure, won't explode. Children run it. Several million people already enjoying this powerful, white, steady light, nearest to sunlight. Guaranteed.

$1000.00 Will Be Given

to the person who shows us an oil lamp equal to the new ***Aladdin*** (details of offer given in our circular.) Would we dare make such a challenge if there were the slightest doubt as to the merits of the ***Aladdin?***

In the Winter and Summer Feed Your Hens

SPERRY'S SURELAY

SAN FRANCISCO-PANAMA-PACIFIC-INTERNATIONAL-EXPOSITION 1915

Send for This Revised Book

It's FREE

The Book tells you all about the big profits in poultry raising. It tells you how you can get these big profits. It tells the truth in plain English just why some make money and many make failures of the poultry business. It shows you how you can get more eggs and how you can get them when the market price is high.

It tells you how to feed and what to feed. Of all livestock the hen is the most profitable, but she can't lay eggs unless you feed her the right materials to make eggs with. We have, by analysis, found out just what goes to make eggs—just what elements nature demands for egg producing—just how much of each ingredient is necessary—upon this knowledge we make

SURELAY

The Perfect Balanced Egg Food

SURELAY is the one egg-producing food that you can depend upon every time to give satisfactory results. We tell you honestly just what we put into it and just how we mix it. Every sack has a guaranty printed on it—What's on the Sack is in the Sack and That's What's in the Egg.

The Revised Sperry Book, "Make Hens Happy"

This Book is free. It will tell you many truths about pou ltry raising and egg-producing that you never knew before.

THE PACIFIC RURAL PRESS

SAN FRANCISCO OCTOBER 30, 1915. LOS ANGELES

CALIFORNIA STATE LIBRARY

California State Library

Why California for Livestock?

Second of a series of sketches in which the Editor presents suggestions drawn from long experience, of what Californians should think and do for the advancement of California Agriculture.

[Written for Pacific Rural Press.]

FROM what remoteness is it desirable to draw demonstrations of the capability of California to produce fine livestock? The other day a man from Iowa nearly roused to consciousness the human statuary behind the desk of one of our leading hotels by announcing, as he registered his name, that he had come to California to buy a drove of elephants. He explained afterwards that he was seeking graven images from Asia, but that did not make his quest any more reasonable. If he had been reading the Pliocene Times, he would have seen that elephants were produced in California, of stature and volume which would make the modern circus elephant look like a goat, and would have found the suggestion also to elephant breeders of the pliocene period in all parts of the earth to get sires from California, where the mild climate and exuberant vegetation produced elephants fit to improve the breed in all less favored countries. This is not vain imaginings, for they have pulled out of the asphaltum beds on Le Brea Rancho, not only two kinds of elephants, but bisons, mastodons, camels, horses, tigers, lions and other beasts, but also, the pliocene man, who was, presumably, caring for them when the motley herd was engulfed many thousands of years ago. Thus is the antiquity of California animal industry established!

Jerseys at the Exposition Stock Show outnumbered any other breed and surprised Eastern judges by their high quality. Jersey graded herds above. Red Polled Lordly and Hereford Omycam, Grand Champions shown below. The other breeds were well represented.

Introduction of Domestic Animals.—It seems that these prehistoric suggestions of the suitability of California for stock raising lay unproductive for ages. The aborigines during historic times gave their attention to raising clams from the mud, roots from the uplands, and acorns from the autumn dust. They apparently did little in the domestication of animals, were not sportsmen, though big game abounded, nor even hunters and trappers in a land so productive of peltry that a Russian offered once to sell a cargo of merchandise worth $30,000 to the Mexicans for otter skins which they might catch in San Francisco bay. He was refused, however, for Mexicans have never been overspry in chasing work, and the Indians were too worthless to be beaten into it. Ancient California was probably the prototype of the landscape "where every prospect pleases and only man is vile." One ean easily see that if California had caught an outshoot of the Aryan raee instead of a spawn of Diggers, her endowment of elephants, lions and tigers might not have gone for naught. Aboriginally, California was surely in a bad way and had to wait for primitive animal domestication until the Mexicans brought in a job lot of about 300 cattle, horses, asses, sheep and swine, when they came to convert the Diggers and to do political geography in 1769. Padre Junipera Serra and Don Gaspar de Portola were the joint heads of this enterprise. They are to be credited with the establishment of animal industry and historians leave us to infer that all the stock found in California before the coming of Americans was the increase of the original importation. When politics triumphed over evangelization and the Missions were secularized in 1835, the livestock owned by them consisted of 424,000 horned cattle, 62,500 horses, mules, and asses, 321,500 sheep, goats and swine. This was a great demonstration of the nat-

DAIRYMEN! ATTENTION! STOCKMEN!

Don't fail while you are at the Exposition to look into the Silo question. Of course, there is no longer any question but that every feeder of stock, either dairy or beef, needs a silo. The question is Which Silo? If you will carefully investigate the

REMCO REDWOOD STAVE SILOS

near the dairy barns, compare them with all other makes and note their many advantages you will surely be convinced this is the silo for you. We build them in all sizes and dimensions exactly as you want them for your particular needs.

Remco Redwood Tanks

With towers or without. Shipped ready to erect.

Remco Redwood Pipe

In diameters from 2 inches to 12 feet. See our exhibit of pipe and tanks in machinery hall.

All our silos, tanks and pipe are designed by our own engineers to meet every condition. Made in our big factory from CLEAR AIR-DRIED REDWOOD; selected from stock of forty million feet which we carry at all times.

Come to our office while you are in San Francisco.

SAN FRANCISCO . SATURDAY, OCTOBER 30, 1915. LOS ANGELES

anama-Pacific Exposition Cattle Awards.

Foot and mouth disease causes small classes at big show, but large premiums attract a creditable showing of all prominent breeds on Pacific Coast.]

Never in this State has there been showier lot of Jersey cattle put on hibition than those shown at the xposition's cattle show last week. e older show herds of both Oregon d California were out in full force, egon breeders bringing down eir herds of imported animals, ile California breeders as usual re strongest in American type imals, which they have been striv- for.

The imported animals came nearer judge Dempsey's idea of perfec- n, based on the score card. When oduction entered into the award- the less beautiful California trons had their innings.

Eastern breeders and American rsey Cattle Club officials frequent- stated that whether the Cali- rnians won in the show ring or t, they are breeding the cows that irymen want and the kind future re cards will favor.

Guernseys: California breeders de their strongest showing in the ernseys, and for quality of show g type there has never been a onger showing in the State.

With the rapid growth of interest this breed there is an apparent provement in the type of the eed on the coast, the intent of eeders evidently being to get a tle finer type without injuring nstitution and vigor.

Chas. Hill, who did the judging, marked that the uniform quality large Eastern shows was not in idence especially in the produce dam class and the aged bull and w classes, but expressed confidence the future of the breed in this ate on the assumption that with der distribution of good breeding ock will come more uniform type d quality.

Ayrshires: The first real show Ayrshires ever held in this State as the one on exhibit last week d in fairness to this little known ottish breed it must be said that ey attracted more favorable com- ent than any of the other breeds the show rings. Their uniform- y in conformation, fine, straight, oad backs and udders, were a velation. Ayrshire lovers main- ined that in many classes the ow was as strong as ever seen in merica.

Holsteins: With the exception of e small herd and a few head own by the University of Califor- a this popular breed's showing as made up entirely by Northwest- n breeders. The high standard d uniformity of the cattle shown, some classes, notably the aged lls and the young females, spelled ality in its broadest sense. eeders who made this show came epared to meet strong competi- n in every class and the outcome as satisfying to all concerned.

Shorthorns: As was expected with a breed so popular in the State as this one there was keen disappointment that the foot and mouth disease so thoroughly upset the plans of Coast and Middle Western breeders. Notwithstanding this, the Shorthorn show was highly representative of the breed; and while none of the older California show herds were there, the recently established herds made a good showing for themselves against competition that was in many classes exceptionally strong.

Red Polled: California shared about even honors with Oregon in awards of this breed, there being a noticeable improvement in the conditioning of the animals over shows of the past. The breeders are making a bid for dairy honors.

BONNIE ORMSBY LASS 131966,
Senior and Grand Champion Holstein Cow.

Herefords: With no competition except in one class, the Hereford awards were secured entirely by Geo. Chandler. The University of California secured first on Prince Donald in the junior yearling bull class and was later awarded reserve junior and reserve grand championships on the same animal. With one exception the University took everything down the line on Hereford steers.

Brown Swiss: All awards in this division were given to B. P. Inman, who showed without competition.

Dutch Belted: The Strader herds of California were the only competitors in this division, securing all awards.

Jerseys. — Thomas Dempsey of Westerville, Ohio, judged the Jersey classes, placing the awards in the following order:

Bulls 3 years old or over: Golden Fern's Noble Jr., shown by G. G. Hewitt; Altama Interest, by G. Miller; Onoto's Cotillion Boy, by Clifford Reid; Octavia's Duke, by Frank Loughary; Maid's Jersey Duke, by G. H. Dammeier.

Bulls 2 years and under 3: Noble Emperor, shown by Loughary; Undulatta Prince, by Hembree; Fussy's Fern Noble, by H. West; Bonnie's Thelma Lad of U. V., by S. P. Kelly.

Bulls 1 year and under 2: Fancy's Raleigh, shown by West; Combination's Premier, by West; Roxy's Rochette's Noble, by Hembree; Rochette's Noble Duke, by Hembree; Financial King of L. by N. H. Locke Co.

Bull calf 6 months and under 12: Onoto's Prince of S. B., shown by West; Luckiamutes Eminent Prince, by Loughary; Undulatta Prince's Six Oxford, by Hembree; Undulatta Princess Eminent, by Hembree; Undulatta Prince's Noble, by Hembree.

Bull calves under 6 months: Onoto's Composer of S. B., shown by West; Dairy Maid's Prince, by Hembree; Martha's King, shown by Dammeier; Foxy Blondy's Valet of L., by Locke; Fresno Lemola's King of L., by Locke.

Cows 5 years or over: Imp. Jolly Berna, shown by West; Imp. Brilliant Spray, by Hembree; Glorious Juanette, by Hembree; Moehicans' Thirty-eight, by Brewer; Maid of Counsel Crest, by Dammeier.

Cows 4 years and under 5: Imp. Great Prince, by West; Valet's Golden Biddy of L., by Lockeford; Bosnians' Dimple Princess, by Hembree; Figgis of C. V., by Kelly.

Cows 3 years and under 4: Nasheville Susie, by F. E. Lynn; Valet's Dairymaid of L., by Locke; Jewel of Venadera, by Miller; Jolly's Nioba, by Dammeier; Sir Oxford's Brilliant Spray, by Hembree.

Cows 2 years and under 3: St. Maives Beauty, shown by Ed. Carey; Valet's Golden Lemola of L., by Locke; Lissa Success, by E. L. Brewer; Alsatia of S. B., by West; La Vallettes Violet of L., by Locke.

Heifers not in milk 18 months and under 2 years: Dulcet's Daisy, shown by West; King's Leada of L., by Locke; Bonnie Belle of K., by Kelly; Noble's Alcy, by Hembree.

Heifers 1 year and under 18 months: Cotillion's Sunny Maid, shown by West; Cowslip's Golden Begonia by Reid; Ibernian's Heroine by Hembree; Onoto's Maggie of S. B., by West.

Heifers 6 months and under 1 year: Cowslip's Financial Maid, shown by Reid; Eminent's Wardress, by Reid; Onoto of Sunny Bank, by West; Onoto's Alsatia of S. B., by West; Onoto's Beauty of S. B., by West.

Heifers under 6 months: Luckiamutes Lady Octavia, shown by Loughary; Onoto's Fern Dell of S. B., by West; Onoto's Maid of S. B., by West; Boise Rosaire, by Carey; Lora B. of L., by Locke.

Cow with official yearly record begun after 5 years of age: Pearl of Venadera, shown by Miller; Moehican's 38, by Brewer; Lorna of Venadera, by Miller; Wanda of Venadera, by Miller.

Cow with official yearly record begun under 5 years of age: Nashville Susie, shown by Lynn; Imp. Brilliant Spray, by Hembree; Bosian's Dimpled Princess, by Hembree; Jewel of Venadera, by Miller; Amethyst of Venadera, by Miller.

Jersey graded herd: 1st, West; 2nd, Hembree; 3rd, Miller; 4th, Locke.

Breeders' young herd: 1st, West; 2nd, Hembree; 3rd, Loughary; 4th, Locke; 5th, Kelly.

Calf herd: 1st, West; 2nd, Locke.

Produce of dam: 1st, West; 2nd, West; 3rd, Miller; 4th, Locke; 5th, West.

Get of one sire: 1st, West; 2nd, Lynn; 3rd, West; 4th, Hembree; 5th, Locke.

Advanced registry cow shown with 2 of her progeny, owned by exhibitor: 1st, Miller; 2nd, Kelly; 3rd, Hembree; 4th, Brewer; 5th, Kelly.

Dairy herd: 1st, Miller; 2nd, Locke; 3rd, West.

Senior Champion Bull: Golden Fern's Noble Jr., shown by Hewitt.

Reserve Senior Champion Bull: Altama Interest, by Miller.

Junior Champion bull: Fancy's Raliegh, shown by West.

Reserve Junior Champion Bull: Onoto's Prince of S. B., shown by West.

Grand Champion Bull: Fancy's Raliegh, shown by West.

Reserve Grand Champion Bull: Golden Fern's Noble Jr., shown by Hewitt.

Senior Champion Cow: Nasheville Susie, shown by Lynn.

Reserve Senior Champion Cow: Imp. Jolly Berna, shown by West.

Junior Champion cow: Cotillon's Sunny Maid, shown by West.

Reserve Junior Champion Cow: Cowslip's Financial Maid, shown by Reid.

Grand Champion Cow: Nasheville Susie, shown by Lynn.

Reserve Grand Champion Cow: Cotillon's Sunny Maid, shown by West.

Guernseys: The Guernsey classes were judged by Chas. L. Hill, of Rosendale, Wisconsin, the awards being placed in the following order:

Bulls 3 years old or over: Imp. Itchen May King, shown by Walter Dupee; Sam Simpson, by D. H. Looney; May King of Fern Ridge, by C. W. Main; King of Mayfield, by Albion L. Gile; Don Adonis of Linda Vista, by Humphrey.

Bulls 2 years and under 3: Yeoman's King, by L. H. Albertson; President's Mysie, by L. D. Smith.

Bulls 1 year and under 2: Fermain's Iowa Boy of the Oaks, shown by Looney; Auricles Cherub of Edgemoore, by Dupee; Mayhews Truetype, by Humphrey; Donaldo of Mayhews, by Humphrey.

Bulls 6 months and under 1 year: Ricardo of Edgemoor, shown by Dupee; Chicona Brevet, by Gile; Volunteer of Edgemoor, Gile; Captain Sam, by Looney.

Bulls under 6 months: Bullion of Edgemoor, shown by Dupee; Chicona Brevet, by Gile; Volunteer of Edgemoor, by Dupee; Chicona Hannibal, by Gile; Captain Sam, by Looney.

Cows 5 years or over: Imp. Itchen Wood Sorrel, shown by Dupee; Imp. Itchen Moss Rose, by Dupee; Imp. Raymond's Queen of School Lane Farm, by Saylor; Imp. Julia's Maid of Beaulieu, by Saylor; Lady Chilmark II, by Gile.

Cows 4 years and under 5: Imp. Mildred II of Les Godaines, shown by Dupee; Ysobel Prince, by Looney; Berkshire Lassie, by Humphrey; May Rose of Haddon, by Gile; Golden Maid of Maple Lane, by Humphrey.

Cows 3 years and under 4: Florham Dame, shown by Dupee; Fairy of Alfalfa Farms, by Humphrey; Lucilla of Chicona, by Gile; Mary Dance of Riverside Farm, by Dupee; Calista, by Looney.

Cows 2 years and under 3: Marguerite of Pinehurst II, shown by Dupee; Imp. Donnington Goldie V.

(Continued on page 422.)

Notes From Cattle Exhibitors.

[Written for Pacific Rural Press.]

John L. Smith of Spokane selects cows which come nearest to making a square from hip joint to pin bones. With hip joints far forward, the bag is more likely to be carried well toward the front. He takes a milking machine outfit along on his show circuit.

W. Sim, in charge of the Hopland Stock Farm cattle, prefers Shorthorns because the cows provide milk enough on the range to keep calves in a thrifty fast-growing condition so they are heavy when taken to the feed lot and are all ready to begin gaining. A calf which has become thin for lack of milk requires as much as 20 days to restore its constitution ready to use feed for flesh making.

E. A. Stewart, owner of the Carnation Stock Farms of Wisconsin and Washington quit raising grade cows because with his hired help he could not make enough from milk alone. He started purebred Holsteins three years ago. A year later in taking invoice, he had to value the grade calves about $30 while the purebreds were worth $100 and up. That invoice showed him the profit in raising purebreds, of which he now has 500 registered.

C. W. Main of Corona had a Guernsey bull at the Fair with a well-nigh perfect back line and extraordinary vein development. He drew third prize. "The winners were good bulls."

Mrs. Ada Howie of Oconomowoc Wis., inherited a wornout farm which she hated. She rented it for cash and on shares, she had it run by a manager, she tried running it herself and moved off, she couldn't get a tenant and couldn't sell it so she moved back on, started with three Jerseys, hired a milk maid from the old country to care for them, asked the milkmaid the why of every detail of her work, now has 100 head of purebreds, recently sold a carload to Japan, can draw her check for whatever she wants to buy, loves the cows and the farm, and has restored its fertility.

In starting a dairy herd of a dozen animals for instance, C. H. Hulbert of the American Guernsey Cattle Club, says get a purebred bull, ten high grade cows and two purebreds. The purebreds will be studied in relation to the others. The breeder's judgment will be developed on the two so that he will be a better judge when he buys more.

Mr. Hughes of Oregon mortgaged his farm about three years ago to get a fine bull and two cows. This year he got grand championship for a bull at Oregon Fair and just about "cleaned up the show." The mortgage was worth while.

C. F. Reid of Portland had the grand champion Jersey bull at Oregon last year but took third prize at Panama-Pacific. The judge said he was perfect in every point but was undersized.

Secretary W. H. Caldwell of the American Guernsey Cattle Club says that the farm papers of the State could scarcely do a better work than to influence the formation of community breeders' associations, in which those having each breed would get together to advertise the community as a center for that breed. Innumerable other good results would also come from such an organization.

Hugh G. Van Pelt, Ayrshire judge from Iowa, remarks that eastern cities are shipping milk over 300 miles so that the butter producing area is being restricted as the population increases. Thus American markets are continually opening wider for western butter.

D. H. Looney of Jefferson, Oregon, emphasizes the greater value of gentle bulls.

Walter Dupee says he didn't dream there were so many fine animals on the Pacific Coast as he has seen at the cattle show.

How pedigree counts is shown by three Ayrshire heifers exhibited by J. W. Clise of Washington. Each has a record of over 10,000 pounds as 2-year-olds, with average tests over 4 per cent. Their dam made 9,000 pounds as a two-year-old and has recently produced 22,500 pounds in a year. The sire of two of them comes from a cow that made over 18,000 pounds as a mature cow.

R. R. Cartwright of Angel's Camp, Calaveras county, won first for dairy production and reserve senior champion on a Red Polled cow which has been on Fair circuit during the month since she calved and has averaged seven gallons of milk per day.

WILLOWMOOR ROBIN HOOD.
Reserve Champion Ayrshire; owned on Pacific Coast.

A new silo (the fifth on the place) is being erected at the beef cattle barn at the University Farm at Davis.

A Herd of 300 Registered Ayrshire cattle holding more

WORLD'S RECORDS

than any other Ayrshire Herd.

Willowmoor Ayrshires

The champion herd at the Panama-Pacific International Exposition

The Ayrshire in official and competitive tests has proved herself to be a most economical producer of milk and butter, yielding the largest possible amount for the food consumed, and at the least possible cost.

The Ayrshire is the Dairy Rustler, thriving and paying a profit on the least natural food supply, because she is a vigorous feeder, not at all dainty in her appetite, eating with a relish everything that comes in her way in the line of forage; good grass, poor grass or browse, all is food for the Ayrshire cow.

While the Ayrshire is strictly a dairy cow, she fattens so quickly when dry, and is so heavy in hind quarters and loin that she is a favorite with butchers.

This herd of three hundred head of registered Ayrshires holds first place as producers and in the show ring.

Peter Pan, one of our herd bulls, was Grand Champion at the Royal Agricultural Show, Great Britain, before imported, at the National Dairy Show, Chicago, at the Panama-Pacific International Exposition, San Francisco, and wherever shown on the Pacific Coast. Production records of his daughters place him at the head of producing Ayrshire bulls.

Stock sold on production records of dams; all tests 365 days.

Of eight world's records made by all Ayrshire breeders in America since 1900, this herd has made three.

Catalogue and prices upon application.

Dairy Cattle Breeders Meet.

[Written for Pacific Rural Press.]

rsey Breeders' Meeting. — A la e, attentive, enthusiastic meeting of the California Jersey Cattle Cl on the World's Fair grounds Oc 20 was addressed by representativ of the American Jersey Cattle Cl and by breeders from eastern an coast States. At the business m ting which followed several new m bers and the officers for the co ing year were elected: R. E. W son of Modesto, president; J. G St l, vice-president; N. H. Locke of Lo eford, treasurer (in spite of his pr est that there had been a Locke on he treasury long enough). J. E. Th rp of Stockton was re-elected for th fifth term as secretary. John Ca ni and S. P. Kelley of Humboldt co nty and Guy Miller of Stanislaus co nty were elected directors. The tw holdover directors are Jos. Mill l and C. D. Conant of Stanislaus co nty. Official representation was n very well distributed geographica y, but comprises men who hold th confidence of the State.

ugh G. Van Pelt of Waterloo, Ia the Ayrshire judge, speaking came dead or maimed and none developed into good mature animals. The ration probably lacked some unknown necessary element for which the cows starved. So it is with alfalfa when fed alone, though possibly less disastrous. Alfalfa and corn silage make larger, stronger animals than almost any other feeds available.

Guernsey Breeders' Meeting.—If you can get away from a Guernsey banquet given under direction of Sec. W. H. Caldwell of the American Guernsey Cattle Club without becoming a Guernsey enthusiast, you are deaf and blind and ironclad besides being unable to eat, and to drink Guernsey milk. Otherwise you are sure to come away believing that the golden cow, brought to the Golden State, to be so splendidly shown beside the Golden Gate, really does give you streams of golden milk, from which to make golden nuggets of butter.

A most elegant repast was served with most cordial welcome and without charge, to about seventy-five Guernsey men, including those who care for the stock as well as the owners. Guernsey milk was bounteously furnished by Walter Dupee of San Diego. N. I. Bowditch of Mass., as toastmaster, stated that the Exposition show of coast cattle compared very favorably with the last National Show at Chicago. E. T. Gill of N. J., who recently lost his herd on account of foot and mouth disease, stated that the future of the Guernsey cow depends on three vital fundamentals: (1) selection of the best cows; (2) continuance of the efficient breeders' organization, and (3) integrity of the breeders

Mr. Gill says there is no reason why the Pacific Coast should not become the breeding center of America, for we already have some of the best blooded stock and we have the Guernsey Island climate.

Ex-President C. C. Hill of the American Guernsey Cattle Club spoke of the tremendous potential market in Australia and New Zealand for any surplus dairy stock we may have for decades to come.

W. W. Marsh of Iowa said he never saw cattle better fitted for showing in England or America than what he had seen at the Panama-Pacific. He spoke about the uniform excellence of all families of the breed, no one family ever holding grand championships long at a time. Three hundred pounds of butter per year was almost irrational in 1870—now 1200 pounds has been attained.

MILDRED,
First Prize Winner of Guernsey cows; California owned.

p ly on account of the unexpected ill ess of President M. D. Munn of th American Jersey Cattle Club, sa that the vitality of the club depends largely on the co-operation of w tern breeders, who are heartily u ed to join and take part in its m agement.

tegarding California's supreme o portunity for low cost of dairy p duction, he said that Iowa farmers in spite of the waste energy of c and man caused by cold winters, w e making money feeding alfalfa a a cost of $17 a ton laid down on t farm. They figure it worth a ut the same as bran which costs $ to $30 per ton. He spoke of the l stent South American demand f our first-class dairy animals a said that we can't supply it for l k of the stock, though U. S. is n king 22,000,000 cows. The forners don't want our second-grade a mals.

John A. Lee, director of the A. J. C C., said that the Club hopes soon t be giving premiums at local fairs a it now does only at State fairs. H predicted that the Jersey Club s ndard of excellence would soon s ing away from its too refined p nts toward the American type.

A. J. Glover of Hoards Dairyman (Wis.) called attention to the Wisc nsin Experiment Station where s entifically balanced rations, from t e wheat plant and grain, were fed t dairy cows for a generation or t o with disastrous results to the c ws and their offspring. The latter

SPLENDIDLY BRED HOLSTEIN BULLS AND YOUNG COWS

I am offering a few highly bred bulls ready for service. Three of these are sired by DUTCHLAND SIR PIETERTJE CREAMELLE, whose sire is by Pietertje Hengerveld Count De Kol, 99 A. R. O. daughters, with records up to 33.19 pounds butter in 7 days, and out of the famous cow Changeling, 29.33 pounds butter in 7 days.

His dam is Dutchland Creamelle, a 23-pound daughter of the former world's record cow, Creamelle Vale, who produced 29,591.4 pounds milk and 1155.85 pounds butter in one year.

No. 1—Estudillo Kalsora Segis Creamelle. A good, straight, young bull, more white than black, sired by Dutchland Sir Pietertje Creamelle, and out of Kalsora Segis Gert, 19.42 pounds butter in 7 days.
No. 2—Estudillo Ceone Tappan Creamelle. Same sire as No. 1, and out of Ceone Tappan 2nd, 21 pounds butter in 7 days.
No. 3—Dutchland Sir Pietertje Creamelle 2nd. Same sire as Nos. 1 and 2. Out of Kekke Pietertje Pontiac Princess, a good young cow that is just now going on official test.
No. 4—Estudillo Hengerveld De Kol Segis. His sire is Sir Pietertje Beets Segis 3d who is a grandson of King Segis out of a 19.50 pound daughter of King Korndyke. The dam of this young bull is Ethel Hengerveld of Eastbank 18.5 pounds butter in 7 days. This youngster is a good individual and nearly white in color.
I also have a few younger bulls, some out of A. R. O. dams, and others out of cows that will go on test as soon as they freshen.

I ALSO OFFER AT THIS TIME EIGHT GOOD YOUNG COWS AND HEIFERS AS FOLLOWS:

No. 1—Hill Pine Half Moon De Kol. A 4-year-old of good size and type.
No. 2—Hill Pine Full Moon De Kol. A typey young cow, good, straight lines and carrying an excellent udder.
No. 3—Hill Pine Dolly Hox Car. A deep bodied 4-year-old of high individual excellence, and with a 7-day A. R. O. record of 18 pounds butter.
No. 4—Kalsora Korndyke Posch. Not a large cow, but of very good type. She has a 7-day A. R. O. record of 17.29 pounds butter, is out of a 19-pound 2-year-old, and she herself has a 11.50 pound 2-year-old daughter.
No. 5—Estudillo Korndyke Segis. A 2-year-old daughter of No. 3, and sired by a grandson of King Segis. A good typey heifer nearly white in color.
No. 6—Estudillo Marie Clothilde De Witt. She has a 7-day A. R. O record of 13.5 pounds butter as a 2-year-old. She is sired by a grandson of King Segis, and is out of a splendid dam with a 7-day record of 20.69 pounds butter, 30 day record of 85.75 pounds butter, and whose sire is a son of King of the Pontiacs. This is as good breeding as could be wished.
No. 7—Maggie Beets De Kol 2nd. A good, big, young cow of large capacity. Her dam has a 7-day A. R. O. record of 18.07 pounds butter.
No. 8—Bonnie Pontiac. Another young cow of good type and size. She is sired by a son of King of the Pontiacs.

INTERESTED PARTIES ARE INVITED TO CALL AND SEE THIS STOCK, OR WRITE FOR PRICES AND ANY FURTHER INFORMATION.

F. Stenzel **San Lorenzo, California**

Colantha Sir Pontiac Aaggie

Heads the MOORLAND FARM HERD of Registered Holsteins

His sire's dam is Colantha 4th's Johanna, 35 lbs. His dam's dam is Aaggie Cornucopia Pauline. 34 lbs. His oldest daughter holds the highest three-year-old record in the State, 25 lbs. butter in seven days, 103 .bs. in thirty days Best day's milk over 85 lbs. His 17 daughters averaged $563 apiece at recent Hanford auction.
Several cows and heifers in calf to this great bull are now being offered for sale at reasonable prices.
Write for price and pedigree of a young son of his out of a 22.65-lb. cow.
You know now is the time to buy stock of this breeding, for prices are bound to go up, as more of his daughters are tested and more of his sons get a chance. He has been proven a producer of good stock, and the above prices for his heifers prove he is popular. What more do you want? Write

K. W. ABBOTT, **Moorland Farm, Milpitas, Cal.**

Panama-Pacific Dairy Holsteins

Panama-Pacific PONTIAC CHIEF.

At the head of our herd of choice females is a grandson of Pontiac Korndyke, out of a cow whose ten nearest dams average 2538 lbs. butter in seven days. His calves are showing splendid type, and this, combined with the very high producing blood which he carries, makes his sons especially desirable as Dairy Sires. Write us for prices, or come and see our herd.

Prince Alcartra Korndyke, 88318

Sire:

KORNDYKE QUEEN DE KOL'S PRINCE 36025, who has 83 A. R. O. daughters, including Winana De Kol Korndyke with 31.22 of butter and Lunde Korndyke 30.82 of butter, and a yearly record of 1090.9 butter and 26192.7 milk. His dam Korndyke Queen De Kol with 24.42 of butter is the best daughter of the great old cow, Belle Korndyke.

Dam:

TILLY ALCARTRA 123439. The World's greatest milk producer from one to three years. In 7 days, butter 32.23 and milk 783.70; 30 days, butter 126.71 and milk 3201.86; 365 days, butter 1189.04 and milk 30451.4. World's yearly milk record.

Segis Cream Cup Pontiac, 137416

Sire:

SEGIS PONTIAC DE KOL BURKE 97472. A son of King Segis Pontiac Emperor and Riverside Sadie De Kol Burke, the holder of the world's milk records for seven days, thirty days and two years. She is sired by De Kol Burke, who has seven 30-lb. daughters.

Dam:

CREAM CUP 106464. One of the very best daughters of Ignaro De Kol. In seven days butter 24.75 and milk 572.9. In 365 days at four and one-half years butter 877.34 and milk 19,993.6. A sister to Aralia De Kol with 30.14 butter in seven days and 1142.32 butter and 28.090 of milk in 365 days at twelve and one-half years of age.

PRINCE ALCARTRA KORNDYKE is being mated to daughters of: Beryl Wayne Korndyke of Riverside, Juliana King of Riverside, Prince Gelsche Walker, Jetze Zwartbak, King Segis Pontiac Emperor, Romeo Aaggie Acme of Riverside, Johana McKinley Segis and Aaggie Cornucopia Johana Lad.

SEGIS CREAM CUP PONTIAC will be mated to the daughters of PRINCE ALCARTRA KORNDYKE.

At the present time we have a few young bull calves sired by PRINCE ALCARTRA KORNDYKE, and out of A. R. O. Cows

Why California for Livestock?

(Continued from page 417.)

ural adaptability of California for the production of live stock—for it must be claimed that the animals multiplied themseives without much systematic effort on the part of the padres, who were not experts in horn, hoof and tail—except those of the Evil One. And the figures of their live stock possessions in 1835 merely represented the survivors of much greater multiplication which went to feed thousands of hungry Indians and to supply the demand for hides and tallow to be traded for gewgaws with coasting vessels.

The Mexican Rancheros.—Previous to the secularization, and much more rapidly during the decade and a half of Mexican administration of California affairs which followed, there were herds established on grants to individuals of land away from the areas belonging to the missions. Most of the area of the state, at that time thought to be desirable, was thus apportioned to adventurers, good, bad and indifferent. Their wealth was cattle and their thrones their saddles. Their products were hides and tallow, their lives most picturesque and romantic and their live stock husbandry most primitive. Their animals were of old Spanish types, filtered through Mexico and not improved thereby. But they were most hardy, productive and agile—agility being counted a very high quality both in bull and horse, for obvious reasons. This hardiness and agility, and productiveness under very wild husbandry, was very desirable also from the point of view of preparedness in California. Under the system of free, fenceless pasturage which prevailed, there were perhaps as many animals roaming free as were ever brought to rodeo, and all valley and foothill regions in the state were teeming with wild cattle and wild horses, herded only by grizzlies and mountain lions. The state was a vast mine of meat. The gold-seeking throng of 1849 found California provisioned for them. Thus the natural suitability to the growth of live stock not only demonstrated itself but placed itself in the foundation of the development of the State.

The American Occupation. — The abundance of animals, of the kinds and characters indicated, was accepted by the early American settlers not only as a demonstration of the pastoral suitability of the state but as foundation stock for animal improvement. Enterprise sprang up with surprising suddenness, and the two terms "American cattle" and "Spanish cattle" became clearly understood early in the fifties. They told the whole story of the old and the new in California animal husbandry. The American never touched a Spanish animal except to escape from its obvious defects. Pedigreed animals, horses, cattle, sheep and swine, were fairly rushed into the state by the pioneers and were shown at State Fairs which began in 1853. At the State Fair in 1856 in San Jose the president, E. L. Beard, said this: "We raise a very large amount of stock and no state has greater natural advantages for the cheap and easy production of stock. I see also, in the fact that large sums are beginning to be expended by some of our most enterprising citizens for the introduction of the improved breeds, a token that we shall shortly take that precedence to which our soil and climate entitle us." It will be interesting some day to describe the Marathon by which the various breeds reached their opportunities in California. It only took about a decade to fill the state with grades and thus establish the common stock upon which later achievements in improvement have been based. Writing in 1868, T. F. Cronise said: "The wild cattle of the Mexicans are poor, long-horned and lank, but they cross well with imported stock, carrying the fine points of the latter and the endurance of the former. Great attention has been paid to crossing and very soon the pure native stock will be extinct, for it is unprofitable. * * * The Mexican mustang is capital under the saddle and very quick in his movements. No horse excels him in keeping up a steady liveliness. He will subsist on scanty food and bear you sixty miles a day, his gait being always a gallop, but the American and half-breed horses are fast supplanting the Mexican horse. The imported horse improves by the change of climate and racers become longer-winded. Mares foal before they are three years old in California and cows calve before they are two years old. Cutting up the Spanish grants and restriction on free ranging is working notable changes and increasing the cost of cattle raising, but it is improving stock by inducing more attention and in the end will be more profitable."

A Constantly Advancing Business.—Thus nearly half a century ago the American period of animal husbandry in California was entered upon and its attainments prophesied. During this half century achievements have been attained which can only be glanced at, though worth a volume's record. California has at some point in that period stood first in the production of wool, first in the breeding of speed in horses, first in world's records for cow-production, first in production of a carload of baby-beef and has doubtless done other honorable things which we do not at the moment remember. Meantime the state has marched steadily forward in all lines of live stock except sheep, and in sheep, while retiring for a time at least, we have furnished the foundation stock for other states which have recently risen to higher place on a range basis, which is no longer largely possible with our advancing husbandry plan. Still, what has been lost in one line of animal industry has, from decade to decade, been made up by the gain in another line so that the whole course has been forward, though varying greatly in rate of increase, as the following statement of the total value of all farm animals shows:

1910	$127,599,938
1900	67,303,325
1890	65,575,427
1880	41,498,417
1870	40,306,300
1860	35,585,017
1850	3,351,058

It is notable that the great increases came during the first and the last full-decades of our history. In

ay the attitude of the present
ration is like that of the Argo-
s. It is the result of awaken-
to a great opportunity which,
he case of the present genera-
, began to be descried early in
new century, when the fruit in-
ry spent its first great boom-
st and began upon an enduring
cture of production. As to the
tion of these two grand divisions
alifornia agriculture, it may be
that as the great drive on fruit,
ch has resulted in an annual pro-
ion with selling value of a hun-
l millions, did not cause a back-
d movement in animal hus-
dry so the present great drive
nimals need not be expected to
ess the fruit industry, for the
tions are reciprocally beneficial.

**pecial Features of California's
ptation.**—It is pleasant to the
er to run along at this roughly
criptive gait, but the pages of
issue are limited. This matter
pecial adaptation is full of in-
sting details, but the category
t be resorted to:

—The absence of snow and
nd-freezing, except on high
ntain valleys or plateaux, ren-
light and cheap shelter sufficient.
s, in fact, frequently dispensed
altogether, but that is neither
ciful nor profitable—in view of
little it costs to furnish it.

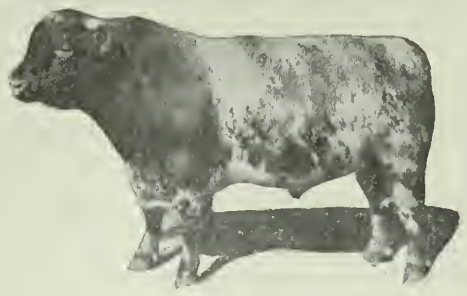
—The mild climate gives a long
zing season and the dry summer
s "dry feed"—which is really
d nutritious hay, cured as it
ds. One who has land enough,
uding low and high, and pastures
in its best condition for green
dry feed, can carry all except
y stock and hogs, without grow-
feeding-crops and siloing, but he
e gets the full benefit of the cli-
e who provides alfalfa or other
ers, grain and roots, to save his
tures from being gnawed and
mped when too wet, and saves his
k from all setbacks by even
rt spells of hunger. A certain
unt of farming should always
associated with wild pasturing.
s is often dispensed with, but it is
her merciful nor profitable in the
hest degree.

—The mild climate not only
s a long growing season to pas-
age plants but multiplies the
nber of plants which sustain the
ture. Speaking broadly, Califor-
pastures include all the grazing
nts, and California fields include
the forage plants, which can be
wn in Europe from the reclaimed
ds of Holland to the alpine val-
s of Switzerland. California hays,
ashed by rain and favored by
air, have an average of concen-
ed richness and wholesomeness
nown to cured forage in humid
ntries. In old trotting days
ifornia stables went to eastern
uits attended by train-loads of
r own munitions. Their owners
ld not trust them to live upon
country traversed.

—The mild climate, free from
backs due to extreme cold
pled with the character of win-
feeding, gives all well-cared-for
nals surprisingly quick growth
early maturity. In old sheep-
s strangers always over-guessed
age of sheep by their teeth, be-
helped to the error by their
. In a way this is true of all
nals and it means great gain of
ght when weight is most cheaply
ined: early sale of increase and
quick turn of money; early maternity and, with some animals, more gestations in a year—profitably because temperature, and, with proper arrangements, feed is always favorable for parturition and lactation.

5—California soils by variety in character, self-drainage and retentiveness, richness and productiveness, match the capabilities of favoring climate in promoting wild growth and give the enterprising grower wide field for choosing feeding plants according to his conditions and requirements.

6—Irrigation, whether it be from ranch brooks or wells or from an irrigation system, gives a grower mastery over variations in time and amount of rainfall or make him practically independent of rainfall in regions which were formerly called "deserts" and are now among our leading stock-growing districts.



7—Apart from natural adaptations, some of which we have noted, there is the group of California's commercial adaptations: the growth of the state in masterful population; the fact that Californians are good-livers, able to gratify their tastes, and free-investors in enterprises which command their interest; the availability of transportation by rail and wave to all parts of the world; position upon the highway back and forth between the world's most rapidly developing regions; the California spirit and point of view which give each Californian breadth and energy according to his capacity for seeing large and still seeing true.

Personal Requirements for Stock Industries.—To be a successful stockman, a man should have land, capital, knowledge of the business, faith in it, positive liking for it and a heart in the right place. To us there is no sadder farm picture than a stockman scant of land. There can be no exact prescription of amounts of land, for different animals require different areas, lands vary in food-productiveness and in acre-valuation. We should get land for stock purposes as Dido did the site for Carthage—all that we can stretch a hide around by cutting it into whip-lashes—and then some. We should do, as the pioneers of all countries have done, go far enough away to get rich flats and warm slopes and running brooks and shady trees. We should strive to help occupy the state by going beyond the thickly settled areas and this can now be done with less social sacrifice than ever before, because a cheap automobile kills distance. People make us weary by asking how many cows, pigs, sheep and fowls they can keep on twenty acres of land! The computations which they bring us for approval, from their own ingenuity or from land vendors, will sometimes require the mounting of a sheep on the cow's back, a pig on the sheep, the rooster on the back of the pig—the whole thing a "tower of jewels," for they generally wish to put on more cows than the land would carry, to begin with.

But the man who has too little land for stock is closely matched by the man who has too little money. Animal production is beyond all other farming, perhaps, in its demand for adequate investment. It is quicker than others in return, if all goes well, but there must not only be investment but working capital from the start. To leave too

ANNA S. LATHROP, Prop.
Stanford University, California.

much still to pay on the land, to buy stock with borrowed money at rates of interest which now have to be paid, not to have enough cash to buy your breakfast when you need a new bull—this is just what General Sherman described as war. Of course if you have youth, force and knowledge of the business and a good, contriving wife who can make a trousseau out of a grain-sack, you can build up in the stock business and before you die own all the land that joins you. But we do not need to tell you how to do it, because you know what that struggle means. As a rule your class does not ask us how to get in: our clients usually wish to float in on an aeroplane, and they frighten us nearly to death by the financial loopings they propose to do.

But perhaps the prime requisite for success in stock enterprise is the heart a man has in it and for it. Domestic animals are our brothers; lacking our vision and our sinfulness also. A man who does not love them has no business trying to figure profit from them, unless his enterprise is so large that he needs to hire stock-lovers for personal contact with the animals—and then he must watch the hirelings. A heartless man will make a stallion vicious, a bull cross, a cow timid and will lose the respect of a hog—because of too close resemblance. All the writers of stock books have good chapters enforcing and amplifying the principle: "A merciful man is merciful to his beast." Such exhortations are not mere sentiment; they are hard business wisdom. Guilford, in his "California Hog Book," most truly says: "A man or woman must have an inborn love for live stock and a nature that is in harmony and in sympathy with animals or he will never attain all that is possible in the hog business or in any other branch of live stock industry"—and the whole book is built upon the principles of knowing and loving.

General Requirements. — If the stock industries of California attain the expansion toward which they are now clearly heading, at least two fundamental requirements must be met to insure enduring success.

Provision must be made for manufacture of meat products as well as for growing meat. The considerable amounts of packed and cured meats now brought into the state from a distance can never be wholly displaced unless California brands can be built up to win greater public favor. These brands must be popularized by artistic style and acceptability of containers and they must be advertised with every honest claim that can be made for California superiority and the product must be itself superior as it undoubtedly can be made with proper effort. It is all very well to exhort California patriotism to buy home products, but when one tries to practice it by buying California hams and bacon in country stores he is apt to have pushed at him a naked and shapeless chunk or slab, possibly flyblown and mildewed through exposure, while the imported article is presented gloved, brushed and chromo-ed. Is it any wonder that the purchaser pays twice as much for the latter? Besides the whole line of meat products must be amply provided for. We can never expect to get justice for the raw material until the manufacturing is provided for.

Another fundamental general requirement is fair and adequate facilities for marketing so that actual values can be had. We have been able to stump along for half a century with a few companies controlling the sale of cattle and handling local buyers by alliances or by separate spheres of action. A great production can never thrive by flat prices without regard to quality or by hoodwinking cuts or increases. All transactions in livestock must come out in the open and every man get what should be coming to him. The day for monopoly in production and favoritism in sale must pass, before our stock industries can meet their opportunities in this state. There must be straight roads opened to purchasing and selling, both for feeding and for slaughtering.

How shall these great requirements be met? We do not know, but we do know that there are just two things which are worth looking at for relief: one is the state and the other is growers' co-operation. We cannot expect that men or corporations who now have good things will give them up; the thought is worth laughing at. There ought surely to be joint action by all those who are not bound up in the "interests." There ought to be organization for it and it should look first, perhaps, at the proposition for State marketing, passed by the last legislature. The needs of meat producers should be first forcibly urged upon the attention of the new State Market Director, when the governor finds him. Whatever is undertaken must have organized strength behind it, both to make the truth known and to enforce it. Individual agitators for justice and fairness will simply get the "ha ha." The provision of open marketing facilities can alone make the present rush for increasing meat production safe and satisfactory.

Dairymen Attention

Be sure to attend the Exposition during AGRICULTURAL WEEK, November 1-4.

We will give a valuable prize which will be drawn by some dairyman who enters the Exposition gates and visits the

Hinman Milking Machine Booth

in the

Palace of Agriculture,

on any day of Agricultural Week.

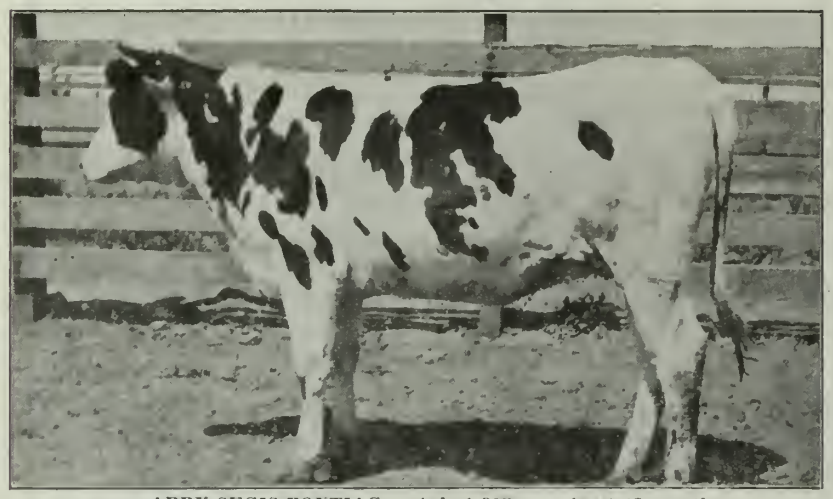
BEET PULP FOR CALVES.

Beet pulp seems to be a specially good feed for growing calves, judging from the experience of McAlister and Son of Chino, two of whose calves are shown in the pictures, having attained exceptional weight for their age. Says Mr. McAlister:



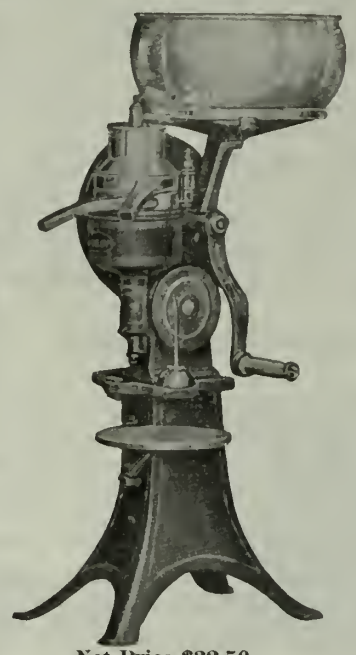
"We feed our calves a ration of about 75% beet pulp and 25% barley until they are about four months old, after which we feed beet pulp exclusively. The average weight of all of our calves (which we have been weighing regularly at twelve months old) has been 895 lbs. The value of dried beet pulp over other concentrated feeds is shown in the fact that at the Kansas Station the average weight of their calves was only 669 lbs. at twelve months, and Henry in his 'Feeds and Feeding' states that 'whoever attains these figures in rearing calves should be well satisfied.' At the Michigan Station, under a heavy ration of grain, the average weight of 57 calves at 12 months was 648 lbs. Our own calves have thus averaged on beet pulp about 35% greater weight than has been obtained at the experimental stations under their expert feeding of grain.

At our Los Angeles sale at Ascot Park, which broke all averages for a live stock sale on the Pacific Coast, the cattle sold were brought out from the East in extremely poor condition, yet after about four months' feeding on alfalfa and beet pulp they were brought up to the most splendid condition, which was one of the very greatest factors for the success of the sale."

[Since beet pulp has such a low ratio of digestible protein to digestible carbohydrates, and since growing animals need about four times as large a proportion of protein as beet pulp affords, we judge that Mr. McAlister refers to "beet pulp exclusively" as the concentrate ration, probably supplemented by alfalfa hay or pasture.—Editors.]

MAGERERTJE GIRL PONTIAC, weighed 880 pounds at 12 months.

ABBY SEGIS PONTIAC, weighed 908 pounds at 12 months.



EXPOSITION SHOW OF SHEEP, GOATS AND SWINE.

A show of sheep, goats and swine will be held November 3 to November 15 at the Panama-Pacific International Exposition at San Francisco.

It will be a distinctively western show, for, like the cattle show, it has been deprived, owing to the foot and mouth disease quarantine, of animals from the entire territory east of the Mississippi river and from Minnesota, Iowa, Missouri, Kansas, and Montana. Nevertheless, this leaves Arizona, New Mexico, Colorado, Nebraska, Washington, Oregon, Texas, Oklahoma, Nevada, California, the Dakotas, Idaho and Wyoming from which to draw, and exhibits are coming from this great region.

The Exposition has appropriated $25,000 for cash prizes for sheep and goats and $25,000 for swine.

The judges of the sheep will be Henry Arkell, Guelph, Ont., Oxfords; George W. Cavan, Sugar Grove, Ill., Hampshires; J. C. Duncan, Lewiston, N. Y., Shropshires and Southdowns; D. C. Lewis, Camp Point, Ill., Cotswolds; Prof. F. B. Marshall, U. S. Bureau of Animal Industry, Washington, D. C., Romneys; John E. Webb, Southport, Ind., Rambouillets. Goats will be judged by Thomas W. Brunk, Salem, Oregon. The swine judges will be A. L. Goodenough, Morrison, Ill., Hampshires; James M. Kemp, Kenney, Ill., Poland-Chinas; Herbert W. Mumford, Urbana, Ill., Duroc-Jerseys; F. A. Scott, Belleville, Ill., Berkshires.

Net Price $32.50.

Harris Brothers Company announce the sale of the

RUMELY CREAM SEPARATOR

AT A SPECIAL LOW PRICE FOR QUICK SALE.

The Rumely Cream Separator is a machine that will save all the butter fat—deliver the skim milk with but little foam—that has interchangeable parts—a durable machine that will last for 20 years or more—a separator with which you can regulate the cream to any thickness desired—a machine that is clean and that you can use in the dairy or kitchen without danger of splashing milk or dripping oil on the floor.

The Rumely Cream Separator

is made by one of the oldest manufacturers in this line in the country, and these standard separators we are offering at the following prices until exhausted. Get yours first.

No. 14— 500 lbs. milk per hour $32.50
No. 16— 750 lbs. milk per hour 37.50
No. 20—1000 lbs. milk per hour 44.50
f. o. b. Los Angeles, San Francisco and Portland.

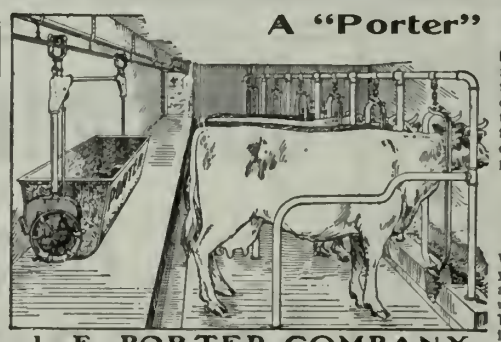
FOR SALE Jersey Bulls Bull Calves

from cows on yearly test-making good-sired by our herd bulls KING'S VALET (imported), VALET'S KING OF L, BORELLO'S GOLDEN LADDIE, GRACE'S FOX OF VENEDERA, and NORMA'S GERTIE SON OF L, cacked by production and winnings in the show rings.

They are of FINANCIAL KING, GOLDEN LAD, GOLDEN FERN'S LAD, MARIGOLD and ST. LAMBERT blood, the kind that improve type, cream production and persistency. One cow gave 49.5 lbs. fat in 11th month; her daughter gave average test of 8.38%; another gave 79.9 lbs. fat in one month, 238.9 lbs. fat in 134 days. A 2-year-old gave 50.6 lbs. fat in one month—all under dairy conditions.



We have bulls from such cows, with correct type.

Dairyman's Opportunity

For $50, a yearling bull by VALET'S KING OF L, out of a good cow. $25 for bull calves under 30 days old. Tabulations, but no Registrations at this price.

Come and see them, send for catalogue, or write us your needs, and we will give you satisfaction and profit.

Mutton Sheep on Small Farms.

[Written for Pacific Rural Press.]

NOTES FROM SHEEPMEN

Telling the Age of Sheep.—When we buy sheep to feed or breed, we want to know that their age is as represented, for old, stunted sheep cost a lot more to fatten or to keep than young ones of the same breed; and the chances are they cannot be sold as early.

By the time a lamb is a month old, he has a full set of eight baby nippers which grow wider and longer until they are full sized. They begin to decay at three months. The baby teeth are shed at about a year old and two permanent nippers grow together from the middle of the lower jaw. This is all they have during their second year, which is why they need tender feed. Every year afterward they add two teeth until there are eight in front. After that, however, they wear down; in some sheep worse than in others on account of hard or soft food, sandy or clay pasture, and corrosive material in the feeds.

Something Doing with Shropshires.—Thirty-five hundred January to March lambs weighing 66 pounds were sold May to July, 1915, at $5.11 each, by A. W. Foster of the Lake View Farm of Marin county.

Mr. Foster has a flock of 10,000, founded five years ago and brought to its present efficiency in mutton lamb production by the continual use of purebred Shropshire bucks, from his own purebred flock of 50 to 60 head of ewes kept for the purpose.

The sheep are divided into bands of 500 each, kept in fenced pastures on Italian rye grass sown 20 years ago. The ewes clipped about 8 pounds apiece.

Grain Foundered Sheep.—"There is no danger in feeding barley to sheep," says a sheepman of 25 years' experience. "The greatest grain ever fed is rolled barley, but too much fresh corn will founder sheep so that they get stiff, lose their appetite, and many never get over it." Whole corn, either Indian or sorghum, thrown onto the ground requires so much chewing that it isn't likely to hurt, but Mr. Blankenship has had sheep founder on wheat so stiff they could not get up in the morning. Some of them were saved by forcing them to move around until the stiffness worked off.

More and Better Hogs in California.

[Written for Pacific Rural Press.]

YEAR-AROUND HOG PASTURE.

Crop rotation furnishing continuous green feed and grain for hogs can be started now on the plan adopted by Henry Webb, suggested by Farm Adviser Mayhews of Madera county.

Mr. Webb is working 50 acres next to the old Miller & Lux grain land. By rotation, he is improving the condition of the soil, spreads hog manure over the place without trying, gets good crops, and beautiful, sleek hogs.

He has 12 brood sows, 80 summer pigs, and about 50 others. He expects to more than double the number of sows this year so he will work the rotation similar to last year, but on a larger scale.

He will sow 20 acres of vetch and barley in October, not as ordinarily sown. (He had 7 acres last year.) According to Mr. Webb, the reason people get a poor stand of vetch is that they do not cover deep enough. For lack of a disk or other seed drill (which would be best), he last year sowed the vetch broadcast after an irrigation, disked it in, then broadcasted the barley, and harrowed it. He says vetch must have water.

By December 1 there was good green feed in this field and he turned eight sows with their pigs on the seven acres until March 20. March 1 is late enough. When he took the hogs from the vetch, he turned them onto good alfalfa, irrigated the barley-vetch, and in May had a good crop again which he could cut for hay, but he turned the hogs back on it until June 15. They were then turned onto alfalfa pasture, from which a crop or two had been cut for hay to feed in wet weather and to keep the pens free of mud.

He planted feterita on the barley-vetch ground to be pastured later until the next year's rotation would start again. More hogs would eat off the barley-vetch sooner, and allow feterita to be sown earlier.

Four acres of mangels were planted last fall to use in the early spring. He pulled "a raft of them," many weighing 12 to 14 pounds, and hauled them to the hogs; but pulling them in the wet mornings got too disagreeable so he turned the hogs on them to harvest the rest. He figures on putting away some mangels under straw to use during the dry season of the year. The mangels were off early so that he planted milo maize mixed with soy beans and when the maize was ripe, he headed it and ground it for fattening food. Two acres were sowed to turnips in October also, and were ready to eat Christmas, but the hogs had to be taught to like them. He thinks he could mix turnips with the grains, and expects to do so when he sows grain after the mangels are off this season.

CATTLEMEN'S MEETING.

The California Cattlemen's Protective Association elected officers Oct. 23 as follows: President, H. W. Lynch, Pleyto; treasurer, Ed. de L. Cebrian, San Francisco; secretary, F. J. Sinclair, San Francisco.

The Association passed resolutions favoring the appointment of a commission composed of stockmen to control the State veterinary work. They favored the establishment of a Federal animal quarantine station at San Francisco, and resolved to ask for the use of the Exposition stock buildings for an annual live stock show. They opposed the establishment of Union Stockyards or any centralization of livestock selling operations.

The supervisors of San Luis Obispo and Kern counties were commended for hiring detectives to help prevent cattle thieving.

Caesar A. Gerali & Co. recently purchased 1800 acres of land southeast of Oakdale. The company will subdivide the land into 80-acre tracts and colonize with Swiss-Italian dairymen.

LARROWE'S DRIED BEET PULP

IT is no longer necessary to buy high priced mill feeds for your dairy cows. A ration composed solely of ALFALFA AND LARROWE'S DRIED BEET PULP furnishes just the right proportions of protein and carbohydrates, together with sufficient bulk and an abundance of succulence. Dairy cows will do their best on this ration and yield 1 to 5 lbs. more milk per cow a day shortly after putting them on it.

A. W. Morris & Sons (breeders of the world's champion cow—Tilly Alcartra) say "Larrowe's Dried Beet Pulp increases the milk flow, strengthens and improves the physical condition of the cow."

McAllister & Son (well known and very successful Holstein-Friesian breeders) feed alfalfa and Larrowe's Dried Beet Pulp exclusively and say that they "know of no grain its equal and couldn't get along without dried beet pulp."

Thousands of feeders will tell you of the splendid results they are getting from this healthful, succulent vegetable feed. It is excellent for fattening; also for horses, hogs, sheep, etc.

LARROWE'S DRIED BEET PULP

—is clean, wholesome, appetizing; aids digestion; contains five times as much nutriment as silage, with as great or greater succulence—swelling to fully six times its original bulk when moistened. It is put up in convenient 100-lb. bags and may be had either plain or with molasses.

GO TO YOUR FEED DEALER TODAY and order a single 100 lb. sack of either the plain or molasses dried beet pulp. Ask for Larrowe's. Test it on one cow whose milk record you know—and watch results.

FREE! Our Booklet "Profitable Feeding."—containing valuable information on feeds and feeding. Should be in the hands of every dairyman. Write for a copy—today.

THE WEEK

As we write on Wednesday morning it is sure enough that the voters yesterday knocked the cupola off the rural-credit skyscraper which we builded with such care and affection in our last issue, and it seems rather likely that the vote has destroyed the whole top-works of it. Concerning the resoluteness with which the rural credit amendment has been defeated it may be said that people in other vocations voted against it because they thought it would give too much cake to farmers and farmers voted against it because promoters buzzed around it like flies around a sugar barrel; because it might throw self-made land owners into competition with a lot of endowed producers and because it might be productive of bonds, which most farmers hate like the plagues of Egypt. Besides, all kinds of people voted against it because it did not agree with their convictions and interests in politics and economics.

We rather strenuously advocated the passage of the amendment because we were perfectly sure that the folly and danger which might be possible under it would never even rise to be judged, as every proposition under the amendment would have to be before becoming operative, for the amendment legislated nothing. What we saw in it most broadly was: first, the popular recognition of the proper relation between agriculture and the State which agriculture maintains; second, the assertion of the popular claim of agricultural security for freedom from financial exactions which now exist; third, the demonstration to the public mind that present operations of commercial credit are ill-adapted and inadequate to agricultural needs. If California had adopted the amendment, these elementary and fundamental things would no longer need to be contended for.

Lest any one may think that the failure of this amendment kills rural credit in California, we hasten to declare that it does not. On the other hand the vote has cleared the sky of a lot of fret-work of enforced altruism and paternalism, the very sight of which was offensive to many people. To us this was never anything but scaffolding which we never believed would take permanent form in any un-American way but which seemed to us of advantage in the development of a few broad popular convictions, such as we have noted. These convictions must now be engendered in some other way; and after the wreckage of the present effort is cleared away, we shall hope to indicate another and, we trust, a better way.

National Aspect of Rural Credit.

In view of the position taken by the California voters, it is interesting to note that the political rural-creditors at Washington seem to be yielding to quite a strong pressure, presumably from the south and southwest, to furnish government aid in short-term rural credit for cropping and improvement purposes. It seems to have been more or less forcibly brought to the attention of the ruling powers in Congress that the people will not be satisfied with amortization mortgages of a generation's length, but demand something here and now in the line of endowed personal credit. The telegraphed report is that the Federal Rural Credit Commission, appointed by President Wilson, which is the core of the larger body, the American Commission, appointed chiefly by the governors of states, has now a strong feeling to favor legislation providing not only land mortgage loans as they first proposed, but short-time loans with personal property as security. This is the result of what the administration did and threatened to do in loans on cotton at much lower rates and better terms than the southern cotton-loaning sharks have hitherto exacted from the growers. The show of influence in this direction is clear in the announcement that "the joint committee of the House and Senate on rural credits is also to take up the subject of short-time loans. A sub-committee is now being asked to prepare recommendations for submission to the full committee at its first meeting next month." It seems quite likely then that there will be something let down from above in Washington this winter and the economists may forget the California pranks in finance in wrapt contemplation of the more entrancing antics at Washington. Politically it will be a race for first place, with all the parties entered for it.

Marketing at the Southern Exposition.

Emphasis is surely seeking the subject of better marketing of California products and it will be an approval of the sense of many of our readers that California needs "safety first" in the matter of selling products at a fair profit above the actual cost of their production. Some of them write us that they will take care of their own credit if they can sell their stuff with a margin for themselves. Some other time we may ask readers to look into that proposition a little more closely—but now things seem to be moving in a marketing way. The State Development Board announces that it will hold a great "counties convention" at the San Diego exposition on November 12 to 14 and adds this: "Instead of the usual formal addresses the Board has adopted, as a unique feature, the plan of having the State Rural Credits Commission conduct a public hearing on the subject of marketing under our auspices." Of course it may seem strange to some that their proposition of "better marketing as a substitute for rural credit" should be transformed into "better marketing through rural credit"—that is not the only surprise they are likely to get, if they live long enough, but we have already dodged that question, for the present. In regard to this announcement by the State Development Board our advice is to give earnest heed to it. It is no secret that the existing Rural Credits Commission, though it is lamentably short of direct rural affiliations, has something else which is just at the moment better, perhaps. It is conceded to be ears, eyes and hands for Governor Johnson and the present executive outfit of the State, which has more than three years to run. Governor Johnson long ago declared himself of the opinion that the farmer is not getting a fair deal out of the cards the consumer has to play. He also signed the bill for State marketing, though it seems still to be heavy in his digestive tract, so far as putting it in operation is concerned. Our advice is that all Californians who yearn for better marketing shall make a strong drive on the "rural credits commission" with their experience and convictions. Col. Weinstock knows well enough how to sell things and long ago his insight was of great value to producing interests by the advocacy of the auction sale of California fruits in great eastern centers. Therefore, if your preference demands better marketing arrangements, now is your chance to shoot your shells so hard at Col. Weinstock and his associates that they will explode in the basement of the State Capitol, and the governor will understand that the people demand something doing in that line. Besides, the San Diego people will keep open house in the way of open meetings and entertainments and it will be a very good time to visit the southern exposition.

Building up Producers' Business.

Probably the advocate of "marketing first" may get a hint that marketing needs money, and success in marketing may often depend upon the terms and rate at which you can get money. It is currently reported that in a decision made by Corporation Commissioner Carnahan, on application of the Dairymen's Associated and Condensed Milk Company of Modesto to finance itself on an investment of $300,000 to erect and operate three condensaries, it was ruled that the company ought to have $500,000 capital, and further, should have its own brand and spend money to establish it. Commenting on the above decision and suggestion, a writer in the Oakland Tribune says: "This decision appears to take a definite stand on the controversy between the wholesale jobbers and the producers. It has been the practice of large wholesale jobbers to establish their own brands and spend large sums in advertising the same. They buy the product unlabeled from the producer and put it on the market under their own brand. There is a large investment in this trade and the tendency or purpose of Carnahan's ruling is to wipe out the middleman and compel the producer to be his own jobber." We are not so sure that the purpose is to "wipe out the middleman." He is probably smart enough to stay in and adjust himself. We should say that the purpose is to make the particular special product, in this case, safe because the ad-

itional money advised is necessary to make ıe whole investment independent and capable f being profitably used. How long is any ırge factory safe in making an unmarked roduct and developing no distribution of its wn? Perhaps as long as it has a good con-act with a distributor. And how long will ıat be? Probably no time at all, because the acker knows that, beyond a limited amount, e can do better buying from "independents," ho are really dependent because they are un-rganized. It is becoming pretty clear from ıe experience of our citrus growers, raisin rowers, walnut growers, etc., that producers ave no chance at all, in a large way, unless ıey establish their own packing houses and rands, undertake their own distribution; lib-rally and systematically pushing it and giv-ıg every one who has a buying constituency qual opportunity in supplying it. And does not pretty clearly appear that this requires ıoney? Judge Carnahan's advice to the peo-le who wish to go into milk-condensing seems) be that they will need two-thirds as much ıoney to handle their product profitably as ıey will need to make the product. We do ot know whether that is an accurate estimate r not, but no one will deny that it needs the se of a lot of money. Can you borrow it at a)w a rate of interest as the aforesaid jobbers an? Yes, probably when you get your credit ıto as acceptable shape as his. How will you o that? And there we are silent: we have ome to a phase of the marketing question hich we promised not to hold forth upon this eek.

The Fruit Growers' Convention.

All fruit growers who can should be present t the next Fruit Growers' Convention which ill be held in Visalia November 18 to 20. here are indications that it will be nearer to s proper character as an assembly of fruit rowers than any convention held during re-ent years. One of the growers in the locality ho is giving some attention to the matter rites us as follows: "About seventy-five per ent of the speakers will be practical men and bout seventy-five per cent of the time will be iven to the discussion of the marketing, co-peration and rural credits. While this con-ention may not be any better than its prede-ssors for the past four years, it will at least e different." To this we have to say: if ou are sure that it will be different the hances are that it will be better.

What the Visalia convention needs for suc-ess is a large and representative assembly of ruit growers and handlers, able to proceed oward solution of existing problems from a roducer's point of view. Such a view should ave pre-eminence in the proceedings, and those ho hold it, by virtue of experience, effort and ıvestment, should be the leaders in discussion nd transaction. Academic and official per-ons were formerly tributary and advisory, and hey received great consideration and respect ecause the growers valued their services. Thus he proper relations between the real produc-ıg interest and its servants were established t the beginning. Then, about thirty years go, horticultural politics were born. Those olding state positions feared the dynamite of hose who desired to possess them; and a man ho had more politics than fruit interests appened to be in a place where he could ar-ange things so that meetings, which were es-tablished as free, independent and popular assemblies of fruit growers, should become programmed and personally conducted affairs, which should no longer possess initiative in State work for the fruit interest, but should serve to bolster up the bureau in its work to secure legislation involving its own self-preservation and perpetuation. Very soon horticultural politics ran into general politics and those who regarded themselves as great horticultural luminaries began to throw billingsgate at each other in the rush for jobs. Each new captor of the job, during the last twenty years, began to entrench himself more firmly by new, inspired legislation until it has almost seemed that in some matters at least the horticultural production of the state exists for the promotion of laws and not laws for the promotion of the fruit interests. What we need now is return to the primitive simplicity, directness and power of originality of the earlier fruit growers' conventions. No other state had such assemblies: none needed them as California needed them then: none needs them as California needs them now. Oh yes, Visalia friends, if you will make the convention different, you will, in all probability, make it a better representative of the fruit industries.

Queries and Replies.

Querists must give name and address.

Soy Beans.

To the Editor: How shall I get a crop of Soy beans started; how many pounds to the acre to plant, and when is the right time to plant? Do hogs take to the beans readily? Will the plants when green make good green manure turned under; also what is the feed valuation of the beans?—E. J. B., Suisun.

Plant about 30 lbs. to the acre, dropping about two inches apart in drills 2½ feet apart, after frost-danger has passed, and cultivate as you would other beans. The crop should be cut before the pods fly open and cured or siloed or bagged off; for this use the crop may be dropped in the hills with corn. Hogs eat them readily though they may have to learn it, and the bean forage has the same character as alfalfa, but slightly less in degree. They are good for green manure, according to the amount of growth you get.

Crimson Clover Not Winter Grower.

To the Editor: I am living near the foothills, and wish to know if this section is too cold to sow crimson clover for a winter cover crop to plow under in March. If this locality is too cold for clover kindly advise me what to get to sow in vineyard and fig-orchard.—D. B. H., Reedley.

Crimson clover is very subject to frost injury and not a winter grower, even in almost frostless places. When conditions make corn jump crimson clover is also at its best, except that in California it does not seem to like dry summer air. Its growth was practically abandoned in this State 25 years ago. For winter growth, as you propose, sow bur clover or vetches.

Bean Hay.

To the Editor: My white beans were a total failure—making abundant vines, but no beans. I have cut the vines and they are now cured. I have been feeding them to my horses. They eat them fully as readily as alfalfa hay. Will the horses do well on them? Could they work as usual on that kind of hay?—E. H. S., Sisquoc.

Surely. Bean hay resembles alfalfa hay in composition and is more nutritious and digestible than bean straw, which is also good. It carries the stuff for work. The nutrients will be balanced by feeding a little grain with the bean hay, and it will probably give the horses a little more zip. Of course, you will watch the condition of the horses and act accordingly.

Walnuts and Blackberries.

To the Editor: Will blackberries do well in a walnut orchard? My walnuts are blighting so badly that I must either fill in with something, or take out the trees, and I wanted to let them stay a while longer in hopes that something will be found to cure the blight.—Subscriber, Sisquoc.

If the trees do not cast too much shade, the berries will do quite as well in the walnut orchard as the walnuts will do in a blackberry patch. Unless you have a deep soil and plenty of moisture the combination will not work very well either way, for you could hardly put in anything which would be more ugly, or be a greater temptation to abandon cultivation, than blackberries.

Local Observation Required.

To the Editor: I have an offer of land in a mountain valley in Siskiyou county, 4,000 feet above sea level, and would like to know if that is too high for successful farming. Would alfalfa grow there; how early and how late does it freeze, and about how much snow would there be?—Subscriber, Princeton.

These questions can only be answered by one who has lived some time in the immediate locality, for all places at the same elevation are not alike. Be careful. Go and see for yourself before purchasing. There is good farming and alfalfa as high as you mention, but local conditions have to be right.

Feterita and Milo.

To the Editor: How does Feterita compare with Milo for hog and poultry feed? I am thinking of planting all Feterita next year and have saved seed, but I have some good Milo I can save for seed also.—F. M. B., Hanford.

The average of analyses thus far indicates that Feterita is a very little richer in protein than Milo and a very little poorer in fat, but the difference is so small that it may be changed by more analyses. Practically they may be considered equal. The greater question is which gives you the greater crop, and unless you are sure of that you ought to go on growing both till you reach a conclusion.

Brown Scabs on Imperials.

To the Editor: My Imperial prunes had quite a bit of brown scab on them this year I enclose one with this. Can you tell me the cause, and what I can do to keep from it next season? —A Subscriber, Mountain View.

We have always credited such blemishes to abrasion of the skin by thrips, when the fruit is very small. If that is a true diagnosis the remedy is spraying early in the spring with tobacco extract, one pint of 40% extract to 200 gallons of water.

Fall Pruning.

To the Editor: I would like to know if it would be an injury to the French prune tree to prune them the first of November. My trees are six and seven years olds.—Subscriber, Healdsburg.

You can surely go to pruning without injury or loss to the trees, if the leaves are becoming limp and yellowish. If they are still green and evidently active, we should begin later. It is not a question of the calendar but of the condition of the trees.

Balancing Humus and Plant Food.

The only permanent way of keeping producing soil good is to give it adequate quantities of plant food elements in available form, supply humus and lime, regulate moisture, and prevent erosion.

[Written for Pacific Rural Press.]

Back in Dixieland, you are wont to hear the criticism that "commercial fertilizers burn out the land." What they really do is to furnish so much plant food that the increased crops remove the humus much more quickly. Then the land is "burned out" sure enough, for with humus gone, bacteria cannot work food elements into available forms, nor do many soils cultivate properly. Humus is needed to separate particles of fine soils and render them more porous; it is needed to fill in between the particles of coarse soils and render them less porous. It increases drainage in the one and moisture in the other. It provides food for bacteria, and holds resultant available plant foods where roots can get them.

Humus from Cover Crops and Manure.—Humus is not supplied in commercial form. It is produced on the farm in two ways: green winter cover crops (summer cover crops, too, if irrigated), and livestock manure. Cover crops are usually the most feasible and cheapest sources of humus, and are the best preventives of erosion.

Thousands of carloads of stable manure are hauled by rail from the cities every year to far distant farms. If manure is so valuable that the most progressive farmers pay the cost of collecting and loading it in the cities, and the freight rates, then haul from the railway and spread it on the fields, the farm manure produced in California is too valuable to waste by throwing it under the eaves of the barn or on the hillside to leach away and firefang. That this value is not only theoretical, but real and far greater than realized, is shown by the figures published July 10.

Manure Worth Over ½ of Original Feed.—Looking at it from another angle, G. A. Olson of the Washington Experiment Station says that if the $35,102,371 Washington wheat crop were fed to mature farm livestock, the value of the manure from that livestock estimated at 15 cents per pound for nitrogen and 5 cents for potash and phosphoric acid would be $13,361,871 or over a third of the value of the original wheat. This is true because mature livestock do not retain much of the fertilizing elements of the grain.

The corresponding figures for Washington oats are $5,871,857, having a fertilizer value of $3,419,872; barley, rye, spelt, etc., $3,384,544 with fertilizer value of $1,490,185; hay and forage, $17,147,648, whose fertilizer constituents are worth $12,058,072

Young growing stock retain more or less of the fertilizing elements so that 8-10 of these amounts are calculated as the actual value of manure from stock if fed the Washington crops. Better methods of saving and applying it are needed. This is especially true of liquid manure.

The New Jersey Experiment Station is cited to show that a plot receiving solid manure alone produced 43.9 per cent greater crop as an average of 3 years than a similar plot without manure; but a plot receiving both solid and liquid manure produced 83.4 per cent more. These increases are due to both the humus and to the plant food added.

Manure Increases Acidity.—Continual addition of stable manure and cover crops to the soil, and continual removal of crops so increases the acidity of the soil that something besides plant foods, moisture regulation, and humus is necessary. This is lime, to correct whatever acidity may have developed. Lime is applied as ground limestone, quicklime, and airslaked.

STANDARD PRUNES.

To the Editor: A good many questions are being asked about the Standard prune, but so few have yet come to maturity that it is hardly possible to form a fair estimate of its value. It is a prune of handsome appearance with a comparatively small white pit that is free from the meat. One man tells me it is as delicate to handle as the Imperial, while another says the skin is as resistant to injury from dropping or dipping as the French. Opinions seem to be united on the following points by Napa men: They are later in maturing than any except Robes; they do not fall readily from the tree when ripe; they dry out about three or four to one, and the wood is not so tough as the French.

I append a letter received from a well known fruit grower of this county who told me I could make what use of it I liked. It may be of interest to brother growers.

John J. Fox.
Napa County Horticultural Commissioner.

"In the spring of 1913 I put in a few grafts of the Standard prunes on an old tree. This September 3 I gathered 50 prunes. They were a little later than my other prunes, which include French, Imperials, and Robes. Of these 50 prunes, all were picked from the tree except one, although they were ripe and some of them were partly dried on the tree. Four of the 50 were badly cracked and three were slightly cracked. (None of the other varieties were cracked.) These 50 prunes before dipping weighed 72 ounces. I took them from the tray Sept. 16, and the weight was then 24 ounces although some of them were not quite dry enough to have been put away in quantities.

"The above shows some of the faults developed, but the prunes are of fine appearance and quality and when dry go about 38 to the pound. This experiment is too small to be of much value but simply shows my experience.

"Napa. S. H. Wyckoff."

SECOND HAND **PIPE**

Very best quality of selected second-hand water pipe and standard screw casing pipe. For quality and low price you make no mistake when buying water pipe of the Weissbaum kind. Largest pipe works in the West.

RADIUM
AND
PLANT LIFE

A very low radio-activity exerts on plant life a healthful stimulation of all the vital processes, and assists in building up the soil so that all growing things can be at their best—healthy, thriving and vigorous.

This radio-active material is the residue from the process of radium extraction and contains a definite amount of radium element. When applied to gardens, trees or crops, the results are most gratifying. Radium has an influence, described by scientists, as very similar in its effects upon vegetation to the ultra-violet rays of the sun, and as applied to growing things is the most important discovery of the century.

We have an illustrated book, sent free upon request, showing what has already been accomplished.

Fair Dealing in Marketing.

[Written for Pacific Rural Press.]

A woman fruit grower sent a beautiful sample of figs to a San Francisco commission merchant. They were extra large, uniform, well dried, and covered with the blue bloom which characterizes freshly dried black figs. He offered her the highest San Francisco fig price f. o. b. her shipping point "if the rest are like the sample." The shipment was sent and inspected. A few wormy fruits were returned to her with the announcement that the figs awaited her further orders.

A grain farmer picked out a sample of his crop and sent it to a San Francisco grain dealer, asking what he would give for the rest of the crop. In taking the sample, he almost automatically picked out the foreign seeds, the burs, and bits of straw. The grain dealer got stung by so many like him that now the only way he will buy grain is to get the local warehouseman to send him a representative sample. This hurts the farmer.

The president of a well known poultry association was called up one day by the secretary with the information that a large number of his eggs had started to incubate. He could not believe it, for all of his eggs were delivered within two days of when they were laid. Investigation showed that the bad eggs were from hens which were so fat that the eggs were not laid as soon as they were ready. Some hens carried several eggs all ready to lay, until the feverish condition thus caused weakened their appetites, and they became thin enough to lay the eggs.

These three instances are mentioned to show that there are two possible sides to the "dishonest commission merchant" question. However often many commission merchants may practice dishonesty, it is wrong to blame them for producers' intentional or unintentional wrong doing.

In the fig case, we were asked to take radical steps which the facts of the case certainly did not warrant. The figs were not like the sample—they were of all sizes, while the sample was uniform. They were shipped in cotton sacks and the first indication of trouble was the large spots of juice which discolored some of the sacks. These were caused by wet figs. The figs were wet because of one of two conditions. Several authorities differed as to whether they were last year's figs processed and mixed with the new ones, or whether they were simply not dried enough. Only three worms were found; no further search was made at the time. However, this was not conclusive evidence, except as to the fact that the figs were unsalable under the State law.

A representative sample of the portion of the shipment containing more or less wet figs was taken to half a dozen dried fruit dealers for comment. Following is the gist of the comments. They should have been practically like the sample on which the price was quoted. Last year's figs are likely to be wormy unless the moths which lay the eggs have been absolutely excluded. This is practically impossible unless the figs are processed to kill the eggs, some of which are laid even while the fruit is on the tree. Figs sold through dealers should not be processed so as to take the bloom off, for it creates suspicion and if the figs are left too wet, they will not keep until resold. Dealers prefer to do their own processing. They will not even quote on improperly dried figs.

In the fig case, the woman will probably never ship to that merchant again—and certainly he does not want her to. For every dissatisfied customer he gets, regardless of whose fault, is a bad advertisement for him. This is the first complaint we have heard against this merchant and he has shown his fairness by offering to pay for the figs whatever we should suggest. The suggestion we made was unfair to him, who had not at all wanted such figs as were sent, yet he cheerfully paid it.

Frank, fair dealing on the part of the producer puts him at least in a position where he can consistently kick if results are unsatisfactory. We would suggest to every one who submits a sample of goods for sale, to make that sample absolutely fairly representative of the goods.

A PRUNE CHALLENGE.

To the Editor: I gathered from one of my French prune trees that is seven years old eleven prunes which weighed one pound green. When the eleven were dried I found sixteen others from the same tree with the eleven made one pound. If any one has French prunes that will beat them would like to hear from them. **Subscriber.**

Pruning Lowers Cost of Production.

[Written for Pacific Rural Press.]

Hopeful signs abound for the disposal of the next peach crop at fair prices. This means that the trees may well be better cared for than they have during the past few years.

Sunburn and decay are the two most universal destroyers of peach trees. Decay comes principally where pruners have saved time and lost trees. It takes two or three times as long to saw a limb off without leaving a prominent bump or stub; and it makes the tree live two or three times as long, because it permits the wound to heal over.

But we have seen wounds practically healed over, with the wood fibers filled with felty decay fungus. We have seen stubs which showed no sign of decay until the limb broke and revealed a rotten heart. To exclude the fungi which decay heart wood, all wounds on big limbs or on the trunk, which will not heal over in the same season, should be well coated with an elastic durable paint when cut and again before rainy weather each year thereafter. This will save limbs and trees, which would be hard to replace.

Sunburn, too, is due to faulty pruning. Where big limbs have broken from weight of crops on account of decay, or too great a load far out on the limbs, the center of the tree is suddenly opened to the burning August sun. The bark dries out too fast, hinders sap flow to the leaves and fruit, cracks and curls up to harbor insects and spores of disease and decay.

Pruning to Prevent Sunburn.—But the inside of the tree suddenly exposed to the August sun would not be damaged had the tree been properly pruned. The limbs and trunk should be protected by a summer overcoat of young growth. This can be obtained by keeping the tree open to sun and air from the beginning of the season. Growth of last year should be thinned out by cutting it off at its junction. It should not be cut back to a few inches as is commonly done, for this induces so many laterals that they shade the inside of the tree and smother the "overcoat."

The usual system of pruning thus places all the fruit far out on the limbs, out of reach of pickers; but, worse still, where it exerts powerful leverage to break the limbs. A weight at the far end of a big stick is much harder to hold up than at the near end.

Where the "overcoat" is permitted to grow, it sets fruit the following year. That fruit is close to its sap supply, makes the best sizes, needs the least thinning, cannot break the limbs or require props, and is picked mostly from the ground. The growth may be pruned easier and sprayed far more thoroughly so that the fruit is practically all marketable.

Such a system of pruning so lowers the cost of production that a profit is made even in seasons of low prices.

CUT PEAR BLIGHT NOW.

[Written for Pacific Rural Press.]

Just now is the best time of year to find pear blight and cut it out. The leaves are still hanging on blighted twigs, trees are least susceptible to reinfection from careless cutting because they are practically dormant, insects are not so numerous as they have been, and the rain is not yet soaking newly cut surfaces with drippings from other new cuts. It is easy to get around the orchard, and mud does not hinder following root blight.

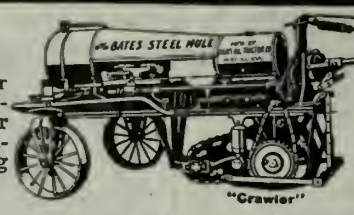
In all blight cutting, remember that cloth disinfecting swabs are very likely to leave small surfaces on the tools undisinfected; also that wooden and certain metal buckets are affected by corrosive sublimate so that the disinfectant very shortly becomes valueless. Better not cut at all than to spread blight by means of tools.

FRUIT GROWERS' CONVENTION.

Preparations for the State Fruit Growers' Convention at Visalia Nov. 18 to 20 inclusive are proceeding well, arrangements being in charge of Tulare County Horticultural Commissioner Chas. F. Collins. Preceding the convention there will be held sessions of the state association of the county horticultural commissioners. One of the principal features of the convention will be the consideration of marketing; to this question an entire day will be devoted.

For the purpose of teaching practical irrigation and the care of pumping machinery, the Inglewood Union High School has just purchased an up-to-date turbine centrifugal pump from the Layne & Bowler Corporation of Los Angeles. The school is fortunate in securing a good pump as a part of its equipment.

No Pit
is required with the
Krogh Deep Well Turbine Pumps



For bored or drilled wells from 10 inch inside diameter up; and for capacities of 250 to 3000 gallons per minute. Built for pumping from any depth to and including 250 feet. They are absolutely water balanced and are self-aligning. More water can be obtained from such wells than with any other type. Built in belted or direct motor driven types. If interested, write for Bulletin.

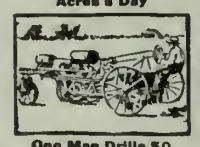
This Tractor Does All Farm Work

The Bates Steel Mule is the *only* tractor built that will replace horses for *every* farm operation from plowing to harvesting.

"Crawler"



30 Horse Power
$1035
20 H. P. $900

The Bates Steel Mule
PATENTS PENDING

No New implements are necessary—the tools you now have will do the work cheaper, quicker and better when hitched to a Bates Steel Mule. Works on any soil all the year 'round. In successful use anywhere.

One Man Plows 10 Acres a Day

One Man Harvests 40 Acres a Day

One Man Drills 50 Acres a Day

One Man Discs 35 Acres a Day

One Man Mows 36 Acres a Day

One Man Cultivates 31 Acres a Day

One Man Operates It

The Bates Steel Mule is the only real one man tractor. Saves help, time and money. Has a heavy duty, four cylinder motor, two speed transmission, hardened cut gears running in oil, and Roller Bearings. This wonderful tractor is backed by a broad, strong guarantee.

California Garden Flowers $1.50 Postpaid Pacific Rural Press

Hen Manure for Fruit Trees.

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

When hens are yarded there is a much greater accumulation of droppings than when they are given range. Where dropping boards are used under the perches and the accumulation of the yards taken out, it has been figured that sixty hens will give the farmer one ton of dried hen manure in a year. The lowest money value to this would be $5.00, giving every hen's earnings at the least nine cents for the year.

The day's droppings will lose some of their value in the ground, unless they are well supplied with litter, which will both save the ammonia from escaping and also save the ground from getting "sick." It It is a well known fact that ground where chickens run continually does get "sick," but if it is littered and cleaned out often it can be kept clean a long time. Then this straw litter is the very best kind of fertilizer for some shrubs and trees that seem to require a sort of mulch to make them grow.

Prune Trees Respond.—A test with hen manure on prune trees that were yielding small prunes, some years ago convinced me of its value in the prune orchard. With land as good as any in California and the best of pruning and cultivation, the prunes were small. After a few liberal feeds of hen manure the trees changed altogether and the prunes were larger and sweeter.

After one or two years of fertilizing with the droppings the trees were more thrifty, the foliage took on that dark green, healthy color that is natural to a well cared for prune tree and the fruit contained more sugar than usual. On plum trees it appeared to work equally well, but outside of improving the color of the foliage on peach and apple trees, I did not notice any difference.

Caution to Avoid Burning.—Around young growing trees we usually put a large bucket once a month, keeping far enough away from the roots or trunk that the droppings will not burn them. This it will do if put on carelessly as it is very strong. When colony houses are moved we generally take a cultivator and run it through the ground where the house stood so that the droppings mix well with the soil. If this is not done a great deal of the value goes out in the air as the drying process goes on. If not convenient to take the manure right out onto the ground and mix with the earth while fresh, the next best plan is to keep it in barrels or boxes and mix equal parts of dry earth or sand with the droppings. This dry earth absorbs the moisture that would otherwise escape and when all is put back on the land, one part is as valuable as the other. In prune orchards after the ground has been pulverized and put in shape for prune picking, it is not practicable to spread hen manure, so the only way is to store in barrels or boxes as stated until after prune season is over.

Three years ago this land I am living on was so poor you could not raise a disturbance on it. The neighbors say it had been planted with prune trees that did not produce; next to peaches that were as bad; then it was planted to rhubarb, "a get-rich-quick crop that sold the poor land for a thousand dollars an acre and that was what it was set out to rhubarb for, just as a bait to catch suckers.

But that has nothing to do with the quality of land. All that ailed it really was that it was starved. Not being a very good soil in the first place it had been robbed of all it contained and nothing put back on it. Since the rhubarb was plowed out and plenty of good hen manure put on it, we are raising all kinds of things, better than disturbances. Two year nectarine trees have fruit, three-year-old apple trees are full of fruit and next year I expect to have Imperial prunes. But I give all the credit to the hen droppings, and the facts show for it. One neighbor planted six Imperial prunes out of the trees I got for myself; he has given them abundance of water and cultivation but no hen manure, and the difference in growth is easy to notice.

CLEAN SOOTY OLIVE LEAVES BY SPRAYING NOW.

To the Editor What is the cause and prevention of the sticky dirty juice on the olive leaves and twigs enclosed?—P. B. V., Danville.

[Your trouble is black scale, of which there are a few in the samples. They exude a honey dew in which the sooty fungus develops readily. Scales may be identified by the distinct H on the backs of the mature ones. Spraying now will be best. Dissolve 30 pounds of fish oil soap in 12 gallons of water; boil it, and while boiling add 20 gallons 28 degree distillate, stirring thoroughly while adding. This makes a stock mixture which must be diluted with 20 times its volume of water when ready to spray.—Editors.]

A unit of the Stanislaus County Farm Bureau was recently established at Keyes, with S. C. Peck, president; F. L. White, secretary; and R. H. Russell, director.

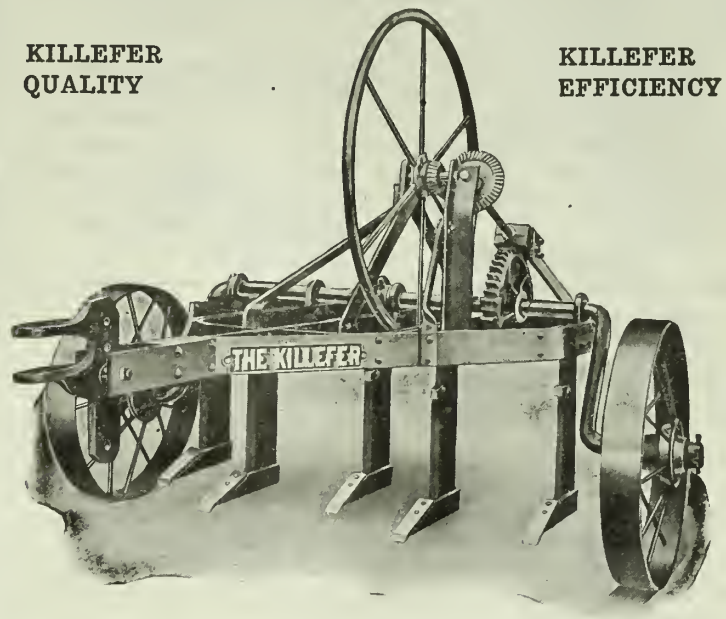
Twenty-five thousand dollars is the estimated value of Kings county's honey harvest for the season just closed.

Now is the Time to Order

FRUIT TREES

By ordering NOW—from us—you will be assured of the best stock and lower prices than you will be quoted later in the season. All our trees are propagated from proven-bearing orchards and scions are selected by specialists. Stock grown in the Santa Clara Valley can't be surpassed.

Elmer Bros. Nursery



The Nursery That Helped to Make Santa Clara Valley Famous.

76 SOUTH MARKET STREET, SAN JOSE, CAL.

Increase Your Alfalfa Crop 30 Per Cent

KILLEFER QUALITY

KILLEFER EFFICIENCY

Subsoiling is generally conceded to be of great benefit to the soil in any country, but more especially in our Western States, where the ground is never frozen, but is packed from year to year, making it very hard and allowing a large percentage of the natural rainfall to run off, that would be absorbed if the ground was broken up to receive it.

The use of these tools in preparing ground for raising grain has proven a thorough success and the value of their use on ground for Alfalfa and other crops cannot be questioned.

The above tool is built in sizes of Three to Seven Standards, and will work to a depth of twenty-four inches, thoroughly breaking up the ground and putting it in the best possible condition to hold the moisture for the crop following.

The Killefer Manufacturing Company

2209-21 Santa Fe Ave., Los Angeles, Cal.

P.R.P.

IN VIEW of the high lifts common in southern California, where water is being pumped for irrigating alfalfa with a lift of 100 ft. and for irrigating citrus fruits with a lift of 200 to 400 ft., it would seem that a very considerable increase in the number of plants can be made in the present pumping districts of the Sacramento Valley. . . . Although it is possible from geologic evidence to determine for any part of the valley the general distribution and character of the water-bearing beds, the precise location of these beds and their value as sources of water can be determined only by sinking wells.

Statistics of ground water irrigation in the valley gathered by the author indicate that there are 1,664 pumping plants irrigating a total area of 40,859 acres. The total power is 15,142 horsepower, of which 10,685 horsepower is electrical and 4,457 horsepower is internal combustion or steam power. The average power per plant is 9.1 horsepower, and the average area irrigated for each plant is 24.5 acres. K. Bryan.

U. S. Geol. Survey 1915.

Mechanical Power on the Farm.

[Written for Pacific Rural Press.]

TRUCKS HELP BUTTER MARKET.

"We are telling patrons every day that we must make butter that will score 93," says N. J. Beck, manager of the Visalia Co-operative Creamery. "Los Angeles requires only 91 to grade as extras, but will soon have to come up to 93 as San Francisco has. Today we have 7,000,000 to 8,000,000 pounds overproduction that we've been sending to Australia but that won't last long and then we must compete with the best butter in the world by shipping it to the East and to Europe. If it scores only 90 or 91 we can't get it out of the western market; but if we make butter that will ship to foreign countries, we can demand our own price.

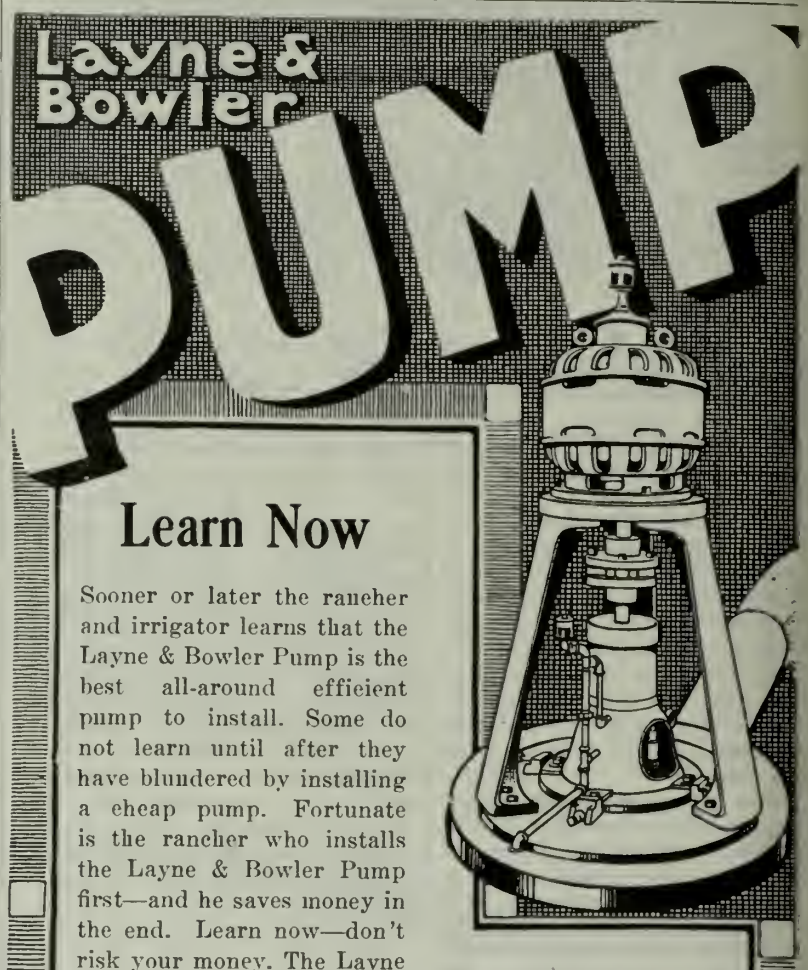
"Farmers are going to suffer and suffer heavily if they do not produce No. 1 cream. We used to get lots of cheesy, stringy cream, but practically none of it comes that way now and we are making about 4,000 pounds of butter per day."

Paying a higher price for good cream than for bad has induced patrons to take better care of their cream at home, but a most important feature of the new regime is the every-day collection of cream.

"No more 2-day cream for us. We must make butter every day in this valley to make it score 93."

The daily collection is made possible by use of auto trucks. Two of these have 1500 pounds capacity but carry double that much, and four are small automobiles converted into trucks.

"A man covers twice the distance now. It used to take a driver two days to make his route—now he collects from all of the same people every day."



POWER FOR MILKING MACHINES

A 1 h.p. electric motor was set up at the Exposition cow barn at the orders of J. L. Smith of Washington State before his herd arrived, so that it would be ready to connect to the pump and milking machines he brought along with the herd. His cows have never been hand milked at home except for the first two or three times after calving, when the milk is too stringy to work well in the tubes. The motor is used simply to run a small rotary vacuum pump which draws air from two milking machines via pipes over the stalls through a 5-gallon airtight tank and out through an exhaust. A gas engine was used at one of the northern fairs for the same purpose. The tank is used to cushion the jerks on the air vacuum occasioned by the stopping and starting of machines when changed to other cows. In the Carnation Stock Farm's view exhibit, the pipes over the stalls are so large that there is enough cushion in them so a tank is unnecessary. There, with six machines going at once, a 2½ h.p. motor is used. This is recommended where six milking machines are used on the farm, because one who has the power machinery at hand is sure to be using it on the separator and other farm machines. Separating is usually started before milking is finished so that 2½ h.p. is little enough. About a 15-inch vacuum is maintained during milking. If it runs too strong, a safety valve admits air to the right amount.

Milking machines never get drunk, are always there on time, do not strike, save time; and if thoroughly cleaned, make possible the production of absolutely clean milk. The power which runs them may be used about the farm the rest of the day.

TRAVELING CRANE.

A traveling crane to pick up anything from bulls to automobiles is rigged on six 8x8's about 12 feet tall on the J. S. Gibson farm in Colusa county. The 8x8s are set three in a row, the rows about 10 feet apart. An I beam about 24

Learn Now

Sooner or later the rancher and irrigator learns that the Layne & Bowler Pump is the best all-around efficient pump to install. Some do not learn until after they have blundered by installing a cheap pump. Fortunate is the rancher who installs the Layne & Bowler Pump first—and he saves money in the end. Learn now—don't risk your money. The Layne & Bowler Pump is the best investment you can possibly make, as all leading irrigation authorities will tell you.

Write for our new Irrigation Booklet No. 25. It gives valuable pumping information and explains in detail the construction of the Layne & Bowler Pump. It's free.

Write for Catalog No. 47 F

For Water Deep Under The Ground

Jackson Deep Well Turbine Pumps give continuous and efficient service. They do not get out of order as they have no valves or plunger rods. Very little care or attention needed as they are oiled from the surface. Are much lower in cost than other types of deep well pumps when the expense of dug pits, cribbing and timbering is reckoned. They raise water from the very bottom of the well, thus eliminating heavy vacuums and delivering all the water the well yields. They develop slow wells and increase their flow.

Like all Jackson Made Pumps These Deep Well Turbine Pumps Are the Very Best Pumps Made for the Purpose—They are Dividend Earners, Not Expense Makers

Whatever your water problems may be our Expert Pumping Engineers will help you out free of charge—write

feet long rests on top of each row. These make the track for an I beam laid across them. A cog attachment run by an endless chain from the ground moves this cross beam to any position from one end of the frame to the other. A Triplex chain block hangs from the cross beam. One man can lift most anything that can be run under the block and hooked to it. When a bull is to be loaded onto the wagon, he would likely tip endwise in the lifting, so a light chain block is hung to the beam to balance him in a sling. Mr. Gibson does quite a business with the home made outfit and finds it most convenient.

DO YOU USE
Belting?
We Want to Send You a Sample FREE

We want every user of belting to know just how to test rubber belt—How to know that he is getting a belt that will do what he expects of it—That will do what is claimed for it. There is a sure test for rubber belt. We want to send you a little folder that tells you how to apply this test. With this folder we will send you a sample of

COMBINE TO USE SILAGE CUTTER.

A silo club composed of ten neighboring ranchers around Bishop, Inyo county, including ten silos, is made possible and profitable by using one large portable silage cutter to fill all of them. Previous to these silos, which are of the wooden types, there has never been any in Bishop Valley except a large stone one built by W. D. Roberts 25 years ago. This has always been a great pride and profit to Mr. Roberts. Members of the silo club are mentioned as an example of enterprising farmers who might otherwise have waited years before getting this profitable form of feed: Collins and Young, Fred Hess, J. F. Pearson, C. P. Stutting, Wm. Compton, Wm. Roan, W. Chapman, G. B. Hogle, A. Garnier, and Wm. Rood.—C. F. Barnum.

ENGINE RUNS DYNAMO.

A gas engine runs a dynamo to generate electric power to do the pumping, separating, grinding, illumination of house and barns, and a thousand other things to save hired help on the farm. Such a generating outfit, compactly built, may be seen at the Bean Spray Pump Co.'s exhibit in the Horticultural Building at the Exposition. It is a Bean 10 h.p. opposed gas engine direct connected to and on the same solid iron base with a dynamo which generates 70 amperes at 107 volts pressure, running 600 revolutions per minute. This delivers 7,490 watts of electric power equalling practically 10 mechanical h.p., but in such a form that small wires can lead it to whatever place it is to be used through a motor.

TRACTOR PERMITS EXPO. VISIT.

"I've been plowing 30 acres a day with my Caterpillar. That's how I was able to come to the Exposition cattle show," said R. E. Watson of Stanislaus county. He recently plowed 600 acres for summer fallow at a cost of 26 cents per acre for labor, gasoline and oil. Half of it had not been plowed for years, some of it not for 18 years.

Since an hour of head work on the farm may save a week of back work, and since a week at the World's Fair fixes higher and more nearly correct ideals of breeding which may be worked out to the ultimate improvement of the herd, Mr. Watson's tractor has improved his chances of success in cattle breeding and in farming generally.

PANEL GATE DEVICE.

To pull the sliding 1x3 which usually holds a panel gate shut, Henry Springer of Tulare county bolts a vertical 1x3 to the slide and to the panel board below it. This vertical arm extends upwards across the space above where it is handy to grasp and pull the sliding fastener.

General Agricultural Review.

CITRUS AND SEMI-TROPICAL.

H. W. Blaisdell, who owns a large orange grove in Arizona, is in Tulare county securing data on the sweating of early fruit.

Frank Brown of Los Angeles recently traded his orange grove near Naranjo, Tulare county, for 480 acres of alfalfa land east of Stockton belonging to Geo. E. Waddell and son.

It is stated that the Government will double its force of inspectors this year in the citrus districts to enforce a rigid adherence to the 8 to 1 standard of maturity test; shippers violating this rule will be subject to arrest, and their fruit will be confiscated.

Two carloads of lemons were recently shipped from Porterville by Parr & Shippey of the Zante district to the eastern markets. Not more than 90 per cent graded in the 300 size, which as far as is known is the highest average for any similar sized shipment from Tulare county.

DECIDUOUS FRUITS.

The Eighth National Apple Show will be held in Spokane, Wash., the week of Nov. 15.

Kings county peach growers recently met and subscribed over $4000 to the million dollar peach organization.

The fruit shipping season at Vacaville has closed; 877 carloads were shipped this year as against 774 last season.

Ball Bros. of Cupertino report that they refused 4½ cents for their French prunes recently; they are holding for 5 cents.

The Modesto Cured Fruit Association recently shipped a carload of figs to their plant at Berkeley where they will be prepared for the retail trade.

The Tudor section of Sutter county, which formerly was devoted largely largely to wheat raising, is now becoming one of the leading fruit sections of the county; the value of fruit products from that section this fall is estimated at $50.000.

GRAPES AND SMALL FRUITS.

About one hundred tons of raisins are being received daily at the Hanford plant of the California Associated Raisin Company.

R. L. Nougeret of the U. S. Dept. of Agri. who has charge of the phylloxera experiment station at Walnut Creek, will shortly commence experiments in Kings county for the control of the mealy bug.

According to Chas. E. Virden, manager of the California Fruit Distributors, 250 cars of wine grapes have been shipped East from California this season; this is the first time in history that such sales have been made.

Owing to the shortage in cars brought about by the closing of the Panama Canal, the Associated Raisin Company is having difficulty in handling the raisins that are being offered by the growers and they have been urged not to rush their crops to the packing houses.

OLIVES AND NUTS.

The Banning Almond Growers' Association reports the shipment of more than 100 tons of nuts this season and 75 tons still to be shipped.

The Arbuckle Almond Growers' Association recently received an order from the State Exchange for 25 sacks of IXLs for shipment to China.

A meeting of the California Ripe Olive Association was held at San Francisco on Oct. 29; and growers throughout the State were urged to send representatives to the conference.

The Corning Olive Growers' Association at Corning is making improvements in its plant; a cement and galvanized iron pickling shed, 30x60 feet is being erected at this time.

J. E. Gage, formerly superintendent of a large olive packing company in southern California, has been engaged as manager of the olive processing this fall and winter at the Porterville cannery of the Tulare County Growers' Association.

Within the next 30 days olive canning will be started at the Porterville plant of the Tulare County Growers' Association. The crop is estimated to be the largest ever grown in that district; therefore, only the very fanciest fruit will be handled.

GRAIN AND FIELD CROPS.

The El Dorado Nursery of Cupertino shipped 65 fifty-pound lug boxes of cactus fruits to Chicago this season.

It is estimated that the lima bean crop in the immediate vicinity of Santa Barbara will amount to almost 85,000 bags this season.

Thousands of sacks of seed onions are being shipped from the delta lands daily to points in the Sacramento and Santa Clara valleys.

A. E. Liehau planted fifteen acres to sugar beets on an unirrigated tract in the Oakdale district this season and received more than $100 an acre from the sugar company.

It is estimated that the rice yield in the Sacramento valley this year will amount to 1,000.000 sacks; this is the biggest yield ever known in the valley.

Fifty acres on the A. M. Standish ranch near Milpitas have been planted to broccli, a shipping variety of cauliflower. This is the first commercial planting of broccli in that section.

The plant of the American Beet Sugar Company will shortly close its season; to date over 70,000 tons of beets have been put through the mill, the daily average being about 1050 tons.

W. H. Welisch & Co., Inc., of San Francisco have opened a rough-rice department in Biggs; as this firm has selling connections throughout the world, an immense market is opened to Butte county rice.

MISCELLANEOUS.

The Lindsay-Strathmore Irrigation project was voted on Oct. 23 and carried by a large majority.

Paul Dougherty has been appointed by the University of California to assist Farm Adviser N. P. Searles of Yolo county.

The Semi-annual Counties Convention of the California Development Board will meet at San Diego on Friday and Saturday, Nov. 12 and 13.

The twenty-nine prize winners of the high school boys' agricultural clubs left for their eastern trip on Oct. 17, to be gone from California for a month.

The American Trona Corporation is making arrangements to establish a plant for the production of potash at San Pedro; Germany was the former source of supply for that product.

J. B. Van Nuys, the Los Angeles capitalist, has increased the water supply on his San Gabriel property. He has just had a fine Layne & Bowler turbine centrifugal pump installed. The pump is said to be one on the best suited for this locality.

NOVEMBER EXPOSITION CONVENTIONS.

The following list of the conventions to be held during the coming month will give a good idea of the subjects to be covered: American Milch Goat Record Association, 3; American Poland China Record Association, 3; Romney Sheep Breeders' Association, 4; Continental Dorset Club, 5; National Swine Growers' Association, 5; American Rambouillet Sheep Breeders' Association, 5 and 6; American Southdown Breeders' Association, 6; American Hamp-

TIME SAVED—Its capacity is 4.35 cubic yards; it moves as much soil per load as do nine of the old-style Fresnos.

LABOR SAVED—No thirty-six horses (nine Fresnos) to hitch or unhitch; no heavy back-breaking work of loading and dumping scrapers. It is drawn by tractor and operated by compressed air.

MONEY SAVED—No horses to feed; two men, instead of nine to employ.

THEN, TOO—a Schmeiser Land Leveler will work on ground which is too hard and rough and full of old tough roots for Fresnos and horses to touch.

AND—it will put into shape for cultivation acres of your land which you have heretofore considered too uneven to block out—too cut up with draws and gulches, or too marshy and boggy to reclaim.

EXPOSITION TALKS WITH STOCKMEN.

Prof. Gordon H. True pointed out that there was only one thing better than the demonstrated excellence of today—that is a well founded hope for the future. He pointed out the rapid increase of Guernsey herds in California in the past three or four years.

A. J. Glover of Hoards Dairyman (Wis.) noted the attitude of many farmers. "It is too much work to milk a cow three times a day. Too much work to feed cows properly for greatest production; too much work to provide air, light, and whitewashed stalls; too hard on the land to cut three crops alfalfa per year." "Why, bless your heart, what do you keep your cows and land for?"

Ed. Carey of Oregon made the points that we will get the combination of dairy type and high production sooner if we buy and breed for production first and for type second. In buying a bull look first for production in his ancestors as far back as possible, and then take him if the conformation is good. Better have a medium type than either extreme of coarseness or refinement.

Mrs. Ada Howie of Wisconsin emphasized the need of loving cows to make them do their best. She advises the beginner to start with few enough so that his work never drives him and he will not get discouraged.

Miss M. L. Eckles of Glendora emphasized the need of varied ration, saying that alfalfa alone for three years would kill a cow, at least would destroy her further usefulness except in some cases where five years would be the extreme limit. She is exhibiting a bull 17 years old.

A breeder was overheard remarking that his partner is getting wise. He "used to wouldn't" have a cow unless she was most typey of Island breeding, but now he won't buy a cow or bull without records for their own or their ancestors' production.

C. D. Hayworth came to Wood colony, Stanislaus county, 11 years ago with $200 and 10 Jersey cows, part grades, part purebreds. He now has 23 head two years and over, on a forty-acre farm. He recently put up a modern barn of which he is proud. "I didn't have to mortgage the farm for it, either." He is putting all of his cows on yearly test as they come in.

All of W. J. Hackett's Jersey cows are in the Register of Merit except 10 now on test. Some of these latter have already produced more than the required amount while some are just started, but all are doing finely. Some of the heifers finished with over 300 pounds fat, though only 250.5 pounds are required for two-year heifers and 287 pounds for three-years.

That Ayrshires are becoming important in California is shown by the several prizes won by the herd of E. B. McFarland of San Mateo, whose herd is founded from that of J. W. Clise of Oregon.

A determined effort by Pres. M. D. Munn of the American Jersey Cattle Club to have the membership fee reduced to $50 in order to attract more actual farm breeders, met defeat but the question will come to a vote again in a few years.

Thos. Dempsey, Jersey judge from Ohio, gave special praise to five of Guy Miller's cows, saying they could scarcely be surpassed by five cows of any breed owned by any one man.

Be cautious in feeding very hot or tired horses.

Skim Milk for Poultry Feed.

[By Geo. H. Croley, President Federated Poultry Assn. of California.]

To the Editor: I would like to know the value of skim milk as a poultry feed and best method of feeding.—J. J. K., Kerman.

[After providing for average non-assimilation and deducting the amount necessary for the maintenance of the hen, one hundred pounds of skim milk has an egg producing value of 55 whites and 18.5 yolks when fed in a properly balanced ration; these values total 73.5 egg maker units. Good meat scrap supplies 1010.5 units and dried ground green bone 536 units, therefore a good commercial meat scrap, that does not carry an excessive amount of bone, is worth about fourteen times as much in feed value as skim milk; on the basis of $3.50 as the price of the meat, the skim milk would be worth 25 cents per hundred pounds.

There are so many ways in which milk can be fed under varying conditions that it is not practical to go into details here; but in a general way we will state that it may be placed before the fowls so they can drink it, but best results usually follow feeding in a mixture of other food stuff; unless quite sweet it is well to make it into cottage cheese and dispose of the whey as waste. Several who have added the whey to the feed report bad results.]

POULTRY NOTES.

[By Geo. H. Croley, President Federated Poultry Assn. of California.]

H. D. Burmaster will offer no chicks for sale this season, but will operate his hatchery to supply future stock for his own flocks.

A Santa Clara county correspondent reports that during the present season Chas. H. Vodden has shipped 100 Barred Plymouth Rocks to Australia and New Zealand; and that Wm. J. Schmidt recently forwarded three dozen White Leghorn pullets to the Philippine Islands.

At the regular monthly meeting of the Arizona Poultry Association held at Phoenix, Oct. 9, the plan of selling eggs backed by the guarantee of the Association was discussed.

An electric tester, for testing eggs during incubation, has been patented by F. W. Dobbel of Sonoma. The inventor states that with this instrument from 60 to 100 eggs may be tested per minute. Instead of removing the eggs from the trays, the tester is run lightly on the eggs. A contract for making 500 testers has been given to an eastern firm.

I. N. Foss, manager of the Tulare Co-operative Poultry Association, states that a show will be held in Tulare sometime in December or January. The business of the Association during September made a gain of $849 over that of the corresponding month of 1914.

The Petaluma Poultry Keepers' Protective Association has offered standing rewards for arrest and conviction of poultry thieves. These rewards range from $50 where the thefts amount to not less than five fowls, up to $500 when the theft amounts to over fifty fowls.

Mrs. J. B. Tupper of Ceres has recently imported a pen of White Plymouth Rocks from an eastern breeder. The hens have a trapnest record of 212 to 226 eggs and the cockerel that heads the pen is a son of Lady Show You that made a record, at the Missouri laying contest, of 281 eggs.

The Pebbleside Poultry Farm of Sunnyvale recently sold 41 Rhode Island Reds for $341.

A Sonoma county correspondent reports new interest in poultry raising since the price of eggs has advanced; there is an unusual demand for pullets at good prices. The hatcheries are anticipating an increased demand for baby chicks.

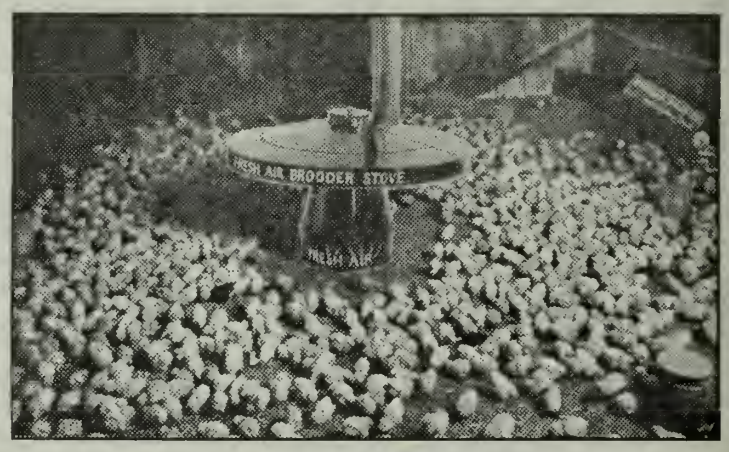
Tuesday, Nov. 16, is Poultrymen's Day at the Panama-Pacific Exposition.

The convention of the American Poultry Association will take place during the third week of November; the fortieth annual meeting will be held on Nov. 19, at 2 o'clock p. m., at the Inside Inn on the Exposition grounds. Other meetings to be held are as follows: Nov. 18, American Buff Plymouth Rock Club and Pacific Coast Division of the same club; American Buckeye Fowl Club; Nov. 20, Buff Minorca Club of America; Nov. 24, American Cornish Fowl Club; American Pigeon Fanciers' Convention; Dec. 2, National Pet Stock Association of America.

5%—a Business Proposition!

If you could safely add another 1% to the profits of your business or take 1% from your expenses, would you hesitate?

If you could increase your income 25%—one fourth—would you neglect the opportunity?



The HIBERNIAN BANK pays 5% on Savings Accounts. Other Los Angeles banks allow you 4%. The proposition—a *business* proposition—presents itself to you.

There is no choice as far as Safety is concerned. The HIBERNIAN conforms to the same strict State Banking Laws all other California banks observe; it is subject to the same rigid supervision of the State Superintendent of Banks; it is a member of the Los Angeles Clearing House and is managed and directed by men prominent in the banking and business life of the city.

Low upstairs rent and economical management make possible greater profits. We share with you. It's a business proposition!

Our "5%" Booklet tells how to take advantage of this by mail. Write for it today.

Farm Poultry for Profit.

[Written for the Pacific Rural Press by Susan Swaysgood, Pomona.]

This is the time when egg prices begin to soar and the man with a good bunch of pullets ought to be paying back feed bills and lining his pocket, too. But as a rule, outside the large poultry plants, the pullets hang shy.

Just get it in your head that you can't get many winter eggs with pot luck management or feeding and running all sizes and all kinds together. This is the one great stumbling block of the small poultryman or rancher. He mixes both sizes and varieties and it won't work out. Pick out all the likable pullets as near one size and age as possible and yard them, after first preparing the ground for them. If you have already grown fowls in that yard, especially males, dig or spade it up and sow a little barley in it before putting in your pullets, spray the house and take away all odor of the last bunch, as near as you can. Then put in your pullets, dust them, and commence to feed them well. Give them a fairly good mash. Allow at least 10 per cent beef scrap, or a mixture of fish meal and beef scrap. You may have to increase it, but that is strong enough to start with. Plenty of green feed, nice and succulent, and grain fed in litter to make them exercise. Give water fresh from the hydrant in the morning, with plenty of grit, shell, and bone, and you will soon see those pullets begin to wear rosy combs and hear them talking in a morning to each other.

There is not anything better than milk of any kind to develop the pullets, and bring them into laying condition. Just feed it in the pan, in the mash, or any way that is convenient, and if you see to the other items you will get eggs galore.

The next best thing to milk to start pullets laying is green bone fresh from the butcher. This is the nearest thing we can get to the natural worm and bug the hens should find but don't. In feeding the green bone, however, we must use discretion, as too much would be harmful. About half an ounce to one grown hen or pullet is plenty at one time; this can be repeated three or four times a week, but it is not safe to feed more.

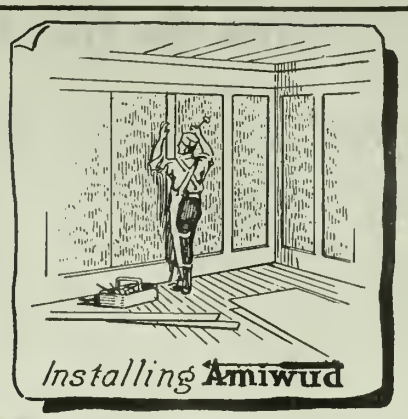
All condiments, such as mustard, pepper, and stronger drugs, are to be used with care. They are really both tonic, stimulent and irritant, according to the quantity fed, and it is hard for the average feeder to draw the line. Even in buying ready-mixed poultry tonics, that are supposed to be, and in many cases are put up in right proportions to give valuable help, the feeder does not always give the right quantity.

Plant Mustard Now.—In feeding green mustard or radish pods, or any green feed that contains warming or stimulating qualities, there is never any danger of irritating the bowels, because the hens know when they have had enough and will leave it. These are natural stimulants and they are the best by far for all purposes. Now is the time to plant some giant mustard seed and get a crop of hen fodder started that will bring eggs without hurting the hens.

Some men can't believe that pullets can be started to lay without some of these things to give them "a jolt." Others think putting a good lively cockerel in the yard will start them to lay; all these things are outside things that never add one particle to the egg. It is just like a woman putting dope on her face to remove wrinkles. The only way to remove wrinkles is to feed the muscles and the skin, and the only way to start pullets laying is to feed them just what the ovaries need to mature and develop them and form the eggs.

If the land is short on mineral substances and the pullets are not served enough to offset this lack, this is another reason why pullets will not start to lay when they supposedly ought to. If the land lacks iron the pullets should be given iron in some form; if lime, give them broken plaster, air-slacked lime, and a grit that contains lime. There are several forms of iron, but about the best one for common use is powdered sulphate of iron, given in the mash in small doses.

But the main thing is to know what is lacking in the bill of fare. Too many changes are not satisfactory; and if you are getting good results with one feed or mode of feeding, it is best to stay with it. If on the other hand, you are not getting results, then it pays to find out why, and then remedy it.



Sores on Turkey Heads.—My young turkeys are four months old and two weeks ago their heads became covered with sores that look like warts. Their bodies are clean, but their heads are simply covered with these hard-looking sores. Two have died already and the others are all sick. They eat little, but drink heartily. I have been feeding quite a few peaches; they also have wheat, clabbered milk, and green alfalfa. What can I do for them?—Subscriber.

This is common chicken pox. I had hoped that last year's epidemic would have died out, but it seems it is just springing up again. Get a little tincture of iron and put about ten drops to a quart of drinking water for all the turkeys. Keep this up for one week, clean up your yards, and if you have not go too many to treat individually, catch them and dip their heads in 72 parts of water to one part of Kreso Dip Number 1. After dipping the heads, wipe them dry and smear with carbolated vaseline; that will fix it and you will have no more trouble, but you must clean up all filth.

If you have too many to dip individually, mix up a bucketful of the solution and at night go out to the roosts and spray the heads and plumage with the solution. They wipe the heads on their feathers and clean themselves, but you will have to do this two or three times to effect a cure. Chicken pox is bad and everybody should be on the lookout and catch it in the early stages.

At a recent conference it was decided to change the date originally set for the Kings County Poultry Association Show to be held in Hanford. The new date was not decidedly fixed, but it will probably be between the fifth and ninth of December.

DAIRYING.

The Milbrae Dairy will erect this fall a new barn for housing their cows on official test.

An eight-months-old Holstein calf was sold at Cortland, N. Y., for $10,300. His sire is King Segis Pontiac Alcartra and his dam Woodcrest Peterke Elma.

W. B. Smith of Modesto has been using a purebred Guernsey bull on 13 half breed heifers and 5 other cows. He will sell some of these as soon as they are producing and invest at first in a couple of purebred heifers.

F. B. Wulfe of Modesto has a purebred Jersey heifer which freshened last June aged 12 months, 18 days. Three months later the tester of the cow testing association recorded a production of 12 pounds milk in one day, 7 per cent fat.

T. A. Hall of San Jose reports that Cream Cup Vogelschen Cornucopia 180311, three years old, just recently made a record of 25 1-3 pounds butter in seven days. Her seventeen half sisters sold at the Hanford Consignment Sale for an average price of $560.

Seventeen daughters of Colantha Sir Pontiac Aaggie, who now stands at the head of K. W. Abbott's Holstein herd at Milpitas, were sold at the Hanford Consignment Sale for an average price of $560 each. Two of his daughters sold for more than a thousand dollars.

The September report of the Stanislaus Cow Testing Association shows 93 cows on the honor roll with two Jersey cows leading the list: Lucy, owned by F. D. Keeney of Hughson, making 70.5 pounds butterfat and Pet, owned by Genzoli, making 68.4 pounds butterfat. The highest Holstein, owned by M. E. Sandos, made 68.1 pounds butterfat.

Laura J. Frakes of the Panama-Pacific Dairy at Sutter Creek reports the following: "The first heifer to freshen sired by Pontiac Prince Inka, our herd sire, has given us a beautiful heifer calf, sired by Pontiac Chief. The dam is giving seven gallons of milk per day and this is her first calf."

Tilly Alcartra has just completed the first six months of her fourth year's test with approximately 16,400 pounds milk and 650 pounds butter. No effort is being made this year to crowd her for maximum production. At this time she is producing over 80 pounds milk daily.

T. Freitas and Jos. Silvey of Stockton and F. C. Serpa of Hayward have purchased the controlling interest in the Nunes-Freitas Dairy of Roberts Island, San Joaquin county. This is the largest dairy in the county, occupying 450 acres and consisting of about 400 head of cows.

H. T. Robb of the Milbrae Dairy is looking forward with interest to the freshening of the daughters of their herd sire, King Pontiac Musa Netherlands, son of King of the Pontiacs. His three closest sires have 390 A R O daughters, consequently something pretty good is expected from the offspring of this young sire. It is the plan to put every cow in the herd in the Advanced Register.

CATTLE AND SHEEP.

The Porterville Alfalfa Co. of Porterville recently shipped 300 head of steers to San Francisco.

The Spreckels Co. recently brought down 55 carloads of cattle to their ranches in the Salinas valley to be fattened on the beet tops.

W. R. Belknap of Tulare recently sold forty head of feeder steers for R. Schwartz of Tulare to Otis Lockhart of Los Angeles, who will ship the cattle to his ranch at Bakersfield to fatten for the market.

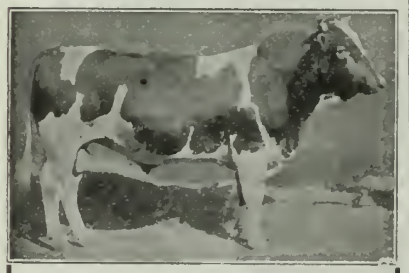
Cattlemen owning ranges on the Klamath river and its tributaries, Siskiyou county, are seeking aid in the extermination of noxious weeds which are causing the death of cattle valued at many thousands of dollars.

D. J. Stollery, assistant manager of the Paicines Ranch, reports that they have purchased the famous Shorthorn bull, Champion of Scotland, to be imported as soon as the quarantine is raised, for service in their herd of 200 breeding cows.

HORSES AND SWINE.

E. S. Nott of the Alta Mesa ranch, Los Altos, has lately purchased two young gilts and a young boar from T. L. Steele of Grant's Pass, Ore.

The first annual meeting of the Yolo County Hog Raisers' Association was held at Woodland on Oct. 27. The meeting was addressed by Dr. Cady of the U. S. Dept. of Agri. and State Veterinarian Chas. Keane.



A. M. Standish is erecting on his ranch near Milpitas eight individual hog pens and runs. A few very choice Duroc sows were purchased last spring; from these an excellent herd is being built up.

Agents of the French and British governments are again in the San Joaquin Valley buying horses for army purposes and thus far two carloads have been shipped from Stockton to Kansas City.

W. H. Waugh of Riverside has joined the ranks of the swine breeders. He has four registered sows and a boar now. As soon as the quarantine is lifted, he will ship out several head of first-class stock from the East.

The Palo Alto Percheron Farm, of which Dr. Jenkins of Stanford is the principal stockholder, has leased 1000 acres of the Stanford ranch and are now very busy building new and replacing old buildings for housing their fine herd of Percherons.

Mrs. Anita Baldwin of Los Angeles county recently purchased a drove of 21 jennets from H. B. Thornberry of Stockton; a short time ago she also secured from Mr.

1st Prize 2-year-old Cal. State Fair 1914.

Segis Pontiac de Kol Burke

The bull that combines the blood of the greatest producing families in Holstein history. He is an outstanding individual, weighing 2200 at just three years of age. His dam RIVERSIDE SADIE DE KOL BURKE, is the heaviest milker that the breed has ever developed. She and six of her sisters have records above 30-lbs. butter in seven days.

A few sons of this sire are now available, some of which are soon ready for service. Several are from half sisters to Aralia De Kol, 30-lbs. butter in seven days at 12½ years, 28090 lbs. milk and 1142 lbs. butter in one year. Prices reasonable.

Pedigrees and Prices on Application.

LOUDEN

BOOK OF BARN PLANS FREE

If You Intend to Build a New Barn or Remodel an Old One You Should Have This Book

Louden Barn Plans is not a catalog of barn equipment. It is a complete and valuable book of reference and instruction on barn construction.

The 96 pages of **Louden Barn Plans** are full of dollar-saving information. It contains 51 representative designs for cow barns, horse barns, combination and general purpose barns, as well as many other designs for hog barns, pens, hay sheds, chicken houses, etc

In addition to the barn plans shown in the book, there are 32 pages devoted to general construction problems, such as concrete work, laying floors, roof construction, ventilation, etc.

When Writing for This Book Please State When You Expect to Build, and How Many Cows and Horses You Want to House

We have designs for nearly 4,000 barns, and our architects will give your letter personal attention if we learn your exact requirements.

Louden Barn Equipment

Louden equipment makes possible a clean, sanitary barn with a minimum of expense. When cows are transferred from dark, dirty barns to Louden barns the milk flow often increases from 15 to 25 per cent, and the labor of caring for the herd is reduced from one-third to one-half. Louden equipment is just as great economy for the man with a half dozen head of stock as for the man with hundreds of animals. The percentage of labor saved is the same.

The Louden Line of Sanitary Steel Equipment Includes:

Litter Carriers	Cow Stalls	Hay Loft Equipment	Sheep Pens
Feed Carriers	Horse Stalls	Cow Pens	Water Basins
Milk Can Carriers	Mangers	Calf Pens	Bird Proof Barn Door Hangers
Harness Carriers	Manger Divisions	Bull Pens	
Hay Carriers	Feed Racks	Hog Pens	Power Hoists and Other Barn Specialties
Feed Trucks

SILOS

Manufacturers' Prices

We sell you our famous **IRON CLAD SILO** direct from the Mill. **IRONCLAD SILOS** are made with many patented features—doors, roof, hoops, and four double cross braces (see picture), one-piece staves up to 50 feet, clear Oregon pine.

Buy your lumber with your silo and get carload freight rate on both, saving 100% in freight. Send us your lumber bills for our delivered f. o. b. figures. Our prices are lowest because we sell direct.

Get your neighbors to use part of carload. We load each bill separately, so you will have no trouble unloading.

See our Silo Exhibit at the Panama-Pacific International Exposition, near the Dairy Barn.

Thornberry two registered jacks for $7,500 each.

Another man has been building up a herd of high class Berkshire hogs: Ray C. Hannan has recently purchased a herd boar of Laurel Champion fame that will do his or any other farm a great credit. He also has a showy gilt which weighed 285 pounds at six months old which shows the good weight and quick growth of his herd. Mr. Hannan's farm is located at Corning.

Alex D. McCarty of the Riverina Farms, Modesto, writes: "The foundation stock for the Riverina Farms herd was purchased in the spring of 1913 from the best herds at Iowa and Minnesota. Our herd boar is Oak Grove Ladd 7th, No. 17469. One of our best sows is Oak Grove Pearl 4th No. 13790. We have just purchased from one of the leading Canadian breeders, Oak Lodge Vim 91st, No. 49141. We will exhibit these individuals at the Panama-Pacific Exposition next month together with a younger herd consisting of seven individuals, five gilts and two boars."

MISCELLANEOUS.

W. W. Russel, who has has been with Dr. Jenkins of Stanford as his ranch foreman, is now planning to go on his own ranch near Gilroy.

E. B. Balis has been appointed manager of the agricultural department of the Whittier State School to succeed W. H. Taylor who is to take charge of the stock farm of Mrs. Anita Baldwin.

A recent commerce report states that on account of stock diseases, there are practically no beef cattle kept in the Philippine Islands; and the whole supply for consumption is imported.

SWINE.

BIG TYPE POLAND CHINAS—I have an extra good lot of strictly high-class young boars from three months to one year old that are fit to head any herd anywhere. Visitors say they are the best they ever saw. They have the large size, the good hams and shoulders, the strong, wide, arched backs, great length and depth of body, plenty of smoothness, mellowness and quality—in fact, they have two good ends and a good middle; are good lookers and money-makers. Their dams are either from Illinois, Iowa, or Missouri, or are from dams whose sire or dam are from these States. These boars are sired by Iowa Wonder, who will weigh over 1000 pounds in show condition. He is a son of A WONDER, the greatest Poland China boar living or dead. These young boars carry the stamp of their sire and will sire pigs that will please you. Satisfaction guaranteed in every particular. I am overstocked. I have boars galore. Will sell them at extremely low bargain prices. No females for sale at present. The book on THE HOG SUPREME—THE POLAND CHINA will be sent to you free for the asking. Yours for the BIG TYPE—the kind that grow faster and larger and have more and better pigs. GEO. A. SMITH, CORCORAN, CAL.

BILLIKEN HERD of pedigreed O. I. C. Swine; weaned pigs of both sexes for immediate shipment; pairs and trios mated, not akin. All from big type stock of extra heavy bone. Immunized against hog cholera, crated and shipped free. Write for descriptive circular and price list. C. B. Cunningham, Mills, Sacramento County, California.

DUROC-JERSEYS — We are offering some very fine young boars, ready for service. Also weanlings, either sex. Immediate delivery. Our prices are always reasonable. W. H. Ginn & Son, Corcoran, Cal.

THE GREAT ADVENTURE.

By Kathleen Green.

He longed for a Great Adventure,
For his life was dull and straight;
No dragons lingered about his path,
No Saracens thronged his gate.
Men past on the road to battle,
Or followed the sounding chase
But his was the struggle for common things
In the dust of the market place.

When the years were long behind him
And he feared to be growing old
He tried to barter adventurous deeds
For the weight of his gathered gold;
But the path was smooth and easy
Well beaten under his tread,
The battles he sought had been long since fought
And all the dragons were dead.

So he shouldered his spear in silence
And turned to his unloved ease,
His shining armor about the walls,
His sword unsoiled at his knees.
And there at last ere his strength was past
In the peace of his fireside
He met with the Great Adventure,
Struck once at the foe and died.

THE POPPY.

"Oh, you beautiful, lovely flower, so full of gold," said wee Robin, as she pressed her lips to a gorgeous poppy she had gathered from a wealth of others just as handsome. "I wish I knew more about you. Flowers are never sad, they even look glad when we pick them, and I think it must hurt them when we break them off of their stems."

Then a faint musical voice came from the poppy, saying:

"Take a sip of the dew in my golden cup and you will sleep and I will tell you all about myself."

Robin obeyed the voice, and presently she felt like she was soaring and everything around her was strangely beautiful. Bells tinkled in her ears, then it was the murmur of a silvery brook singing on its way between banks covered with lacy ferns. It changed into the songs of birds, then everything about her became a beautiful rose-color and she sank down on a downy silken couch and listened to far-away music. A dainty little maid attired in the satiny sheen of golden poppies and with butterflies' wings, flew lightly beside her, and this is the story she told:

"Once I was a little earth-child like you, and I suffered much. My parents took me to a hospital for a good doctor to cure me. On all sides were little white beds filled with boys and girls; some of them were only little babies, and some of them were going to get well and others were only waiting to go to a more beautiful place. Some of them cried all the time with pain, others couldn't sleep and there was nothing that could help them. Then a figure came in a mist of light and said:

" 'I have heard your prayer, little one, to help the suffering of others. If you will consent to go with me into a wonderful land I can create you into a beautiful flower and you will not only make the world rejoice by your beauty but you will hold a secret within your heart which will bring peace and happiness to the sick and cause them to forget their suffering.'

" 'How happy I should be,' I replied.

"Folding me in her arms she soared away and as she went flying over hill and valley, she gave me a reed pipe and bade me blow it, and as I did so, a shower of little black seed fell from it and burled themselves in the ground.

" 'Blow three times as hard as you can and point your reed toward the sun,' she commanded.

"I did as she directed and music as sweet as a lute came from it and a shower of gold dust fell over me and I was no longer an earth-child but a gorgeous poppy, and hidden away in my heart is a costly substance that is taken and made into a medicine and whosoever partakes of it, their pains and aches disappear and it brings rest, sleep and happy dreams."

FASHION TALKS.

The fall and winter styles show that fur is to be used on everything from "head to toe." Some of the shoes have a rim of fur round the top, the hats are fur-trimmed and suits and dresses have their finishing touches of fur collars and cuffs, and even some of the dress-skirts show a fringe of bear fur on the edge that favors somewhat of Pocahontas' time when she roamed the woods in fur-trimmed garments.

In the fur sets of muff and scarf the fox—black, silver, white and red—are most in favor; wolf, skunk, beaver and bear are used as well. Those who have the little old-fashioned round fur muffs that have been out of style for several seasons can resurrect them and shake out the moth balls, for fashion's edict has brought them into favor again. The animal style which is so much in vogue now in the scarfs is made of the whole skin of the animal with the head at one end, the tail at the other and the paws used as a fastening strap.

One of the scarfs I have seen recently was made of heavy black satin about two and a half yards long, about six inches wide and lined with lavender brocaded satin. Shadow lace was set in four inches from the ends showing the lavender through, and the ends were finished with black knotted silk fringe. A pretty and most becoming scarf.

The long evenings are drawing near and their advent always heralds the winter season parties. Exquisite party dresses are made in three tier scalloped effects, dancing length, in the delicate evening shades of crepe, or any other dainty fabric. High crushed girdles of same material and low neck and short sleeves lace-trimmed.

Apoplexy stands near the top as a cause of death among old people After passing middle age it is well for people of apoplectic tendency to watch digestion carefully and to avoid all intemperance in eating and drinking.

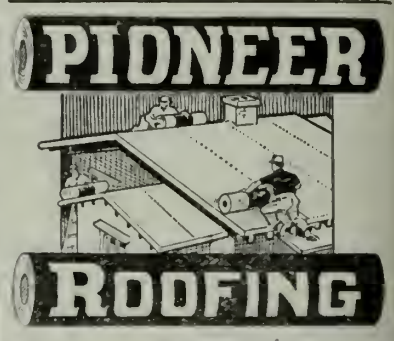
Lady Mackworth, a Lusitania survivor, is now managing England's coal trust of which her father is at the head. Her father, D. A. Thomas, is now in the United States on business for the British government, and she has undertaken the giant task in his absence, and yet some people claim that women have no business ability.

BULBS FOR THE FLOWER GARDEN.

[By Alfred W. Hincks.]

There has been considerable inquiry this year as to whether there would be a supply of bulbs to plant. The seedsmen have not known until recently whether or not Holland and France would be able to supply the bulbs which usually come from those countries. The bulbs from Holland and France have now arrived, and may be purchased from any of the seed stores.

In planting bulbs there are several considerations of very different sorts to be thought of: The first is time—you very likely want a succession of flowers in your garden beginning with those flowers which bloom in mid-winter and taking in those which last until summer. A second consideration is height; short varieties look best near walks and tall varieties in the background. A third is the color; a fourth is the fragrance; then there is, too, the location, the amount of space, the price and, over all, plant those sorts which you really like.



These bulbs bloom early and should be planted early: Narcissus, Paper White; Freesias; French Roman Hyacinths; these all may be had in bloom in January if planted in October. It so happens that all are deliciously fragrant.

Freesias have an exquisite perfume, and once planted live for years. They have grass-like foliage and make good borders, the flower stems will be about six inches long the first year, unless they are drawn up by keeping the sides dark, such as putting a board on each side of the row. The stems may be had eighteen inches long. Another bulb which should be planted early, not because it flowers in winter, but because the bulbs do not keep, is the handsome St. Joseph Lily—the hardiest of white lilies for the garden. This lily should be set out in September and will bloom in May—most lilies bloom two months later than this.

After the bulbs mentioned above, these sorts come in bloom: Blue and White Flag Iris if the roots have been planted two years, otherwise they flower in May. Crocus, Scillas, Snowdrops and Triteleya flower in March. Hyacinths, the first of April; Daffodils during all of April, also Lily-of-the-Valley. Late Long-Stem Tulips during May, also Spanish Iris, Anemones, Ixias, Ranunculus, Poeticus Narcissus, Sparaxis, English Iris during June, also early flowering Gladiolus, Incarvillea, Iris Gigantea, Germania and Susiana. July is the month for Lilies, Calochortus, late Gladiolus, Hyacinthus Candicans, Bleeding Heart and Tuberoses. Montbretias are also in flower and until the end of summer. Here certainly is a long list to choose from. A great many people think of only Hyacinths, Daffodils and Tulips when "bulbs" are spoken of, but some of the lesser-known sorts mentioned above are deserving of a very much wider planting.

One great thing about bulbs is that they have the flower bud and stem all ready made and stored inside of their thick covering, just waiting to be sent up into the most glorious flowers. The covering, too, is a storehouse of plant food ready to give a good start to the early growth. This is why bulbs are able to bloom early in the season and why there are few failures — the plant is strong to start with. If you plant bulbs you may look for good results almost without question; and if you can leave the bulbs in the ground just where they are and let the bed be dry after they have flowered, you may expect even better flowers the following year. If you cannot let the bed dry up, then leave the bulbs in four or six weeks after flowering, when the leaves will dry and the bulbs may be safely taken up and stored in dry earth and kept until fall, when they can be replanted. These sorts can be kept year after year in any ordinary flower bed; Daffodils, Jonquils, Agapanthus, Montbretia, Flag Iris or German Iris.

When planting do not put manure or fertilizer into the hole, but if the soil is heavy put a little sand around each bulb. A month before

—was chosen to cover the big exhibit palaces at the Exposition, because of its reliability and genuine worth. Pioneer Roofing has stood every test of heat, cold, rain and wind for more than 27 years; is economical at first and at last; needs no paint or repairs. It is sold under a guarantee that really guarantees.

Funsten Pays Cash for FURS

Largest in the World in Our Line

Prices Higher This Year

Big Money in Trapping skunk, coon, mink, muskrat, fox, etc. You can trap furs—we teach you how. **Funsten Animal Baits** guaranteed to increase your catch. $1.00 a can postpaid. The **Funsten Perfect Smoker** "smokes 'em out." Price $1.50; parcel post 30 cents extra. Both guaranteed satisfactory or money back. **Traps at factory prices. FREE** 3 books in one (trapper's guide—game laws—supply catalog). Tells how, when, where to trap, how to remove, prepare and ship skins. Will send you fur market reports, shipping tags and big book **FREE**—Write today. We tan hides and furs for coats, robes and garments.

FUNSTEN BROS. & CO., 761 Funsten Bldg., ST. LOUIS, MO.

planting bulbs a good enriching of well-rotted manure, thoroughly dug into the bed, will be beneficial.

Where bulbs are set in beds and wanted to bloom all at one time, like Hyacinths, be sure to set the bulbs all at an even depth. If your flower bed is of heavy soil and wet, place the bulbs nearer to the surface than if the soil is light or sandy. The following table gives the correct depth to plant, and is measured to the top of the bulb:

Hyacinths—Plant 4 inches deep and 7-8 inches apart.

Daffodils—Plant 3 inches deep and 6-7 inches apart.

Jonquils—Plant 1 inch deep and 4 inches apart.

Tulips (long-stem) — Plant 2 inches deep and 6-7 inches apart.

Tulips (early bedding)—Plant 2 inches deep and 4 inches apart.

Lilies—Plant 5 inches deep and 18 inches apart.

Anemones—Plant 1½ inches deep and 4-5 inches apart.

Calochortus—Plant 2 inches deep and 3 inches apart.

Crocus—Plant 1 inch deep and 2 inches apart.

Freesias—Plant 1 inch deep and 3 inches apart.

Gladiolus (early flowering)—Plant 1½ inches deep and 5 inches apart.

Ixias—Plant 1 inch deep and 4 inches apart.

Ranunculus—Plant 1 inch deep and 5 inches apart, prongs pointing downward.

Old Dutch Breeder Tulips are in greatest demand just now. These have mahogany tones and brownish tints, which a few years ago were not largely planted; but now every one wants these "art colors" in his garden. The flowers are of magnificent size, and are among the most handsome Tulips. As companions to these are the Darwin Tulips and Long-stemmed Tulips. Darwins have handsome reds and claret tones, also pinks and carmines, and even a good lilac—Rev. Ewbank.

There are a number of fine Daffodils, which are much superior to any of the old sorts. King Alfred, shown in the Holland section of the Panama-Pacific display, is an especially fine Daffodil, with a very large trumpet elegantly frilled and a magnificent flower. Great improvements have been made in Daffodils and Crown Narcissus, and some of the newer sorts are in wonderful bright colors and in large size.

Early planting makes strong plants and fine, large flowers. October and November are the months to plant bulbs, and the earlier they are in the ground the better. Some summer-flowering bulbs do not ripen until late, but these are the exceptions and not the rule. Plant early.

Situations are preferable for planting bulbs where they get sun part of the day. Daffodils, Hyacinths and Tulips do well in partial shade. The finest English Iris I have ever seen were raised on the north side of a house and under the water spout from the roof. Japanese Iris needs a real wet place. Lily-of-the-Valley requires a shaded place and a mulching to keep the soil always moist. Remember to water regularly and freely all bulbs which are coming into bloom; then is the time they require a good supply. Manure water made by soaking rotted manure in water will help at that time. After flowering stop the water on bulbs and let the leaves die back, but do not cut them off while green, otherwise the bulb will not flower next year.

SCHOOL NOTES.

The Women's Civic Club of Joplin, Mo., besides relieving the suffering of the poor, have kept 150 children in school, seeing that they had the necessary clothing and food as well as the school books.

The girls at Bates College, Oregon, have long wished for a student government like that enjoyed by the boys, and this year by permission of the faculty under the supervision of Dean Buswell have drawn up a constitution. There will be no radical changes in the rules and regulations that may have been in vogue in the past, but the girls themselves will be more in charge of their own affairs. The plan is really the adoption of an Honor System as the girls are bound to report any infringement of their rules to a house president who is elected by the girls in the various dormitories. There is also an executive committee corresponding to the Student Council of the men. This committee is a medium in all affairs between the faculty and the girls of the college, and will be a deciding factor in matters that the girls may bring before it in regard to their social life and regular college work.

The textile school at Reichenberg, north Bohemia, years ago experimented in spinning the fiber of the common nettle and was successful. Owing to the shortage of cotton, the textile mills in Austria and Germany are now making use of the nettle fiber in place of American cotton.

The Chinese quarter of San Francisco is justly proud of the new Oriental school on Washington street which was dedicated by Mayor Rolph and members of the School Board on October 20th. The building is a modern $100,000 structure, with twelve classrooms, assembly hall, roof garden and open air classrooms. More than 400 pupils are enrolled.

Convicts at Folsom prison are studying to be teachers, according to announcement made by the university extension division of the University of California. Fourteen men have signed up for the normal course. About 500 prisoners are now enrolled in fifty-three different classes of the university extension course.

FROM VAUDEVILLE.

(Wilson Brothers.)

"I got arrested once—der chudge fined me ten dollars."

"Vot vos de charge?"

"Der vos no charge. He did it for nothing."

"No, no. I mean how did they come to arrest you?"

"In a patrol vaggon."

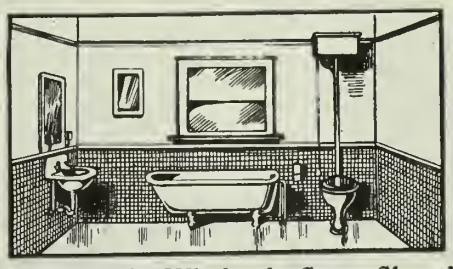
"Did you have der money to pay der fine vid?"

"No, I asked him for a little time."

"Und did der chudge gif it to you?"

"Oh, yes; he gif me thirty days."

THAT'S DIFFERENT.



Nurse—Tommy, it is naughty to play soldiers on Sunday.

Tommy—Oh, that is all right. It's the Salvation Army.—Chicago News.

The delta of the Nile was the first mentioned in history. It took its name from its shape, bearing in this particular an exact resemblance to the Greek letter delta, or D.

In India the proportion of literate females among Muslims is as low as only 3 per 1,000; but in Burma it is as high as 77 per 1,000.

The Markets.

(Unless otherwise noted, prices quoted are f. o. b. San Francisco.)

San Francisco, Oct. 27, 1915.

WHEAT.

The grain market in general is very uncertain at present, as the upward tendency in the East has been checked by new peace rumors, and the market is unusually sensitive to such influences. Locally values are unchanged, and trading at the moment is rather quiet, though so far there is no pressure to sell.

(Wholesale prices, S. F.)

Cal. Club, ctl.	$1.65 @1.67½
Northern Bluestem	1.70 @1.75
Northern Club	1.65 @1.70
Northern Red	1.60 @1.65

BARLEY.

Spot buying, which dropped off before the election, has not yet picked up much. Trading in futures has been fairly active, and the market is decidedly firm, but without any quotable advance.

Shipping, ctl.	$1.25 @1.30
Choice Feed, ctl.	1.22½ @1.27½

OATS.

No further advance is noted, and aside from a substantial movement of seed grades, business is limited to small jobbing operations.

Black, ctl.	$1.85 @2.00
Red Feed	1.30 @1.35
Red Seed	1.50 @1.75
White	1.40 @1.42½

CORN.

Business here is decidedly quiet, with only moderate consuming demands through the country and little disposition among large buyers to speculate, though the Eastern market is firm.

Eastern yellow, ctl.	$1.65 @1.70
Milo Maize	1.45 @1.55
Kaffir	1.55 @1.65

BEANS.

Further sharp advances are noted in several varieties this week, with a very strong demand in most lines. Shipments are large, and while there is still a great deal of stock on the Coast, the outlook is firm for most descriptions. White varieties, which are short in the East, are especially strong, and pinks, reds, bayos and cranberry beans all participate in the upward movement. Blackeyes and limas, of which the production is heavy, are only holding their own at present.

(On wharf, San Francisco.)

Bayos, per ctl.	$4.70 @4.80
Blackeyes	2.90 @3.00
Cranberry Beans	4.75 @4.90
Horse Beans	2.25 @3.00
Small Whites (south)	4.90 @5.00
Large Whites	4.90 @5.05
Pink	3.80 @3.90
Limas (south)	4.50 @4.60
Red Kidney	5.00 @5.25
Mexican Reds	4.25 @4.50

SEEDS.

The advancing season is bringing out a good deal more demand for all descriptions, but the heavy movement is still waiting for a good rain. Values show little change.

Alfalfa, per lb.	17 @18 c
Melilotus Alba	30 c
Melilotus, Indica	6 c
Bur Clover	11 c
Oregon Vetch	4¼ @ 4½ c
Soy Beans	6 c
Canada Peas	5¼ @ 6 c
Sudan Grass	40 c

HAY.

Hay is coming in at about the same rate as for several weeks past, most of it now being from the warehouses, as the fields are cleaned up. Some trouble is reported due to car shortage, which threatens to become more serious, and may cause some shortage in the local market. Values are very firm, though the old prices are still in force. Fancy wheat and red oat hay is very scarce and brings as high as $18 in light bales, most of the stock arriving grading as No. 1. There is an active demand in the country, as well as for export.

No. 1 Wheat	$12.00 @15.00
do No. 2	10.00 @11.50
Tame Oats	10.00 @15.00
Wild Oats	8.00 @10.50
Alfalfa	10.00 @14.00
Stock Hay	6.00 @ 8.00
Straw, per bale	.25 @ .40

FEEDSTUFFS.

The only change in this department is a slight drop in cracked corn. Most other lines are steady, with a fair demand.

(Wholesale prices per ton, carload lots, San Francisco.)

Beet Pulp, per ton	$20.00 @21.00
Alfalfa Meal. ton	17.00 @20.00
Alfalfa Molasses Meal per ton	20.00 @21.00
Bran, per ton	26.00 @27.00
Oilcake Meal	38.00 @39.00
Cocoanut Cake or Meal	23.00 @25.00
Cracked Corn	40.00 @41.00
Middlings	32.00 @33.00
Rolled Barley	26.50 @27.50
Rolled Oats	29.50 @31.00
Digester Tankage	45.00

VEGETABLES.

Prices in general have dropped off again this week. Offerings of most varieties are comparatively light, but the demand likewise has been limited for the last few days, and current arrivals do not clean up readily. Tomatoes are doing a little better, with fancy stock selling up to 60c.; and the best lots of eggplant bring an advance. String and lima beans are rather easy, and peppers have dropped sharply. Little green corn is coming in, but it is not very attractive, and with a very limited demand the price is low. Celery and artichokes are appearing more freely again, and prices have declined from last week's high level.

(Wholesale Prices, San Francisco.)

String Beans	2 @ 3½c
Lima Beans	2@ 3 c
Peppers, bell, box	35 @50 c
Tomatoes, lug	35 @50 c
Cucumbers, lug	35 @60 c
Summer Squash, lug	30 @40 c
Green corn sack	.75 @1.50
Okra, small boxes	40 @65 c
Eggplant, lug	40 @65 c
Celery, doz.	15 @25 c
Artichokes, doz.	20 @35 c

POTATOES AND ONIONS.

Prices in this line show no further change. Potatoes are coming in freely and find about the usual demand for this season, while onions continue firm, with a good outside demand which has already relieved the pressure of excessive supplies. Garlic is very scarce, and current supplies are coming from China.

Salinas Burbanks	$1.40 @1.55
Delta Burbanks	.90 @1.10
Sweet Potatoes, ctl.	1.10 @1.25
Onions, ctl.	.90 @1.00
Garlic, per lb. new	.08 @ .10

POULTRY.

The few changes noted are downward. The demand this week has been light, and while shipments of California chickens are not heavy, there is a good deal coming from the East. Young turkeys are more plentiful and lower, and extra hens have have been shaded a little. Young ducks show more firmness.

Turkeys, old, lb	18 @20 c
do, young	22 @23 c
Broilers, 15 lbs to doz and less, lb	30 c
do, over 15 lbs to doz	22 @24 c
Fryers	17 @18 c
Hens, extra, per lb	15 @16 c
Small Hens, per lb	13 @14 c
Smooth Young Roosters per lb	18 c
Squabs, per doz	2.00 @4.00
Geese, per pair	2.00 @2.50
Ducks, young, lb	14 @15 c
Old	12 @13 c
Belgian Hares	8 @ 9 c

BUTTER.

Prices show no change whatever from last week. Prime firsts advanced half a cent Saturday, but went back again with liberal offerings the first of the week, and there is nothing to indicate much change for the immediate future.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	27	27	27	27	—	27
Prime Firsts	24½	24½	25	24½	—	24½
Firsts	24	24	24	24	—	24

EGGS.

Extras quickly recovered from the slight decline noted last week, but there has been no further advance. Pullets, however, are higher, as the present price of extras has brought them into more demand; and as offerings are running rather light, further advances are anticipated.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	48½	48½	48	48	—	48½
Sel. Pullets	38½	38½	39	39½	—	39½

CHEESE.

All grades continue firm, though there is little change except for a slight advance in fancy flats. The inside figure on Monterey cheese is lower, but most business is done at the old range.

Y. A.'s, fancy	18 c
Fancy Calif. flats, per lb	17 c
Calif. Cheddar flats, per lb	16½c
Monterey Cheese	15 @17 c

LOS ANGELES DAIRY PRICES.

Eggs	42	42	42	42	42	43
Cheese	14½	14½	14½	14½	14½	14½

DECIDUOUS FRUITS.

With the fag end of the season at hand, the fruit market is dragging a little. With good weather, many varieties are still in fair supply, but the general quality is nothing extra and the demand is slow. A good many cranberries are moving now, Eastern stock bringing up to $9.25 per barrel. Huckleberries are less plentiful, while strawberries are lower, with little demand. Figs are easy, with little attractive stock offered. Most of the Bartlett pears are taken from cold storage, while winter nellis are in good supply. Apples are firm, with a good shipping movement, and a great deal of northern stock is coming in. Pomegranates and persimmons are lower, with increasing supplies and only a light demand. Watermelons are about cleaned up, and offerings of cantaloupes are limited; and casabas, though plentiful, bring better prices. Except for muscats, grapes show less strength, though supplies are not very large.

(Sales in S. F. Market.)

Cranberries, Eastern, bbl.	$8.25 @925
Huckleberries, lb	5 @ 8 c
Strawberries, chest	4.00 @6.50
Figs,, bx., double layer	45 @75c

Tokay, lug	75 @90 c
Muscats, lug	1.00 @1.25
Black, lug	.35 @ .65
Cornichon	.85 @1.00

DRIED FRUITS.

According to some of the local packers, the dried fruit market is in better shape than they expected, the demand in Eastern and foreign markets holding up remarkably well for this time of year. This, they say, is true of all lines. Apples are firm at the old figures, in sympathy with the Eastern market, though the movement in this line is not especially heavy. Apricots hold up well, being all out of growers' hands, and little is held by packers. Figs also are pretty well cleaned up. The greatest improvement is noted in prunes, which have stiffened up remarkably in the last week; though reports as to the reason for this differ. In some quarters it is said that certain interests are short for their October shipments, and that the price will drop after the end of the month; but with estimates of the pack considerably smaller than a few weeks ago, and a stronger demand in the East, there is at least a possibility of further advances. Peaches still receive very little attention, and prices are barely steady. The New York Journal of Commerce says:

"With all stocks of California Prunes absorbed as quickly as they reach New York, operators report that the market continues to hold a very active tendency. The available supplies received are said to fall far short of the demand. Future Coast prunes, are firmly held. The general quotation appears to be fairly well established at a 4½c bulk basis for stocks of straight 40s for either October or November shipment. Offerings are in evidence on the part of Coast packers for 40s to 70s at a 4c bulk basis f. o. b. common Coast shipping points.

Stocks of 1915 pack California Apricots, which have been very closely controlled and strongly held, are quoted at 8⅞c for equal quantities of choice, extra choice and fancy Southern stock f. o. b. common shipping points. The whole tone of the future apricot market appears to be very firm, with growers reported to be entirely sold out to the packers.

Heavy European inquiry continues to be received in the New York market for California Raisins both for spot stocks and for supplies for future shipment from the 1915 pack, according to well-posted operators. One sale is reported consisting of 100 cars of 1915 pack California raisins for Europe."

(Prices to growers.)

Peaches	2½ @3 c
Pears	5 @6 c

CITRUS FRUITS.

The season for citrus fruits is closing with good prices, so much so that the average for the whole year will be much better than hoped for three months ago. Valencia oranges are in good demand and lemons are well cleaned up. Prices for lemons are from $2.60 to $3 per box f. o. b. California. On the New York citrus auction, Monday, Oct. 25th, valencias averaged from $6.55 down to $2.15 per box. Lemons averaged from $2.15 to $3.90 per box. At Chicago the same day, prices averaged from $5.25 to $5.75 per box, and lemons brought from $2.75 to $3.75 per box.

In San Francisco the new crop grapefruit has not yet appeared, and prices have again been advanced sharply. Arrivals of oranges are not especially large, but are more than the market will absorb readily at present, and prices are lower. Lemons are steady as last quoted.

(Wholesale prices, San Francisco.)

Oranges, Valencias, bx	$3.00 @3.75
Grapefruit, seedless, bx.	4.50 @5.00
Fancy	5.00 @6.00
Lemons, box	2.00 @3.50

NUTS.

Almonds are moving gradually, but there are still a good many of most varieties in the state, and prices show no particular strength. Packers are rejecting all they can of the crops contracted for early in the season, and their present offers are considerably below the Exchange figures; while independent growers are making efforts to dispose of many small lots. There has been a large movement of walnuts so far, and it is too early to tell how much French stock will be available.

(Exchange prices, f. o. b. common shipping point.)

Almonds (1915):	
Nonpareil	15 c

WOOL.

Buyers have been taking more interest for the last week, and some good sizel lots of fall wool have changed hands in various parts of the state. Recent sales include some first class clips in both the Red Bluff and southern mountain districts. There is still a great deal of spring wool unsold.

Spring clip:	
Humboldt and Mendocino	18 @ 23 c
Sacramento Valley, lb	15 @ 16 c
Southern, year's staple	13 @ 14 c
Six months	10 @ 12½c
Fall clip:

Northern "	9 @ 12½c
Southern Mountain, free	13 @ 14 c
Tehama Co., free	12 @ 13½c

HORSES.

Nothing new has developed in the local trade this week, as no large shipments have arrived and business is mostly of a small retail nature. Buyers, however, are taking some interest in medium to heavy stock, and better market is expected; while there is a very fair demand in most parts of the country for good serviceable work stock.

Approximate values at San Francisco, based on auction sales.)

Drafters, 1700 lbs and up	$200 @ 250

SPECIAL DECIDUOUS MARKET REPORT.

By J. L. Nagle.

Sacramento, Cal., Oct. 25, 1915.

This week's shipments will show a decided falling off in the output of Tokays and Malagas. To date the total tonage of Tokays is in excess of last season by about three hundred cars, although it was reported early in the season that the crop of Tokays was considerably lighter than last season. This was true in some districts, but not in the Lodi section. The records show that last year but 5 per cent of the Tokay crop was marketed East, the balance going to the wineries.

The keg Emperor season is practically closed in so far as packing is concerned and most of the cars have been shipped East. Some shippers are also experimenting by shipping Emperors and Malagas in lugs for Eastern storage, to be sold at auction or to the trade at private sale for the mid-winter holidays.

It is estimated that there will be from five hundred to six hundred cars of crate Emperors which will be marketed during the next four or five weeks.

Considerable anxiety is being shown by the Spanish packers of Almeria Grapes on account of the increasing popularity by the Eastern buyers for the California Keg Emperor and inquiries have already been received in this country from Spain regarding the use of redwood sawdust as being superior to cork dust. If special care attends the packing of Emperors in kegs and the Eastern trade can be assured that nothing but the best is put up in this manner, it is only a question of a short time when the keg Emperors will supplant in a great measure the now popular Almeria.

The following prices have ruled for the week:

New York.—Malaga Grapes, averaged 98c.; Tokay, $1.07; Cornichon, $1.15; Muscat, $1.04; Winter Nellis Pears, $2.68: B. Clairgeau, $2.30.

Chicago.—Tokay Grapes, averaged 95c.; Malaga, $1.02; Cornichon, $1.09; Muscat, 99c.

Total shipments of deciduous fruits to date 14,555 cars as against 14,656 to the same date last year.

Publisher's Dep't.

This edition is devoted largely to stock, in order that we could give a full account of the meetings of cattle men, and judging of the live stock at the Exposition. In this connection Prof. Wickson gives us the second of the series of articles—this one covering live stock in California. In this article our editor gives some figures, some speculation, a little philosophy and much common sense, intermixed with a little dry humor, all of which makes a very interesting and instructive article. Read it carefully and then look for another one from his pen in about a month on a different subject.

Our edition this week, as it has been for several weeks past, is in excess of 23,000 copies. During the past week we added 233 new paid subscribers to our list. Next week we expect to announce a gain of more than 250 new subscribers. Field men take notice.

C. W. Hansen of San Mateo has entered eleven Buff Leghorns in the Panama-Pacific poultry show.

AN HONEST HOG BOOK.

In a personal letter to W. S. Guilford, the author, W. G. Stimmel, superintendent of the Vina ranch, says some very nice things about the "California Hog Book." We quote from Mr. Stimmel's letter:

"I think you are to be congratulated on your unusual honesty in giving credit to your sources of material. As to the book, I believe it will take place alongside Dean Wickson's 'California Vegetables' and 'California Fruits.' This Hog Book will be of great value to all of us as it is a clearing house of hog information gathered from men successful in the business. I find in the experience of others as related in your work a whole flock of ideas to apply to our own already successful work—ideas that will make our hog raising still more successful. The only complaint I have is that I now have to buy two more copies. W. G. Stimmel.
Vina.

State University investigation has given direct contradiction to the prevalent belief among ranchers that exclusive feeding of alfalfa to dairy milch cows tends to produce sterility. According to Professor C. H. Haring of the veterinary science division, long and careful investigation has found no evidence to suspect alfalfa of having anything to do with sterility. Professor Haring declares that from his observations cattle fed exclusively on alfalfa showed less sterility than those fed partly with this fodder or those receiving none of it.

Another boon to the alfalfa grower is a discovery by the university of a way to hoodwink cows into greedily eating weedy alfalfa. The University tried the experiment of putting the first cutting of an alfalfa field into a silo in April and feeding it during July and August to 107 range steers, together with a good cutting of second alfalfa hay, and also with rolled barley. This silage was eaten with relish.

On October 10 a fire destroyed a large prune shed on the Robert Durham property east of Durham containing 25 tons of prunes, practically the entire crop of this season.

Conditions at the present time indicate that the 1915 deciduous fruit season in the San Joaquin Valley will not be ended until the latter part of November, according to local shippers.

J. H. Hale—The Great Commercial Peach For California

—A peach so solid and firm it ships thousands of miles.

—A peach that keeps for days after reaching market.

—A peach of immense size, many weighing a pound each.

—A peach dense and solid, almost like a cling, yet perfect freestone.

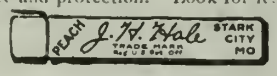
—A peach that sells for $2.00 to $2.50 per bushel, when Elberta and ordinary varieties are bringing $1.00 to $1.50.

—A peach that paid Mr. Hale at the rate of $1420 per acre.

—A peach of highest quality, flavor, brilliant coloring.

—A peach that makes money no matter what markets are.

—A peach that means millions of dollars to California growers.



The J. H. Hale

"A peach that would go to European markets from California."—Parker Earle, Pasadena, Cal.

Read the Whole Story! Send for Free Book Today!

Be Sure of Genuine J. H. Hale Peach Trees

Beware of fakers offering so-called "J. H. Hale" trees, or old "Hale's Early," of no commercial value. There is only **one genuine** J. H. Hale peach, grown by us under exclusive contract with Mr. Hale. Trade-marked tag with Mr. Hale's personal signature is your guarantee and protection. Look for it!

Read how Mr. Hale originated this great peach—how he tested it for 12 years—how he shipped it in a barrel like apples—how he got $380 MORE per car for J. H. Hales than for Elbertas. Find out all about this wonder peach, its size, beauty, yield, quality, how it sold at highest prices in a season of glutted markets—how it will make money for **you.** Hundreds of acres are being set out on the Pacific Coast. Don't wait. Write for the FREE 160 page Book today!

The Early Rose paid Mr. Hale $3.00 to $3.50 per crate—the highest price of any peaches on the market for a season of over two weeks.

The Early Rose—The Best of all Early Peaches

Its exceptional quality and flavor, deep, rich rosy color and marked peachy fragrance sold carload after carload on the New York markets in June at 50% to 60% higher than other varieties.

The Early Rose is to early peaches what the J. H. Hale is to commercial peaches—the best quality and highest profit-maker in its class. We are introducing the Early Rose to growers who are looking for an unusually early peach with exceptional quality, and one that is an extra good shipper. Our supply is limited. Write for catalog at once.

Delicious Apple—Another Money-Maker

Everybody knows Delicious—and the profits that it brings. It is the great national dessert apple—beautiful in appearance, dark red striped, firm, crisp, tender flesh, and with a surpassing flavor, mild, luscious and tempting. A plateful of Delicious will perfume a whole room. Delicious is a splendid keeper and shipper—stands lots of handling—brings more per box than most apples do per barrel. Succeeds in lower elevations in California where other apples fail. You can now get genuine Delicious trees direct from William P. Stark at prices you usually pay for ordinary varieties. Write for low growers' prices.

Delicious reaches high colored perfection on the Pacific Coast.

Thousands of Pacific Coast Growers Buy William P. Stark Trees Yearly

We have customers in every Western state. They buy from us year after year, because they get better developed, thriftier, more vigorous trees, with heavy, dense, wide-spreading root-systems such as they cannot get anywhere else. These trees establish themselves quickly and make an amazingly rapid, healthy growth. The William P. Stark "3,000 Mile Package" ensures safe delivery to any shipping station in the world. And best of all, by buying direct from the nursery you cut out all agents' and salesmen's salaries and commissions. You save from 30% to 50% on your order.

Send For New 160 Page Book FREE! The handiest reference book for fruit growers ever published. Describes best apple, peach, pear, plum, cherry, grape, bush-fruits, roses, strawberries, etc. Prices in plain, bold figures. **Same low growers' prices to all.** Write today.

Citrus Frost Insurance.

All citrus orchards, even when located in "frostless" sections, need frost protection. Local topography permitting air-drainage reduces the cost of smudging, but is not dependable.

[Written for Pacific Rural Press.]

FROSTLESS citrus orchards have been frosted at the same time that exposed orchards have escaped. Until we are able to control the winds and the somersaults of windless air, none of our citrus orchards will ever be free from frost danger. Strictly speaking, frost itself is a safeguard. Low temperature is the destructive force, increased by rapid thawing afterward.

Over in Utah, as a rule, they have given up frost fighting because of the dryness of air and the frequency of wind. They grow fruit in places where it survives the frosts. In some cases, our citrus orchards might well be abandoned because excessive frost fighting increases cost of production until profits on present markets are all gone. At any rate this is to be considered in selecting locations.

Since still air cools mostly by contact with cooled objects, lowest temperatures are found next to the ground. Since cold air is heavier than the rest, it slides down hillsides and through draws in currents which collect at low points in lakes of ever-increasing depth. Here under ordinary conditions, is the greatest danger point. Cost of production will be lessened by selecting locations from which such currents can drain away.

Sometimes, as in 1912-13, the currents assume titanic proportions so that they envelope mountains and flow over them, or may be drawn across great sections of country by the rising of warm air at some place far away. Local topography does not help much then, and the cold must be kept away from orchards or the crops and often the trees will be lost.

ORANGE ORCHARDS NEAR PENRYN AND POMONA.
In fighting frost, the pots are set between the rows; in summer they are either stacked or set under the trees.

Does Frost Fighting Pay.—Whether it will pay to insure against such loss or to grin and bear it, or to replant in less dangerous locations, will depend on the value of the crop and trees insured, the cost of the insurance, and the probable frequency of its need.

Little need be said about the frequency of danger except that no insurance company is known that will issue a policy against frost. The Citrus Protective League finds the average annual cost of frost fighting $20 to $40 per acre. It was much higher during the big freeze; but it was still higher for those who fired awhile and had to give up for lack of adequate fuel and equipment. One company had $109 per acre invested in equipment and oil. They thought so well of the proposition that they now have $182 per acre invested in spite of the $33 annual interest-and-depreciation charge which goes on whether the frost comes or not. The actual expense of frost fighting, including labor, fuel, interest, and depreciation, was about $110 per acre in 1912-13. It is worth while to spend $110, to save the trees themselves, in addition to the profits on the crop, which in this case paid fair dividends to the stockholders after paying a cost of production f. o. b. cars of $500 per acre. The labor cost practically as much as all other charges, while the fuel used cost half of the remainder.

Organization Reduces Cost.—Where large areas of citrus orchards are close together both the labor and fuel cost can be greatly reduced, with a most important increase in efficiency. The freeze of 1912 had stimulated the organization of districts in which thermometers and psychrometers were located at significant points. Men on motorcycles patrolled definite circuits and their reports to the central officer of the district were charted on a large map. As each report came in, the rapidity of temperature drop was noted and when time came to fire in any district, telephone central gave each grower a prearranged signal. Where the growers of a district are unanimously in on such a proposition, there is manifestly more protection afforded to each, at far less cost for labor and fuel, but with more dependable notice of the necessary time of firing and extinguishing fires.

These frost fighting districts have been greatly increased in number and individual strength since 1913, and they afford a most efficient means of distributing the general forecasts of the U. S. Weather Bureau. To make these forecasts requires a knowledge of temperature and atmospheric conditions for a radius of thousands of miles. Reports of these conditions are sent to the Weather Bureau office in San Francisco where they are interpreted and wired to the citrus districts to be distributed locally by phone, mail or otherwise.

When to Fire.—The time of firing depends on rapidity of temperature drop and on humidity of the air. With other conditions equal, fires should be started at 34 degrees or above when the drop is rapid, while 31 degrees is otherwise considered safe. But humidity

Los Angeles	0	0	.85	92	50
San Diego	0	0	.54	78	52

*To October 31st.

THE WEEK

Two notable and significant things have transpired since we wrote in this place a week ago: prunes have reached a basic price of 5c per pound, and figures have become available to show that the outward movement of California cured fruits has amounted to more or less of a clean-up of holdover supplies and has bitten sharply into the crops of the current year. The figures of the movement of dried peaches, given on another page of this issue, should be carefully studied: they are themselves more eloquent than anything which can be written about them, and our claim is that they could have been foreseen by any unprejudiced person with half a prophetic eye. We had about that much prophecy in us when we wrote in these columns, on May 29th last, as follows:

"If one listened too long to the croaking of the buyers, he would surely be apt to think that California might have to eat up all the food products she makes this year. It is the most utter nonsense. Half the world off its job and hungry! There are not enough embargoes nor submarines nor prize courts or other obstructions in the world to keep hungry men or nations from getting food. Hunger draws food just as a magnet draws steel—unceasingly, relentlessly, and with a surprising degree of efficiency; and, conversely, food draws gold in the same way. When you are told that California products cannot be moved because of the war, these facts may be worth remembering. If California grows plenty of things good to eat, they will get out all right."

If one wishes to see just how this prophecy has worked out, and how quickly, too, let him read the figures on another page. It surely works better than sun-spot and quadrature rain prophecies, and it works because it has more common sense in it. The psychology of bear movements in food prices is that they endeavor to throw people off their common sense, and they generally try to do this by shouting a lot of things which are not facts. The producer is very likely to be knocked leary by this shouting if he feels his loneliness and dependence, and that is the bear's opportunity. If the producer feels the shoulder-touch and hears the voices of his associates in the same line, he learns to laugh at many things which he is apt to weep over when alone. If peach-growers had come together in 1914 as they were urged to do, and as they are now doing in 1915, the funk of last spring would have been made impossible, and how much money and how many heart-aches would have been saved thereby. The peach-depression should never have occurred and never would have occurred if peach growers had been ready to meet it by associated courage, capital and credit.

The Lesson from the Prune-Growers.

What a strong side-light is thrown upon the funk in peaches by the achievement of the prune-growers committee! The same game was projected on the prune-growers as on the peach-growers. It was a drive of speculators all around, and legitimate enough from a commercial point of view. We are not condemning it at all. If we had had money and smartness enough we might have been in it ourselves with a perfectly quiet commercial conscience. A buyer has of course no right to lie, but he has a right to express an opinion that the world's trade would continue demoralized, that the mighty deep would be full of monsters fiercer than the ancients could dream of, and that people on shore would be content to gnaw a bone and not try to get delicious dried peaches and prunes. And if the buyer pours these views into the ears of the seller, with groanings which cannot be uttered, it is surely commercial ethics with at least the sanction of antiquity in the old proverb and common law principle "let the buyer beware"; and, as the logicians might say, "the converse is also true: let the seller beware"—which is the aspect producers have to look out for. What a fine lot of money prune-buyers would have made if they had been able to make their bear-game work and filled themselves with prunes at the prices they desired to pay! They got enough probably and will make all the money they desire for their astuteness. We are not begrudging them that, although it is painful to think of those of little faith who needed more money than they got this year. The ones to be blamed are the growers who allow themselves to be stampeded and roped singly by those who explode the munitions of the buyers' craft for the very purpose of blinding and frightening them. How easily such a bluff can be called and exposed is certainly demonstrated by the prune growers' defensive campaign of this summer. They had but informal organization; only a committee of safety, as it were. They were able to uncover certain real facts of much importance and they put a bold front against unwarranted aggression. They controlled nothing; they simply focused the rays of common sense which the buyers were trying to scatter. They did not change a condition; they simply disclosed it. They did not advance values; they simply made people see that values must advance under the conditions which they disclosed. They have saved prune-growers a million dollars—perhaps more.

Now, as all can see how easily this beneficent deed was done, does one have to argue for organization? Do not the facts declare it, without argument? And as this committee has thus demonstrated possession of that most admirable modern quality of efficiency, is it not clearly their duty to do more? How could you assemble a better bunch of men to lead prune-growers into formal association, of such form as seems wise after full deliberation, than this committee which has a right to inscribe on its banner: "We have saved you a million dollars"? That is what we are thinking of at this moment and we may think more of it at some other time.

The Sea Will be Full of Ships.

When California was a great grain State and the surplus had to be wind-jammed around the Horn, there was an immense business done in "charters to arrive," which meant that every old tub which could carry wheat might come into the harbor with her outward service already contracted for, so that a shipper of wheat could not charter a ship when he was ready to ship: all he could do was to buy a charter from those who gambled in them. And not only that: the easiest way to corner grain was to corner charters, and the grain had to come to you. It was a fierce aggression and imposition upon the grain-growers; it began fifty years ago and more, and it filled the sky with wailings and profanity. We may think more of that outrage on producers at another time. Just now we mention it to make a contrast. Last spring fruit buyers said there would be no ships for this year's cured fruits. Think of that when you read the figures of exports of dried peaches on another page. In spite of hardships to American ship owners, which should be cleared away, there never has been a time when so many ships promised to plough Californian waters. The way they are coming may be humiliating to Americans, but that is another story. They will carry the goods to distant markets and that is the assurance we chiefly need at the moment. Our East and the great Orient seem to be flying abreast toward Pacific ports. From New York and Washington come announcements of the Pacific and Eastern Steamship Company, capitalized for $2,000,000. Eight ships will soon be in operation between New York, the Panama Canal, San Francisco, other Pacific Coast ports and the Orient. Officials state that eventually the capital would be close to $100,000,000 and a determined campaign would be waged for the shipping business between Pacific Coast ports and the Far East. News is also given of the increase of the "Admiral" fleet from this port northward to Alaska, by addition of two new steamers recently purchased in the East. It certainly does look as though our days of small things, cornered charters and lack of ships, are passing away, and that our horizon, though never fully white with sail, might be black with oil and coal-burning steamers.

A Fragrant Trainload.

Although most enterprises projected for California along the line of perfume farming on the posy basis have failed because of the high price of labor for petal-plucking, there is surely one line whose efficiency for perfume need not be questioned, for it has achieved the shipment of a special trainload of onions from Sherman Island to an Eastern point. This fact interests us not so much for its fragrance as for its suggestion of one fact of onion history of California. This trainload was made up of onions from Sherman Island, in the lower tule dis-

ct, which came early under reclamation, although it did not, perhaps, stay with it very adily and has had to survive some mishaps. connection with onions on Sherman Island, the doubt was at the beginning, and it was ickly dispelled, and most conclusively, too. e remember the claim in the seventies that od onions could not be successfully grown on e reclaimed islands—that they would not be und, firm, and all that. At that time onions me chiefly from the lands adjacent to the uthern extension of San Francisco bay, and e people rather rejoiced in the appellation, Onion City," which one of their villages ined by the large shipping of the product to n Francisco. It was probably some patriotic n of Onion City who spread the report rough the San Francisco papers that such od onions as theirs could not be grown "on e tules," and certainly the public mind was mpathetic to the claim. The claim, however, t on the nerves and the onions of an old iends of ours named Perkins, a pioneer of mmaton, Sherman Island, and he sat-to to dis- l the illusion. He used to float into the me- opolis in those old days by river steamer, ad in a black sombrero and a long linen ister, and always made the Rural Press office friendly call. One day he came in along wards night, looking very tired and smoth- ed with smell. We asked him why. "Well," id he, "I have been into every wholesale oduce house in this city fighting that infernal e about tule onions. They have said tule ions were no good and I resolved to show em." Then he pulled out of each pocket of s duster a gleaming "silver-skin" as large a pie-plate and hard as concrete, and umped them down on our desk. "There, oung man," he said, "take them home and oil them—they are my exhibits; they have one their work." And they surely had. Perins had held up every commission man rough the old produce district of forty years go, and made him admit that Sherman Island uld grow a sound, firm, fine-grained onion! Ve cannot think of that special trainload of le product, speeding across lonely plains and rough populous towns on its eastward way, istilling everywhere the fragrance of civiliza- on and good cheer, without being more than ver convinced that Perkins of Sherman Island ade good!

New Foe for Rice.

The fragrance of onions certainly suggests oast ducks, and roasting is what they deserve or their work on rice. They are getting it ow because the shooting season is open, but t opens too late for the rice growers. It is a nonth or more since ducks began their ravages n ripening rice in the Sacramento Valley. The irst ducks shot showed liberal feeding of rice. One mallard killed at Colusa had two ounces nd a half of rice in its craw. A grower northvest of Colusa has lost more than 100 acres of ice from the ravages of ducks and blackbirds. The growers will appeal to the Fish and Game Commission for relief on the ground that ducks re more numerous in the valley than ever efore. It probably would not avail much, ut they ought to appeal upon the ground hat no one's interest or sport should be gratified at the expense of the man whose ivelihood is in his crop. That is the fundamental idea, but it seems hard for it to get ny headway in the public mind.

Queries and Replies.

Querists must give name and address.

Pruning Running Roses.

To the Editor: We have been reading your book on "California Garden-Flowers," particularly on pruning roses, but do not find any instructions as to what to do with climbing roses on fences. We are going on to an old ranch where roses on 300 yards of fence have been untouched for two or three years, and immensely long sprays grow out in every direction, half-way across the road. Can we bring it down to some restriction without losing this winter and spring bloom?—R. B. P., Los Angeles.

The general handling of vines trained against house walls or high fences at the opening of Chapter XXV applies to climbing roses as to other vines. In training on a highway or division-line fence there are two ways, according to the effect you desire to produce. If there is a good fence and you desire to clothe it with good large leaves and roses, the same principles should be observed as in covering a house-wall, viz., lay down the canes flat, fasten them tightly in place with large staples or double-pointed tacks, which give plenty of room for expansion, saving new wood and cutting out old until you have covered the space with canes about six inches apart. After the first blooming remove suckers and keep the growth down to the canes you have laid in place, getting leaves and bloom on short laterals from these canes. If you have no fence, or if you desire to produce a fountain effect along the line, get into the center-line pretty well, cut out old wood, and save new canes, which arch outwards to make the outline you choose as best, saving what you need for that outline, and cutting out everything else whether it be old or new. For this effect do not shorten the arching canes—if they go too far, take them out near to the starting point, and new streamers will appear later, which will serve your purpose better. All the canes you leave now will bloom this winter.

We take it you do not desire to make a rose hedge. If you do, follow an entirely different policy. Stretch a line along one side to mark one of the upper corners of the hedge-form and cut off all growth on side and top to that line, thinning out shoots where they grow thickly and bending and tying to stakes, or to other canes, growth which can be used to fill gaps. Then stretch the line on the other side and fix that up in the same way. The hedge will also bloom on new laterals, which start after pruning.

The Chance in Quinces.

To the Editor: I have land that seems especially adapted to growing quinces. Trees began bearing at three years and in the fourth year were heavily laden with fine large quinces. I would plant largely to these trees if I were sure of a market. Can you inform me about a market for quinces? I know of but one large quince orchard. I believe this ships to the East.—O. L. T., Santa Rosa.

Expansion of the quince product must be undertaken with much care, for the demand is limited and largely local. Thirty years ago there was an idea that many more could be grown for Eastern sale, but experience showed that only small shipments could be made to the East. Although the California quince is larger and handsomer than the Eastern, they do not care to pay more for a fruit which loses its form in preparation for use. Such quinces as are now grown pay about as well as apples, but if we should largely increase the product no use could be found for it. You might do very well with your planting providing too many other planters did not follow the same "hunch."

Early Planting of Beets.

To the Editor: Would you advise planting stock beets, in the San Joaquin Valley near Bakersfield, at this time of the year? In other words, is it too cold here to plant them at this time?—H. P. S., Wasco.

If the soil is right for germination you can start your beets now, and they will not be injured later unless you are in a place of very hard freezing. Beets will go through quite hard frosts, but the growth will be slow and not give you much stock feed until towards spring. For early winter feeding, beets should be sown in June or July with irrigation, and will get plenty of fall growth to make large feeding from December to February.

Sterile Apricots.

To the Editor: What can be done for a couple of apricot trees, six years old, which have never borne any fruit. They are about sixty feet apart. Should they be pruned this fall and how severely? Will other trees planted near them help any?—E. R. F., Sanger.

You do not say what variety of apricot. Probably not less than 25 varieties of apricots have been discarded during the last forty years for natural sterility. You may have one of them. Do not winter-prune them at all. It would have been a good experiment to have summer-pruned them severely last July. No need of cross-pollination has been demonstrated for the apricot. You can see what more age may do for them, or you can graft them over—taking scions from some tree which bears regularly.

Pruning Prunes.

To the Editor: How would you prune a French prune tree after second summer in orchard? Would you advise topping or cutting back main branches, and how many laterals would you allow to grow on main branches, and should the laterals be pruned?—M. A. H., Walsh Station.

Although there is some difference of opinion as to how a prune tree should be pruned after the third summer growth (as our columns last year clearly showed) there is little difference among those who prune at all, as to the desirability of rather short cutting for the third summer's growth. We should prune back to a length of one to two feet from the starting point of the second summer's growth, according to strength, situation and direction of the branch. There can be no rule of inches. It is a matter of judgment. As to number of laterals, two cut-back shoots of last summer's growth from each branch of the first summer's growth would be usually enough to fill the tree sufficiently by the end of next summer's growth.

W. B. Thomas, a former Californian, but for the past sixteen years a pineapple grower and shipper of Hawaii, while in our office recently, reported the pineapple industry as growing faster than the market. He, with other growers of the islands, is planning a co-operative marketing and educational movement to better their selling conditions.

Walnut Growers' Economical Marketing.

To the Editor: Answering your inquiry, we do not handle walnuts in small quantities. This Association is simply the selling end of twenty-two local walnut growers' associations operating throughout California and we confine our sales to the wholesale jobbing trade only. If we attempt to sell small lots in a retail way, we cannot expect the support of the wholesalers, whose distribution system is entirely essential to our success. Furthermore, our business comes on with such a rush at this season of the year that we are not prepared in any way to handle small orders. Our shipments all are made in carload quantities and at this season of the year the volume of business we do amounts to about a hundred to a hundred and fifty thousand dollars a day. Any first-class retail store any place in the United States can supply any consumer with our Diamond Brand Walnuts in packages, we having already sold some 4,000,000 packages of this stock this season. The large retail stores we know of handling this package are McLain; Goldberg, Bowen & Co., San Francisco, and practically every prominent retail store in Los Angeles. We have a plant here in Los Angeles for handling the cull walnuts for our members where we employ some 200 people and crack up about 25 tons of walnuts daily. We grade the meats into four grades—light halves, light pieces, amber pieces and halves mixed and dark pieces and halves mixed. These also are sold to the wholesale trade.

I might add in conclusion that through our system of marketing everything at a uniform price, competition has forced our entire line to be handled very close by both the jobber and the retailer. Therefore, the consumer is assured of buying Diamond Brand walnuts through their retail store really cheaper than we could afford to fill the order if it was sent direct to this office. Nobody can buy first-class walnuts unless they are willing to pay a reasonable price for them. We have a great many inquiries from people wanting to know where they can buy good walnuts cheap. We simply tell them that this cannot be done. They can buy good walnuts or they can buy walnuts cheap, but they cannot buy good walnuts cheap. They have either got to sacrifice quality or else pay the price.

C. Thorpe, Manager.
California Walnut Growers' Ass'n.

California Olive Growers Organized.

[Written for Pacific Rural Press.]

Olive growers from Tehama to San Diego counties and eastward and westward were loaded for business when they met in San Francisco Oct. 29, to organize a Statewide Olive Growers' Ass'n. This was the culmination of several months' work interviewing growers and holding meetings in all olive sections of the State. It first took definite form when a temporary organization was formed at the Exposition on Ripe Olive Day, Mar. 31, with J. J. Avis of San Francisco as president and R. L. Underhill of Berkeley as secretary.

At the suggestion of the temporary organization, a proposed platform of action, articles of incorporation, and by-laws were drawn up and presented by J. P. Dargitz of Acampo, veteran organizer of the Cal. Cured Fruit Exchange and the Cal. Almond Growers' Exchange. Mr. Dargitz said that the plan proposed for olive growers provided for contingencies which caused more or less trouble in the other associations, because unforeseen when they organized. It provides for a non-profit co-operative association to be incorporated under the laws of California with no capital stock unless the membership fee should be counted as such. The voting would be one vote per acre, for protection of large operators, but it was stated that the other Exchanges which have the same provision have found that they could always run the business on the one man one vote basis.

The purposes as stated in the platform are broad enough to enable the new association to do anything connected with olives, paying the expenses from the returns and always keeping the membership fee of $10 per acre intact as working capital. As 3000 acres were signed up with the temporary organization and as there are about 1,500 acres bearing in Cal., this capital will be a plenty in view of the $800,000 worth of business done by the Cured Fruit Exchange during its first 15 months without a dollar of capital, and in view of the $19,000,000 business done last year by the Cal. Fruit Growers' Exchange on a capital of $1,700. The Almond Growers' Exchange paid $300,000 to growers of this year's crop before it had $25,000 returns on almonds sold and it has no capital.

The principal immediate purpose as brought out in the meeting, is to standardize the curing of olives, always giving each locality its own brand in connection with the State Association's advertised brand. At the same time, marketing arrangements will be pushed with all the vigor possible. The fruit is to be pooled, perhaps by localities, on the basis of the relative price at which each grade sells. This eliminates the idea that "my fruit is best." Details of management are to be worked out after incorporation, which followed immediately after the meeting.

Some 50 delegates from local olive growers' associations, and representative olive growers were present and approved the plan unanimously after spirited discussion of the stock company idea embodied in the Raisin Co. The State was divided into tentative districts and a director from each district was elected to serve one month or until his successor is elected by a meeting of olive growers in his district. Following are the divisions, and directors who were elected primarily to sign articles of incorporation and get things moving. Northern District, all north of Marysville represented by E. P. Hilborn of Oroville; North Central, all between Marysville and Turlock, including the Bay district, by J. J. Avis of San Francisco; Central, all between Turlock and Tehachapi, by R. C. Merryman of Exeter; South Central, including Santa Barbara, Ventura and Los Angeles counties, by A. B. Miller of Los Angeles; and Southern, by E. J. Harper of Los Angeles, whose orchard is in San Diego county.

A number of landowners northwest of Colusa are formulating plans for the irrigation of 10,000 acres which will be planted to rice next season.

Selected Holland BULBS

Our Bulb stock, now on display for your inspection, is complete and will fill your needs. The beauty and charm of true Dutch Bulbs will add a pleasing touch to the garden or home. Study our "special collections" below and see what a transformation of the home place can be made at a small cost.

COLLECTIONS:
These collections contain such bulbs as Hyacinths, Tulips, Narcissus, Crocus, Anemones, Ranunculus, Iris, Calochortus, Oxalis, Freesias, Ixias, Montbretias, Sparaxis and Amaryllis.

Send in your order early before our stock becomes broken.

Plow Vs. Leaf Hopper.

[Written for Pacific Rural Press.]

Vine leaf hoppers injure grapes in Fresno county if neglected. The defoliation which follows severe infestation exposes the grapes more or less to sunburn so that they must be picked as soon as possible after they become sweet enough to pass the recently imposed test.

F. H. Wilson had 50 acres of Emperors whose leaves were nearly ready to fall when he had them "hoppered" with a machine recently described in Pacific Rural Press. Six times through the vineyard with the machine persuaded the leaves to hang on and protect the grapes so that Mr. Wilson is said to have packed and sold at $2800 per car. It was cheap hopper work, considering what was saved; but, according to W. M. McKersie in charge of this ranch, they may be handled cheaper than that by taking them in time.

He plows a double furrow between the vine rows about three feet from the row just before Christmas. All the loose leaves and weeds are raked into the furrow and dirt is plowed back onto them. The hoppers have been hiding under them The insects are still pretty active and not many are plowed under. But the exposure during the cold winter after their protection is removed gets most of them so that Mr. McKersie doesn't worry about them. But if the leaves and weeds were left all winter, the chances are that leaf hoppers would be so numerous in this vineyard and others in that section that they would set back the vine growth and prevent or injure the crop by cleaning off the leaves very quickly.

AVOCADO GROWERS ENCOURAGED.

[Written for Pacific Rural Press.]

The avocado is coming to the front through the efforts of the California Avocado Growers' Association which held a meeting in Los Angeles Oct. 23. This organization is built on the co-operative plan to forestall such troubles as growers of other fruits have had. The exhibit of avocado fruits and trees and by-products attracted as much favorable attention as did the lunch of avocado sandwiches, salads, etc. Points brought out in the addresses are summarized below: I. J. Condit: hardiness of trees against frost depends largely on degree of dormancy. This depends much on the time of last irrigation of season. Prof. M. E. Jaffa; the avocado has higher food value than the olive. W. Popenoe; trees must be heavily mulched through summer ... three or four years old. Highest prices are received for fruit marketed after Christmas. It ripens well off the trees. J. C. Bosche; wrapping the fruits in paper makes them heat and spoil more quickly en route to market. Dean H. J. Webber; an exhibition of seedling fruits should be held each year to stimulate interest in selecting and propagating the best varieties. E. B. Rivers; $12 a dozen was received for many fruits handled last winter —there will be a heavy demand when the price gets respectable.

The State University has been working out methods of preparing avocado by-products such as oils, candied seeds, flour, etc. C. P. Taft prophesied a prosperous future for the industry. The Association decided to retain the American name Avocado.

CITRUS FROST INSURANCE.

(Continued from page 449.)

might make considerably lower temperatures safe if not so prolonged as to use up all the latent heat in the moisture and freeze the air dry. It is seldom that frosts come where the barometer is low (indicating high humidity). A simple instrument called a "sling psychrometer" may be used by anyone to determine the humidity in a minute or two, and may often serve to delay the firing an hour or more with safety. On the other hand, it is far better to waste an hour of burning than to be sorry, except in case of insufficient equipment when fires would not last through the night.

Green cover crops do much to prevent frost damage, by the heat contained in their sap and tissues, and perhaps by the moisture they transpire. Their influence in preventing air motion and mixture would scarcely offset this advantage. If they prevent freezing of a crust on the ground, they also keep open the reservoir of heat stored underground. A possible danger is that in winter they would not always be irrigated and might weaken the trees by robbing them of moisture.

Thermometers and frost alarms, accurate and high priced, are needed, not only at frosty spots in the orchard, but at similar locations away from influence of the fires so that outside temperature ranges may indicate whether more fuel will be needed or when to put out the fires.

Central Oil Tank. — Here and there, other systems besides oil pots are being tried out. One is to pipe oil by gravity to a burner at each tree. The burner is inside a pot which it heats red below but not so on top—keeping the heat more closely to the ground. Holes in the pots are not vital objections in this system. The pipes drain themselves when a valve at the storage tank is closed. Various systems of piping or blowing warmed air or steam to the trees have been proposed, but so far as we know their success has not been established.

The Grange Company of Modesto reports that indications point to a heavy yield in both beans and corn.

California Fruits and How to Grow Them
EDWARD J. WICKSON.
Seventh Edition, Extended and Revised.
Contains over 500 pages of text with many illustrations. Goes thoroughly into every phase of that immense industry, California Fruit Growing.
In the preliminary chapters, the important subjects of Climate and Soils are handled in a masterly manner, with the necessary modifications called for by the immense latitude, the topography of the Country and the different regions with their relation to coast, valley and mountain.
The book then goes into the subject of Fruit-Growing from the nursery, on through budding and grafting, preparation for planting; planting, pruning the trees and thinning fruit; cultivation, fertilization and irrigation right along to picking, canning and preserving, with chapters on injurious insects, tree diseases and the protection of the trees therefrom. Every fruit and nut which can be grown commercially in California or countries possessing a similar climate, has received the attention which the forty years' experience of the author makes of incomparable value to the fruit grower.

TREES

THIS year above all years, you should place your orders for trees with us. We know the condition of the markets, the probable outlook when your trees come into bearing, and every other factor that concerns the planter.

For 31 years we have been successfully growing nursery stock in this state. Our nurseries and orchards are the largest in the West—covering over 2000 acres in the choicest spots of California — located where soil and climate are conducive to growing the strongest, healthiest stock.

Thousands and thousands of successful growers all over the West will attest to the value of Roeding's true trees. They know that it pays to buy the best.

Hints to Boys on Brand-Building.

To the Editor: I have read much that has been written on the 35-cent dollar, the advantages of the parcel post, and the getting together of the producer and the consumer. Theoretically it is fine. Practically there is much left to be desired. The difficulties that prevent the practical working of the theories are large. Take one instance: a producer brings to my house his vegetables. He expects to get the same price that is charged by the stores, that will deliver goods free, and he says so, claiming that I can do no better than buying from him. He apparently forgets that there are probably several stores who buy from as many producers who raise as good if not better produce from which I can select, to say nothing of the keen storekeeper who selects the choice of what is offered, so that he can hold his trade and beat his competitors, etc.

I have been interested in articles in eastern papers on apples by parcel past. You have no doubt seen them. I want a few of the best apples at a time, that are obtainable, and am willing to pay for them. I need not encumber this letter with details why I am dissatisfied with what I get. I live in hopes that there may be one boy, at least, in Northern California, Oregon, or Colorado that wishes to build for the future a business that will give him a competency and last a life time. This would call for character and honesty far above the average. There ought to be three boys of that kind; boys that can stand discouragement during the initial period, that could put a ticket in the package, something like this:

"The apples this year are particularly fine and I send you the best, but owing to crop conditions I may not be able to do as well other years. You will always get not only the best, but I have set my standard so high that when I cannot ship up to it I will return your money and say so. I am so confident that I can live up to this pledge I say, without any reservation, your money back if the quality of the apples is unsatisfactory. During the shipping season see my ad in the classified column of the Pacific Rural Press, or write to me direct as follows—Brand Builder, Appleville."

The thought of brand building is based upon my experience in New York, where from being a poor boy I worked up to a partner in a large concern. I remember that there was in Messina a large mauufacturer of oils, lemon, bergamot and orange. Of course he did not manufacture all he exported. Occasionally he would cable, "There is no more stock here fit for my brand." His brand advanced in price by buyers anticipating their requirements. Other brands declined, probably hastened by the doubt created by his action. He had no second quality or other brands. K.

Pasadena.

FALL WORK ON BORERS.

To the Editor: We have several inquiries how to treat borers in young trees. At this time of the year, if the tree contains one or more borers there will be noticed a dead, dark place on bark near the ground. On cutting into this the bark will be found to be dead and worm-eaten. With a sharp knife cut away all the dead and worm-eaten bark or wood, then paint the scar with grafting wax, first being sure you have found and destroyed the borer. He often goes to the center of the tree, if neglected that long, and then goes right up the heart of the tree. If you cannot locate him without splitting the tree a very good way is to use a hat-pin: push it in the hole as far as it will easily go. This will kill him. At this time of year borers are bad, particularly near timber, and if they are looked over in time many trees can be saved by this means. C. N.

Sebastopol.

[This is very good advice, but the work should have been begun two months ago. It is, however, better to go at it now than later. We have found a piece of pliable wire, like a hair pin, better than a hat-pin, which is usually steel wire and too stiff to easily bend into a form making it easy to enter and follow the burrow of the borer. If borers are allowed to eat away all through the fall the tree is quite apt to be girdled and killed outright.—Editors.]

BISULPHIDE FOR WEEVILS.

To the Editor: I saw an article in the Pacific Rural Press of October 9, 1915, on the use of carbon bisulphide for the control of the bean weevil. As I have had considerable experience along this line I thought it might be of interest to you. I have used carbon bisulphide for a number of years. I have fumigated beans, peas and all kinds of grains for weevils and moths and have had good success.

While many remedies have been recommended for the control of the bean weevil there is nothing that will compare with fumigating in an air-tight compartment. As soon as the weevils commence to show up the beans should be placed in a receptacle and fumigated. This can be done while the beans are in the sack, but will be more effective if emptied out in the fumigating room. The carbon bisulphide is poured in a shallow pan or tray and placed two feet above the seed. The pile of seed should not exceed four feet in depth. Seeds treated in this way should be left in the room for a period of forty-eight hours, which will be sufficient time to kill the weevils and moths in all stages.

Dried Peach Exports 700 Per Cent.

[Written for Pacific Rural Press.]

There is something mysterious and extremely interesting in the present relation of dried peach exportations to the prices quoted to growers. Pacific Rural Press has held hopes from the first that peaches would sell for at least the cost of production (figured between 4 and 5 cents by J. P. Dargitz, formerly of the Cal. Cured Fruit Exchange). The exports shown below, taken from U. S. customs house reports which are compiled directly from the cargo shipping manifests, would seem to indicate that the supply of dried peaches is rapidly disappearing. The latest figures available for the total U. S. exports to foreign countries are for the seven months ending July. These are all "old crop" peaches. During that period in 1913, U. S. exported 1,452,533 pounds. During the same period in 1914, U. S. exported 2,905,209 pounds. During the same period in 1915 U. S. exported 10,559,651 pounds. This was over 700 per cent increase in amount of dried peaches taken out of U. S. over the same period two years previous. Since California has a practical monopoly on dried peach production, these may be considered approximately as California figures.

During the same period of 1915 there were shipped from San Francisco by sea alone to Eastern U. S. ports through Panama Canal, 5,319,026 pounds of dried peaches, some of which may have been transshipped under the figures given above for exports from U. S. This is a paltry increase of a million pounds over the same period of 1914, but takes no notice of our shipments by rail, which we do not have for the seven months, but which amounted to 7,062,000 pounds from California in September, 1915.

The total California dried peach crop of 1914 was about 64,000,000 pounds. Estimates for the 1915 total are lacking, but every peach grower remembers the many orchards whose fruit was not dried last season as usual.

Shipments of dried peaches to foreign ports and to the Atlantic coast by sea from San Francisco are given by months below for 1914 and 1915 for comparison of shipments before and during the war. Some of the irregularities in quantity were due to interference on the Tehauntepec railway by Mexican troubles and part to the expected opening of the Canal.

Month	To foreign countries		To Eastern U. S. via Tehuantepec and Panama	
	1914	1915	1914	1915
J.	255.665	302,307	1,194,017	1,602,765
F.	314,486	2,341,740	1,449,072	1,374,547
M.	483,945	2,197,004	362,318	434,171
A.	210,786	1,358,855	990,955	592,225
M.	228,945	967,871	49,276	336,980
J.	139,772	473,734	76,395	562,508
J.	84,495	438,390		415,800
A.	304,266	327,861	68,125	380,994
S.	219,768	1,777,521	3,355,833	1,763,436
O.	446,117		1,656,840	
N.	371,748		2,660,348	
D.	1,121,994		1,937,242	

Taking the nine months of 1914 and 1915 available for comparison, the peach shipments by sea from San Francisco to Atlantic States were practically the same, but to foreign countries they jumped from 2,242,128 to 10,185,283 pounds, and this ought to warrant us in hoping that with a smaller crop last season, but about the same holdover as for several years, the end will be an entire cleanup. If so, as the cleanup approaches, the prices ought to rise for fruit that has been kept out of reach of the moths which lay eggs and make wormy fruit.

The mysterious part of the relation between the tremendously increased exports and the prices is that the prices to growers have persistently weakened since Jan. 1, with only one or two short rising waves. There is no doubt that the foreign market has increased greatly at the same time.

Peach growers who have held their dried product may well take notice of the splendid victory of the prune growers of Santa Clara valley for 5c prunes after a long, stubborn fight. The accumulated pressure recently became so great on the packers that they are now practically falling over themselves to pay the growers 5 cents. They are still holding the big-crop club, however, ready for use when the pressure shall be relieved, in spite of the Prune Growers' Committee estimates of a light crop.

The Chico development committee on Oct. 25 adopted a resolution, at the request of the Florida orange growers, asking Congress to make an appropriation for the extermination of citrus canker. It also adopted a resolution opposing the 8 to 1 standard of maturity test and mailed a copy to Congressman Kent.

Plow Now Don't wait for rain It may come too late

A 5 DISC "GROUND HOG," plowing hard, dry adobe—cutting 40 inches wide and 7 inches deep, hauled by a little 8 H. P. Tractor.

6 Horses will handle our 4-Disc Plow in dry adobe

By a system of weighting it works in hard ground where other plows fail to work. No need to wait for rain, making certain the ability to plow early, which is most important in these days of high prices.

The "Ground Hog" is the acknowledged plow sensation of 1915

Bug-go

A Perfect Crude Oil Emulsion

FOR WINTER SPRAYING

Cleans all moss off the trees.

Cleans all scale off the trees.

Best spray to use for red spider eggs on almond trees.

Makes the trees clean and healthy.

Easy to apply.

Costs only a little over a cent a tree.

There is no longer any question as to whether or not it pays to spray with crude oil emulsion. Its value has been emphatically demontrated over and over again.

But to make a crude oil emulsion in the field is a dirty, unpleasant task—and the results of the home-made solution are always uncertain.

That's why we offer Bug-go. It is no more nor less than a PERFECT crude oil emulsion. Mixes readily with cold water.

To use it—just pour the necessary quantity of Bug-go into the tank, add water, and go to work.

INEXPENSIVE TO USE: Bug-go sells at $4.50 per bbl., less 10% in 10 bbl. lots, f. o. b. San Jose. Costs less than 1½c per tree when ready to apply.

ENGINE CHOPS PRUNINGS.

To the Editor: I wish to have a word concerning A. B. C.'s inquiry of Sunnyvale regarding the cutting up of prunings as fertilizer. Three years ago we bought a 24-inch second-hand feed cutter and mounted it on a truck together with a 5 h.p. gasoline engine. Through this cutter have passed all the prunings for the past three seasons that has been taken from a 140-acre lemon grove twenty years old and 60 acres of oranges twelve years old. We find that we can cut it cheaper than we can haul it away and burn it, and since noticing the results we have come to look upon the hauling out and burning of prunings from an orchard as a kind of crime against the soil. **Kaweah Lemon Co.**

Lemon Cove.

TRACTOR LEVELING FOR ALFALFA.

Alfalfa was planted years ago on unleveled land in the Summit Lake region of Tulare county, but it became foul and weedy so its present owner, L. P. Denney, flooded and plowed it. Leveling and checking for irrigation proceeded as fast as possible, that it might be sown to irrigated alfalfa so soon as the weeds are cleaned out. Meanwhile and partly for the latter purpose, it was put into grain last fall. Mr. Denny is just finishing the job of leveling 400 acres with a Yuba 18 tractor and three scrapers which have been working fine. Grain this fall will finish preparing the land so it will be seeded to alfalfa next fall.

The Tweed ranch in Glenn county only recently finished leveling and ditching for 180 acres of alfalfa, which has become a necessity because now Mr. Tweed has only 2½ months of green feed for his large dairy herd. He has found that while a cow can live on dry feed, she doesn't give milk after two or three years. He used a Caterpillar and scraper.

TRUCK BEES TO PASTURE.

A motor truck to haul bees to new pastures appeals to L. D. Walker of Sacramento county, who has five apiaries. In the early spring he takes about 140 stands into the Fair Oaks section to get the wild flower and tree fruit honey. Deciduous honey is gathered and extracted before much orange honey is gathered. The latter is most desirable, being water-white and of delicious flavor. The oranges bloom in late April or early May for about 20 days of honey gathering.

The bees are then loaded onto a car and hauled back to the Sacramento river country for June to October. They make 40 to 50 pounds per hive in the Fair Oaks District and 60 to 75 pounds on Sacramento river carpet grass and alfalfa. The latter makes amber to light amber honey. This sells wholesale at about three cents per pound less than the water-white. So it pays both in quantity and in price per pound, to truck the bees back and forth.

A truck load of bees was recently photographed hy the Western Honey Bee for E. H. Ross of Los Angeles county, being just ready to move from the Santa Monica mountain sage range to the orange orchards. It contained "183 colonies in 10-frame hives with moving screens and covers." They were loaded, hauled 35 miles, and unloaded in an 8 hour day for $12 auto truck hire. They are hauled back to the sage pastures after orange blooming.

GOPHERLESS DITCH BANKS.

To the Editor: In your issue of August 14 I notice a letter from E. L., Winton, who writes you asking information regarding putting a cement surface in the banks of his irrigation canal to keep the same from being honey-combed hy gophers or other rodents of any kind.

At North Yakima, Washington, the Yakima Power and Light Company quite a number of years ago had considerable trouble with the power canal by gophers, and every once in a while a break would occur in the canal and do a great deal of damage by washing over the orchards and alfalfa fields and garden tracts through which the canal runs.

The president and manager of that canal was Edward Whitson. A narrow trench was dug through the

37 FIRST STREET, SAN FRANCISCO
Blake, Moffitt & Towne, Los Angeles
Blake, McFall & Co., Portland, Oregon

center of the lower bank of the canal, parallel with the water. He dug this with a long steel bar, with a wide face on it about four inches in width. He used, to take out the dirt, a long-handle shovel, made in something of the manner of shovels that are used by the telephone companies in digging their deep holes; with this difference: he had it cut down to the width of the trench, and made over in the shape of a bowl. With this he lifted out the ground down to a depth of five or six feet. He then filled the same with a weak cement mortar.

He mixed the mortar on a scow that floated in the canal. On this he carried his gravel, sand, and cement along the line of his work without any extra handling.

The best way to get the mortar into the trench without washing down any of the ground, is to make a galvanized or sheet iron chute, in lengths, with an open funnel mouth at the top.

Pour your cement into that and it runs to the bottom of the trench. This chute was made in sections, so that it could be uncoupled as the concrete was filled in. He told me that it was a slow job and cost some money, but in the long run it was an economical piece of repair work.

E. C. Burlingame.

Walla Walla, Wash.

NOISELESS PUMPING.

Running so noiselessly and smoothly that you think it is standing still, a 3-inch Bean centrifugal pump direct-connected to a 5 h.p. electric motor pumps water at the Horticultural Building at the World's Fair, through a four-inch pipe vertically about 20 feet. The water then runs horizontally some distance to a rock bound pool near the ceiling, whence it flows in a beautiful waterfall over a series of rocky cascades.

PUMP REDEEMS GRAIN LAND.

To redeem worn-out grain land in the level part of Placer county by growing alfalfa to feed to livestock is the proposal of E. F. Edwards. He recently drilled 450 feet to water-bearing sand. A deep well pump was installed to irrigate 40 acres of alfalfa to be planted in the spring. If that works well, he expects to put in a great deal more.

SILAGE CUTTER HORSE POWER.

To the Editor: In reference to horsepower for silage cutting, one h.p. per inch of blade width will do as recently reported in your columns, but ½ h.p. should be added per cutting inch for elevating through a 10 inch blowpipe into 36 to 40-foot silos. A great mistake is made in underestimating the power to be added for elevating.

Oakland. **Wm. Curtis Clark.**

WANTS THE STATE TO MAKE SOME MONEY.

To the Editor: I have been reading what has been said in Pacific Rural Press on "Rural Credits." I have wondered why some one does not tell what the poor farmer needs most, and what we must have or quit farming. Why should we go on year after year raising crops to sell for less than cost of production? Why should we borrow money to improve more land to raise more crops to sell for less? Why not, if we must have speculators, the "State" make the profit on our crops? Then taxes might be reduced and schools and other public utilities improved and we be just as rich (?) as we are now.

Or why not have the State advance us enough money on our crops to enable us to sell our grain and other produce slowly and save for ourselves some of the difference between $24 for our corn now and $40 next May? What do you think about it? **Farmer.**

Stevinson.

[We think that it is thoroughly impracticable and undesirable—but there are ways by which farmers can be defended against unrighteous speculation and helped to get what their produce is really worth.—Editors.]

Van Brunt Single Disc Drills

The drills that plant any small seed from alfalfa to bearded oats exactly where it will bring the best results—at the bottom of furrows of uniform depth. All the grain is up and ready for harvest at the same time.

No seed wasted, all the field sown. Van Brunt Drills have an adjustable gate force feed which compels an even, continuous flow of seed from each seed cup without bunching or cracking the seed. It cannot choke up. And the seed beats the dirt into the furrow because of the closed forward delivery.

Individually adjustable pressure springs, direct gear drive, extra large and stiff hopper, high grade steel disc blades and disc bearings that are guaranteed are additional features that make the Van Brunt the desirable drill.

Grass seeder attachment can be furnished for any Van Brunt Drill.

There's a Reason

why a man you know—your John Deere dealer—is handling this drill. He knows it is made right. Ask him about it, and write us for free circular describing the "Van Brunt." Mention that you read about it in **The Rural Press.**

JOHN DEERE PLOW COMPANY
SAN FRANCISCO, CAL.

GOMOR
TRADE MARK
INCREASES MILEAGE FROM 25% TO 50%

"Gomor" Makes Car and Money Go Farther

Your car will run 25% to 50% farther on each gallon of gasoline by using "Gomor"—the scientific lubricant.

"Gomor" is a marvelously refined oil that is introduced into motors through carburetor *with* the gas. A small amount of "Gomor" (¼ pint to ten gallons gasoline) poured into the gas tank is sprayed on cylinder walls, pistons, valves, etc., thus greatly reducing friction and eliminating carbon formations. Motor runs perfectly on very lean mixture and power is materially increased. "Gomor" reaches vital parts of motor that ordinary lubricants fail to touch.

1000 Tests Prove Our Claims

"Gomor" is not an experiment. Upward of one thousand tests of "Gomor," covering a period of four years, have been made. These tests, conducted by many leading automobile engineers, have been most exacting. Many motor companies and thousands of private owners testify to the merits of "Gomor."

Friction is the thief of power, "Gomor" reduces friction to a minimum and thereby greatly *increases* power. "Gomor" saves wear and tear on motors. It lengthens their life.

"Gomor" is Sold on Money Back Guarantee

The "Gomor" Oil Company is a thoroughly responsible concern backed by a number of Detroit's leading business men. "Gomor" is widely used in the East and is now being adopted by Western motorists. In Detroit its popularity is almost universal. "Gomor" sells for $1.00 per sample quart can, prepaid to your address. "Gomor" really costs you nothing because it saves its price many times over in reduced fuel bills. Order today or send for booklet, testimonials and sworn proofs.

General Agricultural Review.

GRAIN AND FIELD CROPS.

A normal crop of beans is reported for the Sacramento district this season.

A good crop of beans is now being harvested in the Tipton section of Tulare county.

The 1915 season of the American Beet Sugar Company at Oxnard closed on Oct. 26.

A large crop of corn is being harvested in District 70, Sutter county, some growers getting 25 to 35 sacks to the acre.

Celery shipping from the Antioch section commenced the early part of this week; a successful season is expected by the growers.

S. J. Vincent of Porterville has just finished threshing his corn crop; he produced 404 sacks of kaffir corn on 20 acres of unirrigated land.

The harvesting of rice has commenced on 100 acres of the P. M. Gow ranch near Dixon; this is the first crop of rice in Solano county.

The shipping of celery from the delta sections of the Sacramento Valley has commenced; indications point to a large crop of excellent quality.

The beet crop in Salinas Valley this year is said to be one of the largest ever harvested. The sugar factory has enough beet contracts to keep it going until the first of January.

Harvesting of rice on the Moulton Irrigated Lands in Colusa county is in full blast; the average yield is 55 sacks to the acre, though some of the land has produced as high as 70.

It is stated that heavy orders for beans from France and England have caused considerable excitement in the bean market. One reason given for the heavy demand for black-eyes is their use in Europe in the preparation of a substitute for coffee for the soldiers.

The harvesting of the sweet potato crops around Atwater and Livingston is well under way, says the Merced Sun, and most growers are preparing to store the sweets in cellars until the market price reaches a better figure than present quotations.

R. C. Townsend of Butte county planted experimentally a pound of broom corn seed on his ranch; a small quantity of excellent broom corn was produced and Mr. Townsend had brooms made from it on display at the recent Paradise Fruit and Flower Festival.

On account of the tomato shortage in the East and Middle West, the demand for California goods in the Mississippi belt has been so keen that the Central California Canneries' plant at Sacramento has sent agents into Nevada and Modoc counties to purchase all the product available in order to meet the demand.

At a recent meeting of the Sacramento Valley Development Association held at Willows, a resolution was passed asking that a member of each rice growing district of the State be appointed to serve on a committee to formulate plans for a State-wide campaign against water grass which, according to a recent warning sent out by the U. S. Dept. of Agri., threatens the rice industry of this State. It is stated that during the last three years, more than 2000 acres in the Sacramento Valley have been made useless for rice growing by this pest.

"At various times and from various sources there come new lots of Alaska wheat, Mummy wheat, Egyptian wheat, Seven Headed wheat, offered as seed to farmers at fancy prices," says Prof. G. R. Hyslop, crop specialist of the Oregon Agricultural College at Corvallis, Ore. "This type of wheat, which is so different from the ordinary varieties, nearly always appeals to farmers who are not acquainted with it and there is a strong incentive to purchase the seed and frequently to pay a very high price for it. This variety of wheat has been tested at the Oregon Experiment Stations, and in no case has it been proved to be as satisfactory a yielder or as good in quality as several other of the standard varieties."

GRAPES AND SMALL FRUITS.

To date, Oct. 31, Livingston, Merced county, has shipped out 100 cars of table grapes.

A carload of wine grapes was shipped from Placerville Oct. 26 to Chicago, selling for $19 a ton.

Over $408,000 is to be distributed to patrons of the California Associated Raisin Company within a few days. This is in addition to $329,565 payable for raisins already delivered, besides $368,066 advanced to growers. The Company now has on hand raisins to the value of $800,000. The 1914 crop has been entirely disposed of in the face of the 1915 largest Muscat crop the State has ever produced. This is due to European conditions and to advertising and salesmanship employed to increase consumption. The European demand is still good and the Company is in the best financial shape ever.

MISCELLANEOUS.

The Fifth Annual Land of Kerman Flower Show is to be held at Kerman on Nov. 6.

An irrigation system to cover a large area of land between Suisun and Rio Vista is under consideration by land owners of those sections.

An irrigation district of 7000 acres is planned for Thermalito, Butte county; the main source of water supply will be the west branch of the Feather River.

Tulare county farmers are making an organized effort to rid their lands of squirrels, which have increased in great numbers since the last campaign against them.

Petitions have been circulated requesting the Government to open 100,000 acres of what is claimed to be fine agricultural land in Trinity and Humboldt counties.

On Oct. 25, 7805 acres of land in the Imperial Valley were thrown open to entry; the land will be divided into tracts of 10 acres to a quarter section and will remain to settlement by homesteaders up to Jan. 1, 1916.

Prof. M. E. Jaffa, director of the pure food and drug laboratory of the University of California, has been appointed Consulting Nutrition Expert for the State, his duty in this connection being to see that the food at the State institutions is up to standard.

OLIVES AND NUTS.

Olive harvesting in the Oroville districts is well under way at this time.

It is stated that Esparto, Yolo county, produces one-fifth of the State's output of almonds.

Walnut packing is in full swing at the house of the Anaheim Walnut Association, which expects to ship 250 tons of nuts this season.

An early Mission olive tree absolutely true to type, with fruit ripening early in October, has been found on the ranch of W. J. Moore of Pleasant Grove.

Fred K. Howard, horticultural commissioner of Kings county, in his monthly report, states that the olive orchards in that county are in healthy condition with the trees free from pests and diseases.

California Garden-Flowers

SHRUBS, TREES AND VINES

Being Mainly Suggestions for Working Amateurs.

By Edward J. Wickson,
Hon. President, California State Floral Society.

FIRST EDITION—1915.
262 pages; 5½x7½ inches; illustrated; cloth bound;
12 full-page photo-plates and numerous text illustrations.

This book aims to tell the beginner in California, whether he be a scholar struggling with his school garden, or a suburban gazing vacantly on his residence lot, or the farm-home-maker, who is puzzled to translate his experience with teams, plows and pasture fields into trowels, pruning-shears and lawns, just what to do to make garden-soils grow plants and surround his abode with beauty under the peculiar climatic conditions of California.

MICA AXLE GREASE

would still be the best axle grease you could buy. But the mica makes it even better. Mica resists heat and is a good lubricant also. Keeps the spindles cool and slippery. No worn boxes. Dealers everywhere.

Standard Oil Company
(California)
San Francisco

urt Bros., olive growers of ermo, have recently installed two hydraulic presses to their mill ipment and are now able to crush r 500 tons of olives for oil in addon to their own large crop.

n our issue of Oct. 23 we stated t the Fair Oaks Fruit Company decided to pool the oil olive crop fall and that each grower who ticipated in the pool must accept f of his pay in stock of the comy. W. W. Hinsey, secretary of company, says this should read follows: "Oil olives should be led this year, the grower to be d when the oil is sold, all it sells less cost of operating and stor. . . . . Therefore, the recomndation of the Directors is that h grower or stockholder desiring es processed, must now have or uire from the Fairoaks Fruit mpany one-half share of stock for h ton delivered. This will be a inning toward proportionately ncing the olive plant by those ng it."

DECIDUOUS FRUITS.

Pajaro Valley will ship about 0 carloads of apples this season; ces range from 80 cents to $1.00 ox, according to grade.

t is planned to reorganize the San nando Fruit Growers' Associah along new lines; a meeting for s purpose was held on Nov. 3.

At a recent meeting of peach wers held in Merced $740 was scribed to the million-dollar ch organization; at a meeting at rlock, $2000 was pledged.

At a recent meeting of the mems of the Hemet-San Jacinto Grow' Association, the acreage subiption fee was raised from $15 acre to $25; this action was taken order to provide a cannery of sufient size, etc., to take care of all fruit offered by the members.

Placer county growers recently orhized the Auburn Fruit Exchange, growers pledging 70 carloads of it next season. The following ofers were elected: J. A. Teagarh, president; J. H. Andregg, vicesident; C. C. Jeffries, J. M. Bean, x Ammonds, Thos. Stanley, and L. Teagarden, directors. A packhouse will shortly be built in burn.

CITRUS AND SEMI-TROPICAL

It is expected that oranges will late this season in the Oakdale trict.

Regardless of the recent ruling of e Department of Agriculture, Tue county shippers will volunrily observe the 8 to 1 standard maturity.

San Dimas citrus growers broke records for shipments during the ason just closed, shipping 648,286 xes of oranges and lemons, as ainst 460,908 boxes the previous ason.

The Comet Citrus Association of rterville has been allowed to ange its name to the Mid-Califora Citrus Association by the Judge the Superior Court of Tulare unty.

According to shippers in Porterle, the warm weather of the past ree weeks has retarded the develment of oranges, and it is expect that the fruit will be later than ual.

W. T. Ogden of Butte county reived a jujube tree from the U. S. ant Introduction Gardens at Chico, hich has already begun to produce his ranch. Mrs. Ogden processed box of the fruit and displayed it at e Paradise Fruit and Flower Fesval.

As the result of protests, it is said at no attempt will be made by the epartment of Agriculture to interre with this year's interstate shipents of California oranges and the to 1 test will not be enforced this ear. The department will only revent shipments of oranges that re heated, sweated, or otherwise tificially colored.

"FALKI" BEANS.

To the Editor: Will you please give me all the information you can about "Falki or Chinese beans"? When is the best time to plant them? Are they large like Lima beans or are they small or medium? Are they a true bean or are they a cow pea like Blackeye, or a vetch like garbanza? — Reader, West Sacramento.

[Answered by G. W. Harney, Marysville.]

I am sending you a few specimens of the Falki bean. The seed of this bean is said to have been brought from China by a local Chinese gardener. It has been grown in the Chinese gardens near here for several years. The seed is planted in the late spring, it is a climbing bean and is grown on brush supports six to eight feet high. It bears continuously during the year until stopped by heavy frosts. It is quite a prolific bearer, and in that respect seems to be fully equal to the common string bean which is grown in the same manner. I notice that the ground is kept quite moist, in fact wet, around the roots in the gardens here. The name "Falki" is a local name given it by the Chinese here and is taken from the name of a shipping firm—H. Falk Company—who have made some little effort to market the product. It is held in great favor by the Chinese and has been sold as high as thirty-five cents per pound, so it is said by Mayor Harry Hyde, who speaks a Chinese dialect and is agent for the American Express Company. It does not seem to be considered a very important crop by the Chinese gardeners here, as I notice in the gardeners where they have an acre or two of the common string bean they will have only a short single row of the "Falki" fifteen to twenty feet long.

[The bean is small and brown and is of the "yard-long" branch of the cow pea family (Vigna sinensis).—Editors.]

The bean yield in Salinas Valley is reported above average.

(Report of University of California Experiment Farm.)

PRICE $40 F. O. B. DAVIS, CALIF.

NOT A PROBLEM, Mr. Farmer—a Solution! A solution of your scraper problem, solved by the Schmeiser Manufacturing Co., of Davis, Cal., and checked by the U. of C. Experimental Farm by actual test on Saturday, Oct 2, 1915.

The meaning of the above equation is simply this:

THE NEW SCHMEISER WHEEL SCRAPER

(built for four horses)

requires only 69 hundredths of a pound of pulling energy for each load pound in the scraper. It moves 69-100 of a cubic yard of earth with the same ease as the old style Fresno moves 53-100 of a cubic yard. A gain in efficiency of 30 per cent (.69 yard—.53 yd. equals .16 yd. .16 yd. equals 30 per cent of .53 yd.)

Why? Because it rolls along smoothly and easily instead of sliding jerkily. IT IS BUILT ON WHEELS! A labor saver—A PROFIT BOOSTER! And the cost is so low that it pays for itself in no time. STOP DRAGGING THE LIFE OUT OF YOUR HORSES WITH THE OLD-TIME "FRESNO."

Farm Feeding Problems.

[Answered by Prof. F. W. Woll, University Farm, Davis, Cal.]

TEN SHEEP OR ONE COW ON FIVE TONS ALFALFA.

To the Editor: I would like to know how much alfalfa hay does the average dairy cow consume in a year without other feed or pasture, and how many sheep could be kept on the same amount of feed under the same conditions? — Mrs. J. J., Livingston, Cal.

A dairy cow fed alfalfa only will eat an average of 30 lbs. of hay per day or about five tons of hay in a year. A sheep of medium weight, on the other hand, will eat about 3 lbs. of alfalfa hay daily without grain or pasture. It is generally assumed that 10 sheep can be kept on the amount of feed required by one cow.

BARLEY STRAW AND ALFALFA HAY FOR STEERS.

To the Editor: How much barley straw and alfalfa hay—half and half—will it take to feed a "short yearling" beef steer for six months? What gain in weight could I expect? Would it pay to feed a small amount of grain?—H. C. S., Stratford, Cal.

[I cannot say how much barley straw and alfalfa hay, half and half, a yearling steer would eat. The amount would depend on how much straw he can consume in addition to alfalfa hay. If the correspondent is bound to feed equal parts of the straw and hay, the steer would not get sufficient nutriment to make satisfactory gains even if some grain is fed. If he is anxious to feed as much straw as possible, I would suggest that he give, say 6 lbs. per head daily and feed alfalfa hay ad libitum, of which the steer will then eat somewhere around 15 to 20 lbs. daily. I would not expect very large gains even on this ration unless some grain is fed, say at least 2 to 4 lbs. per head. With the latter amount of grain and roughage as suggested, good yearlings would probably make a gain of one and one-half to two lbs. per head daily on an average for the six months.]

FEEDING SCRUB HOGS.

To the Editor: Will you tell me the best way to feed a lot of nine scrub hogs for fattening: I have my last to dispose of and no more for me, thank you. Pure breds from now on. I have milo maize, ground head and all, tankage, about 75 lbs. skim milk daily, and alfalfa hay. Hogs weigh about 50 lbs. apiece with good frames. Would you soak milo in milk or soak with water and add milk? Should tankage be fed wet or dry? That is, wet long before feeding.—F. M. B., Hanford.

[The method of feeding scrub hogs will not differ from that of feeding purebreds if satisfactory results are to be obtained. If scrub hogs or scrub live stock in general were better fed and cared for than is now generally the case, or received as good treatment as most purebred stock, the difference in the results obtained with the two kinds of farm animals would be much smaller than at present. However, purebred live stock has the advantage in being bred for a long series of generations with a specific purpose in view and they have gradually assumed the body conformation or characteristics that best serve this purpose. Furthermore, and this is most important for the breeder, they may be counted on with a fair degree of certainty to transmit their characteristic qualites to the offspring.

With the feeds at the disposal of the correspondent, there should be no difficulty in securing satisfactory gains. We suggest that the hogs be fed 3 per cent of their body weight in the form of grain, viz.: 9-10 of milk and 1-10 tankage, the milo being soaked in water or skim milk and the tankage added just before feeding. In addition, the hogs are given all the alfalfa hay they will eat and about four times as much skim milk as the amount of grain fed. This will take all the available skim milk at the start and if more milk cannot be obtained, the proportion of skim milk to grain is reduced and somewhat more grain fed so as to secure a body weight of toward 200 lbs. at the close of the fattening period.

FEED VALUE OF EGYPTIAN CORN.

To the Editor: Please tell me the feed value of Egyptian corn in comparison with ground barley. In other words, which is better to fatten hogs, Egyptian corn or barley when soaked in skim milk?—F. S., Live Oak.

Egyptian corn contains about 8 per cent digestible protein and 71 per cent digestible carbohydrates and fat, while the corresponding figures for barley are 9.4 per cent and 75.9 per cent, respectively. Barley is, therefore, a somewhat more valuable feed than Egyptian corn. Practical feeding experiments with hogs have shown that the latter possesses about 10 per cent lower feeding value than Indian corn or other cereals. This figure will doubtless be found approximately correct for the comparison of the value of the two grains for fattening purposes. Like all small grains, Egyptian corn should be ground or soaked in skim-milk or water for feeding to hogs or calves, and should be ground when fed to mature animals.

GRAIN FOR FATTENING HOGS.

To the Editor: In the Pacific Rural Press you have been advocating raising more hogs in Cal. Around here we are beginning to feel the other way about it, especially small ranchers. . Our barley costs us about $1.10 a cental, and recently I read in your paper that it takes 500 lbs. to put 100 lbs. of meat on a hog. We are offered 6 and 6½ cents a lb. for our fat hogs; and then no market close and there seems to not be much of one in S. F. Will you please tell me if I am right, and, if so, will it pay?—J. A. C., Madera, Cal.

It is true that it will take toward 500 lbs. of grain to put 100 lbs. on the hog, but this amount can be greatly reduced by furnishing cheaper feed with the grain, like alfalfa pasture or alfalfa hay, in which case only 200 to 300 lbs. will be required per 100 lbs. gain in body weight. It is often possible to utilize barley in stubble fields for fattening hogs. This would otherwise be wasted and has no market value. Feeding grain to fattening hogs also pays for the reason that it shortens considerably the feeding period and improves the dressing percentage and the quality of the pork produced. According to the figures given by the correspondent he is getting full value for his grain and has not, therefore, much cause for complaint. It is, of course, necessary to use good judgment in feeding grain to hogs as well as to their other farm animals in order to come out ahead. Fortunately we can have excellent alfalfa pastures in the main swine-raising sections of our State and are, therefore, able to lessen the cost of producing pork.

DE LAVAL
SEPARATORS

Make Fall and Winter Dairying More Profitable

THERE are special advantages in using a good cream separator during the fall and winter months. The milk from cows long in lactation is hardest to cream, and likewise hardest to separate with an inferior separator.

Moreover, cream and butter prices are highest, so that the waste of gravity setting or a poor separator counts for most.

Then there's the sweet, warm skim-milk for stock feeding alone worth the cost of a separator in cold weather.

There is surely no reason to delay the purchase of a separator or to continue the use of an inferior one.

You can't afford to wait until next spring. Let the De Laval start saving cream for you right now and it will earn its cost by spring. See the nearest De Laval agent at once, or if you do not know him, write us direct for any desired information.

California's Opportunity for Dairymen.

[Written for Pacific Rural Press.]

BUTTER MAKERS DECIDE ACTION NECESSARY.

What we have said regarding the poor quality of California butter and the opportunity presented at this time to improve conditions was given added weight last week by the California Creamery Operators' Ass'n at their annual convention held in San Francisco.

All that we have said regarding butter was mild compared with the abuse these butter-makers heaped upon themselves and their product; and the speakers did not mince words in pointing out the necessity of immediate action in order that we may be prepared to export next year's surplus at prices, and in sufficient quantities, to relieve stagnation in our own markets.

E. H. Webster, formerly with the Dairy Division of the U. S. Dept. of Agriculture, later with Hoard's Dairyman, and at present general superintendent of the California Central Creameries, announced that this is the transition period in California dairying, the period in which the change from an under-production to an over-production and consequently an exporters' basis.

He predicted an overproduction of butter next year of 10,000,000 pounds. He quoted a recent visitor to Australia as saying that "California butter merchants need not count on an Australian market again" and read letters from Australian correspondents saying that there was much dissatisfaction with California butter and that retail merchants returned portions of the last shipment to their dealers with the remark-"Not wanted." "Our first attempt as exporters has been a failure," stated Mr. Webster; "our goods, with the exception of two or three standard brands, will not be in demand in Australia again for years."

Mr. Webster stated that from now on every dairyman and buttermaker whose product is sent to the San Francisco market is a possible exporter. If exporting is successfully carried out grading cream on its quality and pasteurization must be universal.

W. H. Roussel, president of the Association, stated that many large creameries in the State have met financial disaster the past year owing to the inability to market poor goods at a profit and predicted that more will follow unless our butter is improved in quality sufficiently to allow competition in the world's markets with good butter in good packages.

C. L. Mitchell, manager of the Challenge Cream and Butter Co. of Los Angeles, the selling agency for the Dairymen's Co-operative Creamery Ass'n and the Riverdale Co-operative Creamery, stated that "We are now face to face with a situation which has been prophesied in this state for years — overproduction," caused by marvelous development of the dairy industry in recent years. He believes that unless there is immediate improvement in the quality of our product there is a strong likelihood of our butter quotations dropping below the cost of production. He pointed out the benefits of co-operative creameries in this respect, claiming that the direct interest dairymen have in the selling of co-operative creamery butter causes them to take better care of their cream and to welcome criticism. "Our surplus butter, handled in the same sensible way that our fruit organizations handle their products, would not be a menace and might be a blessing. Allowed to glut our markets, bankruptcy may overtake many an unfortunate dairyman."

F. H. Andreason, secretary of the State Dairy Bureau, advised the meeting that his department of the State was alive to the evil of poor cream and that his bureau has sent out 10,000 letters the past summer to dairymen in the State, advising them that the law which requires the cooling of milk as much as practicable, within one hour after being drawn from the cow, will be enforced by prosecutions when necessary. Thousands of cream coolers have been installed by dairymen during the past few months and many creameries report great improvement in the quality. Many creameries will not accept cream from patrons who refuse to install coolers, while others are paying more for cream that has been cooled, in an effort to encourage the dairyman.

S. H. Greene told the meeting that an excess of poor butter on the market pulls down the price of all butter, that any noticeable development of both the local and distant butter market can only be secured with butter which grades as "extra." People will consume more butter scoring "extra" than they will "prime firsts" and the more "extras" we produce the broader the outlet.

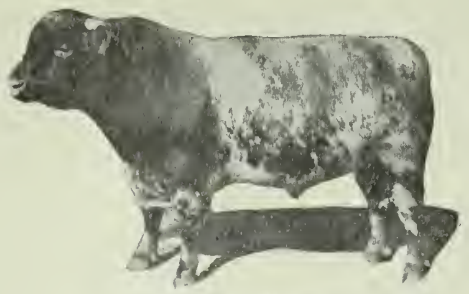
The man who affects the butter market permanently is the buttermaker and dairyman, and any exporting business must be done with a quality of butter superior to the present supply which runs now about 25 per cent "extra," 75 per cent "prime firsts" and "firsts."

He explained the creamery manager's position, who has seen the trend of the times and inaugurated a cream-grading system, saying that many dairymen believed the creameries were doing this to buy cream cheaper. Such is not the case; the creameries pay less for poor cream not because they want more of it but because they want more good cream at the higher price.

John Sollie maintains that to manufacture butter which will stand the delay of consumption that is necessary in exportation, pasteurization of cream by butter makers will be necessary. This can be accomplished with little if any additional cost over other methods.

Other speakers were F. H. Bothell, U. S. Dairy Division, Salt Lake City; J. C. Phillips, Imperial; A. J. Glover, Ft. Atkinson, Wisconsin; Chas. G. Johnson, Sacramento; Prof. Elwood Mead; Dr. Wm. C. Hassler.

A resolution was passed requesting the University of California to inaugurate, through its extension department and other means at its disposal, an educational campaign among the dairymen of the State in matters pertaining to the production of a more sanitary grade of cream, the more general weighing and testing of milk and cream and the more general use of purebred bulls. The association went on record as favoring the holding of more dairy farmer institutes and agreed to co-operate with the University in the holding of such meetings.



A resolution was also passed requesting the U. S. Department of Agriculture to recognize the dairy industry in California by establishing stations in the State where dairy investigations could be made.

Ferndale, Humboldt county, was selected as the meeting place next year, and the following officers were elected: President, H. F. Harbers, Grizzly Bluff; vice president, J. B. Hopkins, Petaluma; secretary-treasurer, L. M. Davis; Directors, C. E. Gray, San Francisco; N. J. Beck, Visalia, and W. H. Roussel, San Francisco.

T. S. Glide of Davis recently shipped two fine sheep to Honolulu.

Productive Feeding
OF
Farm Animals

F. W. WOLL, PH.D.
Professor of Animal Nutrition, University of California.

FIRST EDITION—1915.

360 pages; handsomely illustrated. Cloth bound.

Prof. Woll has had long experience in the work covered by his book. Before coming to California a few years ago to take up his work at the University Farm, Davis, he was for years Professor of Agricultural Chemistry, University of Wisconsin. This book in a practical way covers productive feeding from a scientific standpoint. Every breeder of stock needs this work to make a success of his feeding operations.

Price, $1.50 Postpaid.

DAIRYING.

Fred Ross of Hanford recently sold two Holstein bulls to Morris & Sons of Woodland.

J. E. Thorpe of Stockton has worked up a fine local butter trade on the production of his Jersey herd.

Clark & Marzorini of Paso Robles recently sold to Geo. Hook of King City twenty 15-16 Holstein cows for $2000.

Nathan Rosing of Los Angeles recently purchased 120 acres of alfalfa land near Porterville, from W. H. Nelson and will start a dairy there.

Geo. E. Peoples has recently been elected Manager of the Kerman Creamery at Kerman. Close to 1500 pounds of butter are made daily by the Creamery.

C. A. Bibbles of Dos Palos sold out his registered Holsteins a few years ago. He couldn't stay out of the game, so last spring bought a few heifers for a fresh start and will soon have quite a herd again.

Edw. R. Polhemus of Elk Grove recently sold his ranch on Deer Creek, near Cosumnes, to A. Saner of the Cosumnes district; the new owner will convert the tract into a dairy.

A cow testing association is under consideration for Scott Valley, Siskiyou county; at the recent farmers' institute held in Etna a committee was named to canvass the county in the interests of the association.

The Visalia Co-operative Creamery will open a branch house in San Francisco, with A. M. Eckleson, cashier of the company, in charge. This move has been made necessary on account of the demand for Visalia butter at the Bay cities.

The butter fat producing contest of the Butte County Cow Testing Association has started; to stimulate interest in the testing, a silver loving cup will be presented to the owner of the cow producing the largest amount of butter fat for the year.

C. G. McFarland of Tulare reports having sold five head of his registered Jersey cattle to J. E. Wherrell of Riverside, for a total of $1,250, says the Tulare Register. One bull sold for $200, a heifer sold for $200, two cows sold for $300 each, and another cow for $250.

Frank C. Clark, graduate of the University of California, on his ranch at Loyalton, experimented feeding mistletoe to cows and found it not only nutritive, but relished by the stock. Care in feeding it, however, has been recommended by the University on account of it being practically an untried food material.

Alcartra Abbekerk 3rd Prince has just been received by Clark & Mazorini of Paso Robles from McKay Bros. of Waterloo, Iowa. The dam of this bull is a half sister to Tilly Alcartra. His sire's first three dams' records averaged over 30 pounds butter in seven days. His dam has a two-year-old record of 15.77 and his dam's dam has a 27.88 pound record.

Dairymen of the Barstow colony of Fresno recently formed the Fresno Co-operative Dairy Association, electing the following officers: President, J. W. Holland; secretary, J. A. Schlotthauer; directors, W. J. Anthony, W. F. Barnett, J. A. Schlotthauer, Stephen Guler, and J. W. Holland. The general purpose of the association will be to furnish the trade with a high quality of milk and cream.

Dr. Belknap of San Jose has the gutters of the cow barn sprinkled once daily with a solution of sulphate of iron to keep away the flies and sweeten the air. The solution is made of five pounds of sulphate in a fifty-gallon barrel of water. His sprinkler is made of wood as tin or iron is eaten by the solution. Arsenate of soda, 2½ pounds; sugar, 5 pounds; and water, 50 gallons is kept in a barrel and used to spray spots where flies breed; this kills them.

The October report of the Stanislaus Cow Testing Association shows that 91 of the 1497 cows being tested produced at least 1.5 pounds of butter a day. Lady Nadine, a purebred Holstein cow, belonging to P. Brunold, leads all other cows in the Association, having produced 2653 pounds milk, 82.1 pounds butter, 3.1 per cent fat during the past month.

HORSES AND SWINE.

Guthrie Large of Monterey is selling out his herd of registered Durocs.

G. H. Duboise of San Martin reports having sold four registered O I C hogs recently.

J. M. De Vilbiss writes us that his son, Clyde De Vilbiss, was the winner of the Patterson High School pig feeding contest.

A trio of Berkshire sows were shipped by F. C. Bohnett of Campbell to J. O. Stradbug of New Mexico recently.

C. G. McFarland of Tulare recently purchased a thoroughbred Poland-China boar from Geo. A. Smith of Corcoran.

Since the opening of the war, a total of 174,285 horses have been purchased at East St. Louis, Ill., by England and her allies.

A Boys' Pig Feeding Club has recently been formed at Hughson, with an entry of some eleven or twelve boys from that district.

Chas. R. Fillon, of Metz, Salinas Valley, Poland China breeder, reports that he cannot nearly supply the local demand for breeding stock.

At the meeting of the Stanislaus County Farm Bureau on Oct. 23 a movement was started for the formation of a swine breeders' association for that county.

The University Farm shipped a carload of fat hogs to the Western Meat Company on Oct. 27; they also shipped a fine Berkshire pig to Honolulu on Oct. 26.

Merrill & Son of Morgan Hill report having sold F. G. Frazel of Hollister one boar; a sow each to Henry Rainstroff, Mountain View, G. A. Cassey, San Jose, and A. M. Kinkaad, Morgan Hill; and one boar to M. Choen of Irvington.

C. R. Hushback of Watsonville bought from A. D. Welsner of Gervais, Ore., 3 Duroc Jersey sows which were in the First Prize litter at the Oregon State Fair, 1914. These sows farrowed at 14 months old 32 pigs.

W. J. Hanna of Gilroy reports shipping some of his choice Poland Chinas to: Geo. A. Smith of Corcoran; Lenard Bros., San Benito; J. J. Flanning, Santa Clara; and S. S. Harris of San Martin. His herd is headed by a son of A. Wonder.

Considerable interest is being taken in the Hollister district in purebred hogs. D. Bache is breeding registered Chester Whites; W. A. Pack, registered Duroc Jerseys; B. B. Shaw and McConnel, registered Poland-Chinas. Practically all the surplus breeding stock of these ranches is being disposed of locally.

Entries at the Panama-Pacific Exposition hog show which started the fore part of this week indicated that the Berkshire breed will be shown in larger numbers than any other breed. Out of a total of 51 entries in this division, there were 23 Berkshire breeders, 13 Duroc-Jersey breeders, 10 Poland-China breeders, and 5 Hampshire breeders, the show being participated in by breeders from Oregon, Washington, Idaho, and California.

We have a few females and some of the best blood in bulls extant. Ages, six months to two years old.

Prices low.
JERSEY QUEEN FARM, San Jose, Cal.

Save That Last Crop of Alfalfa

By Putting it in an

IDEAL GREEN FEED SILO

BECAUSE OF THE RAINY WEATHER encountered when the last crop of alfalfa is ready to cut, it is very difficult to cure.

BUT YOU NEED NOT SUFFER a loss on that account, for if put into an Ideal Green Feed Silo it will make just as good feed as when harvested in any other manner, and you can silo it in the rain if necessary.

ORDER YOUR IDEAL GREEN FEED SILO NOW and get it up ready for this last crop of alfalfa when it matures.

YOU CAN COMMENCE FEEDING it just as soon as the silo is filled, and by next spring it will be empty and ready to receive that first cutting that as hay is usually not worth handling because of the weeds it contains, and the trouble usually experienced in curing it.

THE SPRING FILLING can in turn be fed out in plenty of time to receive the crop of corn in the fall, thus enabling you to fill your silo three times within less than a year, by filling of which will pay you enough profit to buy the silo and at the same time provide the equal of the very best of pasture for the year round.

STOP BUYING SO MUCH MILL FEED, but place your order now for an Ideal Green Feed Silo. You will never make the profit from your dairy that you should until you commence feeding silage.

WE CAN MAKE SHIPMENT within four days after we hear from you. Write us now.

FOR SALE Jersey Bulls Bull Calves

from cows on yearly test-making good-sired by our herd bulls KING'S VALET (imported), VALET'S KING OF L. BORELLO'S GOLDEN LADDIE, GRACE'S FOX OF VENEDERA, and NORMA'S GERBIE SON OF L, backed by production and winnings in the show rings.

They are of FINANCIAL KING, GOLDEN LAD, GOLDEN FERN'S LAD, MARIGOLD and ST. LAMBERT blood, the kind that improve type, cream production and persistency. One cow gave 49.5 lbs. fat in 11th month; her daughter gave average test of 8.38%; another gave 79.9 lbs. fat in one month, 238.9 lbs. fat in 134 days. A 2-year-old gave 50.6 lbs. fat in one month—all under dairy conditions.

We have bulls from such cows, with correct type.

Dairyman's Opportunity

For $50, a yearling bull by VALET'S KING OF L, out of a good cow. $25 for bull calves under 30 days old. Tabulations, but no Registrations at this price.

Come and see them, send for catalogue, or write us your needs, and we will give you satisfaction and profit.

N. H. LOCKE CO., Lockeford, Cal.

epidemic of cholera is feared e Los Banos and Dos Palos sec-. Several of the big breeders vaccinating their herds.

as. Gatewood of Fresno reports g sold within the last few s eight head of registered nd-China hogs. At the 1915 no District Fair this herd took rsts and thirds.

rchases of horses and mules rmy purposes are still being in the vicinity of Stockton. It ted that over 850 animals have shipped from that point since pening of the war, and that an ge of a carload a week is leav- here at this time.

L. Varney of South Dos Palos gone into hog raising in the r way. Thirty Berkshire brood were secured last spring from of the best herds in the State; number will be increased as the g stock develops. It is the to save only the very best for ing stock; the rest will be sold e butcher.

CATTLE AND SHEEP.

midt Bros. of Salinas are ac- lating a small herd of Red d cattle.

is reported that rabid coyotes oing much damage to the cat- northern California, and that nger of an epidemic from that e is imminent.

e removal of the embargo upon ican cattle opens to American ers a most promising market in tina that has formerly been polized by the British.

e Paicines Ranch Company has tly purchased 4300 acres of has been known as the Mc- Ranch at Paicines from T. S. ins and Elwood Varney; this be used as range land.

e Healdsburg Tribune states cattle raisers in that vicinity complaining of the scarcity of cattle for the ranges this win- d are seeking elsewhere to sup- eir needs.

W. Wiley purchased of the Hop- Stock Farm of Hopland one of rize-winning Shorthorn bulls at anama-Pacific Exposition. He ecured another registered bull the Paicines Ranch, San o county. He will buy a few es when the opportunity ar- to stock his 3000-acre ranch Salinas Valley.

J. S. Harding of Chicago, secre- of the American Shorthorn ers' Association, while visiting xposition recently stated that rnia has every opportunity for g the cattle business as profit- s it is in Argentina. These de- ns were drawn by Mr. Harding a comparison of conditions in rnia and South America.

MISCELLANEOUS.

R. E. Duckworth, a recent gradu- the San Francisco Veterinary e, has hung up his shingle at .

A. J. Glover of Wisconsin thor- believes that a man will not d with a breed of livestock that not love best of all even his conditions are better for one breed than another.

A the meeting of the Murray hip Center of Alameda county eld on Nov. 8, Dr. C. L. Road- of the University of California eliver an address on "Live- Diseases," dealing especially nthrax and blackleg.

Revada Ranch north of Napa ilt this season a 24x100 foot ed, a concrete dipping tank, et deep, five feet wide, 20 feet n the top, and six feet long bottom. A dripping board so made of concrete next to nk. Cows and horses will be as well as hogs. They now nder construction a machine 20x30 feet, with sleeping ents supplied with shower nd every convenience for the ands.

SWINE.

BIC TYPE POLAND CHINAS—I have an extra good lot of strictly high-class young boars from three months to one year old that are fit to head any herd anywhere. Visitors say they are the best they ever saw. They have the large size, the good hams and shoulders, the strong, wide, arched backs, great length and depth of body, plenty of smoothness, mellowness and quality—in fact, they have two good ends and a good middle; are good lookers and money-makers. Their dams are either from Illinois, Iowa, or Missouri, or are from dams whose sire or dam are from these States. These boars are sired by **Iowa Wonder**, who will weigh over 1000 pounds in show condition. He is a son of **A WONDER**, the greatest Poland China boar living or dead. These young boars carry the stamp of their sire and will sire pigs that will please you. Satisfaction guaranteed in every particular. I am overstocked. I have boars galore. Will sell them at extremely low bargain prices. No females for sale at present. The book on THE HOG SUPREME—THE POLAND CHINA will be sent to you free for the asking. Yours for the BIC TYPE—the kind that grow faster and larger and have more and better pigs. CEO. A. SMITH, CORCORAN, CAL.

Veterinary Queries and Replies.

[Answered by Dr. H. H. Wintringham, Petaluma, Cal.]

Correspondents desiring a reply by mail should send money order for $1.00. No charge is made when questions are answered through this department.

OLD WIRE CUT SWELLS.

To the Editor: We have a 2½-year-old colt that had been cut on wire, just below the fetlock on one of her front feet, about a year ago. It is all healed up now but the foot just above the hoof tends to swell up and cause the animal to limp. We have relieved this twice by the application of "Mustang" liniment, but it is appearing again. Could this be due to some other reason, perhaps such as rheumatism?—J. H., Rio Linda.

[Evidently a forcign substance remained in the wound and is still inside. The animal should be examined by a competent veterinarian and this substance removed, as it will never be right till this is done.]

COW HAS SORE JAW.

To the Editor: I have a seven-months-old colt that has a sore under its jaw, where the halter strap goes, the size of a quarter. There is a scab which is partly mattered. When I feel of the sore there seems to be a lump 2 inches in diameter on the bone. It does not seem to hurt the colt and is not noticcable. The colt's blood does not seem to be in good condition.

[Give this colt ½ oz. Fowler's Solution once a day. Heal up the sore with carbolated vaseline and do not allow anything to rub it till healed.]

SOW DOES NOT BREED.

To the Editor: I have a Duroc Jersey sow that is sixteen months old and has never been with pig. She seems to come in heat regularly and has been bred five times by three different boars: We did not breed her until she was twelve months old. She is in real good condition.—J. L. C., Delano.

[This sow either has a growth in her genital tract or is trouhled with leucorrhea. An examination would be necessary to determine the exact trouble. Try douching her vagina once daily with a 1-1000 solution potassium permanganate.]

MILK FEVER AND MILK FLOW.

To the Editor: Does milk fever lower a cow's production for the whole lactation period? My cow recovered and is in good flesh. How can I prevent milk fever?—D. S. K., Madera.

[Milk fever does not affect the milk flow except for a short time following an attack. It would seem that you had got hold of an unprofitable animal. There are no certain procedures to use to prevent milk fever.]

ABORTER HAS DISCHARGE.

To the Editor: My cow which was due to calve Nov. 6 lost her calf about Oct. 11. The afterbirth did not come away until the sixth day. Since then she has a discharge of a yellowish substance, sometimes a half pint at a time. She has not increased in milk.—R. J. S., Crescent Mills.

[Wash this animal out once daily with a solution of cresolis 1 per cent until the discharge ceases.]

BIG JAW NOT CONTAGIOUS.

To the Editor: My cow, fat and apparently healthy otherwise, has "big jaw." Is it contagious or does it make the meat unfit to eat?—B. K., Oakland.

[Big Jaw or Actinomycosis is not a contagious disease. Under the federal regulations the head alone would be discarded for meat.]

MANGE REMOVES HAIR.

To the Editor: My horse has a sort of mange spreading in spots until all the hair is gone. Dip has little effect.—J. S. Doyle.

[Apply sulphur iodide ointment to the affected parts once daily.]

SHEEP LIKE "SOFT CHESS."

To the Editor: Please give me the name of the grass of which I am sending seed-heads. Sheep like it and it runs out foxtail. Where can I get the seed of it?—J. F. R., Mendocino county.

[Answered by Dr. H. M. Hall, University of California.]

[The grass from Mendocino county is the Soft Chess (Bromus hordeaceus). As you doubtless know, the Soft Chess has taken large areas in California, particularly in the south Coast Ranges, within the last few years. It is there considered to be a very undesirable species since it has crowded out better forage plants and is itself eaten by cattle and horses only when they are actually starved to it. It is probable that sheep would eat it under almost any conditions, as indicated by your correspondent, but it certainly is no grass for other grazing animals. I do not find it listed in the seed catalogs at hand, but one should have no difficulty in harvesting an abundance of seed. That these are viable under our conditions is evidenced by the fact that the grass has spread so rapidly, although it propagates only by seeds.]

STOCK NOTES.

The grand champion stallion at the Exposition bred 65 mares during the season of 1915 at $100 per service, and his owner has been offered $1000 each for 10 of his colts. Pretty good interest on a heavy investment.

Purebred mares sell at $500 up. For $800 to $1000 the buyer can pick animals of very good conformation. Poor purebreds are undesirable at any cost, according to O. H. Brandt of Shellville, Cal.

"Use pure bred sires of good conformation by all means and have all the purebred mares you can." Heat doesn't hurt a heavy draft horse if he is kept thin and busy, according to H. Lefebure of Fairfax, Ia. They have more oppressive heat there than in California, he thinks.

Can't Californians raise draft horses cheaper than Easterners? Why then allow a Californian to go East to buy heavy stock for draft purposes?

Mules are not sought for European cavalry, according to L. M. Monsees, jack breeder of Smithton, Mo. They have too much sense to run into the gunfire, which is the reason they do not run into barbed wire fences very often.

The fame of the Missouri mule is due to its mother. She is a cross of a draft breed onto one of the large trotting breeds. This gives her good size, plenty of room, and quick action which is the reason the slow walking jack begets a fast walking mule of large size.

The idle horse requires skill and judgment in feeding, just as much as the hard-working horse.

Dairymen, Attention!

CRUDE OIL BEST FOR HOG LICE.
[Written for Pacific Rural Press.]

When you are all run down, and about 20,000 disease bacteria are introduced into your system in a spoonful of water, the disease-fighting corpuscles in your blood are too weary to wage winning battle against the invaders, and you sicken and die. That's the way it was with a Colusa county rancher's hogs which died with cholera probably, but the county veterinarian said the primary cause of death was lice. One would expect that purebred hog growers would think enough of their pocketbooks to keep these tortures off when it is so easy and cheap and profitable to do so.

Crude Oil on the Wallows.—Crude oil in the wallows does the work for Chas. Goodman of Williams. It costs about 5 cents a gallon and a little of it spreads over quite a surface if warmed up so it runs thin. Mr. Goodman's hogs come running when they smell it, they douse themselves in it, and work it into their hides by rubbing against posts. They work it all through the mud and direct the yards as far as crude oil can do it. Mr. Goodman says he knows it is harmless to the pigs; though it is well not to allow them access to very warm oil on cold days. Formerly J. K. Fraser of Stanislaus county used a gallon of sheep dip per week, but this year he turned water into the hog pens once a week during hot weather and poured a gallon of oil on it. The pigs do the rest. He also pours crude oil into the troughs and they lick it up; it never blisters or hurts them.

The Meadowbrook Stock Farm of Merced county dips the pigs about once per ten days. The dipping vat is on runners and is moved from one lot to another. The pigs tumble into the vat head first and when they come up, must swim several feet to the outgoing incline so that every wrinkle is thoroughly soaked.

A concrete pit to dip the hogs was built on the Tweed ranch in Glenn county. But the hogs were so big that it semed impracticable to dip them; and now they are sprayed with 4 ounces sheep dip per 10 gallons water, until they are thoroughly soaked. The partitions, walls, and floors of the hog houses are also sprayed so that the hogs lie down in it. Mr. Tweed says it costs only a quarter as much this way as to dip them, but admits that he cannot do as good a job on the hogs outside. W. C. Chisholm of Sonoma county also sprays for lice, but his work was ineffective. Thus it seems that crude oil in the wallows or on the floors is the cheapest and most satisfactory hog louse remedy.

Mutton Sheep for Small Farms.

SMALL FLOCK ON BIG RANCH.
[Written for Pacific Rural Press.]

The meat problem on a large ranch where many men must be provided with food is satisfactorily solved by Geo. W. Baxter who has 2000 acres, mostly grain, near Le Grand, Merced county. Hogs are too much trouble to suit Mr. Baxter, and he doesn't care much for pork anyway. Sheep are turned loose on green pasture in winter and spring, and have the run of the stubble in the fall, with some hay—just enough have been raised during the past eleven years to supply the tables at home and in the camps.

Last April the first lamb sales were made. The local butcher took fifteen surplus lambs two to three months old at $5 a head. They averaged 56 pounds. Old or poor ewes for breeding are sold or killed. These recently sold for butchering have brought $7-$8.50.

The start was made with three Merino lambs raised on a bottle. No ewes have been bought and there are 50 in the flock now. A purebred Hampshire buck was bought every two years until four years ago when a Shropshire buck was obtained from Bishop Bros. Though no shelter is provided, Mr. Baxter claims 100 per cent of lambs—many twins. They have come as early as November some as late as March. It is desirable for them to come while there is grass for the mothers, since dry hay and dry stubble tend to dry up the milk. Hay for sheep should be cut while green so it will cure in better shape than if sun cured.

Diseases have never troubled this flock. A scabby buck came once, but was swabbed with sheep dip. That fixed it.

Old sheep are sheared twice a year; first in Sept. to get the summer dust and trash out so the spring wool will be clean of everything but easily washable mud. Also bunches of wool do not drag loose as badly as if sheared only once per year. Spring shearing is desirable on account of the hot weather.

"There is plenty of market right here," says Mr. Baxter. "Butchers bother me to death, and neighbors would come after them." They are best at 5 or 6 months when they wean themselves.

"The principal thing is to buy pure bred bucks, no matter what you have to pay for them. Mine cost $25 besides $2.50 express."

SUGGEST DIFFERENT HANDLING OF THE HORSE.

To the Editor: With reference to Geo. E. Wright and his horse in your issue of Oct. 2nd, I wonder what kind of an imagination Mr. Wright has. He says that if he leads the mare a little ways she is all right. Why does he not take a little more time, cinch her lightly, lead her a little way, then tighten the cinch just tight enough to get on without rolling off; lead her a little way further and get on? And in course of time she will forget all about her bad acting. There are but few horses that will not cut up if cinched tight, especially on a cold morning.—**Lover of Horses,** Chico.

To the Editor: In regard to Geo. E. Wright's request for advice about his saddle-horse, I suggest that he make a blind for her 3 in. wide by 21 in. long out of medium harness leather. Run straps through loops at the ends of the blind, long enough to go around the horse's neck, and buckle. When he saddles her it would be best to back her in a fence corner, or better in a wide stall. Pull her blind down over her eyes. Then put the saddle on and cinch it up slowly and not too tight, then get on the horse and raise the blind (which will stay in place like the forepiece of a bridle. It should be made so the throat strap doesn't slip too easily through the loops.

If the mare continues to throw herself, I would advise him to hog-tie and leave her down for a while. She is probably nervous and needs to be handled with patience and care. As for her colts being like her, that depends a great deal on their disposition and how they are handled. —Geo. A. Turner, Morgan Hill.

Manual For Hog Men

Kings county's fame as a pure-bred stock - raising community has now attained the stage of text book fame. In a carefully compiled volume, named "California Hog Book," a compilation of information about hogs applied to California condtions, written by W. S. Guilford and from the Pacific Rural Press, appear illustrations of Poland China hog prize winners belonging to M. Bassett and Wm. Bernstein of this city, as a typical purebred type of that breed. Inasmuch as this bids fair to become a real textbook for California nog raisers, the free advertising these local fanciers and this county obtains in its pages will be perpetual and all the more valuable. No textbook on hogs, cows or sheep would be complete nowadays without reference to Kings county's splendid success and example. — Hanford Journal.

Farm Poultry for Profit.

[Written for the Pacific Rural Press by Susan Swaysgood, Pomona.]

POULTRY SHOW NOTES.

This is the time of year when the poultry shows are in evidence. For all members of the home, a good poultry show is an educator. If you have a good flock of any breed whatever, of pure-bred fowls, look them over closely, or get some one who is posted on such matters to look them over for you. Then if there are but a few or even one that excels, enter it in some local show and try it out before a competent judge.

Attend the show and ask questions, look closely at the winners and note how your own birds compare with them. If there is a wide difference, don't get discouraged, but brace up and come back next year with something better. Don't look over the well-groomed birds and then say you have better stuff at home if they had been washed up. That's a cowardly way of doing. People mark him down as being either a fool or a liar, and either of those things are bad. Get your bird in condition. If a cockerel, train him to stand for the judge to poke his stick at him. Quiet birds are always admired best by a judge who has to handle them. Quietness induces a judge to give a closer investigation than if the bird is wild and just plain cross.

Grain makes hard flesh and if the bird is in good health and fair flesh it will need very little conditioning. A little olive oil once a day helps put a gloss on the feathers that nothing else will. In the case of black birds a little sulphur added to the feed helps give a green luster to the feathers that all black fowls should have.

All varieties must have their legs and feet washed with soap and water and a scrub brush, then the dirt must be taken from under the scales with good hardwood toothpicks and the legs polished with a dry cloth and a few drops of oil of pennyroyal. Wash the face, comb, and wattles with a little alcohol and glycerine, band your bird, smooth the feathers over a few times with a silk handkerchief and you are ready to coop him. Of course it goes without saying that your bird is free from lice, because that is the first thing to think about in conditioning. No lousy bird, no sick bird, no scaly-legged bird, and no crippled bird is ever considered in a show as a possible winner.

Don't be afraid to let it be known that you are an amateur; many old fanciers are glad to tell new ones anything in reason, and of course you will not ask anything unreasonable, or anything that would hurt the other man's business.

Turks Go to Neighbors.—What can I do where a neighbor turns his chickens and turkeys on my range. Several of them have gone with his flock and been driven into his coops. Subscriber.

The law would amply protect you, but it would involve a lot of trouble and much bickering and bad blood, and even then you would scarcely be able to prove the claim, unless there were some private mark on the birds. And this is what every farmer should have. For twenty-five cents you can get a chick punch, and by punching the web between the toes, keeping dirt out until it heals up you have a mark that no one can gainsay. This is at once a protection and a means of proving your property that few would dispute. But for plainer means of knowing your stock the leg band is the easiest. Get a bunch of bands. Every bird must have a band on and its number put in a small book kept for that purpose. After fastening the band on in regular fashion put a drop of hot solder over the fastener which will seal it so that the band cannot be taken off.

Brooders for Turkeys.—Can you tell me whether young turks can be brooded in hot water brooders? I have raised chicks in them successfully and would be glad to have any information you can give me.—Mrs. H. A. R.

Yes, I think you can raise young turks in hot water brooders, but you will have to move them to new ground more often than with chicks. The heat should be a little lower than for chicks and keep plenty of sand handy for them. I would put at least two inches of sand in the bottom of the brooder and also some in the run. If the heat affects them at all wrap woolen cloths over the pipes; that will modify the heat that falls over the backs. Plenty of clean fresh sand and a good run of grass will help you. But don't force the poults to stay in the brooder except at night, encourage them to go in to warm up but not to stay too long under a hover. Turks really need more fresh air than anything else I know of and too much heat weakens them.

Thinning Hens.—Some of my hens are over fat. What can I do to take it off?—L.

If the hens are well and are through, or nearly through, the molt, leave well enough alone; as soon as they commence to lay they will lose the surplus fat. But if they are at the beginning of the molt, put them on short rations, cut out the mash and just feed grain. Put a tablespoonful of sulphate of magnesia in a quart of water for two days together and give no other drink. This will reduce them sufficiently to make them more active and they will not accumulate so much fat when they are more active. Molting makes some hens sleepy and lazy; then if they give way to it they get fat, but it is not healthy fat and really should be taken off.

Send in Your Questions.—This department is for your good. Send in your questions, and the management assures me that we shall have space given us for all questions. And in order to benefit many, make the questions as plain as possible. If chickens are sick, say how you feed and care for them; that makes it so much easier to help you and ourselves too, because we take pride in being able to help, and feel badly when our efforts go for naught.

Why Use Trap Nests?

To the Editor: While recently visiting a number of poultry farms I was surprised to learn that very few breeders who formerly used trap nests continued with them, for more than a few reasons. The general opinion of the users seemed to be similar; i. e., that the trap-nested hen of high egg-producing ability could not be relied upon to produce pullets of great egg-producing capacity; and in numerous instances all their pullet progeny proved to be inferior layers. After reading much relating to the value of trap nests these direct adverse reports are confusing. Can you set me right in the matter?—W. W., San Francisco.

[Answered by Geo. H. Croley.]

[The poultry breeders referred to were not thorough in their work of trap-nesting or were lacking in certain knowledge that was essential to their success. To go into this complex subject to any extent would require many times the space that can be used here, but the following brief remarks may start our enquirer in the right direction. Pullets do not become heavy layers simply because their mothers were great egg producers; therefore, the trap nest does little more than prove that the hen that has laid a large number of eggs has the capacity to digest large amounts of egg-making food and that she has a good circulation which insures vigor. She is able to transmit these qualifications for heavy egg production to her young of both sexes if mated to a male whose ancestors have possessed the same qualifications. On the other hand, if the male is from a mother who was able to produce only a limited number of eggs, he will, in nearly all cases, influence the laying capacity of his pullets that come from his mating with a heavy laying hen, causing them to be poor layers while their brother cockerels are almost sure to inherit their mother's qualifications for producing many eggs, to be transmitted by them to their daughters of the next generation.]

FALL HATCHING ENDORSED.

[By Geo. H. Croley, President Federated Poultry Assn. of California.]

For several months past we have been vigorously urging a more extensive hatching of fall chicks. Reports from various parts of the State show that many poultrymen who never before thought of trying it, have undertaken fall hatching on an extensive scale. On the other hand, there are some doubters who write to ask questions or to state that from a viewpoint of profit "it can't be done." This opinion which seems to be more prevalent in southern California than in the northern part of the State, receives a hard jolt in a recent issue of a southern journal, Pacific Poultrycraft; an unknown writer—possibly the editor—his brooder house and more eggs in presented a long argument highly endorsing fall hatching. Reading between the lines, we fancy this writer began his investigations with the idea that fall hatching was not practical in a general way and particularly for the reason that it is assumed that all fowls over eight months of age will molt about the same time in the fall and thus interfere with fall egg production.

The following brief extracts from his article are instructive and demonstrate what effect his investigation had upon his opinion:

"In order to change the period of molt, the hatching season must be changed. . . . A hen will always lay during the month in which she was hatched the year before. . . . An egg farmer in Green Valley gets a 50 per cent egg yield from his year-old hens and a 60 per cent egg yield from his pullets during October and November, and the secret of his success, besides knowing how to run a chicken ranch, lies in the fact that he hatches his laying stock in the fall. . . . At the time he had 1100 smart little chicks in the machines."

In view of the fact that the greater doubt as to the value of fall hatching seems to have existed in the South, this article contains much that is gratifying to us and should be of value to southern readers.

In regard to the date of hatching affecting the time of molt, the following statement by an Hawaiian Island correspondent should furnish food for thought: "In my experience there is no regular molting period in these islands; fowls may molt during any part of the year each individual depending apparently on the time of year during which it was hatched and the ripening or dying of the plumage exciting a natural response on the part of nature to repair the loss of the old feathers with a new coat. No particular portion of the year is known as the molting season."

ALMOND HULLS AND FERTILITY.

To the Editor: Almond hulls placed in a layer 6 inches deep over a patch of Johnson grass last fall killed it off, for no Johnson grass showed up in the spring. A 3-foot cottonwood tree was unfortunate enough to have a stack of almond hulls piled around it and it died in a short time. On the other hand, almond trees are known under which hulls have fallen for year because the nuts were not desirable enough to harvest, yet these trees are still vigorous. I must get rid of my almond hulls. Would it be safe, or of any fertilizing value to spread them out in the orchard in mulch?—D. S., Orland.

[A layer of almond hulls thick enough to shut out the air from the soil or to make the soil sour by its decay would be likely to kill plant roots under it. Considerable amount could of course be worked into the soil without such effects and they would enrich the soil—slowly because their decay is slow. If practicable we should spread in the corral and have the hulls broken by stock tramping and commingled with the manure. This would lessen the danger and hasten decay.—Editor.

HOPLAND STOCK FARM

Four to five months' old pullets, $18 per dozen. Selected Cockerels and Cock Birds, $5 each and up.

STRONG SHOWING OF SHEEP AND SWINE AT P. P. I. E.

[Written for Pacific Rural Press.]

The greatest swine and sheep show ever held in California is on this week at the Panama-Pacific Exposition grounds, and every farmer should make it a point to spend one or more days there the next week.

In the swine division the show, while largely of a Pacific Coast nature on account of quarantine regulations, is a marvel of quality and size. Particularly is this true of the Berkshire show, which numbers over 300 animals, of a quality said by Eastern authorities to excel in Berkshire quality and size any previous Berkshire Congress show.

Through the loyal support of the American Berkshire Association, the Pacific Coast breeders have responded nobly and their efforts will be long remembered. Their sale, to be held on Saturday, (the day of this issue) promises to be the forerunner of much good, backed as it is by such a strong showing competition.

Poland China breeders, while not so strong in numbers, are holding a show worthy of the breed as are also the Duroc Jersey and Hampshire breeders. The belted hog is particularly strong as compared with previous California shows.

Yorkshires O. I. C.'s and Essex aid in giving the visitor breed viewpoints which will seldom be offered again.

Sheep and goats of all breeds combine in making this the most worth while exhibit afforded the California stockman in late years at least. In numbers the Rambouillets are leaders, the show being made by out-of-state breeders who are truly putting up a show of a superior nature. This show seems to have been less affected in size by the quarantine restrictions than the other breeds of sheep.

In Shropshires California-owned animals are leading in winnings as this is written and they are in condition to have won in much hotter company.

New Zealand breeders with their Correidales, Lincolns and Romey Marsh, together with Hampshires, Oxford Downs and Cotswolds from out of State, add variety and internationalism to the show. A big showing of Angora goats and Toggenburgs complete the show.

HOME-MADE HOG TONIC.

To the Editor: There are certain parties traveling through the country selling a very marvelous tonic for hogs at a marvelous price. Many of the farmers are paying their money for the product when they could procure the ingredients and make the compound themselves at about one-sixth the cost. The recipe for the tonic is given by Dr. Salmon in Farmers' Bulletin No. 24 of the United States Department of Agriculture as follows:

Wood charcoal 1 lb.; sulphur 1 lb.; common salt 2 lbs.; sodium bicarbonate 2 lbs.; sodium hyposulphite 2 lbs.; sodium sulphate 1 lb.; antimony sulphide 1 lb.

These ingredients should be completely pulverized and thoroughly mixed. The dose is a large tablespoonful for each 200 lbs. weight of hogs to be treated. Reader.

THE FLORAL SHOW.

If you failed to see the Floral Show in the Horticultural Palace at the Exposition you have certainly missed a treat. Those who did attend carried away memories of the most beautiful gems in nature's realm. What a sight it was to the thousands that poured in and out of the building, and what a setting the show had with the wilderness of ferns, palms, hanging baskets, vines, etc. Words cannot depict it. There were myriads of huge chrysanthemums I heard a man remark that he had measured one and it was seven inches across. Great snowy blossoms, rose-colored, gorgeous yellow, gorgeous combinations of red and yellow—some of them regular "ragged robins" with their fringed petals of all colors and sizes. There were dainty, fragile lilies-of-the valley peeping out of their pale green leaves at the big aristocratic Easter lilies that seemed to have stolen a march on the season, and which were surrounded by quantities of beautiful lacy maiden-hair and ferns —splendid specimens and in their proper setting in this great greenery. People went into ecstacies over the begonias, truly a magnificent display. There were two leading exhibits of these tuberous begonias. Henry Bothin had about sixty varieties of the exquisitely tinted flowers, and the Vallance nursery of Oakland was a close second. The section devoted to them was crowded with throngs admiring and seeking information in regard to them. It was rather late for roses, but nevertheless there were a number of choice and beautiful exhibits that attracted the attention of the rose lovers. Dahlias—you never saw a finer collection of these popular flowers. Great clusters of the lovely rose-colored Delice, the yellow and red "Dacia," the ragged red and gold Geisha and the cactus and peony dahlias. I understood that there were about four hundred varieties displayed by one exhibitor. The display of orchids by J. A. Carboni of Berkeley was certainly beautiful and people were paying them homage on all sides. He had between 90 and 100 of these rare and exquisite plants all in blossom. I was glad to see the names of a number of women among the prize winners. A feature that attracted a great deal of attention was the dining table by Pelicane, Rossi & Co. The centerpiece was made of Ophelia, Prima-donna and American Beauty roses, combined with maiden-hair. At each place was a dainty little blue basket filled with Cecil Bruner roses, maiden hair and tied with pink gauze ribbon—a most artistic setting to the table. It was rather surprising that there was not a larger number of artistic designs. Mrs. R. E. Darbee displayed a beautiful Marie Antoinette vase five feet high, constructed entirely of chrysanthemums and roses, which captured the first prize and Frank R. Clark's reproduction of the Tower of Jewels, made of chrysanthemums and jewels was awarded the second prize. The exhibitors paid a compliment to President Wilson by sending him a huge bouquet of chrysanthemums with the good wishes of the National Fall Flower Show.

GARDEN LORE.

Many flower lovers who can only boast of a few house plants have found that using tepid water in place of cold during the winter season has brought forth most happy results.

The Forest Service of the Department of Agriculture gave away one hundred two-year-old specimens of "Big Trees" on San Francisco Day and Forestry Day at the Exposition. This is part of the plan to distribute several hundred transplants of western yellow pine and sequoias.

This is the month to plant your Holland bulbs — tulips, hyacinths, crocus, jonquils, narcissus, daffodils, etc. The ground should be well enriched and spaded deeply, and if a little coarse sand is mixed with it so much the better, for it will prevent water from standing at the base of the bulb which would soon cause the roots to decay. Tulips, hyacinths and daffodils should be planted about four inches deep and five or six inches apart, and the smaller bulbs two and a half to three inches apart, and about three inches deep. By planting at once you should have a wealth of blossoms in the early spring.

Luther Burbank, who occupies an enviable place in every flower lover's heart on the coast, had the pleasure of entertaining Mr. and Mrs. Thomas A. Edison and Henry Ford at his home in Santa Rosa, the scene of his great accomplishments in the creation of fruits, flowers and shrubs. On leaving the home all the school children of Santa Rosa and a number from Sebastopol, where Mr. Burbank has another experimental farm, met them and made the welkin ring with "I love you, California." It was a pretty tribute to Mr. Burbank and his friends.

FASHION TALKS.

According to Dame Fashion's edict the tight-fitting coats to the waist with full rippling skirts are being ushered in.

The Russian blouse effect with fur collar and cuffs and turban fur-trimmed are not only popular but very effective.

I saw a beautiful little three-cornered hat the other day. It was made of an elegant piece of black satin; folds of the satin making the brim. On the smooth satin crown a medium-sized white pearl bead was placed at intervals, and a black ostrich faney fastened to one side on one of the points completed one of the Frenchiest little hats I have seen in many a day, and it was made by the young lady herself who objected to giving a milliner $18 for a hat not nearly so pretty.

Another pleasing effect was an aeroplane turban of blue velvet with wings of Roman silk.

ALMOST A CAT-ASTROPHY.

The cat clubs are in trouble over the cat show scheduled to come off November 27th at the Exposition. Mrs. Jack Gordon, a member of the Pacific Cat Club, who has written a book about cats, and ought to know what she is talking about when it comes to cats, was appointed judge of all the cats. This "rubbed the fur the wrong way" for the Pacific Cat Club and the California Cat Club had both been aspiring for the honor of having one of their members appointed judge of all the cats. Consequently, Mrs. E. S. Warren of Haywards, member of the California Club, who had also aspired for the honor, and is a recognized authority on cats, and all of her friends have refused to have anything to do with the show. It is hoped by friends on both sides that a truce will be reached by the 27th.

HIS LETTER.

A section foreman on a railroad was ordering a list of supplies. He had completed his letter when he found he was in need of a "frog" for a switch, so his letter ran as follows:

"Dear Sir:—You will please ship me some pick handles, spike mauls, spikes and wrenches.

"Yours truly,
"PAT HOGAN, and a frog."

GUESS AGAIN.

Shronk stopped his motor car at crossroads and yelled to a farmer who lay on a cart of fertilizer:

"Hey, Cornsilk, is this the way to Croyden?"

The farmer raised himself from the fertilizer in astonishment.

"By heck, stranger, how did you know my name was Cornsilk?" he asked.

"I guessed it," said the motorist.

"Then, by heck," said the farmer, as he drove off, "guess your way to Croydon."—Philadelphia Ledger.

The man who won't even let his best girl carry a handbag before they are married is the one who generally expects her a few years later to do all the lugging of the baby.

HOUSEHOLD HINTS.

Oil stains can be dissolved i naphtha, or taken out by soap an cold water.

Meat juice stains must be washe out with lukewarm water, then wit soap.

Cream stains can be washed i cold water, then in warm water an soap.

To clean gilt frames, grate a fresh raw onion, and apply the juice, ful strength, with a soft clean brush t the gilt frames. This not only re moves all former traces of flies, bu will prevent their alighting upon the frame or the picture in it.

To prevent salt in salt bottles fron becoming damp and lumpy, whe filling them put in ten or twelv pieces of rice. This will not com through the holes in the cover o the salt cellars, but will break th lumps and gather the moisture thus the salt is always dry and fine

In making buttonholes in sof muslins it is a very good idea to ru a little paste, made of flour an water, on the wrong side. This wil give a firm surface to work upon and obviates the possibility of cut ting a buttonhole too large. O course, the paste will not discolo the fabric.

Coffee, chocolate, tea and frui stains can be eradicated when quit fresh by spreading the stained par over a bowl and pouring boilin water over the stained part from a height. If they have been in th fabric a short time, the stain should first be sprinkled with borax an then soaked in cold water.

It simplifies the work of th housewife if every article is pu away when she is through using it instead of leaving cans opened

"Let 'er rain"

(California)

which usually results in a search for the lids, soiled knives, spoons, etc., all of which could be attended to at once, leaving the kitchen neat and the temper serene, which cannot be the case when it is in disorder.

Many people go hobbling through the world, their tempers marred and too irritable to try and be pleasant, when the sole trouble lies in not giving their feet proper attention. If the feet are bathed every night in tepid water into which a little borax or common salt has been sprinkled, there is little likelihood of sensitive, swollen feet, or of hardened or calloused portions on the feet. As the evening foot-bath is a preventive, so is it a cure, for such condition, unless they have reached an extreme stage. If sufferers from soft corns between the toes will bathe their feet daily and sprinkle talcum powder liberally between the toes night and morning, they will find ease and comfort and the corns will soon disappear.

CULINARY SUGGESTIONS.

Almost Thanksgiving and the thought of it suggests mince meat and pumpkin pies, fruit cake and all sorts of good things. The following recipe is for a delicious fruit cake that is even better for keeping a while, so that means your Christmas fruit cake can be made at the same time as your Thanksgiving cake. Take 1 pound of butter, 1 pound dark brown sugar, 10 eggs, 1 pound of flour browned, 2 pounds, of currants, 3 pounds of raisins, 1 gill of New Orleans molasses, 1 gill of brandy, 1 gill of cinnamon, 1 gill of allspice, ½ gill of cloves, ¾ pound of citron, 10 cents worth of candied lemon, 1 glass currant jelly, ½ tablespoonful of baking powder. Place two layers of buttered paper both top and bottom. It makes two large cakes. Bake slowly two and a half hours.

Onions are good for cleaning steel articles that have rusted. Rub the rust spots with a piece of onion and leave for 24 hours. Wash and polish with bath brick dust moistened with turpentine. Wash again in suds and scald with clear water. Knives that have rust spots of long standing should be plunged into an onion and allowed to stand for some time. Finish the cleaning process as above.

An English way of making a fruit pie is to fill a deep buttered baking dish with fresh or stewed fruit, peaches, apricots or plums, and cover with a crust made as follows: Sift together two cupfuls of flour and two teaspoonfuls of baking powder. Rub into it half a cupful of butter and add one egg beaten with a cupful of milk. Spread over the fruit which has been previously sweetened to taste and bake until the crust is done. Serve either hot or cold with cream or any preferred sauce. They omit the under crust which is usually soggy, and retain every particle of juice by inverting a cup in the center of the baking dish, the juice which would otherwise simmer over the edges will be found in the cup, and when removed it holds the pie with the juice.

In Japan there are 196 people for every 40 acres of land, and 256 cows, 6 donkeys and 512 swine for every square mile of land in the kingdom.

MORE AND BETTER FLOWERS FOR CALIFORNIA.

By E. J. Wickson.

Enterprising Californians are earnestly discussing the possibility of maintaining for permanent sources of joy to the people, some of the architectural and horticultural beauties of the Expositions of San Francisco and San Diego. It is to be hoped that generous people will furnish the funds needed for this purpose. Fortunately however there is one element of beauty which has been embodied in these grand displays to an extent and degree of excellence never previously attained, which will perpetuate itself in the hearts of the California people. It is the exposition horticulture. Its lessons will remain active and influential for a full generation at least, and probably for longer, in ways which we cannot foresee or even dream.

It is not too much to claim that John McLaren is not only our greatest horticultural teacher, but he has put forth his instruction in a way to cause his pupils to linger longingly over his object lessons. He has reached the acme in the art of instruction for he has not only awakened a new sense of beauty and apprehension of the elements of taste in the public mind but he has planted the impulse to do the things which afford such lofty and pleasurable emotions. It behooves the people to encourage and promote the growth of the sentiments and impulses which this year's exposition horticulture has awakened, to the end that in both private and public places California may manifest a fitting complement to the uniqueness and variety of our native flora. Some esthetic critics urge that California should be content with the domestication of her own wild plants. It is a narrow view. California should not be content until she has introduced and acclimated all the joy-giving plants of the world, established them in the places which suit each best, in our world-variety of soils and climates, and learned the art of growing each to perfection and of using many in proper association for border and landscape effects.

Of the many significant lessons toward this desirable attainment which exposition horticulture has demonstrated, a few of the simpler ones may be briefly noted:

FIRST: It has shown that there are many better garden and park plants than the ones which are now common in private and public places. This is true both of kinds of plants not now widely known and of varieties of plants which are now common. Every planter should use discrimination in accepting the seeds and slips which generous neighbors offer. They are often inferior from some point of view, and one should be sure to plant for real excellence as manifested in local gardens or as demonstrated by those who are giving their lives in plant improvement. One would not select a wardrobe from his neighbor's clotheslines, indiscriminately. Nor should you plant your garden in that way. Why should your garden be like your neighbor's? Even if it is good, you can do better by not imitating.

SECOND: This does not mean that one should go wild over rare plants which have not been locally tested, although he should always be trying a few. The great effects in the exposition gardens were not made by rare plants, though they may have seemed strange to many visitors. Mr. McLaren would not risk a beauty-creation on the behavior of a rare plant—much as he loves them. He knew his plants and others, who like him live for better plants, knew them also and were charmed with their behavior. Every one should, within the limitations of his conditions, try to know better plants and should get them from trust worthy sources.

THIRD: Many visitors enjoyed a revelation of what can be done with masses of similar plants. In a way, the effects which were produced by massing on a large exposition scale can also be secured in a small garden lay-out. Instead of having a lot of incongruous plants sidling from each like an army of tatterdemallions get plenty of plants and group them effectively. Group shrubs and trees for permanent effects on the same principles as at the expositions: group herbaceous plants for temporary effects also.

FOURTH: Another most important lesson, as worked out in the exposition horticulture, was the demonstration of effective successions. Get plenty of plants with harmonizing colors ready beforehand. Learn the advantage of transplanting. If you do not care to grow your own plants, it is now possible to buy them as reasonably as cabbage and tomato plants and from nearly all kinds of stores, though naturally the florists should have preference in purchasing, and they ought to give you better plants.

FIFTH: The desirability of flowering bulbs has been impressed upon California as never before and the glorious effects secured with them at the expositions were really a revelation to thousands. Flowers can be had from bulbs nearly the whole year in most California places and their employment in succession and in mass effects should be realized. Everyone can have them, for good standard kinds hardly cost as much as roasted chestnuts.

SIXTH: Perhaps no lesson of the expositions is more significant than to plant early and have things ready ahead of time. It is perfectly true to say that California's springtime is in the autumn. The bulbs which filled the exposition grounds with midwinter glory were planted in September and October and continuosly thereafter. The fall announcements of the nursery and seedsmen who are located in all parts of California will soon be ready. They mark the proper time to begin for more and better flowers.

BIBLE TO MIKADO FOR CORONATION GIFT.

The Reverend Doctor Storge, an official of the Presbyterian church on the coast, sailed for Japan in the Sado Maru, to present to Emperor Yoshihito on the date of his coronation, a Bible in commemoration of religious amity. He will represent the American Bible Union.

P. O .....

Address .....

The Markets.

Unless otherwise noted, prices are f. o. b. San Francisco.

San Francisco, Nov. 3, 1915.

WHEAT.

The western market shows a little more firmness, but not sufficient to cause any advance here. Prices, however, are steadily held at the former level.

(Wholesale prices, S. F.)

Cal. Club, ctl.	$1.65	@167½
Northern Bluestem.	1.70	@1.75
Northern Club	1.65	@1.70
Northern Red	1.60	@1.65

BARLEY.

Speculative business has been active, with stiffening prices, and while trading in the spot grain is light, the quotations for both shipping and feed grades show a slight advance.

Shipping, ctl.	$1.30	@1.32½
Choice Feed, ctl.	1.27½	@1.30

OATS.

Supplies have been coming in rather freely of late, and with the principal seed requirements filled, seed grades are quoted lower. Feed is in fair demand, red being unchanged, while white is lower.

Black, ctl.	$1.75	@1.90
Red Feed	1.30	@1.35
Red Seed	1.45	@1.65
White	1.35	@1.40

CORN.

The local market is dull for all varletles. There is a fair demand for the sorghum grains in the country, but the movement here is light, and there is not much call for Eastern.

Eastern yellow, ctl.	$1.65@1.70
Milo Maize	1.45@1.55
Kaffir	1.55@1.65

BEANS.

The recent advance appears to have been due to the need for stock to fill October orders, and since this business has been provided for the demand shows a sharp curtailment, and it looks as if prices will be a little lower for the next few weeks, at least. Quotations have been reduced on bayos, cranberry beans, small whites and pinks, and the general tone is easy. The crop of red kidney beans is very light, and prices in this line are higher.

(On wharf, San Francisco.)

Bayos, per ctl.	$4.50@4.60
Blackeyes	2.90@3.00
Cranberry Beans	4.50@4.60
Horse Beans	2.25@3.00
Small Whites (south)	4.60@4.75
Large Whites	4.90@5.05
Pink	3.70@3.80
Limas (south)	4.50@4.60
Red Kidney	5.50@5.60
Mexican Reds.	4.25@4.50

SEEDS.

There is a fair demand all along the line at present, though the movement is hardly what was expected for this time of year, as many buyers are still waiting for rain.

Alfalfa, per lb.	17	@18 c
Melilotus Alba		30 c
Melilotus, Indica		6 c
Bur Clover		11 c
Oregon Vetch	4¼ @	4½c
Soy Beans		6 c
Canada Peas	5¼ @	6 c
Sudan Grass		40 c

HAY.

Arrivals show a further curtallment, all of it coming from the warehouses, and the car shortage is llmlting shipments to such an extent that there is hardly enough comlng in to take care of requirements. Prices show no quotable change, but all grades are very firm. There is quite a heavy demand in the interior of the state, from which numerous inquiries are received by local dealers. The export movement also continues fairly active.

No. 1 Wheat	$12.00@15.00
do No. 2	10.00@11.50
Tame Oats	10.00@15.00
Wild Oats	8.00@10.50
Alfalfa	10.00@14.00
Stock Hay	6.00@ 8.00
Straw, per bale	.25@ .40

FEEDSTUFFS.

Alfalfa molasses meal has stiffened up a little, while bran is in liberal supply and shows a slight decline. Rolled barley is firm, but not quotably higher.

(Wholesale prices per ton, carload lots, San Francisco.)

Beet Pulp, per ton	$20.00@21.00
Alfalfa Meal, ton	17.00@20.00
Alfalfa Molasses Meal per ton	21.00@22.00
Bran, per ton	25.00@26.00
Oilcake Meal	38.00@39.00
Cocoanut Cake or Meal	23.00@25.00
Cracked Corn	40.00@41.00
Middlings	32.00@33.00
Rolled Barley	26.50@27.50
Rolled Oats	29.50@31.00
Digester Tankage	45.00

VEGETABLES.

There is comparatively little change in the vegetable list this week. Some lines are higher, owing to the seasonable shortage of stock, but many summer vegetables are still coming forward freely. String and lima beans are both higher, and tomatoes show a sharp advance, as present arrivals are believed to constitute about the last of the crop. Eggplant also is considerably higher. Green peppers also are rather firm.

(Wholesale prices, San Francisco.)

String Beans	3	@4 c
Lima Beans	3	@3½c
Peppers, bell, box	35	@50 c
Tomatoes, lug	.75	@1.00
Cucumbers, lug	35	@60 c
Summer Squash, lug	30	@40 c
Green corn, sack	.75	@1.50
Okra, small boxes	40	@65 c
Eggplant, lug	50	@75 c
Celery, doz.	15	@25 c
Artichokes, doz.	20	@35 c

POTATOES AND ONIONS.

The potato market still holds up steadily, with a very good demand for both Delta and Salinas goods. The shipping demand for onions has dropped off again, and prices are lower.

(On Wharf.)

Salinas Burbanks	$1.40@1.55
Delta Burbanks	.90@1.10
Sweet Potatoes, ctl.	1.10@1.25
Onions, ctl.	65 @75 c
Garlic, per lb., new	8 @10 c

POULTRY.

Turkeys are steady, with a fair demand and no heavy offerings. Arrivals of good young stock have been very light for the last few days, and small broilers show a sharp advance, fryers also being higher. Hens also show a little more firmness.

Turkeys, old, lb	18	20 c
do, young	22	@23 c
Broilers, 15 lbs to doz and less, lb	32	@35 c
do, over 15 lbs to dz	22	@24 c

DECIDUOUS FRUITS.

The fruit market is beginning to narrow down to winter dimensions, several items being taken from the list, though with favorable weather there is still a good assortment coming in. Bartlett pears are about cleaned up, and winter nellis are bringing a little better for first-class stock. Peaches also are practically out of the market, and there are not enough watermelons to be worth quoting. The market is still well supplied with grapes, which show little change in price. They find a good demand. Cranberries are a little firmer under a good demand, other berries being unchanged. Figs are scarce and higher, and apples are pretty steadily held, with northern stock bringing high prices. Quinces are easy, while pomegranates show a slight advance. Cantaloupes are higher, with the crop about over, while the inside figure on casabas is lower.

DRIED FRUITS.

Those who attributed the firmness in dried fruits to a temporary shortage for October shipments were evidently mistaken, since most varieties remain strong, with some further advances, notwithstanding the delay in shipments due to the blockade of the Panama Canal. There has been a stronger demand for apples, resulting in a sharp advance, as there is a very light pack in the East. Apricots again are higher, with very little left on the Coast; and white figs are higher, with a very firm market for all kinds, owing to a close cleanup of supplies. There has been a very heavy European demand for prunes, resulting also in a stronger movement in this country; and with the growers standing firmly together, the price was advanced to 5c soon after our last report went in. Nor was this the limit: some local packers are now quoting as high as 5½c, and there is nothing to indicate that prices will be lower in the near future, as supplies have been greatly curtailed. As for peaches, packers offer little encouragement; though it may be pointed out that some large export shipments have been made recently, which materially reduced the supply in the state, and the lack of strength may be due as much to lack of effective co-operation as to fundamental market conditions. There seems to be very little demand at the moment, but some advance is expected as soon as the trade begins to buy. The New York Journal of Commerce says:

"Practically all Pacific Coast packers report a stronger tendency predominating in the market for future shipment Santa Clara 1915 pack prunes. Packers are holding Santa Clara 40s to 60s, inclusive, at a 4¾c bulk basis f. o. b. common coast shipping points, with stocks of straight 40s held from 4⅞ to 5c, according to packers.

"At these prices there is reported to be very light buying in progress on the part of the New York operators. On the Coast several packers who were said to have been caught short on supplies with which to meet their future contract obligations were reported to be purchasing from the growers at 5c basis irrespective of size.

"Choice California apricots for future shipment continue to maintain a strong tendency, with packers showing no inclination to shade prices. Sales are reported of this grade at 8⅞c f. o. b. comomn Coast shipping points.

"Fancy seeded California raisins in one-pound cartons are held at 8½c, a slight increase over previous quotations. Supplies are said to be larger than for several days, though still greatly restricted."

CITRUS FRUITS.

Prices are still good on the eastern auctions for both oranges and lemons. At New York on Monday, Nov. 1st, seventeen cars of valencias sold averaging from $2.25 up to $3 per box. Lemons averaged from $2.55 up to $4.05 per box. Chicago the same day paid on averages from $5.25 to $5.75 for oranges and $3.25 to $3.75 for lemons.

Oct. 31st was the last day of the citrus year of 1914-15. While we haven't the exact shipments for the last few days, yet the figures here given are very close. Orange shipments for the season from the three districts in carloads were as follows:

	Oranges	Lemons
Southern California	33,317	6,843
Tulare district	5,667	222
Butte county	630	2
	39,614	7,067

For the 1913-14 season they were as follows:

Southern California	39,024	2,954
Tulare district	5,878	73
Butte district	404	5
	45,306	3,032

While the early part of the citrus crop sold at low prices the latter part of the year good average prices were received, and the outlook for the new year is much better than it was a year ago.

Valencia oranges are getting a little scarcer, and San Francisco prices have been marked up in sympathy with the market at shipping points. Lemons are easier, and a little new grapefruit is moving at $3.25 to $3.50, but old crop still brings high prices.

(Wholesale prices, San Francisco.)

Oranges, Valencias, bx	$3.75@4.75
Grapefruit, seedless, bx.	4.50@5.00
Fancy	5.00@6.00
Lemons, box	1.50@3.25

NUTS.

There is little new to report in this line. There still seem to be plenty of almonds, though most of the desirable stock is controlled by the association and steadily held, and is gradually moving off. Walnuts are quite firm, the southern crop being well cleaned up, and no large offerings are coming this way.

(Exchange prices, f. o. b. common shipping point.)

HONEY.

Values stand as before, but there is no great firmness to the market. Buying for export is over for the present, and considerable stock is coming in, with only a moderate local demand. A car of attractive comb honey arrived recently from Nevada and is moving off gradually.

Water White, comb	11	@13 c
Amber	10	@11 c
Water White, extracted	6	@ 7 c
Light Amber	3	@ 4 c

Tehama Co., free	12@13½c

HORSES.

A large lot of Nevada horses, including some rather heavy stock of popular breeds, was brought in this week, and sold off readily at about the same range of prices as has prevailed for some time past. Nothing of special interest has developed, the local demand being just fair for desirable stock, while miscellaneous offerings received little attention. (Approximate values at San Francisco, based on auction sales.)

Drafters, 1700 lbs and up	$200@250
Drafters, 1550 to 1650	150@200

SPECIAL GRAPE MARKET REPORT.

By J. L. Nagle.

Sacramento, Cal., Nov. 1, 1915.

This week's shipments practically wind up the Tokay season for the late. Some districts have already completed their shipments; but the Lodi district, which considerably underestimated its crop, still has a few cars remaining.

Emperors in crates are now moving and there is a very active demand which will probably exceed the supply, and if the market remains as active for the next two weeks as it is at present, grapes now in storage should bring fancy prices for the holiday trade.

Taking all things into consideration and even in view of the fact that the total shipment of grapes has been in excess of last season, we consider that the California grape growers have enjoyed one of the most successful seasons in their history.

The following prices have ruled for the week:

New York—Malaga grapes averaged $1.05; Cornichon, $1.12; Emperor, $1.02; Tokay, $1.15; Winter Bellis Pears, $2.52; B. Clairgeau, $2.25.

Chicago—Tokay Grapes, $1.19; Cornichon, $1.16; Malagas, $1.12.

Total shipments to date, 15,363 cars; total shipments same date, 1914, 15,195 cars.

Publisher's Dep't.

Prof. Wickson is at work compiling volume two of "California Agriculture Questions Answered," which he hopes to have ready for the printers in another month. The first volume of this work was issued less than two years ago and has met with popular favor, so much so that this new edition is necessary. The new volume will contain an entirely new lot of questions and answers, so that those who have a copy of the first volume will find as much of value in the second as the party who secures the last only. The size of the book, number of pages and general style will be same as the first and the price will be $1.50.

Readers will notice that beginning with last week the Rural Press is printing a series of articles on ornamental horticulture. We trust these articles will help our readers in their work of beautifying their home grounds, roadways, etc. As a supplement to these articles we would suggest that those who can afford to should send for a copy of "California Garden Flowers" by E. J. Wickson. Price $1.50 postpaid, this office. The book will help you in your work in the garden.

Only 189 new subscribers added to our list during the past week. We did mighty well considering the fact that some of the reports of the men were not received in time to be counted.

The California Hydraulic Engineering & Supply Co. of Los Angeles has moved to 420 East Third street, where they are now ready to fill your orders on short notice.

Next week's issue will tell all about the fine lot of swine and sheep now exhibited at the Panama Exposition.

J. H. George of Red Bluff has purchased 1000 lambs from John Finnell of the same place.

Frank Meacham of Petaluma recently purchased a Red Polled calf which won first prize at the recent stock show at the Exposition.

If the few Almond growers who are now shipping their almonds to San Francisco on consignment would support the
California Almond Growers Exchange
by becoming members, a better market would be insured for all.
CALIFORNIA ALMOND GROWERS EXCHANGE
311 CALIFORNIA ST.
SAN FRANCISCO.

Mr. H. A. Clark, a well known fruit grower of Saratoga, is shortening the road between producer and consumer. He is marketing a considerable proportion of his crop direct. He packs his product in tenpound paper sacks that are then enclosed in cloth sacks. For prunes, orchard run, unprocessed, he gets 11 cents per pound f. o. b. Saratoga and for apricots in the same condition 13½ cents. He gets in touch with his trade through cards at the Santa Clara county exhibit at the Exposition and through advertising in his old home town in the east.

For bloat, tap a sheep or cow in the left flank, well forward. Keep a trocar handy and know how to use it.

Moldy feed of any kind may be dangerous, especially moldy cornstalks or any corn products.

To date, Oct. 26, Redlands has shipped 4605 carloads of oranges, or 261 more than the previous year.

California Poultry Practice

WRITTEN TO TEACH BETTER POULTRY METHODS ON THE FARM.
By Mrs. Susan Swaysgood.

Every poultry raiser of California should have this book. It is very practical and will help make your business profitable. In the preface of the book the author says:

"This book is not an accident; it is born of a desire to help others to avoid the stumbling-blocks in the poultry business, and at the request of many readers of The Pacific Rural Press, and other papers.

"With forty-two years of experience with poultry it is expected that I have learned a few things about it; it's a poor business that does not teach lessons in that length of time. Don't you think so?

"There are books, yes, books without number, on poultry matters, but many of them are mostly theory. This book tells you just what I have done and how I would do it.

"'It is a book of action, and it is action that counts these days. We have to act in the living present if we want to live. I want to live and I want others to live, too, and as I have learned these things by experience it is fitting that I should tell others how to obtain results without paying such a big price for the experience.

"The things told you in this book are original, unorthodox, but strictly practical; and if you will read and then heed, you will be well satisfied that the author has given you your money's worth. California is an empire in itself, and I am sure there are enough men and women engaged in the poultry business, or wanting to get into it, to call for a milion copies of this book, though its only claim is that it is needed."

The book contains 157 pages, besides illustrations. The 45 chapters cover every phase of poultry culture from eggs to hens, and from hens to market. Feeding, housing and parasites.

Price, cloth-bound, postpaid, $1.00.

Pacific Rural Press, Publishers
525 Market Street, San Francisco, Cal.

For All Farm Buildings

the matter of roofing is of first importance. It does not pay to skimp when you are building for permanence.

"I used RU-BER-OID Roofing," says the owner of these buildings "because it is waterproof, leak proof and almost wear-proof. Put on years ago, it is still as good as new. I never have to make repairs that take time and cost money."

You can have roofs that are *permanently* watertight—roofs that will not crack, rust, warp or rot, by using

Pronounced "RU" as in RUBY
RU-BER-OID ROOFING
COSTS MORE - WEARS LONGER

—the first smooth-surfaced, pliable, ready-to-lay roofing. Hundreds of **RU-BER-OID** roofs put on more than 20 years ago are still as serviceable as when laid. The long life of **RU-BER-OID** makes it *cheaper by the year.*

The base of RU-BER-OID is a strong felt, thicker, heavier and costing one-third more than that used in low-priced roofings. This felt is waterproofed with a compound containing animal and vegetable substances, RU-BER-OID contains no sand, coal tar, mineral fillers or asphaltum oils.

RU-BER-OID withstands all extremes of heat, cold and moisture. It is used on all kinds of buildings in every country in the world.

RU-BER-OID roofing is always uniform in quality. Chemists allow no variation from the original formula.

Colored RU-BER-OID (Ka-lor-oid)

—Tile Red and Copper Green—possesses all the enduring qualities of the gray RU-BER-OID. These permanent colors are *built into* the roofing. Time and weather only add to their pleasing tones.

Court Decision Against Imitators

In a recent opinion, the U. S. Court of Appeals in Chicago holds that the public has long recognized the trade name "Ruberoid" or "Ru-ber-oid" as our trade name and as indicating roofing of our manufacture, and it enjoins imitators from using the word "Rubberoid or any similar name as the trade name or brand" of their roofing, as unfair competition in business.

Look for the "Ru-ber-oid Man," shown below, on every roll. If the Ru-ber-oid Man is not there, the roofing is *not* RU-BER-OID.

Free Books to Help You

Building a Barn discusses sites, foundations, floors, interior arrangement, etc., and shows how to make and cover all roofs.

Building a Poultry House gives working plans for the best types of structures.

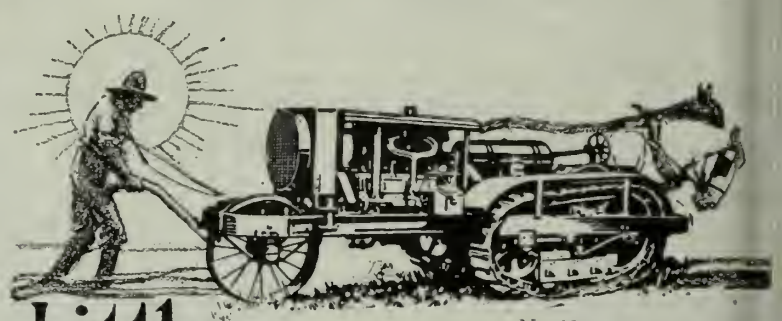
LAST CALL FOR SILOS

FOR THIS SEASON'S USE

We will ship you a **Remco Redwood Stave Silo,** best Silo made—in 4 days—so you can silo this Fall's corn crop. Every day counts now. If you have feed that you will turn into silage accept this **last call** and get your **Remco.** If you don't you lose a whole season's benefits.



You use **Tanks** and **Pipe** all year round. Let us quote your prices on our **Remco Redwood Tanks** in all sizes and our **Remco Redwood Stave Pipe** in all diameters, 2 inches to 12 feet.

Tell us your requirements and we will quote you prices. Our factory is equipped for special orders as well as standard requirements.

If you come to San Francisco for any purpose, come also to see us.

Little Stories of Success

No. 10

Possibly you still look upon the Caterpillar as a big farm proposition, and are not yet convinced that it is a cheaper and better form of tractive power than horses. Listen!

E. A. Brim of Williams says: "Having used a Caterpillar almost 3 years, doing all kinds of work, I find that the expense of this work is at least one-half less than doing the same work with teams."

Cy Hermle, Winters, says: "I figure the Caterpillar is half cheaper than mules, counting all wear and tear."

Sleeper and Waller, Santa Ana, says: "In figuring the difference in cost against mules, we made a saving of $850 during our harvest."

Can *you* afford to plow with teams any longer? Figure it out, interest, depreciation, feed, everything. Then write us for the actual costs of doing work with a Caterpillar "30" as reported to us by Caterpillar owners.
